The Western Values Project, a Colorado-based nonprofit, ran ads late last year pressuring three potentially vulnerable Republicans — Arizona Rep. Martha McSally, who is now running for Senate, along with Oregon Rep. Greg Walden and Washington Rep. Jaime Herrera Beutler — over their support for Zinke's decision to shrink the national monuments.

And the attacks had an impact: In Arizona, McSally held a 3-point lead against a generic Democrat in her congressional district in a poll conducted by Global Strategy Group. But when "asked to consider a scenario where she votes to reduce the size of the Bears Ears and Grand Staircase-Escalante national monuments," her support dropped to 38 percent, with a generic Democrat winning 50 percent of the vote.

Interior spent \$139K on Zinke office doors [Back](#)

By Anthony Adragna | 03/08/2018 05:58 PM EDT

The Interior Department is spending \$139,000 for new doors for Secretary Ryan Zinke's office suite, according to records posted online.

The work was recommended by Interior career facilities and security officials, an agency spokeswoman said, not by Zinke.

"The secretary was not aware of this contract but agrees that this is a lot of money for demo, install, materials, and labor," Heather Swift, the spokeswoman, said in a statement.

The award to Maryland-based Conquest Solutions LLC was first reported by the Associated Press. The work involves replacing three sets of double doors, including two that open onto a balcony and leak during rain storms, the AP reported. An existing set of doors to Zinke's office from a hallway do not have a lock, so the security will be upgraded with the new doors.

Swift said the work is part of a "decade-long modernization of the historic FDR-era building."

"Between regulations that require historic preservation and outdated government procurement rules, the costs for everything from pencils to printing to doors is astronomical. This is a perfect example of why the Secretary believes we need to reform procurement processes."

Housing and Urban Development Secretary Ben Carson drew criticism recently over news that HUD would spend \$31,000 on a dining set. That order was subsequently canceled.

House passes controversial dam bill [Back](#)

By Annie Snider | 04/25/2018 04:45 PM EDT

The House passed a controversial measure to override a court decision that required changes in the operations of major hydropower dams in the Pacific Northwest to help protect endangered salmon.

The measure, H.R. 3144 (115), from Rep. Cathy McMorris Rodgers (R-Wash.), was passed by a nearly party-line vote of 225-189.

The 9th Circuit Court of Appeals earlier this month upheld a lower court decision requiring that water be spilled over the tops of dams along the Columbia and Snake rivers, including the powerhouse Grand Coulee Dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The suit was brought by the state of Washington, tribes and conservation groups.

McMorris Rodgers and other Republicans in the region have fought the decision because it would reduce the dams' hydropower output. Their legislation would override the courts and require that dam operations continue as they have historically to maximize power production until an environmental review of the system can be completed.

The legislation is the latest front in a yearslong battle over the nearly 100-year-old hydropower system on the rivers. Conservation groups and tribes with treaty fishing rights want it altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River.

WHAT'S NEXT: The legislation moves to the Senate, where some of the region's Democratic senators have registered their opposition.

EPA drops 'once in, always in' policy from key Clean Air Act requirements [Back](#)

By Alex Guillén | 01/25/2018 06:11 PM EDT

EPA today withdrew a Clinton-era policy that was designed to prevent major emitters like power plants and factories from getting out of tough requirements to limit their toxic air emissions.

In a new memo, EPA air chief Bill Wehrum wrote that the "once in, always in" policy "is contrary to the plain language" of the Clean Air Act. Wehrum revoked a 1995 guidance memo outlining the policy and said EPA would consider new regulations to clarify its interpretation of the law.

Under the now-revoked guidance, any emitter that qualified as a "major" source of hazardous air pollutants would forever be subject to that tougher standard to comply with MACT rules, even if its emissions dropped low enough to be considered an "area" source subject to fewer or no requirements. Wehrum's memo said the law does not specify that such classifications are permanent.

"EPA has now determined that a major source which takes an enforceable limit on its [potential emissions] and takes measures to bring its HAP emissions below the applicable threshold becomes an area source, no matter when the source may choose to take measures to limit its" potential pollution emissions, Wehrum wrote.

Wehrum argued that the policy shift will actually encourage sources that hesitated to install emission reduction projects to move forward. Environmentalists, however, quickly blasted the change on social media.

The Bush administration twice attempted to change the OIAI policy but never succeeded.

WHAT'S NEXT: Wehrum's memo says EPA will "soon publish a Federal Register notice to take comment on adding regulatory text that will reflect EPA's plain language reading of the statute."

Subject: Morning Energy: Perry's latest bid to save coal — NEPA focus of hearing today — More on the Pruitt front

By Kelsey Tamborrino | 04/25/2018 05:54 AM EDT

With help from Anthony Adragna

PERRY'S LATEST BID TO SAVE COAL: So far, Energy Secretary Rick Perry has had no success in his effort to construct a safety net to keep alive coal-fired and nuclear power plants threatened with shutdowns — a mission that's come straight from President Donald Trump. And Perry's latest potential gambit to use the 1950 Defense Production Act in hopes of designating the plants as crucial for national security may not fare better than his previous efforts, energy experts tell Pro's Eric Wolff.

Experts say the bid would stretch the definition of the law and almost certainly draw legal challenges. Plus invoking the act that was last used by the Obama administration to push advanced biofuels would probably hit a snag in Congress, since lawmakers would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts say.

Using the Korean War-era law to protect the plants could be a novel approach to aiding power plants, Eric writes, especially after Perry failed to gain FERC's support for his proposal to give the plants financial backing. And since Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run, Perry and his staff appear to have very few viable options left.

But the fresh take on the act doesn't necessarily mean it'll work. "To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the U.S. Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. DON'T FEAR THE NEPA? House Natural Resources will hold an oversight [hearing](#) this afternoon on what it calls the "weaponization" of the National Environmental Policy Act, and it could be a doozy. The committee notice calls NEPA — the seminal law that requires an environmental review on all federal actions — activists' "weapon of choice." Republicans have long-sought to undo parts of the law, and today's hearing will likely echo some of the rhetoric out of the Trump administration, which has supported faster NEPA reviews as part of its [infrastructure push](#). The hearing will review challenges from NEPA and will evaluate reforms to "de-

weaponize" the law to "minimize opportunities for bad faith litigation, and restore the law to its original intent," according to a committee notice.

The committee previously took up the topic last year, holding a similar hearing in November on modernizing the law for the 21st century. James Coleman, a law professor at the Southern Methodist University, is expected to say the current NEPA process is "broken" and that bipartisan efforts to fix the problem have failed. "As President Obama's regulatory czar put it, 'If the permitting bureaucracy were a supervillain, it would be the Blob,'" he'll say, according to his testimony. "Right now, the Blob is winning: We have lost decades of investment while environment reviews grow longer and longer. How can we ensure that the U.S. does not fall behind our global competitors?"

Meanwhile, Laura Alice Watt of Sonoma State University, who says she is a proponent of environmental reviews that are conducted consistently, will discuss the effect of NEPA on the Point Reyes National Seashore, where a review over the last 20 years has contributed to the erosion of active ranches. Melissa Hamsher of Eclipse Energy Resource Corporation and former CEQ official Horst Greczmiel will also testify. Democratic Rep. Donald McEachin, ranking member of the Oversight subcommittee, will say that he'll hold the administration and Republicans to account on NEPA. "Many communities — and especially vulnerable minority and low-income communities — have had to endure a decades-long pattern of environmental injustice, in no small part because they were denied a say in important decisions that affected them," McEachin is expected to say. **If you go:** The hearing kicks off at 2 p.m. in 1324 Longworth.

SPEAKING OF NEPA: The League of Conservation Voters sent this letter to House members Tuesday urging them to oppose H.R. 3144 (115), which LCV says would "attack" the Endangered Species Act and NEPA by "mandating dam operations harmful to endangered salmon and steelhead in the Pacific Northwest."

ADD THIS TO THE LIST: Two days before two House hearings and fresh off an announcement on EPA's plan to bar scientific studies that don't publicly disclose data, Administrator Scott Pruitt got another appointment to testify on his agency's budget. This time Pruitt will appear in May before the Senate appropriations subcommittee that oversees EPA's budget, Lisa Murkowski said Tuesday.

OH, TO BE A FLY ON THE WALL: Sen. Shelley Moore Capito, one of the Republican EPW members open to a hearing with Pruitt, told ME Tuesday she has a "well-timed" phone call with him scheduled for this week. "I think he wants to talk about some regulatory measures," she said. "But I'm going to probably ask him questions on the current state of some of the things that I've read and we'll see where it goes." She said the call had been set up last week.

McConnell voices support ... again: Majority Leader Mitch McConnell told reporters Tuesday he remained a supporter of Pruitt's, while noting the EPA chief's busy Thursday on the Hill. "We'll just see," he said. "I expect there will be a lot of interest."

PERROTTA WORKED FOR TRUMP-BACKED MEDIA COMPANY: Pasquale "Nino" Perrotta — the Secret Service veteran who heads Pruitt's security detail — previously worked on assignments for the tabloid publishing company American Media Inc. during the 2016 presidential campaign, The New York Times reported Tuesday. While it is unclear when Perrotta started working at AMI, the Times reports some of his activities at the company included physical security, cybersecurity and investigative services involving litigation. Read more.

OLD AD-AGE: The Natural Resources Defense Council is sponsoring an ad today in The Washington Post that calls for Pruitt's ouster. The ad — which says: "President Trump promised to drain the swamp. He should start with EPA Administrator Scott Pruitt" — will run as an insert in 3,000 copies of the Post and will be delivered to Capitol Hill on Thursday. See it.

IF YOU PLAY YOUR CARDS RIGHT: The Environmental Defense Fund mapped out what it says are Pruitt's unanswered questions surrounding scandals while he helms EPA and during his time as Oklahoma attorney general — 86 of them to be exact. The group will also hand out a deck of "Non Trivial Pruitt Questions" during Thursday's hearings with a sampling of the ethical questions. See the cards here.

Rally cry: Separately, the American Federation of Government Employees will hold a rally today from noon until 1 p.m. in support of EPA workers. Democratic Reps. Salud Carbajal, Don Beyer, Bill Foster, Sheila Jackson Lee, Alan Lowenthal, Grace Meng, Jamie Raskin and Debbie Wasserman Schultz are all set to attend the rally, which will take place outside of EPA headquarters.

MACRON ADDRESS LAWMAKERS: French President Emmanuel Macron hits the Hill this morning to address a joint session of Congress. Earlier this week, the French president said he'd call for continued U.S. intervention in Syria in his speech. "I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday." But it's also possible issues concerning climate will come up — which would likely receive a welcome reception from Democrats.

Macron, a staunch supporter of the Paris accord, also briefly mentioned climate during a joint press conference with the president Tuesday. "We also talked about the climate. And here, also, we know where we stand," Macron said vaguely. "France will continue to work on major pieces, including the global compact for the environment. But I think I can say that our economic — our businesses, our researchers can continue to work on — can create solutions in the field." Both he and Trump are "attached to that," he said.

Bold move: It's probably not an indication of environmental topics to come, but Apple CEO Tim Cook brought former EPA chief Lisa Jackson to Tuesday's state dinner with Macron. Jackson, who now works as vice president of environment, policy and social initiatives at Apple, has attended events with Cook in the past — but it's an interesting move considering Jackson's not been known to mince words about the Trump administration. For what its worth, Cook will meet today with Trump in the Oval Office.

MORE NOMS: Trump sent James Hubbard's nomination to be undersecretary of Agriculture for natural resources and the environment to the Senate Tuesday. Hubbard, of Colorado, replaces Robert Bonnie, who resigned from the post.

DEMOCRATS CITE SAFETY: Three Energy and Commerce Democratic leaders on Tuesday called on the Government Accountability Office to probe EPA's enforcement of federal health and environmental safeguards. "We are concerned that President Trump's and Administrator Pruitt's policies to 'streamline' permitting processes, reduce regulatory 'burdens' for industry, and defer to states on enforcement will lead to more environmental law violations due to lax enforcement at both the state and federal level," ranking member Frank Pallone and Reps. Diana DeGette and Paul Tonko write in a letter to GAO Comptroller Gene Dodaro. Read it here.

MAIL CALL! GOING NUCLEAR: Former national security officials and nonproliferation experts will send this letter today to congressional foreign affairs leadership stating that for national security reasons, it is in the U.S.' best interest to have a nuclear cooperation agreement — a so-called 123 Agreement — with Saudi Arabia.

— **Democratic Sens. Maria Cantwell and Jeff Merkley** and Reps. Raúl Grijalva and Jared Huffman sent a letter to Interior Secretary Ryan Zinke on Tuesday, calling on him to undo plans for a 2019 lease sale in Alaska's Beaufort Sea. Read it here.

— **Sen. John Barrasso, chairman of the Senate EPW Committee and Capito**, subcommittee chairwoman on clean air and nuclear safety, sent a letter to Pruitt and Perry, asking them to protect the confidential business information of U.S. small refineries. Read the letter here.

AT IT AGAIN: Michigan GOP Rep. [Fred Upton](#) officially filed for reelection in the state's 6th District, [MLive reports](#). "We are full steam ahead and excited about the future," the Energy and Commerce lawmaker said in a statement.

A TANGLED WEB: The Environmental Data & Governance Initiative is out with a new monitoring report this morning that says EPA removed pages related to "international priorities" and "international grants and cooperative agreements," as well as corresponding links, from its [International Cooperation](#) web page. The page in question listed priority areas including "strong environmental institutions," "climate change" and "clean water," among other terms, which EDGI says were removed in December 2017. Read the report [here](#) and see screenshots [here](#).

GROUPS TO SUE OVER DRINKING WATER IN NEW JERSEY: The NRDC and Newark Education Workers Caucus say they will sue the city of Newark, N.J., and Catherine McCabe, the acting commissioner of the New Jersey Department of Environmental Protection, over lead contamination in the city's drinking water, [Pro New Jersey's Danielle Muoio reports](#). A Newark city official [said Tuesday](#) that the complaint filed by the groups is "absolutely and outrageously false."

OLYMPIANS HEAD TO HILL FOR CLIMATE: Five Winter Olympians will brief House and Senate offices today on the impact of climate change on winter sports and outdoor recreation. Cross-country skier Jessie Diggins, freestyle skier David Wise, halfpipe snowboarder Arielle Gold, biathlete Maddie Phaneuf and alpine skier Stacey Cook all will appear on the panel, which is co-hosted by nonprofit Protect Our Winters, Citizens Climate Lobby, and Sens. [Michael Bennet](#) and [Susan Collins](#). **If you go :** The briefing begins at 12:30 p.m. in 538 Dirksen.

CORRECTION: The April 24 edition of Morning Energy misstated the purpose of H.R. 3144 (115). The bill would codify the 2014 Biological Opinion until 2022, while the NEPA and the environmental impact statement processes continue.

Perry's latest bid to help coal faces uphill battle Back

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:28 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproduceable, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Murkowski: Pruitt will testify to Senate appropriators [Back](#)

By Anthony Adragna | 04/24/2018 03:03 PM EDT

EPA Administrator Scott Pruitt is scheduled to testify in May before the Senate appropriations subcommittee that oversees his budget, Sen. [Lisa Murkowski](#) (R-Alaska), who chairs the panel, said today.

Murkowski did not elaborate on her plans for the hearing or how much it would delve into Pruitt's ethics and spending. But she said it was "absolutely appropriate" for the Environment and Public Works Committee to hold an oversight hearing on the administrator's conduct in office, an idea that has been endorsed by [multiple Republicans](#) on the authorization committee.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW committee.

EPW Chairman [John Barrasso](#) (R-Wyo.) said today he has "serious questions" about how Pruitt has handled taxpayer dollars but stopped short of announcing plans for Pruitt to testify.

"We'll see what comes out of the hearings this Thursday," Barrasso said, referring to Pruitt's scheduled appearance of two House hearings that day.

Barrasso said he planned to send additional letters to EPA, following his recent request for details on the administrator's use of four separate email accounts. In response to that earlier letter, EPA [told him](#) all of Pruitt's accounts are searched in response to public records requests.

"You want to make sure taxpayers are getting value for their dollars," Barrasso told reporters today. "We want to make sure money is being spent appropriately."

WHAT'S NEXT: Murkowski declined to say when Pruitt would appear before her Appropriations Subcommittee on Interior, Environment and Related Agencies, but she has [said previously](#) it was expected to be the week of May 7.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support is developing new cracks, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies — and Sen. Lisa Murkowski announcing Tuesday that she plans to bring him before her appropriations panel in May.

Three other Republicans, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla.), told POLITICO on Monday that they would also support hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions. Their words came as Pruitt, who has managed to hold onto President Donald Trump's public support for now, faces a pair of House hearings Thursday that could be make-or-break for his hopes of remaining in the Cabinet.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) said Tuesday that he has "serious questions" about how Pruitt has handled taxpayer dollars, but he stopped short of announcing plans for Pruitt to testify.

"We want to make sure money is being spent appropriately," Barrasso said.

Murkowski (R-Alaska), who chairs the subcommittee that oversees EPA's appropriations, did not elaborate on her plans for her own hearing with Pruitt, or how much it would delve into his ethics and spending. But she said it would be "absolutely appropriate" for Barrasso's panel to hold an oversight hearing on the administrator's conduct in office, an idea that multiple Republicans on the authorization committee have endorsed.

"I'm hoping they move on it sooner than later," Murkowski said of the EPW Committee.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides. The White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

French president to call for American role in Syria [Back](#)

By Ian Kullgren | 04/22/2018 10:03 AM EDT

French President Emmanuel Macron said Sunday he will call for continued U.S. intervention in Syria before a joint session of Congress this week.

"I will advocate for multilateralism," Macron said in an interview on "Fox News Sunday."

Macron is visiting Washington this week in the first official state visit of the Trump presidency. In an interview with Chris Wallace at the presidential palace in Paris, Macron said he has a "special relationship" with President Donald Trump, describing them both as political outsiders.

"Both of us are probably the maverick of the systems on both sides," Macron said. "President Trump's election was unexpected in your country and probably my election was unexpected in my country."

Macron said that the United States is still an indispensable player for achieving peace in the Middle East, adding that France will rely on the U.S. in Syria once the conflict comes to an end.

"We will have to build a new Syria afterwards," he said.

Apple's Tim Cook attending White House state dinner for Macron [Back](#)

By POLITICO Pro Staff | 04/24/2018 07:15 PM EDT

Apple CEO Tim Cook is attending tonight's White House state dinner for French President Emmanuel Macron.

Cook was spotted arriving for the dinner with former EPA Administrator Lisa Jackson, who is now vice president of environment, policy and social initiatives for Apple, according to a pool report.

Jackson served as head of the EPA under former President Barack Obama.

Subject: Morning Energy: Heightened vetting for Pruitt-related FOIAs — EPA narrows air permitting guidelines — Coolant industry: Global warming industry is so cool it's hot

By Kelsey Tamborrino | 05/04/2018 05:41 AM EDT

With help from Anthony Adragna, Eric Wolff and Emily Holden

ALL FOIA ONE, ONE FOIA ALL: You may need to have a little patience if you're waiting for EPA to ship over any documents about Administrator Scott Pruitt's activities. Freedom of Information Act requests that relate to Pruitt get an extra layer of vetting before they are released to the public, new internal emails obtained by POLITICO show. Top aides to the administrator, including chief of staff Ryan Jackson, perform the "awareness reviews" on all or most document requests related to Pruitt — on top of the reviews done by career experts. And that is contributing to the slow flow of information released under records requests at EPA, Pro's Alex Guillén reports.

The new vetting processes described in the emails are done before the agency releases essentially any documents involving the administrator. And the emails show Pruitt's political appointees chastising career employees who released documents in accordance with FOIA without letting them screen the records first.

In one exchange from last August, Jackson and Liz Bowman — the head of EPA's Office of Public Affairs who announced on Thursday she was stepping down — expressed concern about documents related to comments Pruitt made on CNBC disputing that carbon dioxide from human activities was the primary cause of climate change. "Why did Kevin Bogardus from E&E all of a sudden get a response to a FOIA today, without any awareness from our FOIA office?" Bowman wrote on Aug. 2, adding later that the deadline wasn't until the end of the month.

ME readers will recall from February that EPA has been flooded with FOIA requests under Pruitt, forcing many groups to sue for the release of documents. But the new emails, which EPA gave to the Natural Resources Defense Council following legal action, shed new light on the cloud of secrecy that surrounds the agency.

While Obama-era EPA officials said the agency sometimes used awareness reviews during their time at the agency when career staff thought documents would generate a lot of interest, FOIA experts say the extra vetting of documents appears to be on the rise under Pruitt. "This does look like the most burdensome review process that I've seen documented," said Nate Jones, director of the FOIA Project at George Washington University's National Security Archive. Read more.

HAPPY FRIDAY! I'm your host Kelsey Tamborrino, and the American Petroleum Institute's Khary Cauthen correctly guessed that Roger Taney — who was nominated for Treasury secretary — was rejected by the Senate, 18-28, in 1834. Not all hope was lost, however, as Taney went on to become a Supreme Court justice. For today: Who was the only member of the Continental Congress to sign all four of the great state papers? Bonus points if you can name all four papers. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

EPA NARROWS GUIDELINES: EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements, Alex reports.

The April 30 memo was sent by EPA air chief Bill Wehrum concerning the so-called common control designation, which says plants located near each other should be aggregated for permitting purposes and subject to stricter standards if they are operated by the same entity. Under the new guidance, that will include entities that can "dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements." The memo concerns a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies. Read more.

ADD ADELSON'S NAME TO THE LIST: Yet another high-profile political ally emerged Thursday to have helped Pruitt arrange an international trip: GOP mega-donor Sheldon Adelson. According to new documents obtained by The Washington Post, Adelson arranged parts of Pruitt's canceled trip to Israel — where he was in part scheduled to unveil an agreement with Water-Gen, an Israeli water purification company championed by Adelson. Read the full report here.

MORE INFO PLEASE: Four senior House Energy and Commerce Democrats — Frank Pallone, Paul Tonko, Diana DeGette and Kathy Castor — sent a letter to Pruitt Thursday asking for the names of three people Steven Hart — a lobbyist who was also married to the EPA chief's landlord — recommended for slots on the agency's Scientific Advisory Board. "Despite your earlier claims that J. Steven Hart had no clients with business before EPA, it is now clear that Mr. Hart did represent clients with business before your agency and, in fact, lobbied you on their behalf," they wrote.

MORE TIME PLEASE: Sixty-four Democrats signed onto a letter to Pruitt calling for a 90-day comment period on a his recent "secret science" proposal to ban the use of studies that don't publicly disclose all their data. "Given the large response from scientists and stakeholders before the rule was officially proposed, a comment period of 30 days will not allow for meaningful engagement from stakeholders," the letter states. Read it here.

'NOT OKAY': Interior's inspector general found a male National Park Service regional office official made unwanted sexual advances toward a female employee on consecutive days that she told him were "not okay." The official retired before a scheduled interview and stopped responding to the IG. Read the report here.

CLOVIS OUT ... AGAIN: Sam Clovis, a former Trump campaign aide who had been serving as the Agriculture Department's liaison to the White House, is departing the department and will return home to Iowa, a USDA official confirmed to POLITICO's Liz Crampton. The president had previously nominated him to be USDA undersecretary for research, education and economics, where he faced backlash for his lack of science credentials and ultimately withdrew his name from consideration for that position in November. Greens had also particularly focused on Clovis for his comments that he did not believe in man-made climate change. Read more.

COOLANT INDUSTRY: GLOBAL WARMING INDUSTRY IS SO COOL IT'S HOT: The White House now has evidence that a global warming treaty limiting coolants would generate thousands of new jobs, and now it must decide whether to send the treaty to the Senate for ratification. A report released Thursday by the Air Conditioning Heating and Refrigeration Institute and the Alliance for Responsible Atmospheric Policy said that the amendment to the Montreal Protocol limiting use of hydrofluorocarbons, a greenhouse gas, would help American manufacturers who produce the bulk of the world's supply of advanced coolants. Ratifying the treaty would produce 33,000 additional jobs and an extra \$12.5 billion of annual manufacturing output.

The report is considered critical to help presidential aides persuade President Donald Trump to advance the treaty to the Senate, despite the president's aversion to multilateral treaties, his predecessor's accomplishments, and anything involving global warming. "U.S. ratification of the Kigali Amendment is good for American jobs, good for the economy, and crucial for maintaining U.S. leadership across the globe," said John Hurst, Chairman of The Alliance, and Vice President of Lennox International. He added, "Over 30 countries have ratified the amendment. America cannot afford to be on the sideline. America must continue to lead."

ZINKE HIRES GOP ADVISER FOR NPS: Interior Secretary Ryan Zinke hired Chuck Laudner, a Iowa Republican political consultant who was an adviser to Trump's campaign, for a position with the National Park Service, an Interior spokeswoman confirmed to Pro's Ben Lefevre. Laudner previously worked with Rick Santorum's presidential campaign in Iowa in 2012 and was executive director for the Iowa Republican Party from 2007-08. Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what job he had taken.

MAY THE FOURTH BE WITH YOU: Zinke teased out some "Star Wars" related news on Thursday. In a video featuring the secretary walking alongside motorized BB-8 and R2-D2 toys, the droid rolls over an Interior logo. Zinke tweeted the video with a message: "Tomorrow is a big day. More to come. #MayTheFourthBeWithYou." See it.

BLANKENSHIP ATTACKS McCONNELL'S "CHINA FAMILY": West Virginia GOP Senate hopeful Don Blankenship released another ad on Thursday attacking Majority Leader Mitch McConnell. This time, the spot claims "Swamp Captain Mitch McConnell has created millions of jobs for China people." The ad, which POLITICO's Alex Isenstadt reports on here, is expected to start airing today. It closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids." The ad arrives days ahead of the state's May 8 primary.

FOIA WHAT IT'S WORTH: The Montana-based Western Values Project filed a FOIA request to EPA in an effort to make public any communication about Zinke. The request includes all communications between select EPA employees that contain "Zinke," "RZ" or "Interior Secretary" and comes in response to a report in The Atlantic that alleges an EPA press employee planted stories about Zinke in order to distract from his boss. EPA spokesman Jahan Wilcox in a statement to the Atlantic called the allegations "categorically false."

CLIMATE LAWMAKERS REBUT CARBON LEGISLATION: The Citizens' Climate Lobby released a rebuttal to Rep. Steve Scalise's concurrent resolution, H. Con. Res. 119 (115), which expresses the sense of Congress that a carbon tax would be detrimental to the U.S. economy. The climate lobby refutes the resolution, claiming that if done correctly, a tax or fee on carbon could boost the economy. Read the rebuttal here and the bill text here.

MAIL CALL! BIOFUELS WRITE TO EPA ON STRATEGY: A coalition of Midwest biofuels associations sent a letter Thursday to EPA asking it to move administrative time and staff away from Renewable Fuel Standard exemptions and instead toward approvals for cellulosic ethanol. "The discrepancy between the way EPA is handling RFS exemptions and cellulosic ethanol pathway approvals tells you everything you need to know about how this EPA is treating the RFS," said Iowa Renewable Fuels Association Executive Director Monte Shaw in a statement. Read the letter.

— **The Business Council for Sustainable Energy**, a coalition of companies and trade associations, wrote to members of Congress on Thursday, asking that they reauthorize energy title programs in the farm bill, H.R. 2 (115). "It is essential that a healthy, robust bipartisan energy title continue as part of new comprehensive agriculture legislation," writes the group's president, Lisa Jacobson. The letter also lays out potential improvements to the programs. Read it here.

— **Congressional Western Caucus Chairman Paul Gosar led 18 lawmakers** in a letter requesting Pruitt reverse course and proceed with an intention to withdraw the Obama-era EPA's preemptive veto of the Pebble Limited Partnership mining project under Section 404(c) of the Clean Water Act. They write that EPA's January decision not to overturn the preemptive vote "has sowed tumult for interested parties."

VW'S WINTERKORN CHARGED: Former Volkswagen AG leader Martin Winterkorn was charged with conspiracy and wire fraud in connection with the company's long-running emissions cheating scheme, according to an indictment unsealed Thursday by the Justice Department. The indictment, issued by a federal

grand jury sitting in the Eastern District of Michigan, charged Winterkorn with four counts of violating federal law. The first count charges that he conspired with other senior executives and Volkswagen employees to defraud customers, the United States and violate the Clean Air Act by making false representations about the company's supposedly "clean diesel" vehicles. The other three counts concern wire fraud tied to the scheme. More from Pro's Lauren Gardner [here](#).

GOING OUT WEST: New Mexico Sen. [Martin Heinrich](#) delivers a keynote address today at the [Outdoor Economics Conference](#), and he's [expected to discuss](#) his legislation to establish the White Sands National Monument as a national park, as well as discuss the outdoor recreation industry in the region. Watch it live [here](#).

REPORT: GRID RESILIENCY IN THE FACE OF NUCLEAR CLOSURES: A new IHS Markit report released Thursday examines the effect of five nuclear closures in the PJM Interconnection, finding the closures will reduce annual net benefits for consumers from PJM grid-based electricity by about \$8 billion per year over 2013-2016. That "translates into a consumer net benefit per kilowatt-hour of PJM nuclear generation of about 3 cents per kWh," the report found. The report was prepared for Nuclear Matters, an industry-funded organization. Read it [here](#).

MOVER, SHAKER: The Joseph Rainey Center for Public Policy, a think tank focused on sustainable politics and inclusive governance, has named Sarah Hunt its founding CEO. Hunt previously was director at the Center for Innovation and Technology at the American Legislative Exchange Council.

HITTING THE ROADMAP: The Delta Institute released a "Coal Plant Redevelopment Roadmap" on Thursday to provide insight into coal-impacted municipalities and their transition processes. Modules in the roadmap will show economic and environmental impacts, as well as provide information on engagement strategies for such communities, among other topics. See it [here](#).

ON THE POD: NPR's podcast, Embedded, released a new episode Thursday on coal in Buchanan County, Va. Listen [here](#).

Stories from POLITICO Pro

EPA's top spokesperson to depart [Back](#)

By Emily Holden | 05/03/2018 11:26 AM EDT

EPA's top spokeswoman is leaving the agency, the latest in a string of departures by key staffers amid the swarm of investigations into Administrator Scott Pruitt's potential ethical [lapses](#).

The exit of Liz Bowman comes after Pruitt's lead security agent, Pasquale "Nino" Perrotta, and EPA's Superfund task force head and adviser Albert "Kell" Kelly both [quit](#) earlier this week. Perrotta has cited negative media attention as contributing to his decision. His role in Pruitt's [security spending](#) was under review by the agency's inspector general, and he was interviewed by House Oversight Committee staffers on Wednesday.

EPA also confirmed Kelly was leaving because he attracted controversy over being banned from the banking industry.

Bowman, who will join Iowa Republican Sen. Joni Ernst's staff, has been associate administrator for public affairs since shortly after Pruitt was confirmed in early 2017. She was previously director of issue and advocacy communications for the American Chemistry Council.

"I leave extremely thankful for the opportunity to serve the Trump administration and Administrator Pruitt," Bowman said. "Being a member of the EPA team has allowed me to further my skills, learn from my mistakes and make lifelong friendships. It has also provided me the opportunity to develop a new, and deep, respect for the public servants who serve the American people, day in and day out, to ensure that we all have access to clean air, land and water."

EPA chief of staff Ryan Jackson said Bowman "has been an invaluable lead of our public affairs office during this past year."

"I congratulate her on pursuing great and new opportunities on Capitol Hill where we'll continue to work with her, just in a different capacity," he said.

Bowman's last day at EPA is May 11.

Daniel Lippman contributed to this report.

Critics pound EPA chief after he disputes human role in climate change [Back](#)

By Alex Guillén | 03/09/2017 12:04 PM EDT

EPA Administrator Scott Pruitt said Thursday that carbon dioxide emitted by human activity is not the primary driver of climate change, a conclusion out of step with mainstream climate science that drew immediate condemnation from Democrats and environmentalists.

"I think that measuring with precision human activity on the climate is something very challenging to do, and there's tremendous disagreement about the degree of impact," Pruitt said on CNBC. "So, no, I would not agree that it's a primary contributor to the global warming that we see." He also called for continued study of the issue.

That is a stronger position than Pruitt took during his confirmation hearing, when he said that the degree of human contribution to climate change is "subject to more debate."

Democrats rushed to condemn Pruitt's remarks.

"This is just nuts: EPA chief Scott Pruitt just claimed carbon not causing climate change," Sen. Brian Schatz (D-Hawaii) tweeted a few minutes after the interview aired. "We Senate D's will be a check on his crazy views."

Most scientists agree that greenhouse gases emitted by human activity like burning fossil fuels is the primary driver of climate change. That includes Pruitt's own agency, which says that human-emitted CO2 "is the primary greenhouse gas that is contributing to recent climate change."

One prominent environmentalist suggested Pruitt should be impeached.

"Pruitt misled Congress about his willingness to do a core part of his job," Sierra Club Executive Director Michael Brune wrote on Twitter. "Contradicting science + law should mean removal from office now."

Pruitt also acknowledged on his CNBC appearance that the Supreme Court has ruled on the matter and that the Obama administration issued an "endangerment finding" concluding greenhouse gases are a threatening pollutant.

But, he added, "nowhere in the continuum, nowhere in the equation, has Congress spoken. The legislative branch has not addressed this issue at all."

Pruitt was slated to speak at the CERAWEEK oil industry conference in Houston later Thursday. He said on CNBC that he would bring a "pro-growth, pro-jobs and pro-environment" message to the conference.

EPA narrows guidelines for aggregating sources for air permitting [Back](#)

By Alex Guillén | 05/03/2018 05:59 PM EDT

EPA will alter its interpretation of when related facilities are considered a single source for air permitting purposes in a way that could ease their permitting requirements.

Permitting rules say that plants located near each other should be aggregated for permitting purposes if they are operated by the same entity, known as "common control." In that case, the facilities' emissions can be aggregated and be subject to more stringent permitting requirements than if treated separately.

In an April 30 memo concerning a common control designation for a Pennsylvania landfill and nearby biogas processing facility that are owned by different companies, EPA air chief Bill Wehrum revised the agency's interpretation so that facilities meet the definition if one entity has "the power or authority ... to dictate decisions of the other that could affect the applicability of, or compliance with, relevant air pollution regulatory requirements."

A dependent relationship should not necessarily mean common control, he added. Facilities can be "economically or operationally interconnected" without being able to direct the other.

In the immediate case of the Pennsylvania landfill and processing plant, Wehrum concluded that the two are not commonly controlled because the landfill could otherwise meet methane emissions limits by burning off biogas and because the processing plant hopes to secure other sources of biogas.

WHAT'S NEXT: Ultimately, EPA's reasoning is only a recommendation. Pennsylvania regulators have the final say on whether these particular facilities fall under "common control."

Sam Clovis is leaving USDA [Back](#)

By Liz Crampton | 05/03/2018 08:16 PM EDT

Sam Clovis, the former Trump campaign aide who had been serving as USDA's liaison to the White House, is leaving the Agriculture Department and will return home to Iowa, a USDA official confirmed Thursday evening.

Clovis' last day is Friday. A "goodbye party" was being held for him on Thursday night, according to a source attending the party.

Clovis had served as a co-chairman and policy adviser on the Trump campaign and later led the USDA beachhead team for the Trump transition, but ran into trouble when President Donald Trump nominated him to be USDA undersecretary for research, education and economics.

Clovis withdrew his name from consideration in November — before the Senate Agriculture Committee could hold a confirmation hearing — after facing a torrent of criticism from Senate Democrats and environmental advocates. Clovis drew fire for his skepticism of climate science, past comments on issues like race and gender, and what critics on the left said was his lack of scientific credentials that are legally required for the position, which would also have had him serve as the department's chief scientist.

Clovis had endured criticism for months, but his withdrawal came shortly after he was swept up in special counsel Robert Mueller's probe of Russian interference in the 2016 campaign and the Trump campaign's alleged ties to Russian interests. While serving on the campaign, Clovis had supervised George Papadopoulos, a Trump campaign foreign policy adviser who struck a plea deal on charges he lied to FBI investigators about his communications with Russia-linked contacts. Clovis' withdrawal followed shortly after news of Papadopoulos' plea deal.

More recently, Clovis had been posted to the Natural Resources Conservation Service to provide guidance.

"Dr. Clovis was one of the first people through the door at USDA in January 2017, and we are grateful for his time here," a USDA spokesman said. "He is a good man and a patriot who for decades has served his country admirably. While we are sad Dr. Clovis is leaving USDA, we wish him well on his future endeavors back home in Iowa."

Daniel Lippman contributed to this report.

Zinke hires Iowa political consultant for Interior parks job [Back](#)

By Ben Lefebvre | 05/03/2018 06:55 PM EDT

Interior Secretary Ryan Zinke has hired Iowa Republican political consultant Chuck Laudner for a position with the National Park Service, an Interior spokeswoman confirmed today.

Interior hired Laudner "a few weeks ago," spokeswoman Heather Swift said, though she did not say what his job he had taken.

"Rebuilding our National Parks infrastructure is a major legislative priority of the Secretary and President and Chuck is helping make it happen," Swift said.

Laudner was an [adviser](#) to President Donald Trump's campaign, and he previously worked with Pennsylvania Republican Sen. Rick Santorum's presidential campaign in Iowa in 2012. Laudner also worked as the executive director for the Iowa Republican Party from 2007 to 2008.

Iowa has two national parks, according to the NPS website.

Laudner's appointment could be the latest example that Zinke is considering a possible presidential run. A [polling firm](#) asked Iowa residents in April their opinion on Zinke, while a political group run by former advisers to Vice President Mike Pence paid for a 30-second [television ad](#) featuring Zinke that aired in Washington, D.C. in March.

"What a curious hire," said Aaron Weiss, media director at Center for Western Priorities, a conservation group. "Chuck Laudner doesn't appear to be at all qualified for a job at the Interior Department, but he's very well-qualified to advise a politician with future ambitions in Iowa."

Blankenship goes after McConnell's 'China family' in new ad [Back](#)

By Alex Isenstadt | 05/03/2018 05:25 PM EDT

West Virginia GOP Senate hopeful Don Blankenship is amping up his racial attacks on Senate Majority Leader Mitch McConnell with a new ad declaring, "Swamp captain Mitch McConnell has created millions of jobs for China people."

"While doing so, Mitch has gotten rich," Blankenship adds. "In fact, his China family has given him tens of millions of dollars."

McConnell's wife, Transportation Secretary Elaine Chao, was born in Taiwan and her parents are Chinese. Her father is chairman of a shipping company.

The new spot, which is expected to start airing on Friday, comes just ahead of the May 8 primary. As the dramatic contest comes to a close, Blankenship, a former coal baron who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, has focused his assault squarely on McConnell — sometimes in harshly racial terms.

During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China." He also said that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

Earlier this week, Blankenship began running another TV spot labeling McConnell "cocaine Mitch." The spot is apparently in reference to a 2014 report that drugs were once found aboard a shipping vessel owned by Chao's family.

McConnell has singled out Blankenship for defeat, convinced that a Blankenship primary win would destroy the party's prospects for defeating Democratic Sen. Joe Manchin in November. A McConnell-aligned super PAC has aired about \$1.3 million in negative ads against Blankenship.

Blankenship is facing two more mainstream GOP opponents, Rep. Evan Jenkins and state Attorney General Patrick Morrisey. Recent polls have shown Blankenship fading.

With Blankenship going after Chao, McConnell's political team has swung back aggressively. Josh Holmes, a longtime McConnell political adviser, has described Blankenship as "mentally ill."

In his new spot, Blankenship responds to that accusation, saying: "Mitch's swamp people are now running false, negative ads against me. They're also childishly calling me despicable and mentally ill."

The ad closes with a shot of Blankenship holding two young children, one on each arm as he pronounces, "I will beat Joe Manchin and ditch cocaine Mitch for the sake of the kids."

Holmes fired back at Blankenship. "This clown is a walking talking case study for the limitation of a prison's ability to rehabilitate," he wrote in a text message.

While Blankenship has attempted to focus the campaign on China during the closing stretch of the race, McConnell's team has noted that in 1999 Blankenship spoke of moving to China and becoming a Chinese citizen. Blankenship's girlfriend was born in China, according to media reports.

Pruitt airs environmental concerns about proposed Alaska mine [Back](#)

By Alex Guillén | 01/26/2018 07:34 PM EDT

EPA Administrator Scott Pruitt today announced he has serious concerns about any potential mining project in Alaska's Bristol Bay region, creating doubt that the controversial Pebble Mine proposal may ultimately be approved.

EPA said in a release today that it will suspend its proposed withdrawal of Obama-era restrictions after hearing from Alaskan residents and other interested parties. The proposed mine has long drawn opposition from some in the state, including independent Gov. Bill Walker, as well as environmentalists, over worries that it could harm Bristol Bay's critical salmon fisheries.

"It is my judgment at this time that any mining projects in the region likely pose a risk to the abundant natural resources that exist there," Pruitt said in a statement. "Until we know the full extent of that risk, those natural resources and world-class fisheries deserve the utmost protection."

The permitting process, which is handled at this stage by the Army Corps of Engineers, can continue, EPA said. But the agency warned that the developers will have to clear a "high bar." The agency added in a release that not revealing Pruitt's doubts at this stage would be "disingenuous." EPA has veto power over such Army Corps permits.

Pebble Limited Partnership CEO Tom Collier said in a statement that the company "can demonstrate that we can responsibly construct and operate a mine at the Pebble Deposit that meets Alaska's high environmental standards."

DOJ charges former VW CEO with conspiracy, wire fraud [Back](#)

By Lauren Gardner | 05/03/2018 04:42 PM EDT

DOJ unsealed an indictment today charging former Volkswagen AG leader Martin Winterkorn with conspiracy and wire fraud linked to the automaker's effort to cheat U.S. diesel emissions standards.

Winterkorn is charged with one count of conspiracy with other VW executives to defraud the United States, along with the manufacturer's customers. The other three counts concern wire fraud tied to the scheme.

"If you try to deceive the United States, then you will pay a heavy price," Attorney General Jeff Sessions said in a statement. "The indictment unsealed today alleges that Volkswagen's scheme to cheat its legal requirements went all the way to the top of the company. These are serious allegations, and we will prosecute this case to the fullest extent of the law."

The indictment alleges that Winterkorn knew of the emissions cheating as far back as May 2014, and that he was informed again of it in July 2015. VW as a company pleaded guilty in March 2017 to criminal charges related to the regulatory deception and agreed to pay a \$2.8 billion criminal penalty.

Subject: Morning Energy: How 'the swamp' could overtake West Virginia's primary — Groups react to EPA's proposed 'secret science' rule — API to tap Mike Sommers

By Kelsey Tamborrino | 05/01/2018 06:01 AM EDT

With help from Garrett Ross

HOW 'THE SWAMP' COULD OVERTAKE WEST VIRGINIA'S PRIMARY: West Virginia Attorney General Patrick Morrisey may be touting himself in the GOP Senate primary as a Washington outsider who wants to "blow up" D.C., but his opponents are dragging him through the muddy swamp. "Morrisey got filthy rich in the swamp lobbying for special interests," says the narrator of one of his opponent Rep. Evan Jenkins' ads, Pro's Theodoric Meyer reports. And while Morrisey, who's hoping to take on Democratic Sen. Joe Manchin this fall, has so far weathered the attacks and continues to do well in public polling, the May 8 vote will ultimately test whether GOP voters are willing to send a former lobbyist to Washington.

"Morrisey's self-described 'outsider' rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions," Theo writes. "It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign. Read more.

IN THE OTHER CORNER of the Republican primary sits coal baron Don Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers and who continues to escalate his attacks against Senate Majority Leader Mitch McConnell, POLITICO's Alex Isenstadt reports. The Senate hopeful is out with a new ad that dubs McConnell "Cocaine Mitch" as polls show Blankenship falling behind his more mainstream opponents. "One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the new ad, possibly referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao, Alex reports.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. BP America's Bob Stout was the first to correctly guess that former President Calvin Coolidge was the first president to attend the White House Correspondents' Dinner. For today: Which president brought the first professional baseball team to the White House to visit? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

WHILE CONGRESS IS AWAY, THE CONFERENCES WILL PLAY: The National Hydropower Association continues its Waterpower Week in Washington today with remarks from FERC Chairman Kevin McIntyre and Thomas Smith, chief of operations and regulatory division for the U.S. Army Corps of Engineers. McIntyre will discuss the "global frontiers of waterpower," providing an update on FERC's

hydropower activities and his perspective on the industry's future. Smith will deliver remarks during the presidential luncheon this afternoon, alongside Herbie Johnson, hydro general manager at the Southern Company. The annual conference is tied to three co-located conferences, including the NHA conference, the International Marine Renewable Energy Conference and the Marine Energy Technology Symposium.

— **The Solar Summit 2018 also kicks off today in San Diego**, where Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association, will discuss solar in the Trump era, with a focus on the corporate tax reform, Section 201 and other macro-level risks. Hopper will be joined on stage by Avangrid Renewables' Laura Beane and Charlie Gray, director of the Solar Energy Technologies Office at DOE's Office of Energy Efficiency & Renewable Energy.

A LOAN IN THE SUN: Coinciding with the solar conference, GTM Research is out with a new report this morning on U.S. residential solar financing. The report found that last year was the first year since 2011 when more systems have been purchased with cash and loans (59 percent) than with leases and power purchase agreements (41 percent). That's in part due to the availability of loan products, as well as a shortage of third-party ownership suppliers, and Tesla and Vivint's move away from third-party ownership, the GTM report found.

The report also said that competition has intensified in solar loans, with various solar-specific loan providers, traditional banks and credit unions entering the realm. The increased competition has led to "uber-competitive rates and therefore compressed margins, leaving questions about the financial health and long-term viability of many of these loan providers," a summary of the report said.

RULE REACTIONS: EPA is moving full-speed ahead in its controversial scientific policy that would exclude the use of studies that don't publicly disclose all data. The agency published the proposed rule in the Federal Register on Monday, kicking into gear a 30-day comment period. And already, several groups have come forward to oppose the policy, laying out what they see as the policy's adverse effects — and calling for more consideration before any formal change.

— **The Union of Concerned Scientists** — which sent a letter signed by more than 1,000 scientists to EPA Administrator Scott Pruitt last week asking him to reverse course prior to the rule's announcement — plans to send another urging for the comment period to be extended a minimum of 60 days and calling for the agency to hold three public hearings across the U.S. to receive additional input. "The current timeframe and lack of opportunities for engagement are wholly inadequate and will not allow for thorough public input of this proposed rule and its impact on science-based health and environmental safeguards." Read the letter here.

— **A group of scientific journals** released a joint statement saying that the proposal "does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."

A SOMMERS DAY: The American Petroleum Institute is expected to tap Mike Summers to replace Jack Gerard to lead the oil and gas industry lobbying group, two sources tell POLITICO's Emily Holden and Eric Wolff. Summers was former House Speaker John Boehner's chief of staff and has since spent two years leading the American Investment Council, a private equity trade group. Gerard announced earlier this year that he would step down in August. Read more.

TRUMP GRANTS TARIFF EXTENSION FOR SOME: The president extended a temporary exemption by one month for Canada, Mexico and the European Union from heavily watched steel and aluminum tariffs, the White House announced Monday. The move gives the key U.S. allies until June 1 to reach a deal with the administration to avoid the tariffs of 25 percent on steel and 10 percent on aluminum exports sent to the United

States. The tariffs were slated to take effect at 12:01 a.m. today if President Donald Trump had not moved to extend the deadline, POLITICO's Megan Cassella [reports](#).

WHISTLEBLOWER SAYS PRUITT LIED: Kevin Chmielewski, the former deputy chief of staff for operations at EPA, told ABC News Pruitt was telling a "bold-faced" lie last week when he testified to lawmakers that none of his employees were retaliated against for raising concerns about his spending decisions. Chmielewski, who was dismissed and is now acting as a whistleblower, told ABC that chief of staff Ryan Jackson called him into his office and said: "Hey — Administrator Pruitt either wants me to fire you or put you in an office so that he doesn't have to see you again." Chmielewski added: "And in addition to that, he wants to put Millan (Hupp) in your spot, as your title and your pay grade."

EPA declined to comment to ABC in response to Chmielewski's allegations, but the outlet said it obtained a personnel form filled out by EPA human resources officials that said Chmielewski resigned on March 17. "The form is not signed by Chmielewski, who says he was actually forced to leave a month before that date," ABC writes. [Read more.](#)

DEMOCRATS PRESS PRUITT ON TESTIMONY: Separately, Democratic Reps. [Doris Matsui](#) and [Paul Tonko](#) sent a letter Monday calling out a different aspect of Pruitt's testimony last week before Congress. The pair point to a contradiction between Pruitt's remarks and reports that the administration has [drafted](#) a proposed rulemaking to block California's waiver authority to set stricter standards for light-duty vehicles. "If true, these reports directly contradict your testimony last week. As you were reminded at the start of that hearing, it is a violation of the law to knowingly make false statements to a Congressional committee," Matsui and Tonko write in a letter to Pruitt. Asked last week about whether he would revoke California's special Clean Air Act waiver, Pruitt [told lawmakers](#) "not at present." The lawmakers requested Monday that Pruitt provide all documentation related to the development of the notice of proposed rulemaking by Friday. [Read the letter here.](#)

SAGE SUIT: Conservation groups are suing the Trump administration over policies that they say would "adversely impact essential habitats and populations" for the greater sage grouse. The lawsuit, filed in the U.S. District Court in Boise, concerns Interior Department's oil and gas lease auctions in Nevada, Utah, Montana, Wyoming and Idaho — and calls on the court to reverse the sales. "There's no scientific or legal support behind these policies, and no public support for them either," said Michael Saul, a senior attorney at the Center for Biological Diversity. "They're clearly intended to make fossil fuel development the dominant use of public land, and that's illegal." [Read the complaint.](#)

DOE 'ENCOURAGED' BY PJM MOVE: The Energy Department said it was "encouraged" by news Monday that PJM Interconnection [will perform](#) "stress tests" on different parts of the grid to identify fuel supply vulnerabilities. "PJM's concerns are consistent with what DOE, NERC, and others have been saying for years: premature retirements of fuel-secure resources are putting the future of our nation's electric grid at risk, and that undermines our national security," DOE press secretary Shaylyn Hynes said in a statement. DOE urges the regulatory agency "to take immediate action to stop the loss of fuel-secure capacity," Hynes said, adding that DOE continues to review all of its options within its authority to ensure a resilient grid. Recently, Energy Secretary Rick Perry [has considered](#) invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security.

BY PROXY: A new report from the American Council for Capital Formation out today found that proxy advisory firms — which advise shareholders on how to assess and vote on company plans — are operating with minimal oversight and are moving toward an increasingly activist stance on issues relating to the environment, as well as social and political issues. The report, titled "The Conflicted Role of Proxy Advisors," examines the impact such proxy firms have on major policies at most publicly traded companies. [Read it here.](#)

FIRST OFFICIAL DAY ON THE JOB: Today is Secretary of State Mike Pompeo's first full day in Foggy Bottom, where he will deliver a speech to introduce himself to the department. POLITICO's Nahal Toosi breaks

down the differences between Pompeo and his predecessor and former Exxon Mobil CEO Rex Tillerson [here](#). But keep an ear out for any climate mentions, as diplomats and environmentalists [gather](#) today in Bonn, Germany, to work out the kinks of the Paris climate agreement. Greens have hit Pompeo as a climate science doubter, while others like Competitive Enterprise Institute's Myron Ebell have said the Kansas Republican will be a "forceful advocate" of Trump's decision to exit the Paris accord.

A PENNY FOR YOUR FREETHOUGHT CAUCUS: Democratic Reps. [Jared Huffman](#), [Jamie Raskin](#), [Jerry McNerney](#) and [Dan Kildee](#) launched the Congressional Freethought Caucus on Monday "to promote sound public policy based on reason, science, and moral values, protect the secular character of our government, and champion the value of freedom of thought worldwide." In a [statement](#), Huffman said the caucus "will help spark an open dialogue about science and reason-based policy solutions."

PAY THE PRICE: The New York Independent System Operator and state policymakers released [a draft plan](#) on Monday to price carbon as part of the electric system, [Pro New York's Marie French](#) reports. The move comes as an early step toward addressing the impact of state subsidies for renewables and nuclear power on the competitive market. "Under the proposal, a social cost of carbon set by state regulators would be added on to regional energy prices," Marie writes. Read [more](#).

MAIL CALL! A coalition of more than 160 groups sent a letter to Interior Secretary Ryan Zinke on Monday in opposition to the department's [proposal](#) to rescind the "blanket rule" the U.S. Fish and Wildlife Service used to extend protections for endangered species. Read the [letter](#).

— **Oregon Sens. [Ron Wyden](#) and [Jeff Merkley](#)** and Reps. [Earl Blumenauer](#), [Peter DeFazio](#), [Suzanne Bonamici](#) and [Kurt Schrader](#) sent a letter Monday to Office of Management and Budget Director Mick Mulvaney and Assistant Army Secretary R.D. James., requesting federal officials support a flood protection feasibility study for Portland. Read it [here](#).

MOVER, SHAKER: The White House is expected to tap California agriculture attorney Michael Stoker to lead EPA's San Francisco-based Region 9 office, [sources tell E&E News](#). The regional office is the only one to which Trump has not appointed a leader.

A NEW LOOK: Trade association the American Exploration & Production Council is launching today a [new website](#) and [Twitter](#) and [Facebook](#) accounts. The new website will include videos, fact sheets, info-graphics and issue pages.

Stories from POLITICO Pro

Lobbyists fuel lobbyist-turned-'outsider' Senate candidate Back

By Theodoric Meyer | 05/01/2018 05:00 AM EDT

West Virginia Attorney General Patrick Morrisey has gone a notch above pledging to "drain the swamp" during his Senate campaign. "Let's not just change Washington; let's blow it up," Morrisey says in an early TV ad, as he drops a mountain on the Capitol dome.

But Morrisey's self-described "outsider" rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions. Morrisey's wife is also a lobbyist, and their work in D.C. has been the subject of unforgiving attacks from both of Morrisey's opponents in the Republican Senate primary.

"Morrisey got filthy rich in the swamp lobbying for special interests," the narrator says in one of Rep. Evan Jenkins' commercials.

Morrisey has weathered the attacks, leading the field or running a close second in recent public polls of the Republican primary to take on Democrat Joe Manchin, one of the most vulnerable senators up for reelection this year. The race has attracted national attention as Washington Republicans attempt to derail the candidacy of Don Blankenship, the former coal-mining executive who spent a year in prison for his role in a mine explosion that killed 29 men. But next week's primary will also test whether GOP voters are willing to send a former lobbyist to Washington, despite President Donald Trump's vow to curb K Street's influence.

"It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's (R-Ind.) successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign.

While Morrisey has tried to deflect attention away from his lobbying past, he has embraced it behind the scenes. Morrisey's campaign raised more than \$250,000 from more than 200 current and former registered lobbyists through March 31, according to a POLITICO review of campaign finance records — accounting for nearly 20 percent of his individual donations.

Morrisey has raised even more from corporate and lobbying firm PACs, as well as from people who aren't registered lobbyists but clearly work in Washington's influence industry, such as former Rep. Mike Ferguson (R-N.J.), who heads BakerHostetler's federal policy team but isn't registered as a lobbyist. Of the \$250,000, roughly \$167,000 of it comes from lobbyists who are currently registered.

Many of Morrisey's lobbyist contributors work for health care and pharmaceutical interests, which Morrisey represented during his own years on K Street. They include Rodger Currie, the top lobbyist for Pharmaceutical

Research and Manufacturers of America, the powerful trade group for drug companies, who wrote Morrisey's campaign a \$2,000 check in December.

Former Rep. David Jolly (R-Fla.), a former lobbyist elected in 2014, said his lobbying background "was definitely an issue that my opponents tried to use to define me" in the race. He was able to overcome those attacks, he said, because he hadn't lobbied for clients that voters found objectionable.

Morrisey represented about 30 clients during his time at two Washington firms, Sidley Austin and King & Spalding, including big pharmaceutical companies such as Bayer, Novartis and Novo Nordisk. If Jolly had represented such clients, he said, he might have had a tougher race.

"These are very fair and legitimate questions," Jolly said.

Morrisey has shied away from discussing his lobbying days, instead casting himself as an outsider and conservative in contrast with Jenkins, who used to be a Democratic state legislator.

Morrisey refused to say the word "lobbyist" during a debate last week, even as Jenkins and Blankenship attacked him for lobbying for the pharmaceutical industry — a sensitive subject in a state that's struggling to combat an opiate crisis partly fueled by drug distributors. Asked by the moderators at the end of the debate to clear up a misconception about himself, Morrisey said only that he'd "never worked on opiate issues in the private sector."

Morrisey's campaign website uses similar language, describing him as a former "health care attorney in the private sector."

Jenkins, who's facing Blankenship and Morrisey in the three-way race for the nomination, has raised far less from K Street, even though, as a sitting congressman, he has plenty of opportunity to mingle with lobbyists, too.

A review of Jenkins' campaign finance reports turned up only 10 current and former lobbyists who had given a combined \$20,000 to his campaign since he filed to run last May. Four of them are currently registered. Jenkins has raised much more than Morrisey from corporate PACs: about \$136,000 to Morrisey's \$86,000, according to a POLITICO analysis.

Morrisey's campaign declined to make him available for an interview.

"Patrick Morrisey served as a law partner and practice group co-chair at two of the largest law firms in the country, focusing his practice on health care regulatory matters, legislative issues, compliance, fraud and abuse, administrative law, investigations, and solving client problems," Nachama Soloveichik, a Morrisey campaign spokeswoman, said in an statement.

Preeya Noronha Pinto, a partner at King & Spalding who lobbied alongside Morrisey and gave his campaign \$500 last year, said much of their work involved meeting with administration officials and, occasionally, members of Congress in an effort to get Medicare, Medicaid and other government health care programs to cover new drugs and medical devices developed by their clients. She said she hadn't seen the ad in which Morrisey drops a mountain on the Capitol, but she wasn't surprised he was running a campaign critical of Washington.

"I think everybody in a certain respect, even if they've worked here for years, thinks that D.C. is dysfunctional and there's a lot of room for improvement," Pinto said.

Morrisey's wife, Denise Henry Morrisey, has also been the subject of attacks based on her lobbying work.

"His wife's firm lobbies for Planned Parenthood," the narrator charges in one of Blankenship's TV ads. "The Morrisseys won't stop drug abuse or abortions by lobbying for drug companies and abortion clinics."

Soloveichik, the Morrissey campaign spokeswoman, said Denise Morrissey would stop lobbying if her husband were elected to the Senate. But she declined to say whether Denise Morrissey would give up her stake in Capitol Counsel, a top Washington firm in which she owns a 15 percent stake.

Denise Morrissey agreed to an interview with POLITICO last week but later stopped responding to emails and phone calls.

Savage, the Republican operative who worked as a consultant on Young's campaign in 2016, said it was possible to parry lobbying attacks — but only with willingness to answer questions about it.

Savage managed former GOP Sen. Dan Coats' comeback campaign in Indiana in 2010, when he won back his old seat in 2010 after working as a lobbyist. Savage credited Coats' victory, in part, to his willingness to be forthcoming about his lobbying work.

"The attacks after that kind of fell flat, to be honest with you," Savage said.

Kevin Robillard contributed to this report.

Blankenship slams 'Cocaine Mitch' in anti-McConnell ad [Back](#)

By Alex Isenstadt | 04/30/2018 06:23 PM EDT

West Virginia Senate hopeful Don Blankenship is intensifying his offensive against Majority Leader Mitch McConnell, calling him "Cocaine Mitch" in a new TV ad released just more than a week until the Republican primary.

"One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the [spot](#), which comes as polls show the coal baron falling behind his more mainstream opponents.

Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers, offers no context for the jab. But he may be referring to a 2014 [report](#) in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao.

Blankenship has gone after McConnell in startlingly personal ways. During a recent interview with POLITICO, Blankenship said McConnell "has a lot of connections in China," and that Chao is "from China, so we have to be really concerned that we are in truth" putting America's interests first.

A McConnell representative did not respond to a request for comment.

With the May 8 primary fast approaching, Blankenship has launched a slash-and-burn campaign targeting the Senate GOP leader. Blankenship's offensive comes as polls show him falling behind GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey in the primary.

McConnell's political operation has moved aggressively to block Blankenship's path. Operatives close to the majority leader, convinced that Blankenship would lose to Democrat Joe Manchin in the November general election, have launched a super PAC that has spent about \$1.3 million on TV ads attacking the coal baron.

One ad from Mountain Families PAC describes Blankenship as a "convicted criminal," who lived a lavish lifestyle while ignoring mine safety laws.

"Don Blankenship was about the money," the spot concludes. "West Virginia families paid the price."

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman [Lamar Smith](#) (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. [Mike Rounds](#) (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a [letter](#) opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

Pruitt scales back EPA's use of science [Back](#)

By Emily Holden and Annie Snider | 04/24/2018 03:17 PM EDT

Environmental Protection Agency chief Scott Pruitt announced Tuesday he would seek to bar the agency from relying on studies that don't publicly disclose all their data, a major policy change that has long been sought by conservatives that will sharply reduce the research the agency can rely on when crafting new regulations.

The unveiling of the proposed rule delivers a win to Republicans like House Science Chairman Lamar Smith (R-Texas), who unsuccessfully pushed legislation to impose the same type of change. The move also demonstrates Pruitt's persistence in pursuing President Donald Trump's anti-regulation agenda just two days before the embattled EPA chief is due to face fierce questioning from lawmakers about his hefty spending, expanded security detail and cheap condominium rental from the wife of an energy lobbyist.

At an invitation-only meeting at EPA headquarters with Smith, Sen. Mike Rounds (R-S.D.) and other supporters of the policy, Pruitt said the proposed rule was critical in ensuring that the agency was transparent

about how it is making decisions to justify costly new regulations. It is the latest step Pruitt has taken to fundamentally shift the agency's approach to science.

"It is a codification of an approach that says as we do our business at the agency the science that we use is going to be transparent, it's going to be reproducible, it's going to be able to be analyzed by those in the marketplace. And those who watch what we do can make informed decisions about whether we've drawn the proper conclusions or not," Pruitt said.

Text of the proposed rule was not immediately available.

The proposal, based on legislation pushed by Smith, is intensely controversial, and scientists and public health groups say it will prevent federal regulators from enacting health and safety protections. Nearly 1,000 scientists, including former EPA career staffers, signed a letter opposing the policy sent by the Union of Concerned Scientists to Pruitt on Monday.

Their primary concern was that many of the country's bedrock air and water quality regulations are based on research that cannot disclose raw data because it includes the personal health information.

But industry has its own version of the same problem. EPA often relies on industry studies that are considered by companies to be confidential business information when determining whether new pesticides and toxic chemicals are safe to use. Internal EPA emails obtained under the Freedom of Information Act show that EPA political officials, including Nancy Beck, who became the chief of the agency's chemical safety office last year after working for years at a chemical industry lobbying group, worried that the new policy would limit the agency's ability to consider industry data or would force companies to make this proprietary data public.

"We will need to thread this one real tight!" Richard Yamada, political official who led work on the new policy wrote to Beck after she raised the concerns.

It was not immediately clear if the new proposed rule included measures to address those concerns.

Rush Holt, CEO of the American Association for the Advancement of Science, said Pruitt's changes could keep the agency from revising public health regulations as problems arise or new data comes to light.

"On the surface it sounds so innocuous or even beneficial. What could be wrong with transparency? Well it's clear to me that this is not based on an effort to be transparent. It is rather based on an effort to be just the opposite," he said.

"EPA is particularly important because when science is misused, people die," he added.

Pruitt has been discussing the new scientific policy publicly for weeks, but it only went to the White House for interagency review last week. Such swift review is very rare for the Office of Management and Budget, which often takes months to vet a new policy. At least one group, the Environmental Defense Fund, has requested a meeting with OMB officials to discuss the rule, but OMB's website shows that no meetings have been scheduled with interested groups.

Many public health studies can't be replicated without exposing people to contaminants, and environmental disasters such as the Deepwater Horizon oil spill cannot be recreated, the group said, raising intellectual property, proprietary and privacy concerns.

Pruitt's predecessor Gina McCarthy, and her air chief Janet McCabe, in an op-ed in The New York Times in March said concerns about studies are dealt with through the existing peer-review process, which ensures scientific integrity.

"[Pruitt] and some conservative members of Congress are setting up a nonexistent problem in order to prevent the E.P.A. from using the best available science," they said.

API's Gerard to exit on an oil industry winning streak [Back](#)

By Ben Lefebvre | 01/17/2018 06:05 PM EDT

American Petroleum Institute President and CEO Jack Gerard's plan to exit the powerful trade association could signal the end an era for oil industry lobbying.

Gerard notched up a long list of achievements during his 10-year tenure, which coincided with the oil and gas boom that turned the U.S. into the world's largest energy producer. He will step down in August after deciding not to renew his contract, API announced.

Gerard took the helm at the API after leading the American Chemistry Council and the National Mining Association. And he was well compensated, receiving \$6 million in salary and other compensation as of 2015, according to the API's latest tax forms.

During his time atop API, flagging U.S. production rebounded with the advent of fracking and horizontal drilling, allowing energy producers to tap new resources in North Dakota, Appalachia and West Texas. And as overall oil output doubled to nearly 10 million barrels a day, API's membership swelled by 50 percent, to more than 600 companies.

That helped API to expand its reach, and it doled out \$9.4 million on lobbying Washington lawmakers in 2017, quadruple the amount it spent in the year Gerard took the helm.

API helped overturn the decades-old ban on oil exports, open new areas to drilling — including the Arctic National Wildlife Refuge — and win federal approval for the Keystone XL pipeline. And under Gerard, API also introduced the term that would eventually be taken up by President Donald Trump, when in 2012 it called for a "new era of American world energy dominance."

"We've taken the nation from energy scarcity to energy abundance," Gerard said of the industry at the API's annual State of American Energy address in Washington earlier this month.

But he warned at that event that it wasn't time for API to take "a victory lap," as he cited a to-do list that contained little more than continuing a yearslong fight to repeal a biofuels mandate the industry finds burdensome and streamlining the federal permitting process.

"It's hard to say API wasn't successful under his tenure," said John Northington, a former Clinton-era Interior Department official who works as an energy consultant for many API member companies, adding that it delivered much of what the industry wanted to accomplish.

Not all energy industry insiders agreed, however. Some pointed that for an organization with annual revenue of around \$250 million — much of which it spent on advertisements, including one that ran during last year's Super Bowl, or donations to Republicans — the API's influence was limited. Despite a string of recent wins, it hadn't managed to record any progress in altering the decade-old Renewable Fuel Standard for biofuels or ending restrictions under the Jones Act against foreign-flagged ships transporting fuel between U.S. ports.

"They have this ridiculous amount of money, but they don't get a lot of results," said one refining industry source who requested anonymity to discuss the association. "They don't do bad work, but for that kind of money, you expect more."

The API's ranks have also become divided over how to handle growing public concern about the oil and gas industry's role in climate change. The group in 2016 created a task force to massage the industry's environmental image and work Democrats on a potential carbon tax, a policy that drives a wedge between companies like Exxon Mobil, which has supported such a tax, and Chevron, which has opposed it.

An API spokeswoman said it was unknown whether Gerard was retiring or would join another organization. Gerard will help lead the search for a new president and CEO, the spokeswoman added.

One possible replacement for Gerard is API's current executive vice president and chief strategy officer, Marty Durbin. Durbin had been in charge of API's government affairs before departing to become head of the lobby group America's Natural Gas Alliance, which subsequently merged with API.

Other names floated by industry insiders as potential candidates included Mike Sommers, a former chief of staff for former House Speaker John Boehner, now CEO of the American Investment Council; Karen Harbert, head of the U.S. Chamber of Commerce's Global Energy Institute; and former Sen. Blanche Lincoln, an Arkansas Democrat.

An API spokeswoman did not comment on possible candidates.

Sources: API expected to tap Sommers as new chief [Back](#)

By Emily Holden and Eric Wolff | 04/30/2018 04:33 PM EDT

The American Petroleum Institute is expected to tap Mike Sommers, the head of a private equity trade group who worked as a top aide to former House Speaker John Boehner, to replace Jack Gerard at the helm of the powerful oil and gas industry lobby group, according to two sources.

Gerard announced his retirement earlier this year after a decade at the helm of the API, where he notched up a long list of achievements including overturning the decades-old ban on crude oil exports. He will step down in August.

API did not reply to a request for comment.

The oil and gas industry has so far gotten strong support from the Trump administration, which has moved to open the Arctic National Wildlife Refuge to exploration, is considering making wide swathes of coastal waters available to the industry, and last week said it would roll back some Obama offshore drilling rules.

But API has urged the White House to scrap its steel and aluminum tariffs, and to keep core provisions of NAFTA in place as it negotiates an update to the trade agreement.

Sommers, who was Boehner's chief of staff, has led the American Investment Council for two years, a position that kept him close to Arclight Capital Partners, The Blackstone Group, EnCap Investments and other firms that have invested heavily in energy projects. He also served as an aide to former President George W. Bush in 2005 at the National Economic Council working on agriculture, trade and food policy.

Barry Worthington, CEO of the United States Energy Association, which brings together public and private organizations, corporations and government agencies, said he'd been told Sommers would succeed Gerard.

"Jack Gerard is going to be a tough act to follow," he said.

Gerard was also one of the best-paid lobbyists in Washington, D.C. He received \$5 million in direct compensation from API, plus another \$1.2 million in perks in 2015, according to the group's latest IRS forms.

Marianne Levine and Ben Lefebvre contributed to this report.

Trump grants key U.S. allies an extra month of tariff relief [Back](#)

By Megan Cassella | 04/30/2018 05:57 PM EDT

President Donald Trump has decided to extend by one month a temporary exemption from steel and aluminum tariffs for Canada, Mexico and the European Union, the White House announced Monday evening.

The move gives key allies — and three of the U.S.' four largest trading partners — until June 1 to reach some sort of deal with the Trump administration to avoid duties of 25 percent on steel and 10 percent on aluminum exports sent to the United States. The tariffs had been set to take effect at 12:01 a.m. Tuesday if Trump had not moved to extend the deadline.

The administration has also reached preliminary agreements with three other countries that had initially been granted a temporary exemption — Argentina, Brazil and Australia — allowing them to escape the duties as details are finalized over the next 30 days, the White House said. Trump did not set a deadline for those details to be worked out but said he would consider reimposing the tariffs if the agreements are not finalized "shortly."

One other country, South Korea, had already reached a preliminary deal for a permanent exemption from the steel tariffs because it agreed to cap its exports to the U.S. at 70 percent of the average export volume over the previous three years. Trump's official proclamation said the administration will monitor the implementation and effectiveness of that quota and left room for Trump to "revisit" his decision if needed.

"In all of these negotiations, the administration is focused on quotas that will restrain imports, prevent transshipment, and protect the national security," the White House said in its declaration. "These agreements underscore the Trump administration's successful strategy to reach fair outcomes with allies to protect our national security and address global challenges to the steel and aluminum industries."

The declaration brings some clarity to a decision-making process that until the official release left key allies wondering whether they would beginning Tuesday face penalties sure to roil international markets and disrupt global supply chains. Few people inside the White House or overseas had been sure of what or even when Trump would decide.

Imposing the duties would also have affected foreign steel industries that depend on access to the U.S. market. Canada and Mexico both send more than half of their steel produced annually into the United States, while the 28 nations of the EU together serve as the largest single supplier of steel to the U.S.

Of \$29.1 billion worth of steel that the United States imported last year, \$6.2 billion came from the 28 nations of the EU and \$2.9 billion from other European countries. About \$5.1 billion came from Canada, \$2.8 billion from South Korea, \$2.5 billion from Mexico, \$1.6 billion from Japan, \$1.4 billion from Russia and just \$976 million from China.

A U.K. government spokesperson called the extension "positive" and said EU countries would continue to work to reach a permanent solution.

"We remain concerned about the impact of these tariffs on global trade and will continue to work with the EU on a multilateral solution to the global problem of overcapacity, as well as to manage the impact on domestic markets," the spokesperson said in a statement Monday night.

Although the move grants some of the United States' closest allies another month to work out a deal, it remains unclear what sort of concessions would satisfy Trump and his administration.

Commerce Secretary Wilbur Ross and other administration officials have said in recent days that countries would have to choose between either quotas or tariffs — but the EU, Canada and Mexico have said they expect a full exemption without having to agree to such restrictions.

"We're busy alienating the few friends we have left," said Bill Reinsch, a senior adviser at the Center for Strategic and International Studies. "The president clearly, on trade issues, doesn't make a distinction between the good guys and the bad guys. If you're not doing exactly what he wants, you're a bad guy by definition — and nothing else counts."

The process of deciding on the exclusions and exemptions has been chaotic since the departure of former White House staff secretary Rob Porter, who was heavily invested in trade policy and making sure that differing viewpoints were included in the decision-making process.

U.S. Trade Representative Robert Lighthizer, meanwhile, has had myriad policy questions on his plate, including the ongoing NAFTA talks and his upcoming trip to China later this week to talk trade.

With any final decision still up in the air, some nations have indicated exactly how they will retaliate if and when Trump does impose the tariffs. The European Union last month generated a list of U.S. exports ranging from peanut butter to lipstick and yachts that would face punitive 25 percent duties on their way into the European market if Brussels is not spared. The EU's list, which is valued at roughly \$3.4 billion, is largely comprised of products from Republican states and districts that would bear the brunt of the tariff impact.

At the same time, European nations have also been working among themselves and with the United States to strike a compromise. German Chancellor Angela Merkel and French President Emmanuel Macron both traveled to the White House last week to talk face-to-face about the issue with Trump, who is still toying with the decision.

Merkel and Macron both spoke over the weekend with U.K. Prime Minister Theresa May about the "vital importance" of Europe's steel and aluminum industries and pledged to work together with the rest of the EU to push for a compromise and a permanent exemption.

To that end, EU Trade Commissioner Cecilia Malmström also spoke again over the phone on Monday with Ross.

Tensions are similarly high with Canada and Mexico, who are in intensive trade negotiations with the United States to update NAFTA.

Both countries have repeatedly made clear that they expect to be granted a full, permanent exemption from the tariffs without having to agree to quotas or any other restrictions. But their temporary reprieve was contingent upon a successful completion of the NAFTA rewrite — and with that deal still at least a week away, it remains unclear whether Trump will make the exemption permanent or at least extend it on a temporary basis while negotiations continue.

For either of the U.S. neighbors, imposition of the duties would ratchet up trade tensions at a time when all three countries are working to wrap up a NAFTA negotiation that has already been technically and politically difficult.

"Obviously, Lighthizer knows very clearly our position and how we have to react if any measure is imposed," Mexican Economy Secretary Ildefonso Guajardo said Friday during a visit to Washington to talk NAFTA. "I have been very clear that in this context a quota on steel won't be the best way to go."

If the tariffs do go ultimately into effect for any of the countries involved, a key question will be whether Trump will ratchet up the pressure again after the countries inevitably retaliate, Reinsch said.

"We act, they act, that's round one. The question will be, is [Trump] then going to start round two?" he said, noting that one round of tit-for-tat is "not that unusual" but that two would be more remarkable. "I think the trade war starts in round two."

Nancy Cook and Jakob Hanke contributed to this report.

Source: EPA draft would halt auto standards at 2021 levels, block California authority [Back](#)

By Alex Guillén | 04/27/2018 06:28 PM EDT

A draft proposal from EPA would freeze auto emissions standards after model year 2021 and seek to block California's ability to enact its own more stringent regulations, according to a source familiar with the draft.

The text of the draft is still reportedly in flux, but if ultimately finalized, it would erase half a decade's worth of the Obama administration's much-touted emissions savings, handing a major win to the oil industry. It would also set up a nasty legal fight with California that many legal experts believe the state could win.

The Los Angeles Times first reported on the draft plan today.

EPA Administrator Scott Pruitt on Thursday told a House Energy and Commerce subcommittee that he did "not at present" have any plans to try to revoke California's Clean Air Act waiver to enforce more stringent standards.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt added.

Automakers successfully lobbied the Trump administration to revisit the 2022-2025 standards — although most indicated they simply wanted more flexibility to reach the ultimate emissions goals in 2025. They had complained it would be difficult to meet the Obama administration's goals that would have ultimately lifted the average fuel economy target for the nation's fleet of cars and light trucks to 55 miles per gallon by 2025.

Industry trade groups and individual automakers have also cautioned that a single national standard is preferable to a regulatory patchwork of rules.

WHAT'S NEXT: EPA reportedly will send the proposal to the White House for review in the near future. The agency is working alongside the National Highway Traffic Safety Administration, which is writing its own separate but related fuel economy rules for 2022-2025 vehicles.

Pruitt: EPA not going after California's waiver 'at present' [Back](#)

By Anthony Adragna | 04/26/2018 12:04 PM EDT

EPA Administrator Scott Pruitt said today his agency is "not at present" attempting to undo California's special Clean Air Act waiver allowing the state to set stricter emissions levels for vehicles.

"It's important that we work together to achieve, as was indicated earlier, a national standard," Pruitt said at a House Energy and Commerce subcommittee hearing this morning. "We are working very diligently and diplomatically with California to find answers on this issue."

California officials have warned they would diligently challenge any effort by the Trump administration to go after the waiver.

PJM to probe fuel supply vulnerabilities [Back](#)

By Eric Wolff | 04/30/2018 11:08 AM EDT

PJM Interconnection said today it would seek to identify any fuel supply vulnerabilities in its grid and design market tools to increase resilience, a move that appears designed to head off Energy Secretary Rick Perry's effort to bail out coal-fired and nuclear power plants.

PJM says in a report out today it will run models to "stress test" different parts of the grid to see if fuel security could be compromised under different circumstances. If it finds risks of fuel constraints, it would consider allowing different prices for power from generators that are better able to hedge against fuel problems.

"As is the case with reliability standards, PJM believes the most effective way to address fuel security is to define and establish fuel security criteria and then use market forces to allow all resources to compete to meet those criteria," the report says.

The report's biggest concern appears to be a grid dominated by natural gas, since cold weather can increase demand for home heating and constrain gas supplies. The report makes only one mention of renewables.

PJM has consistently opposed efforts by DOE to exercise emergency authority under either the Federal Power Act or the Defense Production Act to directly subsidize coal or nuclear power plants struggling in the face of low cost power from natural gas and renewables.

Perry's latest bid to help coal faces uphill battle [Back](#)

By Eric Wolff | 04/25/2018 05:08 AM EDT

Energy Secretary Rick Perry's latest idea to protect coal-fired and nuclear power plants may not fare much better than his previous efforts, according to energy experts.

Perry is considering invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security. But that would stretch the definition of the law and almost certainly draw legal challenges — and it would hit a big hurdle in Congress, which would need to approve perhaps billions of dollars in funding to keep the plants afloat, the experts said.

At the urging of President Donald Trump, Perry has sought to keep open coal and nuclear power plants that are threatened with shutdowns amid the stagnant demand for power — and even as natural gas and renewable power sources grab a growing share of the market.

So far, Perry's had no luck. FERC earlier this year rejected his proposal to give the plants financial support, and Energy Department lawyers stymied a push last year to invoke the agency's authority under the Federal Power Act to force the plants to run.

Some experts said any attempt to use the DPA is likely to meet the same fate.

"To me, it's a tough argument to make. It's a specious argument on its surface that seems like a perversion of the intended use of the Defense Production Act," said Tom Hicks, a former acting undersecretary of the Navy under

former President Barack Obama and now a principal at the advisory firm The Mabus Group. "Defense Production Act is on the vanguard of the need for resources, not on the back end for an industry being challenged by economic forces."

But the effort has been a priority for Trump and Perry, who sees saving coal-fired power generation as vital to U.S. security, according to a source familiar with the conversations on the issue.

The Cold War-era law grants the federal government powerful authorities to inject cash into companies essential for national defense in order to preserve domestic supplies of key products. But DOE will have to make the case that electricity produced specifically from coal and nuclear power plants, and not other types of power, is a critical resource.

Using the act to protect the plants when there appeared to be no immediate shortage of power supplies would be a novel application that would almost certainly face legal challenge.

"If the administration uses DPA, they're going to be using it very creatively," said Ari Peskoe, director of the Electricity Law Initiative at the Harvard Law School Environmental and Energy Law Program. "They may come up with reasoning for higher rates and who's going to pay for it. Whether that will hold up, I don't know."

Perry and his staff appear to have very few viable options for bailing out coal and nuclear power, a major energy priority for Trump, who has promised to revive the coal industry. DOE has opened a comments process for interested parties to weigh in on its use of the Federal Power Act's 202(c) emergency provisions, though that would require the agency to go through FERC, which unanimously rejected a similar Perry effort in January.

The 202(c) effort has been pushed by coal magnate Bob Murray, owner of Murray Energy, and by FirstEnergy Solutions, the unit of FirstEnergy Corp. that is in bankruptcy proceedings and which expects to shut down four coal and nuclear power plants. That company asked DOE to use the emergency authority to save not only its plants, but all 85 coal and nuclear power plants in the PJM Interconnection power market.

The DPA was last used by the Obama administration starting in 2012 to help spur the biofuels industry to develop the kind of advanced biofuels that could power ships and aircraft. The government can purchase capital equipment for the cause of national security, and it can fund advertising to support the effort.

And it allows the government to become the buyer of last resort, which could put Washington on the hook to buy excess power generated by coal and nuclear plants. Technically, this electricity could only be purchased at the "cost of production," a level that in the past has been determined by a team within the Defense Department.

While no hard estimate for the cost of a DPA subsidy exists, consultants analyzing Perry's previous bailout proposal estimated costs between \$4 billion and \$10.6 billion annually.

That's a far higher level than Congress typically allocates for the DPA. It provided \$67.4 million in the omnibus passed in March, H.R. 1625 (115), down slightly from the \$76 million it provided for all projects in 2017, according to a report submitted to Congress.

And Congress — and the Republican Party — is deeply divided on using government subsidies to save these plants. Rep. David McKinley (R-W.Va.) has some allies from other coal districts for the effort, but other free market-oriented lawmakers like Rep. Pete Olson (R-Texas) say they want to see markets function unimpeded.

McKinley's staff has been in touch with DOE and the White House, as has West Virginia Sen. Joe Manchin (D).

"I think it's an emergency national concern for the national defense of our country. I think Rick Perry agrees with it, and I think the president does also," Manchin told POLITICO.

PJM has itself said the retirement of FirstEnergy's coal plants did not pose a threat to the region's power supplies, and that it had ample generation to meet demand. It has opposed any effort to mandate to require the plants to stay online.

"We believe that a market-oriented approach consistent with the American free-enterprise system offers better results than government-mandated subsidies," said PJM spokesman Jeff Shields.

Anthony Adragna contributed to this report.

Chatty Pompeo strikes early contrast with reclusive Tillerson [Back](#)

By Nahal Toosi | 04/30/2018 06:11 PM EDT

Mike Pompeo, the new secretary of state, is leaning hard into the side of the job his predecessor seemed to hate the most: public relations.

Within hours of being confirmed last week, Pompeo took along several journalists on a trip to Europe and the Middle East, answering their questions in public and private, and appearing Sunday on ABC News' "This Week." He's planning a town hall meeting with State Department staff soon. And he may even start tweeting.

The moves are in many ways a return to tradition for a secretary of state, a high-profile position where words are the most powerful tool. But they stand in marked contrast to the man Pompeo replaced, Rex Tillerson, whose early lack of visibility caused lingering damage to his reputation inside the Trump administration and beyond.

"It signals that, unlike Tillerson, Pompeo recognizes some of the basic things he needs to do to make the State Department relevant," said Ilan Goldenberg, a former Obama-era State official now with the Center for a New American Security. "By itself, it won't make Pompeo an effective secretary of state. But not doing these things really hurt Tillerson."

On Tuesday afternoon, his first full day in Foggy Bottom itself, Pompeo will deliver a speech introducing himself to the department. Staffers and journalists won't be the only ones listening; foreign diplomats will also parse Pompeo's words carefully.

Tillerson, too, gave a well-received speech his first full day on the job. But for months afterward, he almost seemed to have taken a vow of silence.

He refused to engage reporters, didn't hold a town hall until three months in and had no social media presence. U.S. diplomats soon found themselves aimless, lacking guidance from Tillerson and his small coterie of advisers. Veteran NBC News reporter Andrea Mitchell took to loudly asking questions of a silent Tillerson during his public appearances, videos of which went viral. The department's daily press briefing, a decades-old

tradition, was put on ice for nearly two months. Under pressure, Tillerson brought it back, but in a scaled back format. Headlines asked: "Where's Rex?"

Tillerson puzzled a foreign policy establishment used to secretaries of state — including Hillary Clinton and John Kerry — who sought, rather than shunned, public attention. Many State Department staffers came to see Tillerson as isolated and aloof. And foreign leaders who concluded he was ineffectual and out of the loop engaged directly with the White House instead.

Tillerson greatly increased his visibility in the second half of his 14-month tenure, but the damage was done. Trump fired Tillerson in mid-March.

The difference between Tillerson and Pompeo might be explained, in part, by their respective backgrounds: Tillerson had previously been a taciturn CEO of ExxonMobil, Pompeo a pugnacious congressman from Kansas.

"His background as a congressman is a great asset in his current position," said Brett Schaefer, a foreign policy analyst with the conservative Heritage Foundation. "He has a great deal of experience in interacting with a broad number of people and doing so in a way that is designed to listen to their concerns and respond to them."

Pompeo has also pledged to stay in close touch with his former colleagues in Congress. Tillerson drew criticism for being slow to respond to lawmakers' requests.

And while Tillerson showed no visible interest in social media, a person familiar with Pompeo's situation said he is considering using Twitter.

David Wade, a former chief of staff to Secretary of State John Kerry, argued that a secretary of state's public words matter well beyond the Washington Beltway. "Externally, you're in a race to define the American narrative against those like Russia and China which will fill in their own narrative if you're absent," he said.

Calling Tillerson "an abysmal failure at communications both internally and externally," Wade said Pompeo "can be a good communicator, and as a politician he's more talented than his predecessor." But, he added, "all the public diplomacy in the world can't get him out from under the weight of Trump's tweets and slurs about people from the Middle East to Africa."

The timing of Pompeo's Thursday confirmation vote allowed him to attend a long-scheduled meeting of NATO foreign ministers in Brussels the next day, winning him early plaudits from others in the military alliance.

"He actually jumped on a plane just after he was sworn in and he was able to address the North Atlantic Council, the foreign ministers of NATO, just 12 hours and 34 minutes after his confirmation," NATO Secretary General Jens Stoltenberg said with admiration.

Pompeo left Washington with six journalists on his plane. On his first major overseas trip, Tillerson brought just one reporter, from the conservative Independent Journal Review.

As he continued from Brussels to Saudi Arabia, Israel and Jordan over the weekend, Pompeo picked up two more reporters. He spoke to the reporters on the plane and also took questions during news conferences on the ground.

Tillerson, by contrast, generally avoided even the reporters who — having been denied seats on his official plane — chased him around the world on commercial flights.

Shortly after he took office, Tillerson took a quick trip to Bonn, Germany, for a meeting of G-20 foreign ministers. At an appearance on the sidelines with Russian Foreign Minister Sergey Lavrov, reporters were escorted out of the room before Tillerson gave remarks. Even Lavrov was puzzled: "Why did they shush them out?" he asked.

"I'm not a big media press access person. I personally don't need it," Tillerson would later tell the IJR reporter, who traveled with him to Asia a month later.

During his 15 months as CIA director, Pompeo forged a much closer relationship with Trump than Tillerson. He is believed to have a much better sense of where the president stands, and his own, often-hawkish views appear more in line with Trump's thinking. Pompeo has also been vocal about wanting to improve morale at the State Department, where many diplomats have been distressed over Trump's attempts to slash their budget and Tillerson's unwillingness to listen to their expertise.

In a news conference in Brussels, Pompeo pointed out that he'd met with U.S. diplomats who work in the Belgian capital and that he was committed to making his department more relevant.

The diplomats, he said, "may have been demoralized, but they seemed in good spirits. They are hopeful that the State Department will get its swagger back."

Subject: Pruitt plans to change EPA policy on scientific studies

By Alex Guillén

03/20/2018 10:38 AM EDT

EPA Administrator Scott Pruitt plans to change how the agency considers scientific information when writing regulations in a way that likely will exclude certain studies, he told the [Daily Caller](#).

Pruitt told the news site he will reverse longtime agency policy to require that any studies used to support regulations make their raw data available for review and replication by independent scientists.

"We need to make sure their data and methodology are published as part of the record," Pruitt said. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

The changes are in line with legislation that House Science Chairman [Lamar Smith](#) (R-Texas) has pushed for years, but which was never been passed by the Senate. Democrats, environmentalists and scientific groups have long criticized that legislation as an attempt to cherry-pick data friendly to industry from the voluminous body of epidemiological science. And EPA already releases significant amounts of this data, they said.

CBO [said last year](#) the changes "would significantly reduce the number of studies that the agency relies on." And although EPA said it could make the changes at little to no cost, CBO estimated it would spend \$5 million from 2018 through 2022. EPA [previously told CBO](#) it would have to spend \$250 million a year scrubbing information from thousands of studies "to ensure the transparency of information and data supporting some covered actions."

WHAT'S NEXT: Pruitt did not say when he will issue a formal directive changing EPA's science policy.

Subject: Morning Energy: Pruitt's watershed moment — 'Secret science' policy coming — Blankenship slipping

By Kelsey Tamborrino | 04/24/2018 05:42 AM EDT

With help from Emily Holden

PRUITT'S WATERSHED MOMENT: EPA Administrator Scott Pruitt is approaching his two separate House committee hearings this week with sagging support on the hill. The make-or-break moment is approaching as once-stalwart backers begin to express concern about the controversies that have swirled in recent weeks. Republican Sen. Jim Inhofe (Okla.) — perhaps Pruitt's staunchest ally in Congress — told Pro's Anthony Adragna he thinks it's "appropriate to have a hearing in so far as any accusation having to do with his office is concerned," and he cited a report in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist.

Sen. Shelley Moore Capito (R-W.Va.) also thought Thursday's hearings before the House Energy and Commerce and Appropriations committees would prove pivotal for Pruitt's long-term future in the administration. "It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

And Sen. John Boozman joined his two Republican colleagues in supporting hearings by the Environment and Public Works Committee. Meanwhile, sources told Bloomberg that administration officials privately cautioned lawmakers and other conservative allies to pump the brakes on their defenses of Pruitt.

Publicly, however, the White House stands firm in its commitment to Pruitt. Press secretary Sarah Huckabee Sanders told reporters the administration is "continuing to review a number of the reports" about Pruitt, but noted the EPA chief "has done a good job of implementing the president's policies," particularly on deregulation and energy dominance. White House legislative affairs director Marc Short was more direct earlier Monday: "I think Scott Pruitt is doing a great job and we look forward to keeping him there as EPA administrator," he told MSNBC.

More to come? Earlier Monday, five senior congressional Democrats asked House Oversight Chairman Trey Gowdy to obtain further documents and hold hearings after obtaining new records they say raise "troubling" new questions about Pruitt's security expenditures. EPW ranking member Tom Carper told Anthony he had a good conversation with Gowdy regarding Pruitt, but said there was no formal bipartisan agreement to work together on an investigation. "I just gave him plenty of encouragement that he's doing the right thing," Carper said. Read more.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. Congrats to the Nuclear Energy Institute's Robert Powers, who was first to correctly guess Mary Walker was the first woman to receive the Medal of Honor. For today: Who is the last former senator to appear on a U.S. postage stamp? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. **Sign up to keep up with your daily conference coverage.**

BLINDED WITH SCIENCE: EPA's Pruitt is expected to unveil his new science policy that restricts the agency from relying on research that doesn't make public all its available data, a source briefed on the announcement tells Pro's Emily Holden. The proposed rule, which the agency submitted to the White House for review last week, will mirror legislation from House Science Chairman Lamar Smith (R-Texas).

Pruitt argues the change will bolster transparency, but scientists and health advocates say it is an effort to constrain rulemaking. The rollout has been delayed as agency officials tried to determine how to treat industry research used to evaluate the safety of pesticides and toxic chemicals, as Pro's Annie Snider reported last week. While academic studies often can't disclose data that includes personal health records, corporations can't reveal proprietary information either.

SCIENTISTS REACT: Close to 1,000 scientists signed onto a letter to Pruitt Monday, calling on the administrator to reverse course on his plans to revise how the agency considers outside research. "EPA can only adequately protect our air and water and keep us safe from harmful chemicals if it takes full advantage of the wealth of scientific research that is available to the agency," write the scientists, including some former EPA career staffers. Read it here.

A BLANK SLIP: GOP establishment attacks on former coal baron Don Blankenship seem to be taking hold, POLITICO's Alex Isenstadt reports via new polling. With the West Virginia Senate primary a mere two weeks away, a poll out Monday found Blankenship falling behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent.

National Republicans have scrambled to intervene in the race, concerned that a Blankenship primary win would destroy their prospects of defeating Democratic Sen. Joe Manchin in November. Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, has poured nearly \$2 million of his own money into a slash-and-burn style campaign savaging Jenkins and Morrisey as pawns of the establishment, Alex writes. Blankenship has also used the Senate run as a path to clear his name. So far, much of his campaign has been geared toward portraying himself as the casualty of the Obama-era Justice Department, which he says was bent on locking him up.

The new survey, which was conducted April 17-April 19 and has a margin of error of 4.9 percentage points, precedes a GOP debate today, and another that will be hosted by Fox News next week for a nationally televised audience. Read more.

SPECIAL ELECTION TODAY: Arizona voters will decide today who will pick up the seat left vacant by Rep. Trent Franks' departure in the state's 8th District. While neither candidate highlights specific environmental issues on her campaign website, Republican Debbie Lesko and Democrat Hiral Tipirneni have markedly different takes on climate change. Tipirneni's site says she believes "climate change is real and that we need to reduce carbon emissions." Meanwhile, Lesko said during a debate earlier this year that "certainly not the majority" of climate change is human-caused. "I think it just goes through cycles and it has to do a lot with the sun. So no, I'm not a global warming proponent," she said.

RULES TO MEET ON COLUMBIA RIVER BILL: The House Rules Committee will meet at 5 p.m. to formulate a rule on H.R. 3144 (115), which would void the environmental impact statement process for altering the hydropower system along the Columbia and Snake rivers. Earlier this month, the 9th Circuit Court of Appeals sided with the state of Oregon, the Nez Perce tribe and conservation groups, ruling that dam operations on the Columbia and Snake rivers must forgo hydropower production during key times of the year to protect

endangered salmon. An environmental impact statement for the system has been the subject of congressional fights, with Rep. [Cathy McMorris Rodgers](#) filing the legislation to void that process.

COAL ASH HEARING TODAY: EPA holds a [public hearing](#) today on its proposal to [roll back](#) the Obama-era regulation for the cleanup and disposal of coal ash. The hearing will begin at 9 a.m. in Arlington, Va., where there will be three sessions: 9 a.m. until noon; another beginning at 1 p.m. and ending at 4 p.m.; and a final session beginning at 5 p.m. and ending at 8 p.m.

PROMISES, PROMISES: Senate spending leaders vowed to restore chamber-wide debate on amendments to individual appropriations bills, Pro's Sarah Ferris and Kaitlyn Burton [report](#). It's a risky move, ME readers may recall, considering how Democrats [blocked](#) a largely noncontroversial Energy and Water bill in 2016 because of a proposed amendment on Iran, and in 2015, House Republicans' Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag. But Senate Appropriations Chairman [Richard Shelby](#) and his Democratic counterpart [Patrick Leahy](#) told committee members in a closed-door meeting Monday that leadership has agreed to allow amendments on the Senate floor for every individual spending bill. And the two have met with Majority Leader [Mitch McConnell](#) and Minority Leader [Chuck Schumer](#) in recent days about opening up the floor for debate on spending bills.

JUDGE: ENBRIDGE PIPELINE SHOULD STICK TO PLAN : An administrative law judge recommended on Monday that Minnesota regulators approve Enbridge Energy's proposal for replacing its Line 3 crude oil pipeline. But the court stipulated that the pipeline should follow the existing route, not the company's preferred route, which would carry Canadian tar sands crude from Alberta across areas in the Mississippi River, the Associated Press reports. Administrative Law Judge Ann O'Reilly's recommendation to the Public Utilities Commission sets up further disputes, "because the existing line crosses two Ojibwe reservations where tribal governments have made it clear that they won't consent and want the old line removed altogether." Read [more](#).

A METHANE TO THE MADNESS: The comment period on the Bureau of Land Management's proposal to reverse the Methane Waste Prevention Rule ended Monday, drawing thousands of far-reaching comments. The left-leaning Center for Western Priorities [analyzed a random sample](#) of 2,000 comments, it said, finding 99.8 percent of them were opposed to the proposal. The Independent Petroleum Association of America and Western Energy Alliance meanwhile submitted joint [comments](#) applauding the move. "We were pleased to see workable changes are being considered to the rule that more accurately represent the scope of power and authority given to the BLM for regulating this type of activity," IPAA's Dan Naatz said in a statement. And, E2, an affiliate of the Natural Resources Defense Council, sent a letter to Interior Secretary Ryan Zinke on Monday, expressing its opposition to BLM's proposal. Close to 400 businesses signed onto that letter, which calls BLM's proposal "a net negative for the American public." Read it [here](#).

MAIL CALL! IN HONOR OF NATIONAL PARKS WEEK: League of Conservation Voters organized 122 groups — including the American Civil Liberties Union and the Human Rights Campaign — in a letter to members of Congress opposing the administration's moves on public lands. National monuments "have helped make our public lands more inclusive," the letter states, before calling on lawmakers to "reject any legislation that would limit the president's authority under the Antiquities Act or codify any unlawful rollbacks of existing national monuments." Read it [here](#).

FOR YOUR RADAR: The House will vote to overhaul the 1988 Stafford Act this week, Pro's Budget & Appropriations team [reports](#). The three-decade-old bill is the main piece of legislation overseeing federal disaster-relief efforts, with proposed tweaks that include new incentives to build "smarter and stronger to better withstand disasters in the future," according to GOP Majority Leader [Kevin McCarthy](#)'s office. That could equate to big changes on how states spend disaster relief money.

ICYMI: ZINKE DRAWS OLIVER'S IRE: The Interior secretary got the full treatment from HBO host John Oliver on "Last Week Tonight" on Sunday. Oliver hit Zinke for [referring to himself](#) as a geologist and said he

"has a real flair for creative license." Of course, Zinke is not the first to draw scrutiny from the HBO host. A judge recently dismissed a defamation lawsuit brought by coal magnate Bob Murray against Oliver, who referred to Murray as a "geriatric Dr. Evil." Watch the Zinke video [here](#).

STATE NEWS — CUOMO INTRODUCES PLASTIC BAG BILL: New York Gov. Andrew Cuomo introduced a [bill](#) Monday to ban the use of plastic bags throughout the state, Pro New York's Danielle Muoio reports. The legislation — a long-sought promise from Cuomo — would give the state Department of Environmental Conservation jurisdiction over all matters concerning plastic bags and recycling, but comes with caveats that left some environmental advocates saying it isn't far-reaching enough. Read [more](#).

White House reiterates support for Pruitt [Back](#)

By Anthony Adragna | 04/23/2018 02:30 PM EDT

The White House says it is still standing behind EPA's Scott Pruitt, voicing support for the embattled administrator two days after it was revealed that a Washington lobbyist whose wife rented a condo to him personally lobbied Pruitt despite weeks of denying they had held any meetings.

"We're reviewing some of those allegations, however Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

She added the administration continues its look into Pruitt's conduct, including his lavish spending, first-class travel arrangements, pay raises for political appointees and use of security personnel. White House budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending \$43,000 on a privacy booth for his office.

Pruitt is scheduled to testify at two House hearings on Thursday.

What's next: Sanders said the White House is "monitoring" additional reports about Pruitt.

White House stands behind Pruitt despite new lobbying disclosure [Back](#)

By Anthony Adragna | 04/23/2018 01:54 PM EDT

The White House said Monday it still stands behind EPA Administrator Scott Pruitt, praising him for enacting President Donald Trump's environmental and energy policies even as it looked into reports of ethical lapses.

It was the first statement from the White House since POLITICO first reported that despite his denials, Pruitt had met with a lobbyist whose wife rented the Environmental Protection Agency chief his \$50-per-night condo. A disclosure form filled late Friday said J. Steven Hart had lobbied the EPA, although both the agency and the lobbyist contend the meeting, held last July, did not constitute formal lobbying.

"We're reviewing some of those allegations. H however, Administrator Pruitt has done a good job of implementing the president's policies, particularly on deregulation," press secretary Sarah Huckabee Sanders said at the White House briefing.

The White House has been looking into Pruitt's lavish spending on first-class travel arrangements, pay raises for political appointees and use of security personnel. Budget director Mick Mulvaney told a congressional subcommittee last week he'd investigate the EPA chief's spending of \$43,000 on a privacy booth for his office.

That's on top of several ongoing probes by the EPA's own watchdog and three by congressional committees, including the House Committee on Oversight and Government Reform.

Pruitt is scheduled to testify at two House hearings on Thursday.

Sanders' comments come as five senior congressional Democrats asked House Oversight Chairman Trey Gowdy (R-S.C.) to seek new documents and hold hearings regarding "troubling" new questions about Pruitt's security expenditures.

According to nonpublic documents cited in the Democrats' letter, Pruitt's office was not cleared for classified communications as of March 2017. EPA previously said Pruitt's need to handle such information justified the installation of the privacy booth. The Government Accountability Office concluded last week the agency violated federal law by not informing Congress of the purchase.

The letter also alleges that a security sweep of Pruitt's office — the contract for which went to a business partner of Pruitt's security chief, Pasquale "Nino" Perrotta — went outside federal contracting norms without proper pre-approval.

"Given the latest developments and these new documents, we believe these and related matters are ripe for additional document requests to EPA and that Administrator Pruitt should testify about all of these matters immediately," the lawmakers wrote. Sens. Tom Carper of Delaware and Sheldon Whitehouse of Rhode Island and Reps. Elijah Cummings of Maryland and Gerry Connolly and Don Beyer, both of Virginia, signed the letter.

Pruitt support in Senate erodes as GOP lawmakers seek hearings [Back](#)

By Anthony Adragna | 04/23/2018 08:32 PM EDT

Scott Pruitt's wall of GOP support developed some new cracks on Monday, with three key Senate defenders calling for hearings into the embattled EPA administrator's recent controversies.

The three, including staunch Pruitt ally Sen. Jim Inhofe (R-Okla), all said they supported hearings by the Senate Environment and Public Works Committee to look into the former Oklahoma attorney general's actions.

"I think that a couple of us on the committee think it's appropriate to have a hearing in so far as any accusation having to do with his office is concerned," Inhofe told POLITICO.

Inhofe said he was troubled by a report over the weekend in The New York Times detailing a sweetheart deal Pruitt received on an Oklahoma City home previously owned by a lobbyist while serving in a state government. The Oklahoma Republican declined to discuss which allegations he found disturbing, but said "there are some things in there that I'd like to check out and see."

Joining his call for a Senate hearing were two other senior GOP members of the EPW panel, Sens. Shelley Moore Capito (W.Va.) and John Boozman (Ark.).

"Most people have concerns about some of the allegations," Boozman said. "At some point he'll be before the committee and we'll dig deeper and see exactly what's going on."

EPW Chairman John Barrasso (R-Wyo.) told reporters he expected Pruitt would come to testify at some point, but he stopped short of providing a specific timeframe or stating his intention to call a hearing.

To date, four House Republicans have called on Pruitt to resign, along with scores of elected Democrats. And Sen. Susan Collins (R-Maine), has said Pruitt was "the wrong person" to lead the agency based on his policies.

Pruitt has drawn criticism about his ethics and lavish spending in recent months. Three Congressional committees, the White House and EPA's inspector general are all probing his behavior, ranging from his security expenses, high pay raises for aides, first-class travel and meetings with a coal group.

The House Oversight Committee has requested interviews with five senior agency aides and the White House said it would formally investigate Pruitt's expenses after the Government Accountability Office last week found EPA broke the law by failing to notify Congress about a \$43,000 privacy booth Pruitt had built in his office.

Pruitt will go to the Hill on Thursday to testify before a House Energy and Commerce subcommittee in the morning and at a House Appropriations subpanel in the afternoon. Those appearances will mark his first time before Congress since the recent allegations broke.

Both Inhofe and Capito said they thought those House hearings would prove pivotal for Pruitt's long-term future in the administration.

"It's really important," Capito said. "He's going to have to answer some tough questions. I'm sure they'll be put to him by both sides and we'll see what his response is."

Meanwhile, EPW ranking member Tom Carper (D-Del.) said he had a good conversation with House Oversight Chairman Trey Gowdy (R-S.C.) regarding Pruitt, but he said there was no formal bipartisan agreement to work together on an investigation.

"I just gave him plenty of encouragement that he's doing the right thing," he said.

But the mounting public criticism from Republicans suggests GOP lawmakers' patience in defending the EPA chief's behavior is waning.

"Some of the things that he's done and that he's been alleged to do are just indefensible," Sen. John Kennedy (R-La.) said. "You just can't put lipstick on those pigs. You can't."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Poll: Coal baron Blankenship fading in W.Va. Senate primary [Back](#)

By Alex Isenstadt | 04/23/2018 07:26 PM EDT

WHEELING, W.Va. — A new poll out Monday evening shows recently imprisoned coal baron and Senate hopeful Don Blankenship fading in the Republican primary, amid an avalanche of establishment attacks aimed at stopping him from winning the nomination.

With the primary two weeks away, the survey shows Blankenship, who spent a year in jail following the deadly 2010 explosion at his Upper Big Branch Mine, falling far behind his more mainstream rivals, GOP Rep. Evan Jenkins and state Attorney General Patrick Morrisey. The poll found Morrisey leading with 24 percent, followed by Jenkins with 20 percent, and Blankenship trailing with 12 percent. Thirty-nine percent were undecided.

The survey, which was conducted April 17-19 and has a margin of error of 4.9 percentage points, came as Blankenship squared off against his rivals in a 90-minute debate held at Wheeling Jesuit University. The candidates spent much of the evening aligning themselves with President Donald Trump, and beating up on Democratic Sen. Joe Manchin.

They will also meet on Tuesday, and again next week for a nationally televised debate hosted by Fox News.

The survey of 411 primary voters was commissioned by GOPAC, an organization that promotes state Republican legislators, and was conducted by National Research Inc., a polling firm that worked on Trump's 2016 campaign. Neither has taken sides in the primary.

National Republicans have scrambled to intervene in the contest, fearing that a Blankenship primary win would destroy their prospects of unseating Manchin. The 68-year-old former coal executive has spent nearly \$2 million of his own to fund a slash-and-burn style campaign savaging Jenkins and Morrisey as establishment pawns.

He has also sought to clear his name. Much of Blankenship's campaign has been geared toward portraying himself as the casualty of an Obama Justice Department bent on locking him up.

Fearful that Blankenship was gaining traction, Mountain Families PAC, a super PAC overseen by strategists close to Senate Majority Leader Mitch McConnell's political operation, swung back — airing around \$700,000 worth of TV ads in recent days accusing Blankenship of contaminating drinking water.

The effort to defeat Blankenship has gone further. Earlier this month, Trump flew to West Virginia to hold an event aimed at selling his tax reform legislation. The president was seated next to Jenkins and Morrisey, a clear attempt to promote their candidacies over Blankenship, who was not in attendance.

For national Republicans, the move was not without risk. Last year, a McConnell-aligned super PAC spent millions to stop Alabama Senate candidate Roy Moore from winning the nomination, only to see it backfire. Moore used it to cast himself as the victim of the establishment, and went on to win the primary before losing the general election in a stunning upset.

Blankenship is taking a similar approach. With the contest hurtling into the final stretch, he has begun airing commercials calling McConnell a "swamp creature."

And during a news conference on Monday morning, Blankenship pledged not to support McConnell as Senate GOP leader if he's elected.

"He needs to understand that if I'm there I will not vote for him for majority leader, and so the rest of the senators should understand that they should not put him up if they need my vote," he told reporters.

The candidates largely avoided attacking each other at Monday's debate, perhaps because three lesser-known contenders were also included onstage, a setup that limited the amount of speaking time.

Blankenship used the debate to further his argument against the establishment. He called the 2010 mine explosion "heart-wrenching," and called it "one of the worst days of my life."

But he blamed the disaster on the government, saying it had taken steps to limit the amount of airflow available to the miners.

During his closing remarks, Blankenship referred to Washington as the "district of corruption," and argued that politicians there often tried to make themselves look like they were fighting over ideals when they were merely posturing.

"When I go to D.C.," he said, "it won't be a fake fight, it will be a real fight."

With candidates and outside groups crowding the TV airwaves, much of the firepower is being directed at Jenkins, a second-term congressman who in 2014 defeated longtime Democratic Rep. Nick Rahall. All told, around \$1.2 million is expected to be spent against Jenkins, according to a media buyer.

Among those spending heavily against Jenkins is Duty and Country, an outside Democratic group with offices in Washington. To date the group has spent around \$380,000 on TV, the vast majority of it against Jenkins.

At Monday's debate, Jenkins argued that Democrats were trying to "meddle" in the primary. He said their attacks on him was proof that the opposing party viewed him as the biggest threat to Manchin.

The Democratic effort, he added, was unprecedented in West Virginia politics.

"They're scared to death of Evan Jenkins on the ballot in November because they know Evan Jenkins can beat Joe Manchin," the congressman said.

Court chooses salmon over hydropower in Columbia River fight [Back](#)

The 9th Circuit Court of Appeals has sided with the state of Oregon, the Nez Perce tribe and nearly a dozen conservation groups, ruling that hotly contested dam operations on the Columbia and Snake Rivers must forgo hydropower production during key times of the year in order to protect endangered salmon.

The three-judge panel upheld a lower court's decision requiring that water be spilled over the top of dams along the Columbia River System, including the powerhouse Grand Coulee dam, the largest power station in the U.S., during periods when young salmon and steelhead migrate to the ocean. The hydropower turbines pose a threat to the fish.

The Justice Department, representing the National Marine Fisheries Service, Army Corps of Engineers and Bureau of Reclamation, had argued that requiring such operations would cause electricity rates to spike and could threaten the reliability of the electrical grid.

The ruling stems from a years-long battle over the nearly 100-year-old hydropower system along the Columbia and Snake rivers. Conservation groups and tribes with treaty fishing rights want the system altered and operated to benefit wildlife, including calling for the removal of four dams along the Snake River. As part of that litigation, the federal agencies are also working on an environmental impact statement for the system that has been the subject of congressional fights, with Rep. Cathy McMorris Rodgers (R-Wash.) filing a measure (H.R. 3144) to void that process, and Democratic lawmakers coming out in opposition.

WHAT'S NEXT: Unless they successfully appeal the decision, the federal agencies will need to release water over the top of dams beginning this spring. The ongoing environmental impact statement process will continue.

Senate spending leaders vow to open up floor debate for amendments [Back](#)

By Sarah Ferris and Kaitlyn Burton | 04/23/2018 06:20 PM EDT

Senate Appropriations Chairman Richard Shelby is vowing to restore chamber-wide debate on amendments to individual appropriations bills to help end Congress' stop-and-go funding cycle.

Shelby (R-Ala.), along with his Democratic counterpart Sen. Patrick Leahy, of Vermont, told committee members in a closed-door meeting today that leadership has agreed to allow amendments on the Senate floor for every individual spending bill.

"There is perhaps unanimity, but certainly strong consensus that if the appropriations process is going to work we're going to be casting votes on amendments and we stay here and we vote," Sen. Jerry Moran (R-Kan.) told reporters exiting the meeting, which was the committee's first bipartisan sit-down of fiscal 2019

"I think it's the single best way to restore the Senate the way the Senate's supposed to work. The full Senate gets a chance to offer a variety of amendments, and if you don't like it, you can vote against it," Sen. Lamar Alexander (R-Tenn.) added.

Shelby and Leahy have met with Majority Leader Mitch McConnell and Minority Leader Chuck Schumer in recent days about opening up the floor for debate on spending bills.

When asked if both leaders were on board, Shelby added: "They tell us they are, and I like to believe them." Leahy added: "We both talked with both of them. I think they both understand. The Senate can't go on like this."

It's a risky gambit, particularly in an election year. Contentious amendments have held up bills in both chambers in recent years.

Back in 2016, Senate Democrats blocked a largely noncontroversial Energy and Water bill because of a proposed amendment on Iran. In 2015, the House GOP's Interior-Environment bill was tripped up by an unrelated rider on the Confederate flag.

The number of amendments on Senate spending bills has dropped dramatically in the last two decades, as the chambers considers fewer and fewer individual bills.

Subject: Morning Energy: Where do biofuels stand? — This week: Pruitt faces the Hill — Macron heads to Washington

By Kelsey Tamborrino | 04/23/2018 05:42 AM EDT

With help from Eric Wolff and Annie Snider

YOU CAN'T ALWAYS GET WHAT YOU WANT: Despite efforts by President Donald Trump to settle a long-running dispute between ethanol backers and the refining industry, progress on a biofuels deal has stalled. Instead, the administration has taken a piecemeal approach to the policy, pushing for an expanded market for higher blends of ethanol, while handing out exemptions to the Renewable Fuels Standard to small refiners.

Trump, for his part, has huddled multiple times with members of his Cabinet, industry and lawmakers from both corn belt and oil states, Pro's Eric Wolff reports. But so far, there's been little progress in striking a grand deal. At odds are the independent refiners, who say they feel financial stress from the RFS, and the agriculture sector, which is anxious to expand the market for corn ethanol.

Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline, while EPA Administrator Scott Pruitt has so far granted more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline. "After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," one oil refining source told Eric.

And Pruitt's controversies stemming from his first-class flights, security spending and condo rental from a lobbyist, have left the EPA chief unable to make an aggressive case for instituting price caps many refiners want on the biofuel credits, according to an administration source. Read more [here](#).

Democrats weigh in: House Energy and Commerce ranking member [Frank Pallone](#) and Agriculture ranking member [Collin Peterson](#) sent this [letter](#) to the president on Friday, expressing concern with the waivers issued by Pruitt to small refineries, writing it "undermines the goal of the RFS program, creates uncertainty and economic hardship in the agricultural community, and gives unfair advantage to specific facilities within the refining sector."

GOOD MONDAY MORNING! I'm your host Kelsey Tamborrino, and Entergy's Rob Hall was first to correctly answer that former Senate Majority Leader Robert Taft's father served as a Supreme Court chief justice. PRUITT HEADS TO THE HILL: Thursday's the day: Pruitt is scheduled to face questions from two House committees for the first time since his swirling scandals emerged in March. He'll appear before both the House Appropriations Committee and the Energy and Commerce Committee to discuss his agency's budget request for fiscal 2019, but of course lawmakers are planning to take Pruitt to task over his ethics and spending issues. "Members are going to have questions about how things are going at the EPA and how the money is being spent," E&C Chairman Greg Walden told POLITICO last week. "And we will. We should. He'll have to answer those."

Not least on the list of questions: POLITICO's Theo Meyer and Eliana Johnson were first to report this weekend that the lobbyist, J. Steven Hart, whose wife rented a \$50-per-night condo to Pruitt, also lobbied the agency while Pruitt was leading it, according to a Friday filing by his firm. That news comes despite the denials from both Hart and Pruitt that the lobbyist did not have any business before the agency. Hart announced his resignation from his lobbying firm Williams & Jensen hours before the disclosure was published. He was already planning to retire in November, but moved up his departure in the wake of the revelation that his wife had been Pruitt's landlord.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat-processing executive concerned about Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying. The disclosure, meanwhile, says Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs." A spokeswoman for House Oversight Chairman Trey Gowdy, who is already probing the administrator, told POLITICO that "the Committee has already been looking into this matter." Read more.

The hits keep coming: The Associated Press reported on Friday that state records show how, as Oklahoma's attorney general, Pruitt ordered investigations agents from his office to work as his driver and bodyguard. And a separate report from The New York Times probed how Pruitt bought a historic house in Oklahoma from a top lobbyist with the help of a shell company.

— **Another Republican called on Pruitt to resign** this weekend, marking at least four current Republican lawmakers to do so. "Yes EPA Administrator Scott Pruitt should resign. Wrong fit from start for agency dedicated to protecting our environment," New Jersey Rep. Frank LoBiondo tweeted. "#EarthDay2018 reinforces our need to promote pristine planet via clean air & water, leaving it better for future generations. Requires leadership & balance."

NOW THAT'S A MISTAKE: Three days after releasing a raft of communications between top EPA personnel to the Union of Concerned Scientists under the Freedom of Information Act, the agency removed them from its electronic library Friday. Among the documents were emails POLITICO cited on Thursday that show political officials developing a new scientific transparency policy were more concerned with the impact it could have on the agency's ability to consider industry data when reviewing pesticides and toxic chemicals for safety than they were about potentially excluding studies on the effect of pollution on public health, as many scientists have warned. EPA sent the policy, based on legislation from House Science Chairman Lamar Smith (R-Texas), to the White House for interagency review Thursday.

EPA did not respond to requests for comment over the weekend, but Yogin Kothari with UCS said the agency told him it accidentally released documents with private information and privileged attorney-client communications. His group removed emails it considered to fit that description and posted the rest on its website.

XCEL NOT SO INTO MARKETS AFTER ALL: Colorado utility Xcel Energy blew a hole in Southwest Power Pool's plans for a western power market when the company announced late Friday it had dropped out of the Mountain West Transmission Group. SPP had been working with the informal group of power providers for months to try and join the power market — and SPP had advanced the effort as recently as last month. Xcel

didn't respond to a request for comment, but the press release said there were "limited benefits" in the effort and "increasingly uncertain costs."

Perhaps most intriguing to ME is the company's point that "Xcel now sees few opportunities for westward expansion of the RTO which might have added to the value proposition." SPP faces competition from both California's already established energy-imbalance market that includes utilities in the Pacific Northwest and Nevada, and a nascent joint project between eastern market operator PJM Interconnection and western reliability manager PEAK. Xcel's press release did not say if it had engaged with either of these other projects.

MR. MACRON HEADS TO WASHINGTON: French President Emmanuel Macron makes his first official visit to Washington this week, where he'll meet with the president and deliver an address to a joint meeting of Congress. Macron and his wife will be hosted by the president and first lady at a private dinner tonight and the two leaders will participate in a bilateral meeting on Tuesday.

Officially, the two heads of state are set to discuss ongoing issues in Syria, the Iran deal and trade tensions. But keep an ear out for climate mentions, too. Macron has been critical of Trump's announcement that he would remove the U.S. from the Paris climate agreement.

Ahead of his meeting with Trump, Macron appeared on "Fox News Sunday," where he was asked whether he believes Trump will serve his full term. "I never wonder that," Macron said. "I mean, I work with him because both of us are very much at the service of our country in both side. And for me, that's why — even when we have some disagreements on climate and on some issues, I think the most important thing is to — I mean, just to remind that we are at the service of our people, that's our legitimacy."

FROM BLOOMBERG WITH LOVE: Special envoy to the U.N. for climate action Michael Bloomberg pledged to help cover the U.S. financial commitment to the Paris climate accord on Sunday. Appearing on CBS, the former New York City mayor announced he would foot the \$4.5 million bill to the U.N. Climate Change Secretariat under the 2015 agreement that was struck by former President Barack Obama.

"America made a commitment. And as an American, if the government's not going to do it, we all have a responsibility, and I'm able to do it," he said on CBS. "So yes, I'm going to send them a check for the monies that America had promised to the organization." Bloomberg will also make more funding available should the U.S. government fail to produce funds for its share of the U.N. climate budget in 2019, according to a press release announcing the action.

READY FOR TAKEOFF: Rep. Jim Bridenstine will be sworn-in at 2:30 p.m. today as the new NASA administrator. After the swearing-in ceremony, Vice President Mike Pence and Bridenstine will speak live with three NASA astronauts currently living on the International Space Station.

MAIL CALL! Senate Democrats sent a series of letters Friday, calling on the administration and agency heads to share documents related to the Koch brothers' role in influencing policy in the Trump era. The letters cite specific actions for which the Koch network has taken credit, including shrinking national monuments, exiting the Paris climate change agreement and streamlining of infrastructure permitting. "Americans have a right to know if special interests are unduly influencing public policy decisions that have profound implications for public health, the environment, and the economy," the senators write. The letters, led by Sen. Sheldon Whitehouse, come before Senate floor speeches this week from Democrats that are expected to detail the influence of the Koch brothers network. Read the letter to the White House here, EPA here and Interior here.

IN CELEBRATION OF EARTH DAY: The president touted his administration's rollback of "unnecessary and harmful regulations," and pointed toward a "market-driven economy" as an essential tool in environmental protection. "A healthy environment and a strong economy go hand in hand," a White House presidential message said. "We know that it is impossible for humans to flourish without clean air, land, and water. We also

know that a strong, market-driven economy is essential to protecting these resources." Trump said for that reason, his administration is "dedicated to removing unnecessary and harmful regulations that restrain economic growth and make it more difficult for local communities to prosper and to choose the best solutions for their environment."

REPORT OUT ON DOE BUDGET: The Information Technology and Innovation Foundation is out with a new report today analyzing the Energy Department's budget for research, development and demonstration. The report details how the administration's current budget proposal for fiscal 2019 would "impose the largest single-year decrease" in DOE history. "R&D spending as a share of sales in the U.S. energy industry is only 0.4 percent, compared with 8.5 percent in aerospace and defense, 9.8 percent in computers and electronics, and 2.4 percent in the automotive industry," the report finds. Read it [here](#).

Stories from POLITICO Pro

Failure to strike biofuels deal opens door for smaller ethanol moves Back

By Eric Wolff | 04/23/2018 05:01 AM EDT

President Donald Trump's long-sought biofuels deal between the agricultural and refining industries appears to be turning into a piecemeal policy cobbled together through EPA that expands the market for corn ethanol while granting exemptions from the program to many small oil processors.

Trump has huddled several times with members of his Cabinet, refining and ethanol industry players, and lawmakers from both corn-belt and oil states. But so far, there's been little progress in striking a grand deal that would relieve the financial pain that some independent refiners say the Renewable Fuel Standard is causing them while acceding to agriculture-sector pressure to expand the market for corn ethanol.

Instead, Trump has promised to allow year-round sales of 15 percent ethanol blends of gasoline while EPA Administrator Scott Pruitt has handed out more than two dozen temporary waivers to small refineries that exempt them from the mandate requiring them to blend ethanol with gasoline.

"After 18 months of pursuing various regulatory forms of relief and a handful of Oval Office confabs, the merchant refiners ended up with [an increase in E15] taking even more market share away from them in return for some small refiner hardship waivers — and some of them did not even get that," said a source with an oil refining company.

For over a year, refiners have urged the administration to put a cap on the price of the biofuel credits that refiners must buy to meet their RFS compliance levels. But the move has been sharply opposed by ethanol and corn interests, as well as Sen. Chuck Grassley (R-Iowa), who as recently as last month called a potential cap "CATASTROPHIC to ethanol."

But the prices for biofuel credits, called Renewable Identification Numbers, have fallen since Pruitt's EPA began issuing at least 25 compliance waivers. Although that's angered biofuels supporters who complain it has sapped demand for ethanol, they see the administration's plan to drop the Clean Air Act rules that have barred E15 sales in the summer in some states as a boon.

"Right now we're going to have anywhere from a billion- to a billion and a half-[gallon] reduction in [ethanol] demand because of [RFS] waivers given so far," Sen. Mike Rounds (R-S.D.) told POLITICO. "I think we're moving in the right direction, but we want to make sure we get the [E15] waiver in place."

At a meeting with Midwestern senators and governors April 12, Trump announced his plan to expand E15 sales. But Trump also said there were efforts to set a transition period for the two years "where we will have a little bit of complexity," an apparent reference to refiners' worries that an increase in the number of RINs from higher E15 sales won't help push down prices for the credits in the near term.

The expansion of E15 sales came after an early April meeting at the White House, where Agriculture Secretary Sonny Perdue urged Trump to give corn farmers something to offset the ethanol demand drop they were seeing from the refinery compliance waivers, as well as the decline expected because of China's retaliatory import tariffs put in place after Trump announced his trade penalties, according to an administration source. The Washington Post reported Trump spent much of the meeting discussing the controversies around Pruitt's condo rental from a lobbyist and heavy spending on first-class travel and round-the-clock security.

Trump's discussion of Pruitt's controversies left the EPA chief unable to make an aggressive case for instituting price caps on RINs, according to an administration source, and have put him in a generally weakened position inside the White House.

And that may have killed the effort to establish RIN price caps, and given traction to the piecemeal EPA actions on E15 and the temporary compliance waivers, according to both administration and industry sources.

"[The oil industry] got what they wanted with the small refinery waivers, so we should get what we want," said Rob Walther, vice president of federal affairs for the ethanol producer POET.

Refiners, who over the last several months have sought and received RFS waivers for the 2016 and 2017 compliance years, are now expected to be pushing for the same exemptions for 2018 before they even know what their final liability for the year is.

Separately, a debate has grown over how EPA has been able to issue so many waivers to refiners this year. Though an EPA spokeswoman says the agency continued to use the same process it had under the Obama EPA to grant those exceptions, oil and ethanol industry sources acknowledge it has made crucial changes that make it far easier to get out from under the biofuel mandates.

In particular, EPA is relying on report language congressional appropriators added to 2016 and 2017 government funding bills that called on EPA to loosen its requirements for determining if a refinery should be awarded a waiver. EPA has also softened its definition of what constitutes economic hardship for a refinery as a result of a ruling from the U.S. Court of Appeals for the 10th Circuit last year.

That decision, in the case of *Sinclair Wyoming Refining v. EPA*, said the agency's test for defining economic hardship as whether a refiner was about to be pushed into bankruptcy had been too severe.

EPA has also taken a more aggressive interpretation of the law, saying it would no longer grant only partial waivers. Instead, the agency is now granting full-volume waivers to qualifying small refineries, according to an industry attorney.

The American Petroleum Institute, which represents the biggest oil companies, has opposed the waivers, and ethanol producers are furious at the use of the congressional report language to loosen the standards for receiving them. Monte Shaw, executive director of the Iowa Renewable Fuels Association, said his group has asked allies on the Appropriations Committee to consider writing their own language into future appropriations reports reversing the previous guidance.

Other groups think EPA is relying too much on that congressional guidance that is not included in the law.

"The report language does not override the plain reading of the statute," said Bob Dinneen, CEO of the Renewable Fuels Association. "While the court's decision in *Sinclair* might suggest EPA views these waivers differently, EPA has turned 180 degrees in its interpretation of the statute, and essentially now requires no demonstration of economic hardship. That's not what either the statute or the court required."

EPA staff has begun work trying to figure out how to best implement the expansion of E15 sales, which corn growers see as pivotal for the program's near future. But ethanol producers and their allies are looking ahead to the long term, in which E25 and E30 provide the octane for smaller, high-efficiency engines that get far higher fuel efficiency than current models.

"We have to move to the point to emphasize the need for octane, for these small engines that become more important in meeting CAFE standards in coming years," Rounds said. "That's where ethanol really shines."

Lobbyist whose wife rented to Pruitt lobbied EPA despite denials [Back](#)

By Theodoric Meyer and Eliana Johnson | 04/20/2018 06:43 PM EDT

The prominent lobbyist whose wife rented a condominium to Environmental Protection Agency Administrator Scott Pruitt lobbied the agency while Pruitt was leading it, contrary to his and Pruitt's public denials that he had any business before the agency, according to a Friday filing by his firm.

The [disclosure](#) from the lobbying firm Williams & Jensen contradicts Pruitt's public statement last month that the lobbyist, J. Steven Hart, had no clients with business before the EPA, and came hours after Hart's resignation from the firm.

An EPA official acknowledged on Saturday that Pruitt had met with Hart, who attended a meeting with a former meat processing executive concerned about President Donald Trump's proposal to cut spending on a Chesapeake Bay cleanup program. But the official argued that the meeting didn't meet the definition of lobbying.

A second EPA official, agency spokesman Jahan Wilcox, told POLITICO: "We have no knowledge of any facts that precipitated Williams & Jensen electing to make this filing."

The disclosure is the latest sign of one-time allies distancing themselves from Pruitt, whose job is in jeopardy because of multiple investigations into his stewardship of the agency, ranging from spending on a 20-person security team and first-class travel to the installation of costly office furniture and a soundproof phone booth. The Government Accountability Office said earlier this week that the purchase of the booth, which cost \$43,000, violated federal law. And the staff of House Oversight Chairman Trey Gowdy (R-S.C.) has interviewed a former EPA political appointee who alleges that Pruitt lied about not knowing about steep raises given to two of his top aides.

When asked late Friday about Hart's lobbying activities, a Gowdy spokeswoman told POLITICO that 'the Committee has already been looking into this matter.'"

Sen. Sheldon Whitehouse (D-R.I.) said in a statement Saturday that any evidence of deception about Pruitt's relationship with the lobbyist-turned-landlord would bode ill for the EPA administrator.

"It doesn't get much swampier than an agency head getting a sweetheart deal on rent from a lobbyist with business before his agency, but someone lying about it afterwards does make it worse," Whitehouse said. "The laundry list of Pruitt scandals grows."

Hart announced he would resign from Williams & Jensen hours before the firm filed a disclosure showing that he lobbied the EPA for Smithfield Foods in the first quarter of 2017. While Hart, the chairman and former chief executive of the firm, has disputed that the contact he had with Pruitt and Pruitt's chief of staff, Ryan Jackson, constituted lobbying activity, the disclosure indicates otherwise.

Hart lobbied the EPA on issues "relating to support for EPA Chesapeake Bay Programs," according to the disclosure.

Pruitt told Fox News earlier this month that "Hart has no clients that have business before this agency."

Smithfield paid Williams & Jensen, which has lobbied for the company for years, \$70,000 to lobby on a variety of matters in the first quarter, according to the disclosure filing. Hart also lobbied Congress on trade, agriculture and food safety issues on Smithfield's behalf during the first quarter, alongside other Williams & Jensen lobbyists.

But Smithfield said Hart's lobbying of the EPA "was not undertaken at the direction of or on behalf of Smithfield Foods."

"These activities were conducted at the request of a then former executive and current Smithfield Foundation board member, Dennis Treacy, in his personal capacity," the company said in a statement. "Mr. Treacy is associated with several environmental organizations and is a member of the Chesapeake Bay Commission."

Treacy had been Smithfield's chief sustainability officer, as well as president of the nonprofit Smithfield Foundation, and before that had led Virginia's Department of Environmental Quality.

The first EPA official, who spoke on condition of anonymity, said Pruitt and Jackson, his chief of staff, met with Treacy and Hart on July 11 for 20 minutes in Pruitt's office. That's backed up by a chain of agency emails obtained by POLITICO, which show Treacy requesting a meeting in May to discuss his "focused and unique view of environmental protection" with Pruitt, and one finally being scheduled for July 11.

On July 10, Hart wrote to Jackson that he wanted to attend the meeting at Treacy's request. Hart added that Treacy "is a good guy and can be trusted. He is coming in as the business rep on the Chesapeake Bay Foundation — another of your controversies."

But the disclosure filed by Williams & Jensen indicates that Hart's lobbying work took place in the first three months of this year, not in 2017.

The official said Hart set up the meeting as a "personal introduction" but that Treacy used a Smithfield email address, which may have prompted Williams & Jensen to consider the meeting lobbying activity on behalf of Smithfield. Treacy wanted to talk about the president's proposed budget cuts to EPA's spending on Chesapeake Bay, the subject of one of the nation's premier ecosystem restoration projects, the official said.

The official said Pruitt discussed his meeting with Hart with EPA staff before going on Fox News for an interview this month, where Pruitt maintained that Hart had no clients with business before the agency. But "it has been clear in [Pruitt's] mind for months now this was a personal introduction of an individual who was supportive of the administration, who wanted to meet the administrator."

Smithfield Foods has had a tangled history with Chesapeake Bay: In 1997, a federal judge slapped the company with a record \$12.6 million fine for violating the Clean Water Act by dumping hog waste into a bay tributary. But Smithfield is now listed as a corporate partner of the nonprofit Alliance for the Chesapeake Bay.

Pruitt's rental of the Capitol Hill condo — a relative bargain at \$50 a night — had attracted criticism even before the filing because Hart has lobbied on energy issues in the past. Hart is also a past political donor to Pruitt, contributing a total of \$4,366 in cash and in-kind services to the former Oklahoma attorney general's campaigns and leadership PAC.

Pruitt's lease originally had J. Steven Hart's name printed on it as the landlord, but someone crossed it out and wrote in the name of his wife, Vicki. Public records show Vicki Hart's name on both the mortgage and deed. (Vicki Hart is also a lobbyist but works primarily on health care issues.)

Hart was already planning to retire in November but moved up his departure in the wake of the revelation that his wife has been Pruitt's landlord.

"Considering the last couple of weeks, I think it is easier on my family and the firm to expedite my departure," Hart wrote on Friday afternoon in an email to family and friends that was obtained by POLITICO.

Williams & Jensen confirmed Hart's departure.

"Mr. Hart informed the firm of his decision to resign today," the firm said in a statement on Friday. "We are grateful to Steve for his 35 years of service and we wish him and his family well in all of their future endeavors."

Hart did not respond to a request for comment. But he was sharply critical of the news coverage of the Pruitt scandal in the email he sent on Friday.

"As you know, these days I am no more an energy lobbyist than I am an astronaut," Hart wrote. "But, why let the facts get in the way of a good story?"

After leaving the firm, Hart wrote that he was "looking forward to devoting myself to an independent legal practice, some strategic business counseling for a few clients, golf, and shooting (not in that order)."

Third Republican calls on Pruitt to resign [Back](#)

By Alex Guillén | 04/05/2018 03:34 PM EDT

Rep. [Elise Stefanik](#) (R-N.Y.) today called on EPA Administrator Scott Pruitt to resign, becoming at least the third Republican to do so even as more conservative lawmakers come to Pruitt's defense.

"I'm going to make news today," Stefanik said at a town hall meeting in South Glens Falls, about 45 miles north of Albany, according to [The Saratogian](#). "I think Scott Pruitt should resign. I fundamentally disagree with how Pruitt has handled the EPA."

Reps. [Carlos Curbelo](#) and [Ileana Ros-Lehtinen](#), both Florida Republicans, earlier this week called for Pruitt's ouster, as have a number of Democrats. Pruitt is facing increased scrutiny for ethics issues including the \$50-per-night rent he paid to rent space in a condo from a lobbyist last year.

Meanwhile, conservative Republicans like Sens. [Rand Paul](#) (R-Ky.) and [Ted Cruz](#) (R-Texas) have come to Pruitt's defense today.

"Why do Obama and his media cronies want so badly to drive @EPAScottPruitt out of office?" [tweeted](#) Cruz.

Pruitt "is likely the bravest and most conservative member of Trump's cabinet," [tweeted](#) Paul. "We need him to help @realDonaldTrump drain the regulatory swamp."

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

France's Macron arrives for 'celebration' of unlikely friendship with Trump [Back](#)

By Nicholas Vinocur and Michael Crowley | 04/22/2018 09:45 PM EDT

PARIS — French President Emmanuel Macron will receive full state honors in Washington this week, nine months after he rolled out a literal red carpet for Donald Trump on Paris' Avenue des Champs Élysées.

The three-day visit is likely to feature more displays of public affection between two leaders who talk on the phone constantly and closely coordinated recent airstrikes against Syria. Despite the U.S president's enormous unpopularity in his country, Macron virtually never criticizes Trump in public and calls him a "friend." Trump in turn reportedly even scribbled a [love note](#) to the 40-year-old French president last July.

This week's visit will be "something of a celebration of the relationship," a senior Trump administration official said.

Few would have predicted such talk just after Macron's May 2017 election defeat of the nationalist insurgent Marine LePen, whom Trump [implied](#) he supported. Macron's dark-horse win was seen as a rebuke to the western nationalist movement of which Trump has become a symbol. And while the French [adored](#) President Barack Obama as a suave intellectual, Trump is seen as the embodiment of a gauche American.

But rather than denounce Trump as many French politicians have, Macron has sought to win Trump over with flattering words. In an interview with "Fox News Sunday," Macron stressed his similarities with Trump, saying both he and the president could be called a "maverick" whose election had been unexpected.

The two men hardly see eye to eye on policy, and are expected to debate the Iran nuclear deal, Syria and trade policy, among other sensitive topics.

But Macron and Trump have worked closely together as Paris takes a larger leadership role on international issues — at a time when Britain is sidelined by political chaos and a weakened German Chancellor Angela Merkel's relationship with Trump is cool at best.

"Macron has become Trump's main European interlocutor when it comes to addressing international crises," Alexandra de Hoop Scheffer, senior transatlantic fellow at the German Marshall Fund, [wrote](#) in a recent policy paper.

Macron and Trump will share a private dinner Monday evening, followed by a bilateral meeting early Tuesday. They'll then meet with Cabinet members before a state dinner at the White House. On Wednesday, Macron will address a joint session of Congress.

In their private talks, the two men are likely to focus on security issues, including a fast-approaching decision point for the Iran nuclear deal. French officials say they share some of Trump's concerns about the July 2015 pact brokered by President Barack Obama, but are urging Trump not to abandon the agreement in mid-May, when Trump has threatened to reimpose sanctions on Tehran.

Macron has sought common ground with Trump by saying the current deal is flawed and that he might be willing to crack down on Iran's ballistic missile program. But Trump wants much stronger measures that French officials worry could abrogate the deal entirely. A Trump official said the deal would be "a major topic of discussion" during Macron's visit.

The official also said the two leaders "will discuss, probably in some detail, the way ahead in Syria."

In a televised debate last week, Macron said he had changed Trump's mind on the U.S. presence in war-torn Syria: "President Trump said the USA's will is to disengage from Syria. We convinced him that it was necessary to stay," the French leader said.

The White House quickly denied that characterization, and Macron later said he never meant the countries should maintain an indefinite military presence in the country.

But on Sunday, Macron told Fox News that he would urge international cooperation during his address to Congress, warning that Iran would benefit from a U.S. and European abandonment of Syria. "We are very much attached to the same values, and especially liberty and peace," Macron said of America and France.

Trade will also be on the agenda, after Macron and Merkel — who's due to fly into Washington on April 27, a few days after Macron leaves — both vowed to tell the U.S. president that Europe would not stand for his recent steel tariffs. U.S. officials may in turn complain to Macron's entourage about a French-led proposal to slap a 3-percent tax on U.S. internet giants.

Despite the menu of issue differences, officials on both sides sought to lower expectations for specific results from the meeting.

"It's largely symbolic," an aide to Macron said.

"I think what the President would like to hear from President Macron is his counsel and his point of view and his perspective," said the Trump official. "Whether we will actually solve, or come to closure, or a full detailed agreement on some of the issues that we've touched on is difficult to say at this remove."

As they work together internationally, Trump and Macron are both fending off political threats at home. A year into his presidency, the French president's sheen as a political prodigy and savior of European liberalism has been dulled by grinding rail strikes and sagging poll numbers.

Macron wants Trump to stand at his side as the European Union's soon-to-be sole military power with a permanent seat on the United Nations Security Council, nuclear capability and the will to intervene where others will not.

The April 14 strike on Syria's chemical facilities bolstered the burgeoning Franco-American relationship, French officials say. Macron and Trump spoke repeatedly during the crisis — and no fewer than seven times over the past month, according to accounts from the Elysée presidential palace.

While Britain also joined the strikes, Merkel barely featured in the Syrian discussions. Characteristically for intervention-averse Germany, she did not order participation in the strikes, commenting on them after the fact as "necessary and appropriate."

Once the missiles had hit their targets, Macron seized on a chance to drive home his point: While others may waver, France remains a red-blooded beacon of Western power. Paris had intervened in Syria for the "honor of the international community," he told the European Parliament in Strasbourg

One outstanding question about the Macron-Trump relationship that fascinates commentators in Europe: Does the French president really like Trump, or is he just "playing him"?

European commentators suggested as much last summer when, during Trump's visit to Paris, Macron mimicked his guest's signature thumbs-up move to TV cameras.

There may be no definitive answer. Macron is a one-time stage actor who loves to quote classical French playwrights from memory and, as he told a pair of French interviewers last weekend, has "no friends."

Quizzed about Macron's apparent affection for Trump, the French president's aides say he has concluded that befriending Trump and avoiding any direct criticism of the U.S. president that could inflame his temper are the best ways of keeping Trump — and the United States — on his nation's side.

Subject: Morning Energy: Interior rejected staff advice on casino, docs show — Pruitt's science directive slowed by industry concerns — Francis Brooke: Rookie of the year

By Kelsey Tamborrino | 04/20/2018 05:43 AM EDT

With help from Anthony Adragna

YOU NEVER KNOW WHAT YOU'RE GONNA GET: Interior officials reversed course on plans from two American Indian tribes to build a casino last year, new documents show. The heavily redacted documents released via FOIA show officials rejected recommendations from federal experts on Indian gaming, Pro's Nick Juliano reports, raising further questions about whether Interior Secretary Ryan Zinke and his political appointees caved to lobbying pressure from MGM Resorts International.

The tribes' treatment is now the subject of an Interior inspector general investigation, a spokeswoman told Nick. And while the documents don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming, they do show that the career staffers were circulating what they labeled as "approval" letters just 48 hours before their bosses refused to either OK or reject the tribes' application, leaving the casino in legal limbo.

No direct effort by MGM to lobby experts in BIA's Indian gaming office can be seen in the docs, but they show a timeline that indicates Interior officials closest to gaming issues were ready to side with the tribes after about six weeks of internal review. The department arrived at the opposite conclusion less than 48 hours after their recommendations went to Associate Deputy Secretary James Cason, a veteran of three Republican administrations, who was one of President Donald Trump's first hires at the department.

The emails also indicate even Interior career staff were unsure how they would explain the sudden about-face from higher-ups. "As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote to a colleague who wondered how he should answer questions. And "like Forrest Gump, say: 'that's all I've got to say about that.'" Read more.

WELCOME TO FRIDAY! I'm your host Kelsey Tamborrino, and NRECA's Kirk Johnson knew all the states with just one representative in the House: Alaska, Delaware, North Dakota, South Dakota, Montana, Vermont and Wyoming. For today: Who was the Senate majority leader whose father served as chief justice? POLITICO Space is our new weekly briefing on the policies and personalities shaping the second space age. Sign up today.

CONCERN ON ALL FRONTS: Scientists aren't the only ones expressing concern with EPA Administrator Scott Pruitt's plans to revise how the agency considers outside research, emails show. As the administrator weighs next steps on a scientific transparency directive announced earlier this year — which is expected to require that the raw data for all studies be publicly available and peer-reviewed — members of Pruitt's staff expressed concern it could block their own use of industry data, Pro's Annie Snider reports.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office, voiced concerns after she received a draft of the not-yet-released policy on Jan. 31. The directive in question has origins in legislation introduced by Rep. Lamar Smith during the Obama administration, but its requirements would exclude a great deal of data about pesticides and toxic chemicals that Beck's office considers when determining whether a substance is safe or must be restricted. "These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote in an email to an official in EPA's office of research and development. "The directive needs to be revised." Read more here.

THE ROOKIE: The energy industry is unsure what to make of the relatively unknown Francis Brooke, who will soon replace Mike Catanzaro as the top White House energy aide. A 28-year-old former baseball pitcher, Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and George David Banks. But Pro's Ben Lefebvre and Eric Wolff report energy lobbyists worry his promotion could leave them without steady hands to steer the White House as big decisions on the coal industry, biofuels and energy trade pile up — especially in the crucial run-up to the midterm elections. "It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so." Read more.

WHAT'S THE HOLD UP? House Natural Resources Chairman Rob Bishop says a comprehensive GOP energy bill is "being held up" until the Pentagon weighs how offshore drilling near Florida could affect national security, following backlash from the offshore proposal that led two Florida Republicans to pursue a permanent moratorium. A pending energy bill, H.R. 4239 (115), is one potential vehicle to extend that moratorium. Bishop told Anthony he is waiting for a Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the results of the study would help determine next steps on the moratorium.

— **On the anniversary of the Deepwater Horizon oil spill**, New Jersey Gov. Phil Murphy is expected to sign into law today a bill that bans offshore drilling in state waters. The Center for American Progress, in anticipation of the legislation, cheered the move. Florida Sen. Bill Nelson, meanwhile, marked the anniversary by joining legislation Thursday intended to block the oil industry from rolling back Interior drilling safety rules adopted in response to the spill.

TRAVEL COMPANIONS: In preparation for a planned trip that was later canceled because of Hurricane Harvey, Pruitt spent nearly \$45,000 to fly five people to Australia, according to Reuters. While not a violation of government policy, Reuters reports two of Pruitt's aides and three security agents flew on business-class tickets costing roughly \$9,000 to set up advance meetings for the administrator. Pruitt was scheduled to participate in environment-related meetings with Australian officials.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox told Reuters Hurricane Harvey, which caused major flooding in Texas, caused him to cancel the trip and instead go to Corpus Christi to assess the agency's relief efforts. "This is not news," he said, adding Pruitt's team was "adhering to the federal government's travel policy."

WHAT ABOUT HIS EMAILS? EPA told Senate Environment and Public Works Chairman John Barrasso that all of Pruitt's four emails were searched whenever there was a FOIA records request, but that a "full review" is being conducted just to make sure. "As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries," Steve Fine, EPA's deputy chief information officer, wrote in a letter released by Barrasso.

DEMS WADE INTO WEST VIRGINIA PRIMARY: Republicans aren't the only ones trying to meddle in West Virginia's Senate primary. National Democrats are also jumping into the game, POLITICO's Alex Isenstadt reports, with an effort launched Thursday that could be designed to help coal baron Don Blankenship

win the Republican nomination. Washington-based super PAC Duty and Country has begun airing ads hitting the other two GOP contenders in the field: Rep. [Evan Jenkins](#) and state Attorney General Patrick Morrisey, ahead of the state's May 8 primary. But Blankenship was notably omitted from their target list, Alex writes. [Read more.](#)

— **Fox News Channel announced Thursday** its "America's Election Headquarters 2018" midterm election series would kick-off in West Virginia, with a GOP Senate primary debate on May 1. Candidates will need to reach a 10 percent threshold in a Fox poll next week to be invited to the debate.

ABOUT THAT CRA THREAT: Sen. [Lisa Murkowski](#) doesn't sound super gung-ho about using the Congressional Review Act on a 2016 plan from the Bureau of Land Management (that GAO [concluded](#) last year met the definition of a federal rule). "Obviously, we've got some issues that need to be resolved in the Tongass and whether this is the best way to do it is something we've been analyzing," she told reporters. Of course, floor time in the Senate is a valuable commodity so carving out time for the Alaska-centric issue may be a heavier lift. Background [here](#) on the Senate Republicans' new novel push to undo federal rules.

IT'S ALMOST EARTH DAY: Sunday marks Earth Day, where the Earth Day Network is using the date to promote its goal of [ending plastic pollution](#). The organization says more than 1 billion people from 192 countries will take part in the event on April 22. For its part, EPA promotes a list of Earth Day events [here](#).

CFA FLAGS FUNDRAISER AT PRUITT CONDO: Washington-based watchdog group Campaign for Accountability filed a complaint Thursday with the FEC against GOP Sen. [Mike Crapo](#) and Vicki Hart, the lobbyist co-owner of the controversial condo where Pruitt lived. The complaint alleges Crapo and Hart violated the Federal Election Campaign Act and FEC regulations when they failed to disclose improper in-kind contributions. Read it [here](#).

GOING PUBLIC: The Sierra Club filed a lawsuit for documents related to EPA's Office of Public Affairs after EPA failed to respond to its FOIA requests concerning whether the agency improperly — and potentially illegally — used the Office of Public Affairs' staff time to promote topics outside the scope of the office. Read it [here](#).

MAIL CALL! BIRD IS THE WORD: Sixty-two Democrats, led by Rep. [Alan Lowenthal](#), sent a letter to Zinke on Thursday regarding Interior's interpretation of the Migratory Bird Treaty Act. "We ask that you continue to enforce this foundational bird conservation law as every administration from across the political spectrum has done for more than forty years," the [letter](#) says.

— **Thirty-one outdoor businesses** will send [this letter](#) to Zinke today, calling on DOI to acknowledge the role of the outdoor recreation industry in its proposal to reverse the Methane Waste Prevention Rule. They request best practices are implemented to improve air quality in oil fields across the country, among other issues.

SPEAKING OF METHANE: Earlier this week BP released its "[advancing the energy transition](#)" report, [committing](#) to near-term carbon reductions and setting a target methane intensity of 0.2 percent and holding it below 0.3 percent. The Environmental Defense Fund [highlights](#) the report Thursday in a post arguing on the next frontier of methane targets, as annual shareholder resolution meetings are on the horizon.

SOLAR BILL SPOTLIGHT: Democratic Rep. [Jacky Rosen](#) introduced the bipartisan "Protecting American Solar Jobs Act," [H.R. 5571 \(115\)](#) this week, which would repeal tariffs introduced by the Trump administration on imported solar panels. It would undo increases in duty and a tariff-rate quota on certain crystalline silicon photovoltaic cells.

QUICK HITS

- Explosion reported at Valero oil refinery in Texas, [NBC](#).
- Girl Scouts to press EPA on coal ash, [WCIA](#).

Stories from POLITICO Pro

Zinke's agency held up Indians' casino after MGM lobbying [Back](#)

By Nick Juliano | 02/01/2018 05:00 AM EDT

Two casino-owning American Indian tribes are accusing Interior Secretary Ryan Zinke of illegally blocking their plans to expand operations in Connecticut — a delay that stands to benefit politically connected gambling giant MGM Resorts International.

The Interior Department's refusal to sign off on the tribes' plans for a third Connecticut casino came after Zinke and other senior department officials held numerous meetings and phone calls with MGM lobbyists and the company's Republican supporters in Congress, according to a POLITICO review of Zinke's schedule, lobbying registrations and other documents. The documents don't indicate whether they discussed the tribes' casino project.

Federal law gives Interior just 45 days to issue a yes-or-no verdict after a tribe submits proposed changes to its gaming compact with a state, as the Mohegan and Mashantucket Pequot tribes note in a suit they filed against Zinke and the department. But the department declined to make any decision in this case, an inaction that raises questions about whether an intensive lobbying campaign by one of the gambling industry's biggest players muscled aside the interests of both the tribes and the state of Connecticut.

"I think the Department of Interior has been derelict in failing to give approval" to the tribes' request, Sen. Richard Blumenthal (D-Conn.) told POLITICO. "We asked for a meeting, but they were unresponsive. They never even responded."

Meanwhile, MGM and its allies had direct access to Interior. Zinke had multiple conversations last year with Sen. Dean Heller and Rep. Mark Amodei — two Nevada Republicans whose state is a major center of employment for MGM, and who have each tried to impede the tribes' casino plans. The company also doubled its lobbying spending and assembled a team that includes Bush-era Interior Secretary Gale Norton and Florida-based Trump fundraiser Brian Ballard.

The proposed Connecticut casino would sit on non-tribal land just across the border from a billion-dollar casino that MGM is planning in Springfield, Massachusetts. The Pequot tribe's Foxwoods Casino in Connecticut previously provoked the ire of former New Jersey casino owner Donald Trump, who complained during a 1993 congressional hearing that "they don't look like Indians to me."

An Interior spokeswoman did not respond to requests for comment, but the department is due to respond by next week to the suit the tribes filed in November. MGM has sought to join the suit on Interior's side.

MGM and its supporters say the tribes are trying to circumvent restrictions on "off-reservation" gambling while still maintaining their exclusive access to Connecticut's lucrative casino market, and that the new property would provide unfair competition to its Springfield project.

Interior officials sent the tribes encouraging signals as recently as May. But by mid-September the department reversed course, saying it would be premature to either approve or reject the plans.

"It's 100 percent about delaying us for as long as they possibly can," said Andrew Doba, a spokesman for the joint enterprise the tribes created for their new project.

The case is far from the first legal dispute to arise from Interior's role as the overseer of Indian tribes' gambling agreements with the states. Clinton-era Secretary Bruce Babbitt faced a special prosecutors' investigation after Interior rejected three Wisconsin tribes' plans for a casino that other, Democrat-supporting tribes opposed — though he ultimately was cleared. Indian gambling also played a key role in the George W. Bush-era Jack Abramoff scandal.

In the Connecticut case, the tribes have been operating two casinos — the Pequot tribe's Foxwoods and the Mohegan Sun — since the early 1990s. Their success in the market between Boston and New York provided competition to casinos in Atlantic City, including the formerly Trump-owned Taj Mahal.

As gambling spread across the U.S. in recent decades, MGM and other casino developers — including Trump — pursued projects in Connecticut but were ultimately unsuccessful. State law there limits casino ownership to the two in-state tribes and their new joint venture.

The tribes say they are fully complying with state law and the federal Indian Gaming Regulatory Act, which allows federally recognized tribes to operate casinos on their reservations or lands held in trust by the federal government. The casino they want to open is technically a commercial project that would be operated by MMCT Venture, a company jointly owned by the tribes that owns the casino site in East Windsor and entered into a development agreement with the town.

Connecticut Gov. Dannel Malloy and the state legislature signed off on that arrangement last year, so long as the tribes agreed to amend their gaming compacts that guaranteed a certain share of slot revenues would go to the state. The Indian Gaming Regulatory Act requires Interior to approve such compact amendments after a brief review window, unless the amendments violate the terms of the federal law.

The lawsuit seeks to force approval of the contract, arguing that the law does not allow Interior to refuse to render a verdict.

"IGRA and its implementing regulations leave the Secretary with no discretion to proceed in any other manner," Connecticut and the tribes argue in their lawsuit, filed in U.S. District Court for the District of Columbia on Nov. 29.

At one point, Interior seemed inclined to agree with the tribes' interpretation of the law. In a May 12 technical guidance letter to the tribes, Associate Deputy Interior Secretary James Cason acknowledged that the Indian Gaming Regulatory Act provides for a 45-day review period for compact amendments and that the department may disapprove them only for violating the act, other federal laws or trust obligations to the tribes.

While Cason stressed that his advice was nonbinding and did not constitute a preliminary decision, he endorsed earlier guidance from the Obama administration that the Connecticut amendment reflected the "unique circumstances" at play and that opening a new casino would not affect the tribes' exclusivity agreement with the state.

But the tribes' request drew opposition from out-of-state lawmakers like Heller and Amodei.

"Under that framework, the tribes seek to expand off-reservation gaming without going through the procedures mandated by" the Indian Gaming Regulatory Act, Amodei wrote in a July 28 letter to Cason, following up on a discussion earlier that day. Amodei asked whether Interior planned to allow the 45-day review period to lapse, which would allow the amendments to be "deemed approved."

Ultimately, Interior decided against approval. Acting Assistant Secretary for Indian Affairs Michael Black told the tribes in a Sept. 15 letter that approving or disapproving the amendment to their gaming compact was "premature and likely unnecessary," and said Interior had "insufficient information" to make a decision. However, he did not cite any legal justification for that move, nor did he outline what additional information the department would need.

Interior has on at least one occasion returned a gaming compact amendment rather than make a yes-or-no decision, although the circumstances were slightly different at the time. In 2013, the department told the Cheyenne-Arapaho tribes in Oklahoma that it could not process their amendments because of incomplete information. But in that case, the department replied in less than 30 days rather than wait for the entire review period to elapse, and it cited specific regulations and outlined what additional information it needed from the tribes.

Black copied Amodei and Heller on his letter but did not include any Connecticut lawmakers. (He did say a separate letter was going to Malloy, the Connecticut governor.) Zinke and Heller also spoke on the phone on Sept. 15, according to an entry on Zinke's calendar. And the day before Black sent the letter, Zinke and Cason were scheduled to meet at the White House with deputy chief of staff Rick Dearborn, although Zinke's calendar does not list the subject of the meeting.

Ahead of the decision, MGM "participated in Interior's review" through meetings and correspondence in which the company urged Interior to either return the amendments without making a decision or to disapprove them for violating the Indian Gaming Regulatory Act, according to a statement filed in court by Uri Clinton, MGM's senior vice president and legal counsel.

MGM brought on heavyweights including Norton — who disclosed her work for the company just last month — as well as Ballard, a lobbyist who has helped raise millions for Trump's campaign. MGM's spending on lobbyists for all issues more than doubled last year, to \$1.5 million spread across five outside firms and its own newly formed in-house team.

An affiliated company, MGM Public Policy LLC, also paid \$270,000 last year to hire a team of lobbyists from Brownstein Hyatt Farber Schreck LLP to work on issues including gaming. That's the firm at which Deputy Interior Secretary David Bernhardt worked until he joined the administration last year, though he has agreed to recuse himself from matters involving former clients of his firm without prior authorization.

"MGM Resorts last year established a public policy office in Washington to engage more directly on Federal legislative and policy issues," an MGM spokesman said in a statement. "Our advocacy activity reflected that increased engagement. As the largest employer in Nevada, part of that advocacy is routinely engaging our elected representatives."

Heller and Amodei each had multiple meetings and phone calls with Zinke last year, according to the secretary's calendar, although it's unclear whether they discussed the Connecticut casinos. On one occasion, Zinke joined Heller for dinner at a Las Vegas steakhouse on July 30, when he was in the state touring national monuments, one of several pieces of Interior's portfolio of interest to Nevada.

A Heller spokeswoman did not respond to a request for comment. But the senator has tried to advance MGM's interests in the past: In 2016, he offered an amendment to a defense bill that would have prevented Indian tribes from operating commercial casinos in the same state where they operate casinos on the reservation — precisely what the Connecticut tribes are trying to do. The amendment never came to a vote, and Heller does not appear to have ever discussed it publicly.

MGM employees and the company's political action committee have given \$96,000 this cycle to Heller's reelection campaign and leadership PAC, making the company his largest single source of contributions, according to the Center for Responsive Politics. Amodei has received no donations from company employees or its PAC.

Interior's Sept. 15 decision came two weeks after Zinke invited several lobbyists for MGM to join him and other guests for a social visit on his office balcony, which overlooks the National Mall. They included, according to Zinke's calendar, Ballard and other lobbyists from his firm Florida-based firm Ballard Partners, which opened its first Washington, D.C., office in 2017. Also present were Zinke's former family attorney and a major GOP fundraiser, according to copies of the secretary's calendar.

MGM hired Ballard in March and paid the firm \$270,000 last year, according to disclosure filings. Ballard was Florida finance chairman for Trump's 2016 campaign and helped organize a fundraiser at the Trump International Hotel in Washington last summer at which donors gave \$35,000 to attend or \$100,000 to join the host committee.

Ballard declined to discuss his work for MGM or any other client and said he could not recall the details of that particular meeting, which took place Aug. 29, according to Zinke's calendar. But Ballard said he had met Zinke and thinks "the world of him."

In October, MGM brought on Norton, who served as Interior secretary from 2001 to 2006, to lobby on issues related to the Connecticut tribes. Norton began lobbying for MGM on Oct. 25, according to disclosures filed Jan. 19.

The next day, Oct. 26, Interior officials spoke to the tribes and asked them to explain why the department was obligated to weigh in on their casino since it was being built by a commercial entity and not on tribal land.

In a brief interview last week, Norton said she did not know why her disclosure form was filed so late — lobbyists are required to file disclosures within 45 days — and she did not respond to follow-up inquiries.

Meanwhile, a new state legislative session begins in February in Connecticut. MGM plans to ask legislators there to allow an open bidding process for new casinos in the state, arguing that Interior's refusal to act shows that the state's attempt to limit casino ownership to the tribes would not work.

Interior rejected staff advice when scuttling tribes' casino, documents suggest [Back](#)

By Nick Juliano | 04/20/2018 05:02 AM EDT

Trump administration officials rejected recommendations from federal experts on Indian gaming policy when they blocked two American Indian tribes from opening a casino last year, documents obtained by POLITICO indicate.

The heavily blacked-out documents add to questions about whether Interior Secretary Ryan Zinke and his political appointees buckled to lobbying pressure from MGM Resorts International, a gambling industry giant that is planning its own casino just 12 miles from the project proposed by the Mohegan and Mashantucket Pequot tribes.

Interior's inspector general is investigating the department's handling of the tribes' casino application, a spokeswoman told POLITICO, after Connecticut lawmakers asked the internal watchdog to look into the matter.

The documents, released under the Freedom of Information Act, don't reveal the contents of the internal deliberations by the staff of the Bureau of Indian Affairs' Office of Indian Gaming. But they show that the career staffers were circulating what they labeled "approval" letters just 48 hours before their political bosses reversed course and refused to either OK or reject the tribes' application — a nondecision that left the Indians' East Windsor project in legal limbo.

To fight off the potential competition, MGM [spent heavily on lobbyists](#), including George W. Bush-era Interior Secretary Gale Norton and firms with ties to the Trump administration, while enlisting the assistance of friendly lawmakers such as Sen. [Dean Heller](#) and Rep. [Mark Amodei](#). MGM lobbyists and the two Nevada Republicans

held a handful of meetings and conversations with Associate Deputy Secretary James Cason in the months and days before he edited Interior's letter holding up the tribes' plans.

A spokesman for the tribes' casino project said they were caught off guard by Interior's about-face and are glad to see the department's internal watchdog probing the matter.

"We are grateful there's an IG investigation into this issue because since last fall, none of the department's actions have passed the smell test," said Andrew Doba, a spokesman for MMCT Venture, the company the tribes formed to own and operate the new casino. "Something clearly happened to pollute the process, which should be problematic for an administration that promised to drain the swamp."

The tribes have also sued, arguing that Zinke ignored his responsibilities under the Indian Gaming Regulatory Act to either approve or reject their application in a timely manner and to act to protect the tribes' interests.

Cason and spokespeople for Interior and the Bureau of Indian Affairs did not respond to requests for comment this week.

But the emails show that even Interior's career staff was unsure how they would explain the sudden about-face.

"As for why we didn't approve the Mohegan compact amendment, you say the letter speaks for itself," Troy Woodward, a senior policy adviser in the Office of Indian Gaming, wrote in a Sept. 26 email to a colleague who anticipated having to answer questions about it at a gaming industry conference. And "like Forrest Gump, say: 'that's all I've got to say about that.'"

The dispute is complicated by the peculiarities of federal law on Indian gaming, which seeks to promote tribes' economic development but also discourages the spread of off-reservation gambling. The two Connecticut tribes, which already operate two lucrative casinos on their reservations, are exploring a gray area with their proposed third casino, which a jointly owned private company would operate on nonreservation land.

MGM, which plans to open a casino later this year in nearby Springfield, Mass., says the tribes' approach would set a worrisome precedent for other states.

"This is an unusual situation, and we're kind of pushing the bounds on IGRA," says Kathryn Rand, dean of the University of North Dakota School of Law and a co-director of its Institute for the Study of Tribal Gaming Law and Policy. Rand is not affiliated with MGM or the Connecticut tribes.

The newly released documents do not show any effort by MGM to make its case to experts in BIA's Indian gaming office. They also indicate that Interior officials closest to Indian gaming issues were ready to side with the tribes after about six weeks of internal review.

Instead, Interior reversed course with little official explanation less than 48 hours after their recommendations went to Cason, a veteran of the previous three Republican administrations who was one of President Donald Trump's first hires at the department.

On Sept. 11, Woodward emailed around copies of "the edited letters for Pequot and Mohegan," which he said had "been through the surname process," a system for internal review. The contents of the letters were redacted, but each was about two pages long, and file names referred to both as "draft approval" letters.

The following day, Woodward alerted colleagues that "Jim wants some changes," referring to Cason. But on Sept. 13, Woodward still sent "approval" letters "for Mike Black's signature," referring to the then-acting

assistant secretary for Indian affairs, along with a notice the department was required to publish in the Federal Register. Again, the attachments were redacted, but each was two pages long.

A day later, "Jim's edits" came back, and the documents were no longer referred to as "approval" letters.

Instead, Black signed a one-page letter on Sept. 15 informing the tribes that it would be "premature and likely unnecessary" to weigh in on their gaming applications at all.

Returning the applications without approving or disapproving them appears to be an option Interior officials did not consider until earlier that day. A pair of redacted memos circulated that morning, including one "regarding Secretarial Authority to not act on a compact," according to its title.

It is unclear precisely what happened over those days, but by then Cason had received ample input from MGM and its allies. As early as June, Cason met with a senior adviser to Zinke and a lobbyist from Ballard Partners, a Trump-connected firm MGM hired last year, to discuss issues related to the company, according to his calendars. And he was in touch with MGM supporters several more times over the intervening months up to the days before Interior's response was being finished.

On Sept. 13, Cason met with Amodei, and the following day he had a teleconference with Heller, according to Cason's calendar. MGM is a major employer in Nevada, and both lawmakers had previously raised concerns about the Connecticut tribes' proposals and the potential expansion of off-reservation gambling.

Cason's Sept. 14 meeting with Heller included some officials who were working on the Connecticut case, according to his calendar and the BIA emails. Later that day, Cason joined Zinke at a meeting at the White House with Rick Dearborn, Trump's deputy chief of staff for policy.

The president has his own history of clashes with the Mashantucket Pequot, whose Foxwoods Casino competed with his Atlantic City properties to draw gamblers from New York City. "They don't look like Indians to me," Trump infamously declared in a 1993 congressional hearing.

Several weeks after Interior released its decision, Norton sent Zinke a 24-page memo outlining legal arguments in support of the decision on behalf of MGM. Among the evidence she cited was Trump's congressional testimony, though not that particular phrase.

"Supreme Court precedent and President Trump's testimony counsel against approving Connecticut's discriminatory framework, the sole function of which is to grant MMCT, a private corporation, a monopoly over commercial, off-reservation, state-regulated gaming," the former Interior secretary wrote in her Oct. 30 memo to Zinke.

Black's ambiguous Sept. 15 letter, which Cason had edited, left the tribes unable to proceed with their planned casino.

The tribes' lawsuit is pending in U.S. District Court for the District of Columbia, and MGM has asked to intervene in the case, although both Interior and the tribes say it does not have standing to do so.

The case hinges on dueling interpretations of the goals of the Indian gaming law — essentially, whether more weight should be given to IGRA's goal of supporting tribes' economic prospects or its prohibitions on off-reservation gaming in most circumstances.

In court filings, Interior has also stressed the importance of procedural differences between the two tribes' prior gaming agreements, which it says should prevent the Mashantucket Pequot from participating in the case at all.

While the Mohegan tribe was operating under a state gaming compact, the Mashantucket were never able to reach an agreement with Connecticut officials back in the 1980s — so Foxwoods has been operating under the terms of "secretarial procedures" authorized under a different section of the law.

The law says amendments to gaming compacts, such as the Mohegan's, must be approved within 45 days unless Interior can demonstrate that their terms violate federal law or the department's trust responsibilities to the tribe. But it contains no such deadline for secretarial procedures such as the Mashantucket Pequot's.

Interior and MGM say that because the department has no obligation to act on the Pequot's proposed amendment, the entire case is effectively moot. However, the newly disclosed emails suggest that career officials were aware of that distinction throughout their review and did not see it as a reason to deny the tribes' request.

Rand, the law school dean, said courts have not previously grappled with the issue. "That I think is a real interesting and open question that we wouldn't have a whole lot to go on," she said.

This case is also unusual because of the nature of the two tribes at issue and the lucrative market the two sides are battling over.

"That might be a bit implicit in MGM's arguments — that the Mohegans and the Pequots aren't acting like tribal governments in this enterprise, they're operating like competitors. And because of their status ... they don't need the protection that other tribes do," Rand said in an interview this week. "The counterargument, of course, is that tribal sovereignty doesn't depend on whether the tribe needs the federal government's help. Tribal sovereignty is just a fact."

Black's Sept. 15 letter also does not mention the procedural difference between the tribes as a factor in deciding to return the applications without acting on them.

EPA emails show industry worries slowed new science policy [Back](#)

By Annie Snider | 04/19/2018 05:01 PM EDT

EPA's rollout of a controversial new transparency policy that would severely restrict the scientific research the agency can rely on when drafting new regulations has been slowed down by political officials' fears that it could have major unintended consequences for chemical makers, according to newly released EPA documents.

The issue of scientific transparency has been high on the agenda of House Science Chairman [Lamar Smith](#) (R-Texas), who has found strong support from EPA Administrator Scott Pruitt — much to the consternation of public health advocates and green groups, who view the effort as backdoor attack on the agency's ability to enact environmental regulations.

Since Pruitt announced plans for the new policy last month, researchers and public health proponents have raised alarms that it could restrict the agency's ability to consider a broad swath of data about the effects of pollution on human health. But documents released under the Freedom of Information Act show that top EPA

officials are more worried the new restrictions would prevent the agency from considering industry studies that frequently support their efforts to justify less stringent regulations.

Emails between EPA officials obtained by the Union of Concerned Scientists show that Nancy Beck, the top political official in the agency's chemicals office who came to the agency after serving as a key expert for the chemical industry's lead lobbying group, voiced major concerns after she received a draft of the not-yet-released policy on Jan. 31.

The new scientific transparency directive is expected to require that the raw data for all studies EPA relies on be publicly available, and that the studies be peer-reviewed. But Beck said these requirements would exclude a great deal of industry data about pesticides and toxic chemicals that her office considers when determining whether a substance is safe or must be restricted.

It costs companies "millions of dollars to do these studies," Beck wrote in an email to Richard Yamada, the political official in EPA's office of research and development who is spearheading work on the new scientific policy and is also a former staffer for the House Science Committee chairman.

"These data will be extremely valuable, extremely high quality, and NOT published," Beck wrote. "The directive needs to be revised."

Moreover, much of this data, Beck noted, is considered proprietary by companies. It is dubbed confidential business information, and even though EPA can consider it as part of its regulatory review, the data cannot legally be made public.

Yamada replied to thank Beck for the heads up. "Yes, thanks this is helpful - didn't know about the intricacies of CBI," he wrote. "We will need to thread this one real tight!"

The term "confidential business information" primarily applies to industry information. That data is separate from the personal medical information that public health researchers worry could block consideration of their work.

Yogin Kothari, a lobbyist for the Union of Concerned Scientists, said the emails show the Trump administration's EPA has been "trying to stack the deck in favor of the industries they're supposed to be regulating."

"They want to potentially create exemptions for industry, but if you look at this entire set of documents ... you will see that there's not a single consideration for the impacts on public health data, on long-term health studies, on studies that EPA does after public health disasters like the BP oil spill," he said.

EPA spokeswoman Liz Bowman emphasized the policy is not yet finalized.

"These discussions are part of the deliberative process; the policy is still being developed. It's important to understand; however, that any standards for protecting [confidential business information] would be the same for all stakeholders," she said in a statement.

The emails indicate Pruitt wanted the new science policy rolled out at the end of February, and teased his plans in an interview with conservative outlet The Daily Caller in mid-March. But the agency has yet to finalize the policy.

The transparency directive has its origins in legislation introduced by Smith during the Obama administration, that had the backing of a number of industry groups, including the American Chemistry Council. The House

Science Committee chairman frequently charged that the Obama EPA used "secret science" to justify "costly new regulations."

Although versions of the measure were approved by the House multiple times, the Senate never took it up. CBO estimated that one version of Smith's legislation would cost EPA \$250 million a year, at least in the initial years, and a leaked staff response to questions from the budget office said a later version would be even more costly, would endanger confidential medical and business information, and "would prevent EPA from using the best available science."

But Smith found an ally in Pruitt. The emails indicate that Smith met with Pruitt in early January and show that Pruitt's staff quickly began working on a directive to "internally implement" the legislation.

Industry's backing for the new scientific approach began to waiver under the Trump administration, though. When a top American Chemistry Council scientist testified before Smith's committee in February 2017, she emphasized the need to protect industry information if the transparency initiative moved forward.

"One of the things that we do need to take into consideration as making that data publicly available is that there are adequate protections for confidential business information to ensure that we keep innovation and competitiveness available for the marketplace," Kimberly White told the committee.

Industry has historically claimed that a wide range of information about chemicals, ranging from the processes by which they are produced, to the locations of manufacturing plants, to their very identities, must be kept confidential in order to keep competitors from learning trade secrets. Environmental and public health advocates argue that industry claims this exemption in many cases where it's not necessary and that it often keeps important health and safety information from public view.

The issue was a key point of debate when Congress considered a major overhaul of the nation's primary chemical safety law passed 2016 and has reemerged as Pruitt's EPA sets about implementing the law.

Asked for comment on EPA's new effort to implement the scientific transparency approach internally, American Chemistry Council spokesman Scott Openshaw said the group looks forward to reviewing the directive once it's finalized.

"It is critical that any final directive properly protect confidential business information and competitive intelligence," he said in a statement.

The internal emails show that EPA political staff were particularly attuned to this concern. In a Feb. 23 email to colleagues, Beck forwarded language from a 2005 White House document that laid out narrow exemptions from its requirement that all "important scientific information" disseminated by the federal government go through peer review.

"[Y]ou may need to tweak but hopefully there is something helpful here that can be borrowed/adopted," she wrote.

Richard Denison, lead senior scientist for the Environmental Defense Fund, said that EPA's access to industry data is indeed important to its ability to review the safety of new chemicals and pesticides, but said the internal EPA communications show that Pruitt's EPA wants to "have their cake and eat it too" with the new directive.

"They're trying to force peer review studies done by academic scientists to disclose every last detail, while at the same time allowing industry studies to be kept private or aspects of those to still be kept private," he said.

He pointed out that the concerns Beck raised about the burden the new policy would place on industry are the very same ones that the CBO report said the policy would place on EPA.

Energy industry puzzles over new White House adviser [Back](#)

By Ben Lefebvre and Eric Wolff | 04/19/2018 07:14 PM EDT

The appointment of a 28-year-old former congressional staffer as the top White House energy aide left many industry lobbyists scratching their heads — and nervous that the new hire may have trouble filling the shoes of the more experienced adviser he's replacing.

The relatively unknown [Francis Brooke](#) will step into the role as replacement for Mike Catanzaro, who will exit the White House next week. Catanzaro and NSC energy adviser George David Banks, another energy adviser who departed earlier this year, have been the top two energy experts in the White House, and they'll take with them decades of experience.

Brooke spent the last year in Vice President Mike Pence's office serving in a junior role to Catanzaro and Banks. But energy lobbyists worry his elevation will leave them without steady hands in the White House just as the administration confronts big decisions on the coal industry, an intra-party biofuels fight and thorny energy trade issues. Putting a relative rookie into the role also shows that the administration may not devote as much attention to energy issues in the run-up to the 2018 elections, sources said.

"It shows you this administration doesn't care about these issues," said one lobbyist who works extensively with the administration on energy policy, but who requested anonymity to discuss people he expects to work with. "I expect agencies are now going to have to play a bigger role. There's not going to be a lot of policy issues that will be determined over the next eight months or so."

Brooke joins the White House with far less energy-sector experience than Banks and Catanzaro, who came to their jobs with long histories in industry and government. He started his career as an intern for Mick Mulvaney in October 2012 when the White House budget director was a South Carolina congressman. After that, he had stints as a staff assistant for Rep. [Andy Barr](#) (R-Ky.) and legislative aide for Senate Majority Leader [Mitch McConnell](#) (R-Ky.). Pence's office tapped him to be associate director of policy in February 2017.

His family was involved in international politics in the previous decade. His father, [Francis Brooke Sr.](#), helped foster the relationship between officials in the George W. Bush administration and Ahmed Chalabi, the controversial Iraqi exile who helped convince the U.S. to invade his country.

Pence's office confirmed Brooke's biographical information but did not offer further details about his time working with the vice president.

McConnell's office did not respond to questions about Brooke. A spokeswoman for Barr said Brooke had been "one of the Congressman's most trusted legislative assistants and handled a wide variety of issues including energy, environment, and health care."

Previous to that, Brooke's biggest notice came from pitching 97 innings in the 2012 season with Northwestern University, making 13 starts and ending with a 2.51 earned run average. He would later serve as a coach to the Republicans' congressional baseball team, and he was on the Arlington, Va., practice field when a gunman shot Rep. Steve Scalise of Louisiana.

Lobbyists say they worry that with the departures of Catanzaro and Banks, Brooke will not be able to help the White House navigate complex energy issues with technical details that can be headache-inducing.

"There is angst downtown that without Mike there, no one knows who is going to make the trains run on time," said Andeavor's Stephen Brown said before Brooke was officially named to the position. "Mike was always the adult in the room on energy issues with substantive knowledge, not just a political perspective."

Brooke, along with Wells Griffith, an Energy Department official on a three-month loan to the White House, will have almost no time to get acclimated to their jobs. The Department of Energy is grappling with whether to try to use emergency authority to keep economically distressed coal-fired power plants running. And the two new staffers may need to help Trump navigate the dispute between refiners seeking changes to the Renewable Fuel Standard and corn farmers who are counting on the president to live up to his promise to protect ethanol.

They will also have to cope with White House officials on trade issues, such as the steel tariffs that oil and gas companies have complained could hamper the construction of new pipelines.

But some current and former administration officials say they have confidence Brooke is up to the job. They say he worked closely with Banks and Catanzaro on all their key issues, including traveling with Banks to the U.N. climate conference at Bonn, Germany, as a key adviser.

"He knows all the players, he's been in all the meetings," said one administration source. "He has the right temperament, the right judgment. People get into these jobs and they use them for vanity tours. Brooke doesn't do that. He's going to be great."

Banks, who left the White House in February, agreed.

"I think that he's ready for the role," said Banks, former adviser to Trump on the NSC. "Francis has been deeply engaged in all of the major energy environment [initiatives]. Some people wouldn't have the experience he's had in working these issues for over a year in the White House. He's incredibly bright, disciplined person."

Critics of the administration's energy policy rollbacks hoped Brooke's lack of experience would depoliticize some of the big decisions before the administration.

"Of course it's weird that there's no senior person covering energy issues," said John Morton, former senior director for energy and climate change on the NSC during the Obama administration. "Though with this administration, it's often a blessing in disguise when a policy area gets neglected by Trump appointees, as it allows more talented career staff to manage affairs."

Bishop: Drilling moratorium holding up energy bill vote in House [Back](#)

By Anthony Adragna | 04/19/2018 05:32 PM EDT

House Natural Resources Chairman [Rob Bishop](#) says a wide-ranging GOP energy bill is "being held up" until the Pentagon weighs in on how offshore drilling near Florida could affect national security.

The Trump administration earlier this year proposed allowing drilling in the Eastern Gulf of Mexico after an existing moratorium expires in 2022. Although Interior Secretary Ryan Zinke [quickly backed away](#) from the idea, the resulting firestorm led two Florida Republicans to pursue [a permanent moratorium](#), which they said has the backing of Speaker [Paul Ryan](#).

A pending energy bill, [H.R. 4239 \(115\)](#), is one potential vehicle to extend the moratorium. But Bishop, a strong supporter of the oil industry, did not include any limits on offshore drilling when the bill passed out of his committee last year.

The Utah Republican told POLITICO this week he is waiting for the Defense Department report on how expanded drilling near Florida would affect "mission compatibility." A committee spokeswoman said the report's findings would influence "how to move forward on a potential agreement regarding the future of the Eastern Gulf once the moratorium expires in 2022."

Oil and gas leasing within 125 miles off the Florida coastline and areas of the Gulf of Mexico is currently off limits until 2022.

Bishop said in the interview Wednesday that the absence of House Majority Whip [Steve Scalise](#) (R-La.), lead sponsor of the legislation, for surgery is an additional factor in getting the bill floor time.

WHAT'S NEXT: When the measure will get floor consideration remains unclear.

Report: EPA spent \$45,000 on Australia trip Pruitt canceled [Back](#)

By Emily Holden | 04/19/2018 05:34 PM EDT

Five EPA employees spent \$45,000 traveling to Australia last year to prepare for a trip by EPA Administrator Scott Pruitt that was ultimately canceled, Reuters [reported](#) today.

The two advance team aides and three security agents spent about \$9,000 each on business-class tickets to fly to Australia in August, an expense that is permitted under government rules on flights lasting 14 hours or more. The two EPA staffers were advance director Millan Hupp, the Oklahoma aide who followed Pruitt to Washington and has drawn scrutiny for receiving a large raise, and Kevin Chmielewski, the former deputy chief of staff for operations who was dismissed and is now acting as a whistleblower to lawmakers about Pruitt's spending habits.

Agency officials did not dispute the figures. EPA spokesman Jahan Wilcox said Pruitt did not go to Australia because of Hurricane Harvey. Pruitt traveled from his home in Tulsa, Okla. to Corpus Christi, Texas, to assess relief efforts on Aug. 30, according to his schedule and flight records.

Pruitt spent at least \$105,000 on first class flights and at least \$3 million on a round-the-clock [security detail](#). Records show about one-quarter of the \$120,000 costs for a trip to Italy in June for a G-7 environment meeting was to cover Pruitt's security. EPA's inspector general and various other government officials are investigating Pruitt's travel and spending.

Flight vouchers EPA has shared with lawmakers show Pruitt originally intended to travel to Sydney and Melbourne from Aug. 31 through Sept. 8 to "discuss best practices regarding the environmental operations" within the country.

EPA tells Barrasso all Pruitt's emails searched for FOIA [Back](#)

By Alex Guillén | 04/19/2018 05:24 PM EDT

EPA today told Senate Environment and Public Works Chairman [John Barrasso](#) (R-Wyo.) that all four of Administrator Scott Pruitt's emails were searched whenever there was a Freedom of Information Act records request, but that a "full review" is being conducted just to make sure.

"As long as EPA Administrators have had secondary email accounts, EPA staff have routinely searched requested accounts in response to FOIA and Congressional inquiries. That practice has not changed under Administrator Pruitt's leadership," Steve Fine, EPA's deputy chief information officer, wrote in a [letter](#) released today by Barrasso.

Fine added: "However, in response to your concern, my office is conducting a full review of the searches conducted regarding FOIA requests seeking Administrator Pruitt's records. If additional documents exist, we will contact the relevant requesters, and we will update you once our review is complete."

"I look forward to receiving the findings of the agency's full review that's being conducted in response to my letter," Barrasso said in a statement.

WHAT'S NEXT: Fine did not say how long EPA's review of FOIA request fulfillment will take.

Democrats meddle in West Virginia's GOP Senate primary [Back](#)

By Alex Isenstadt | 04/19/2018 04:23 PM EDT

National Democrats launched a campaign Thursday to intervene in the upcoming West Virginia Senate GOP primary — an effort that could be designed to help recently imprisoned coal baron Don Blankenship win the Republican nomination.

Duty and Country, a Washington-based Super PAC, began airing TV and web ads savaging the two mainstream Republican candidates, Rep. Evan Jenkins and state Attorney General Patrick Morrisey, who are competing in the May 8 primary. Left off the group's target list, however, was Blankenship, who spent one year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers.

In propping up Blankenship, the Democratic Party is wading into an intensifying GOP civil war. Republicans are growing increasingly worried about Blankenship, who has been gaining traction in the primary. GOP officials in Washington are concerned that if Blankenship wins the nomination, he'll ruin the party's prospects of defeating Democratic Sen. Joe Manchin in November.

Last week, national Republicans launched a super PAC named Mountain Families PAC aimed at stopping Blankenship. The organization, which is staffed by consultants who've previously worked for a political group aligned with Senate Majority Leader Mitch McConnell, has begun airing TV commercials accusing Blankenship of contaminating drinking water by pumping toxic slurry while setting up a separate piping system to his mansion.

The Democratic group is spending over \$380,000 to air the commercials. One of the [TV spots](#) says that as the former head of West Virginia State Medical Association, Jenkins pushed doctors to use an insurance company that overcharged, allowing his organization to profit. Another [ad](#) describes Morrisey as a carpetbagger, calling him a "millionaire New Yorker and former lobbyist who came down here and ran for office with no idea of the real challenges West Virginians face."

The Democratic group has also begun sending out mailers describing Jenkins as "part of the swamp, part of the problem."

A Duty and Country spokesman, Mike Plante, said the group had no plans to go after Blankenship and was instead focused on his two rivals.

"We made the strategic decision based on data that shows that either Patrick Morrisey or Evan Jenkins is more likely to be the nominee, so that's where we're focusing our attention," he said.

Duty and Country appears to have close ties to the national Democratic Party. In its federal filings, it lists the same downtown Washington address as other major party groups, including Senate Majority PAC, the main Democratic super PAC devoted to electing Senate Democrats.

In another twist, West Virginia attorney Booth Goodwin, who served as U.S. attorney in the case against Blankenship, is listed as the group's treasurer.

GOP maneuver could roll back decades of regulation [Back](#)

By Zachary Warmbrodt | 04/17/2018 10:16 AM EDT

Republicans are preparing to open a new front in their push to roll back regulations across the government, using a maneuver that could enable them to strike down decisions by federal agencies that reach back decades.

As soon as Tuesday, GOP senators, backed by President Donald Trump, will use the Congressional Review Act to topple safeguards issued by the CFPB in 2013 that were intended to discourage discrimination in auto lending.

While Republicans in the Trump era have already taken advantage of the 1996 law to remove more than a dozen recently issued rules, this would be the first time that Congress will have used it to kill a regulatory policy that is several years old.

Now, actions going back to President Bill Clinton's administration could be in play under the procedure GOP lawmakers are undertaking, forcing numerous agencies to reconsider how they roll out new regulations.

"It's a hugely important precedent," Sen. Pat Toomey (R-Pa.), the architect of the effort, said in an interview. "It's potentially a big, big opening."

While conservatives are applauding the effort as a way to rein in rogue bureaucrats and boost the economy, consumer advocates are warning that the consequences could be dire.

"This takes an already incredibly dangerous law and cranks it up to 11," said James Goodwin, senior policy analyst at the Center for Progressive Reform.

Republicans are leveraging two key provisions of the Congressional Review Act.

They're again taking advantage of fast-track authority that allows a simple majority of the Senate to pass a resolution rolling back a rule if the vote occurs within a window that's open for no more than a few months. The provision enables senators to avoid a filibuster.

But the more novel use lies in the law's requirement that federal agencies submit rules to Congress for their potential disapproval. Republicans have landed on a way to target a wide array of decisions — including regulatory guidance — that haven't typically been implemented as formal rules under the Administrative Procedure Act.

"You have this unimaginably large universe of stuff that is now eligible for repeal under the CRA," Goodwin said, citing a hypothetical Occupational Safety and Health Administration workplace safety poster as a potential example. "Agencies don't submit all this stuff because it would be an administrative nightmare."

In the case of the auto-lending policy, the CFPB released it as a guidance document rather than a formal rule governed by the notice-and-comment requirements of the APA. As such, it wasn't technically submitted to lawmakers for the purposes of the Congressional Review Act. That means the clock for congressional review never started.

That changed last year. For advocates of deregulation, the stars had aligned thanks to the ascendance of a Republican president eager to roll back rules and the Republicans retaining control of Congress.

Toomey, the former president of the conservative Club for Growth, went on the hunt for ways the GOP could take advantage of its congressional majority to eliminate federal rules.

He found a way to wield the power that the Congressional Review Act gives a majority of the Senate to sidestep obstruction via filibuster when it comes to years-old regulatory actions.

To do so, he asked the Government Accountability Office to determine whether the CFPB auto-lending guidance qualified as a rule for the purposes of the Congressional Review Act. In December, GAO told him that

it did in fact satisfy the legal definition of a rule, starting the clock for Republicans to undo it without having to seek any help from Democrats.

"When regulators regulate by guidance rather than through the process they're supposed to use, which is the Administrative Procedure Act and do a proper rulemaking, they shouldn't be able to get away with that," Toomey said. "If we can get a determination that the guidance rises to the significance of being a rule, then from that moment the clock starts on the CRA opportunity."

Amit Narang, regulatory policy advocate at Public Citizen, said it "is really going to open up a Pandora's box." Public Citizen and 60 other advocacy groups covering the gamut of finance, the environment, labor and gay rights are calling on Congress to oppose the CFPB rollback, saying it would set a dangerous precedent.

They warned it would put at risk not only protections for workers, consumers, minorities and the environment, but also regulatory certainty for businesses.

"Expanding the power of the CRA to overturn guidance from decades ago will threaten protections hardworking families rely on, making it harder for middle class Americans to get ahead and responsible businesses to follow the law," Sen. Sherrod Brown (D-Ohio) said.

Critics have also questioned the need to undo the CFPB auto-lending guidance because the bureau is now led by a Trump appointee, acting Director Mick Mulvaney, who could eliminate it himself. Mulvaney told lawmakers last week he was reviewing the policy. The National Automobile Dealers Association and the American Financial Services Association are supporting the rollback of the anti-discrimination measure, arguing that the way the CFPB crafted the guidance was flawed.

The Senate opened debate on the bill Tuesday following a 50-47 procedural vote. Sen. Joe Manchin (D-W.Va.) was the only Democrat to support moving forward with the legislation.

Other lawmakers have begun to test the waters. In November, GAO in a response to a request from Sen. Lisa Murkowski (R-Alaska) confirmed that a 2016 plan from the Bureau of Land Management was a rule for the purposes of review under the CRA. A spokeswoman for Murkowski did not respond to a request for comment.

Paul Larkin, a senior legal research fellow at the Heritage Foundation, has been advocating for Congress to take advantage of this deregulatory pathway in the Congressional Review Act, saying it could force agencies to comply with formal rulemaking requirements and help the economy by cutting red tape.

"This would indicate that Congress believes it can reach back beyond what the conventional wisdom was," he said.

Emily,

Could you add this to the meeting invitation for the SAB prep discussion tomorrow at 4:15. Thank you!

Draft agenda

1. Preparation & Coverage

- a. Scene Setting & Review of Regulatory Actions (Thurs. 5/31, 3:15-5:00)(see tables of actions below & recommendations from SAB WG in 3rd column)

SAB Discussions about EPA Planned Actions and their Supporting Science

- Public Comments
- Presentation from the Work Group Chair

- Discussion
- Disposition of the Planned Actions

Dr. Michael Honeycutt

Registered speakers

Dr. Alison Cullen,
Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science
SAB Members

- b. Coverage options and possible supplementation of prior Q&As

2. Review/Planning as it relates to other Agenda sessions

3. Next steps

Tables – Summary of Proposed Actions that the SAB WG Considered for Additional SAB Comment on the Supporting Science

Spring 2017

**Table 1: Summary of Proposed Actions that the SAB Work Group Considered for
Additional SAB Comment on the Supporting Science**

RIN¹	Planned Action Title	Workgroup Recommendation
<u>2040-AF37</u>	National Primary Drinking Water Regulations: Finished Water Storage Facility Inspection Requirements Addendum to the Revised Total Coliform Rule	No further SAB consideration is merited.
<u>2040-AF74</u>	Definition of "Waters of the United States" – Recodification of Preexisting Rules	No further SAB consideration is merited.
<u>2040-AF75</u>	Second Action: Definition of "Waters of the U.S."	Defer a determination until sufficient information is available
<u>2050-AG87</u>	Clean Water Act Hazardous Substances Spill Prevention	No further SAB consideration is merited.
<u>2060-AR57</u>	Review of the Primary National Ambient Air Quality Standards for Nitrogen Dioxide	No further SAB consideration is merited.
<u>2060-AT30</u>	National Emission Standards for Hazardous Air Pollutants for Iron and Steel Foundries	No further SAB consideration is merited.
<u>2060-AT34</u>	National Emission Standards for Hazardous Air Pollutants: Asphalt Processing and Asphalt Roofing Manufacturing Residual Risk and Technology Review	No further SAB consideration is merited.
<u>2060-AT54</u>	Review of the 2016 Oil and Gas New Source Performance Standards for New, Reconstructed, and Modified Sources	Merits review by the SAB.
<u>2060-AT55</u>	Review of the Clean Power Plan	Merits review by the SAB
<u>2060-AT56</u>	Review of the Standards of Performance for Greenhouse Gas Emissions from New, Modified, and Reconstructed Stationary Sources: Electric Generating Units	Merits review by the SAB
<u>2070-AK34</u>	Regulation of Persistent, Bioaccumulative, and Toxic Chemicals Under TSCA Section 6(h)	Defer a determination until sufficient information is available
<u>2070-AK37</u>	Review of Pesticides; Certification of Pesticide Applicators	No further SAB consideration is merited.

Fall 2017

RIN¹	Planned Action Title	Workgroup Recommendation
<u>2010-AA12</u>	Increasing Consistency, Reliability, and Transparency in the Rulemaking Process	Defer SAB consideration of the planned action until more information is available
<u>2060-AT67</u>	State Guidelines for Greenhouse Gas Emissions From Existing Electric Utility Generating Units	Does not merit further SAB review
<u>2060-AT77</u>	Reconsideration of Final Determination: Mid Term Evaluation of Greenhouse Gas Emissions Standards for Model Year 2022-2025 Light Duty Vehicles	Merits SAB Review
<u>2060-AT68</u>	Review of the Primary National Ambient Air Quality Standards for Sulfur Oxides	Does not merit further SAB review
<u>2060-AT74</u>	National Emission Standards for Hazardous Air Pollutants for Hydrochloric Acid Production Residual Risk and Technology Review	Does not merit further SAB review
<u>2060-AT79</u>	Repeal of Emission Requirements for Glider Vehicles, Glider Engines, and Glider Kits	Merits SAB Review
<u>2070-AK43</u>	Pesticides; Agricultural Worker Protection Standard; Reconsideration of Several Requirements	Does not merit further SAB review
<u>2060-AS35</u>	Review of the Secondary National Ambient Air Quality Standards for Ecological Effects of Oxides of Nitrogen, Oxides of Sulfur and Particulate Matter.	Does not merit further SAB review
<u>2060-AT31</u>	Fuels Regulation Modernization - Phase 1	Does not merit further SAB review

MEMORANDUM

TO: Members of the Chartered SAB and SAB Liaisons

FROM: Alison Cullen, Chair, SAB Work Group on EPA Planned Actions for SAB Consideration of the Underlying Science */signed/*

DATE: May 12, 2018

SUBJECT: Preparations for Chartered Science Advisory Board (SAB) Discussions of Proposed Rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14)

The Chartered Science Advisory Board convened Work Groups to discuss whether to review the adequacy of the science supporting planned regulatory actions identified by the EPA as major actions in the Spring and Fall 2017 semi-annual regulatory agenda at its May 31, 2018 meeting. To support this discussion a SAB Work Group was charged with identifying actions for further consideration by the Chartered SAB.

The Environmental Protection Agency announced the proposed rulemaking entitled Strengthening Transparency in Regulatory Science RIN (2080-AA14) on April 25, 2018 at a press event and published a *Federal Register* notice on April 30, 2018 with a 30-day public comments period. The Work Group notes that this planned action was not identified as a major action in either of the Spring 2017 nor Fall 2017 semi-annual Regulatory Agendas.

This memorandum summarizes the charge to the Work Group, their discussion regarding the planned action and issues and questions for the SAB to discuss at its May 31, 2018 meeting.

Background

The Environmental Research, Development, and Demonstration Authorization Act of 1978 (ERDDAA) requires the EPA to make available to the SAB proposed criteria documents, standards, limitations, or regulations provided to any other Federal agency for formal review and comment, together with relevant scientific and technical information on which the proposed action is based. The SAB may then make available to the Administrator, within the time specified by the Administrator, its advice and comments on the adequacy of the scientific and technical basis of the proposed action.

EPA's current process is to provide the SAB with information about the publication of the semi-annual regulatory agenda and to provide descriptions of major planned actions that are not yet proposed but appear in the semi-annual regulatory agenda. These descriptions provide available information regarding the science informing agency actions. This process for engaging the SAB supplements the EPA's process for program and regional offices to request science advice from the SAB.

The SAB Work Group then follows a process adopted by the Chartered SAB in 2013¹ to initiate its review of major planned actions identified in the Unified Regulatory Agenda by EPA. This semi-annual regulatory agenda is available at <https://www.reginfo.gov/public/do/eAgendaMain>. The current SAB

¹ Available at [http://yosemite.epa.gov/sab/sabproduct.nsf/WebSABSO/ProcScreen2017/\\$File/SABProtocol2017.pdf](http://yosemite.epa.gov/sab/sabproduct.nsf/WebSABSO/ProcScreen2017/$File/SABProtocol2017.pdf)

Work Group was formed in December 2017 to review the Fall 2017 semi-annual Regulatory Agenda and includes SAB members with broad expertise in scientific and technological issues related to the proposed actions.

The Work Group met by teleconference on May 3, 2018 to discuss its recommendations on considered actions in the Fall 2017 semi-annual regulatory agenda and included the proposed rule: Strengthening Transparency in Regulatory Science RIN (2080-AA14)² as part of the discussions. Members were made aware of the proposed rule via the *Federal Register* and news articles. The EPA did not provide a description of the planned action. SAB members on the Work Group teleconference include Drs. Alison Cullen (Work Group chair), Robert Blanz, Otto Doering, H. Christopher Frey, John Graham, Michael Honeycutt (SAB chair) Merl Lindstrom, Jay Turner, and Messers. Richard Poirot and Robert Merritt.

Work Group Discussions Regarding Strengthening Transparency in Regulatory Science RIN (2080-AA14)

Table 1: Summary of Proposed Actions that the SAB Work Group Considered for Additional SAB Comment on the Supporting Science		
RIN	Planned Action Title	Workgroup Recommendation
<u>2080-AA14</u>	Proposed Rule: Strengthening Transparency in Regulatory Science RIN	Merits review by the SAB.
¹ There is no additional information available on the planned action provided in the Unified Regulatory Agenda on the OMB website http://www.reginfo.gov/ . The OMB review was completed on April 23, 2018. The hyperlink is to the FR notice for the proposed rule.		

Recommendation: This action merits further review by the SAB. The proposed rule deals with issues of scientific practice and proposes constraints that the agency may apply to the use of scientific studies in particular contexts. As such, this rule deals with a myriad of scientific issues for which the Agency should seek expert advice from the Science Advisory Board.

Rationale: In reviewing the Federal Register, Work Group members noted that EPA published a proposed rule that would limit the use of science based on human subject data and would impose requirements for the analysis of dose-response relationships widely used in risk assessments across a wide range of agency programs.

The Work Group recognizes that the long-term trend in most scientific fields is for authors to supply public access to data and analytic methods after scientific findings are published. Such transparency may help to detect and discourage scientific fraud, facilitate various forms of robustness analysis, and allow supplementary lines of knowledge to be developed from the same data. Some fields of science are moving faster than others in the direction of transparency.

² Available at: <https://www.federalregister.gov/documents/2018/04/30/2018-09078/strengthening-transparency-in-regulatory-science>

For studies published many years ago, it may not be feasible to deliver public access to data and analytic methods. There are also sensitive situations where public access may infringe on legitimate confidentiality and privacy interests, and where exceptions from complete public access may be appropriate. In addition, there are considerations associated with the cost and effort that would be involved in making large and complex existing datasets available within Institutional Review Board requirements, including the issue of who would be responsible for shouldering this burden. Thus, the development of guidelines and rules in this arena requires careful collaboration between the government and the scientific community.

Although the proposed rule cites several valuable publications that support enhanced transparency, the precise design of the rule appears to have been developed without a public process for soliciting input from the scientific community. Nor does the preamble to the rule describe precisely how the proposal builds on previous efforts to promote transparency such as the Information Quality Act and EPA's Information Quality Guidelines.

The proposed rule does not include any assessment of the impact of data restrictions on existing or future regulatory programs. Without access to the restricted data, regulatory programs could become more or less stringent than they otherwise would be, with consequences for both regulatory costs and benefits. The Work Group also found that the rule is highly controversial (indeed a similar legislative effort in the House has been stalled in Congress for several years) and could have long-term implications. Furthermore, the rule could have the effect of removing legal, ethical, and peer-reviewed studies of health effects as sources to support the agency's regulatory efforts. The proposed rule does not acknowledge that the epidemiologic science community, for example, has been making significant efforts to make data available where possible and to develop studies based on publicly available data where appropriate. On the other hand, the rule might stimulate researchers to make stronger efforts toward transparency so that their work may be considered in regulatory deliberations. It might be easier to accomplish the rule's objectives if the focus were on future studies rather than on studies that are already designed and published with terms that make complete transparency difficult or impossible to accomplish. It might also be easier if the rule took into account reasonable areas for accommodation or exception in situations for which it is not possible to release a dataset publicly either entirely, or without revision, for legitimate reasons pertaining to the use, for example, of human subject data.

Among the key science issues that the rule touches upon are the following:

- Restrictions on the use of epidemiologic studies that are based on confidential human subject data. Although the epidemiologic community recognizes the need to make data public to the extent possible, in some cases it is not possible to make public full datasets. These include, but are not limited to, cases in which studies are subject to prior Institutional Review Board (IRB) conditions or in which prospective cohort studies include extensive personal data from which it would be possible to identify individual persons.

- The proposed rule fails to mention that there are various ways to assess the validity of prior epidemiologic studies without public access to data and analytic methods. For example, the Health Effects Institute (HEI) conducted a re-analysis of the influential Harvard Six Cities and American Cancer Society (ACS) epidemiologic studies and was able to replicate its findings and to assess the robustness of the findings via sensitivity analysis³. HEI did uncover some sensitivities in the original ACS cohort findings associated with multiple pollutants and with interactions of pollution with socio-economic status (SES) variables such as educational attainment. Furthermore, over time, additional studies have confirmed the basic findings. Thus, in this particular case, an unusually rigorous form of peer review and independent reanalysis, coupled with many follow-up studies, has accomplished a measure of confidence in findings without public access to data and analytic methods. And we note that some of the recent confirmation studies have used publicly available data.
- The proposed rule oversimplifies the argument that “concerns about access to confidential or private information can, in many case, be addressed through the application of solutions commonly in use across some parts of the Federal government.” For studies already completed or underway, the participation of human subjects is undertaken according to terms approved by the cognizant IRB. These terms can vary from study to study. In some cases, the data cannot be released simply by redacting portions of it. For example, data may have been collected with an assurance to the participating individuals that their data would be kept confidential⁴.
- The requirement of the consideration of multiple dose-response models should explicitly state that this consideration is based on information relevant to the selection of the most scientifically-appropriate model(s) such as biological plausibility, mode of action, or mechanism of action. Deviations from the use of default models should be evaluated on a case-by-case basis and have adequate scientific justification for use of an alternative model better supported by the chemical-specific data. Concepts such as “replication” and “validation”, although they are surely crucial in sound science, are not clearly defined in the rule.
- The proposed rule fails to mention that EPA has mechanisms for vetting science through several expert panels, including the EPA Science Advisory Board, the EPA Clean Air Scientific Advisory Committee, and the EPA FIFRA Scientific Advisory Panel (FIFRA is the Federal Insecticide, Fungicide, and Rodenticide Act). For example, the EPA CASAC routinely reviews and evaluates epidemiologic and toxicological studies that are the basis for dose-response relationships used in risk and exposure assessments for air pollutants regulated under the National Ambient Air Quality Standards. Although such mechanisms do not typically engage in reanalysis of original data using the same methods as the original investigators, they do entail a rigorous review process that goes beyond the typical journal peer review procedures.

Work Group Recommendations Regarding Improvements to the Process for Identifying EPA Planned Actions for SAB Consideration

The Work Group notes that the Proposed Rule on Strengthening Transparency in Regulatory Science was not included in previous semi-annual regulatory agendas, is not available on the OMB website www.reginfo.gov and that the EPA did not provide a description of the action. The Work Group continues to urge the EPA to improve the process for future review of the semi-annual regulatory agenda and strongly recommends that EPA enhance descriptions of future planned actions by providing specific information on the peer review associated with the scientific basis for actions and more description of the scientific and technological bases for actions. EPA should provide such information in the initial descriptions provided to the work group.

Effective SAB evaluation of planned actions requires the agency to characterize the following.

- All relevant key information associated with the planned action.
- The science supporting the regulatory action. If there is new science to be used, provide a description of what is being developed. If the agency is relying on existing science, provide a short description.
- The nature of the planned or completed peer review. To the extent possible, provide information about the type of peer review, the charge questions provided to the reviewers, how relevant peer review comments are/were integrated into the planned action, and information about the qualifications of the reviewer(s).

This SAB made several of these recommendations in previous reviews⁵. We request that the chartered SAB highlight to the Administrator the need for the Agency to provide more complete information to support future SAB decisions about the adequacy of the science supporting actions in future regulatory agendas.

Subject: Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations

The Daily Caller

Scott Pruitt Will End EPA's Use Of 'Secret Science' To Justify Regulations

Michael Bastasch

March 19, 2018

<http://dailycaller.com/2018/03/19/epa-scott-pruitt-secret-science/>

Environmental Protection Agency (EPA) Administrator Scott Pruitt will soon end his agency's use of "secret science" to craft regulations.

"We need to make sure their data and methodology are published as part of the record," Pruitt said in an exclusive interview with The Daily Caller News Foundation. "Otherwise, it's not transparent. It's not objectively measured, and that's important."

Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations.

EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public.

"When we do contract that science out, sometimes the findings are published; we make that part of our rule-making processes, but then we don't publish the methodology and data that went into those findings because the third party who did the study won't give it to us," Pruitt added.

“And we’ve said that’s fine — we’re changing that as well,” Pruitt told TheDCNF.

Conservatives have long criticized EPA for relying on scientific studies that published their findings but not the underlying data. However, Democrats and environmental activists have challenged past attempts to bring transparency to studies used in rule making.

Texas Republican Rep. Lamar Smith pushed legislation to end the use of what he calls “secret science” at EPA. Pruitt instituted another policy in 2017 backed by Smith against EPA-funded scientists serving on agency advisory boards.

“If we use a third party to engage in scientific review or inquiry, and that’s the basis of rulemaking, you and every American citizen across the country deserve to know what’s the data, what’s the methodology that was used to reach that conclusion that was the underpinning of what — rules that were adopted by this agency,” Pruitt explained.

Pruitt’s pending science transparency policy mirrors Smith’s HONEST Act, which passed the House in March 2017. Smith’s office was pleased to hear Pruitt was adopting another policy the House Committee on Science, Space and Technology chairman championed.

“The chairman has long worked toward a more open and transparent rule-making process at EPA, and he looks forward to any announcement from Administrator Pruitt that would achieve that goal,” committee spokeswoman Thea McDonald told TheDCNF.

Junk science crusader Steve Milloy also called on EPA to end its use of “secret science” in rule making, especially when it comes to studies on the toxicity of fine particulates in the air.

EPA has primarily relied on two 1990s studies linking fine particulate pollution to premature death. Neither studies have made their data public, but EPA used their findings to justify sweeping air quality regulations.

Reported benefits from EPA rules are “mostly attributable to the reduction in public exposure to fine particulate matter,” according to the White House Office of Management and Budget report. That’s equivalent to billions of dollars.

In fact, one of EPA’s most expensive regulation on the books, called MATS, derived most of its estimated benefits from reducing particulates not from reducing mercury, which the rule was ostensibly crafted to address.

EPA estimated MATS would cost \$8.2 billion but yield between \$28 billion to \$77 billion in public health benefits. It’s a similar story for the Clean Power Plan, which EPA estimated would cost \$8.4 billion and yield from \$14 billion to \$34 billion in health and climate benefits.

Democrats and environmentalists have largely opposed attempts to require EPA rely on transparent scientific data. Said data would restrict the amount of studies EPA can use, but a major objection is making data public would reveal confidential patient data, opponents argue.

“A lot of the data that EPA uses to protect public health and ensure that we have clean air and clean water relies on data that cannot be publicly released,” Union of Concerned Scientists representative Yogin Kothari told E&E News.

“It really hamstrings the ability of the EPA to do anything, to fulfill its mission,” Kothari said.

Milloy, however, countered and argued it’s a “red herring” to claim that forcing regulators to use public science data would harm patient privacy.

“The availability of such data sets is nothing new,” said Milloy, publisher of JunkScience.com and senior fellow at the Energy and Environmental Legal Institute.

“The state of California, for example, makes such data available under the moniker, ‘Public Use Death Files,’” Milloy said. “We used such data in the form of over two million anonymized death certificates in our recent California study on particulates and death.”

“Opponents of data transparency are just trying to hide the data from independent scrutiny,” Milloy added. “But the studies that use this data are taxpayer-financed, and they are used to regulate the public.”

To: Feeley, Drew (Robert) [/o=ExchangeLabs/ou=Exchange Administrative Group (FYDIBOHF23SPDLT)/cn=Recipients/cn=abae82aa36da4d3383eae19a8efa683c-Feeley, Rob]
Subject: POLITICO's Morning Energy, presented by America's Pledge: First SAB meeting to eye EPA reg rollbacks — Cramer hits Trump's legislative director — DOE: U.S. generally 'well prepared' for grid hacks

By Kelsey Tamborrino | 05/31/2018 10:00 AM EDT

With help from Eric Wolff

PRUITT'S SAB STORY: EPA's independent Science Advisory Board will meet today and Friday for the first time since Administrator Scott Pruitt barred scientists on the committee from receiving EPA grants and boosted its ranks with industry representatives — and the group's agenda is packed. The SAB will look at Pruitt's "secret science" proposal to bar EPA from using studies that don't make public all their data, as well as the Clean Power Plan repeal, Pruitt's decision to relax 2022-25 auto emissions standards, changes to the 2016 methane rule for new oil and gas wells and effort to repeal a rule regulating emissions from "glider" trucks — and that's not all.

A lot to dive into: The heavy slate of issues is unusual for the advisory board, Pro's Alex Guillén reports. Several current and former SAB members say it's unprecedented for the board to consider reviewing so many regulatory actions. But like green groups and critics of Pruitt, the SAB scientists say EPA has declined to share information about its regulatory rollbacks. "The agency has not been forthcoming about how they're developing the relevant science work products," said Chris Frey, a professor of environmental engineering at North Carolina State University and a SAB member since 2012.

EPA keeps quiet: SAB has been conducting twice-yearly reviews of EPA's planned regulatory actions since 2012, members said. It's an effort designed to enable the advisory board to help guide EPA before its rules are finalized. But this time around, the SAB's working groups say EPA wasn't being forthcoming with information. "Basically they just didn't provide us with any answers," said Frey. "That kind of put us in a position where all we can really do is say EPA has not identified the science or any plan to review it, and clearly there are science issues that are in the proposed rule."

What to expect: It's not immediately clear whether the full SAB will vote today to advance the reviews. But Frey noted that some of the members appointed by Pruitt had been on the working groups, giving him hope that the full board will back the recommendations to look deeper into the regulatory rollbacks. Should SAB adopt them, Alex reports, it likely would mean setting up special subcommittees that include current members plus outside experts to question EPA further. Read more [here](#).

IT'S THURSDAY! I'm your host Kelsey Tamborrino, and Entergy's Rob Hall correctly identified former President William Howard Taft as the first to see a Major League Baseball game in his hometown of Cincinnati. For today: Name all the presidents who were married while in office. Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseyam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

THE LONG AND SHORT OF IT: In an unusual attack on the White House's legislative affairs director, North Dakota Rep. [Kevin Cramer](#) blamed Marc Short explicitly for the party's legislative failures in the Senate, including ending the Obama rule on flaring and venting from oil and gas wells. After POLITICO published a story outlining the awkward dynamic between [Heidi Heitkamp](#), Cramer and the White House, Cramer told

North Dakota radio host Rob Port that he had done some digging and believes that there "are some people in the White House that think, you know, the president's too friendly too her," Burgess Everett [recaps](#).

Moreover, Cramer laid specific blame at Short's feet for failed GOP efforts in the Senate to roll back an Obama-era regulation limiting flaring and venting, as well as repealing Obamacare. Heitkamp voted against gutting that flaring rule, something Cramer has criticized her for, in particular. "If Marc Short was very good at his job, you know, we'd have a repeal and replacement of Obamacare, we'd have a replacement of the venting and flaring rule," Cramer said. Read that story [here](#).

PRUITT'S MEDIA BLITZ: The EPA administrator visited Rosslyn, Va., on Wednesday to sit for interviews with two conservative media outlets. One was conducted by Boris Epshteyn for his Sinclair Broadcasting segment, "Bottom Line with Boris." (Watch that [here](#).) The other was with the Washington Free Beacon, where Pruitt repeated familiar talking points in defense of the ongoing scandals and investigations that have surrounded him over the past few months. Pruitt said he still has President Donald Trump's backing, noting that Trump has "spoken very strongly and consistently" about their working relationship. "It's been intense the last couple of months, but he's been very encouraging, very empathetic and very supportive rather consistently," Pruitt said. The administrator also discusses the Paris climate agreement, "The Bachelorette" and, of course, baseball in the 13-minute segment, which you can listen to [here](#).

GRID AND BEAR IT: In response to an [executive order](#) signed last year, the Energy Department released a new [report](#) Wednesday that said senior government officials and electric sector executives don't know enough about how energy companies could recover from a disruptive cyberattack, and those companies aren't thinking about cyber threats enough when building out their supply chains. While the report mainly hammered home some long-known problems with the grid, DOE highlighted how grid resilience efforts suffer because of "gaps in incorporating cybersecurity concerns, including planning for long-term disruption events, into state emergency response and energy assurance planning." Generally, however, the report said the U.S. is "well prepared to manage most electricity disruptions." Read more from Pro's Eric Geller [here](#).

WHERE'S PERRY? Energy Secretary Rick Perry delivers remarks this morning on critical infrastructure at DOE's Texas-Israel Cyber Security Conference in Dallas. The department also announced that Perry would address the DOE's annual Cyber Conference in Austin on Monday. During both events Perry is expected to [discuss DOE's new](#) Cybersecurity, Energy Security and Emergency Response office, as well as efforts at DOE to address cyber vulnerabilities in the energy sector.

ABOUT THAT GLIDER RULE: The New York Times' Eric Lipton [tweeted](#) out new documents late Wednesday that give new details into the controversial Tennessee Technological University study on truck emissions that Pruitt used to consider rewriting part of the Phase 2 truck rules. "The letters obtained via open records request show that the principal investigator at Tenn Tech who conducted study funded by Fitzgerald, the company that makes the so-called glider trucks, disavowed the work, saying that it had been distorted in a fraudulent way," Lipton [tweeted](#).

BY THE NUMBERS: The federal government spent \$13.2 billion across 19 agencies during fiscal 2017 on programs related to climate change, [a report](#) from the Government Accountability Office says. That's an overall \$1.5 billion increase across the federal government over fiscal 2016, Pro's Anthony Adragna reports. And it's an increase of \$4.4 billion since fiscal 2010, according to the report, which was request by House Science Chairman [Lamar Smith](#). Read [more](#).

CALIFORNIA GETS CHARGED UP FOR EVs: The California Public Utilities Commission is expected to approve a \$589 million [program](#) for its four investor-owned utilities to build out their electric vehicle charging infrastructure. The plan is part of the implementation of California's aggressive greenhouse gas law passed in 2015. Most of the money — which will ultimately come from ratepayers — will go toward setting up electric

vehicle charging stations and related infrastructure. California leads the nation by far in electric vehicle sales and adoption.

NO MAJOR FLAWS IN FERC PROCESS: Auditors in the DOE inspector general's office said they found no major flaws in FERC's process for reviewing interstate natural gas pipelines, according to a new report. But they also flagged concerns about FERC's transparency and how it handles public comments. The auditors said that "nothing came to our attention to indicate that FERC had not performed its due diligence" in how it balanced public benefits of a proposed project with its adverse impacts. But the report also said regulators' "had not fully ensured" that the certification process was transparent to those who want to participate, and it hit the agency's eLibrary documentation system as difficult to use, Pro's Darius Dixon reports.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

FERC DENIES PENNEAST REHEARING: FERC on Wednesday denied a rehearing sought by the Delaware Riverkeeper Network and Surland Conservancy on the controversial PennEast pipeline. Commissioner Richard Glick issued a separate statement on the agency's use of tolling orders. "This proceeding, in particular, illustrates the need for prompt action on rehearing requests," Glick wrote. " ... I also have serious concerns regarding the Commission's practice of issuing conditional certificates — which, notwithstanding their name, vest the pipeline developer with full eminent domain authority — in cases where the record does not contain adequate evidence to conclude definitively that the pipeline is in the public interest."

GREENS ENDORSE DE LEON OVER FEINSTEIN: 350.org co-founder Bill McKibben and 350 Action said Wednesday it is backing Kevin de León in his bid to challenge California Sen. Dianne Feinstein. McKibben said de León, a current California state senator, "has been a strong champion of clean energy — and an effective one, using his power in Sacramento to make change happen against the strong opposition of the fossil fuel industry." Read De León's candidate questionnaire answers here.

SELC SUES OMB OVER REORG: The Southern Environmental Law Center sued the Office of Management and Budget Wednesday for its failure to release information under FOIA on the reorganization at federal agencies that manage public lands. SELC says OMB has not provided requested information under a November 2017 FOIA request, nor has it made a determination or otherwise responded to the request, and has subsequently stopped communicating with SELC. The center is seeking "all records in the custody or control of OMB submitted in connection with Executive Order 13781 by any agency responsible for the management of federal public lands," including the Forest Service, National Park Service, BLM and the Fish and Wildlife Service. The EO in question directed each agency head to submit a report to OMB outlining proposed changes to their agency. Read the lawsuit.

CRES BACKS McMASTER IN SOUTH CAROLINA: Citizens for Responsible Energy Solutions will announce a \$175,000 television and digital ad buy today highlighting South Carolina Gov. Henry McMaster's record on clean energy. "First as lieutenant governor and now as governor, his commitment to the development of advanced energy technologies like natural gas and solar power is helping the state's economy and job market thrive," CRES Chairman and Executive Director James Dozier said.

McCARTHY NAMED DIRECTOR OF HARVARD CENTER: Harvard T.H. Chan School of Public Health announced former EPA Administrator Gina McCarthy will lead its newly launched Center for Climate, Health, and the Global Environment. Under McCarthy, C-CHANGE announced a collaboration between Harvard University and Google to reduce the use of harmful chemicals in construction and renovation projects. "C-CHANGE will ensure that cutting-edge science produced by Harvard Chan School is actionable — that the

public understands it, and that it gets into the hands of decision-makers so that science drives decisions," McCarthy said in a statement.

MOVER, SHAKER: Mitch Schwartz started this week as communications director for Jason Crow's campaign in Colorado's 6th Congressional District. Schwartz previously worked for SKDKnickerbocker.

— **PUSH Buffalo, a sustainable housing group,** announced Rahwa Ghirmatzion as its new executive director as of August 2018. Ghirmatzion has served as the organization's deputy director since 2017.

Subject: POLITICO's Morning Energy: Spotlight on FERC at Pro summit — Hitching a ride on the 'minibus' — 'Secret science' out in the open

By Kelsey Tamborrino | 07/17/2018 10:00 AM EDT

With help from Emily Holden, Anthony Adragna, Colin Wilhelm and Darius Dixon

SEE YOU THERE: Today's the day — POLITICO Pro is hosting its second annual Pro summit, featuring one-on-one conversations with newsmakers across the policy landscape, including two sessions on energy.

FERC Commissioner Cheryl LaFleur will sit down this afternoon with our own Darius Dixon, before the regulatory body is deadlocked next month following the exit of GOP Commissioner Rob Powelson. LaFleur, a Democrat, has served under presidents from both parties and experienced the agency in almost every configuration — whether it has all five commissioners in place, or just one. There's no shortage of topics to chew over: the potential impact of an Energy Department coal and nuclear rescue plan, the heated rhetoric against states that stand in the way of pipelines, and whether FERC is "on the wrong side of history" when it comes to climate change. Darius' interview with LaFleur starts around 2 p.m.

Also on tap: California Air Resources Board Chairwoman Mary Nichols, Murray Energy CEO Bob Murray and the Council on Foreign Relations' Amy Myers Jaffe will participate in a panel this morning on America's "energy future." Nichols, for one, has been heavily involved in discussions with the Trump administration over car rules that the White House is considering rolling back. Expect questions related to the administration's efforts to pare back regulations and increase oil, gas and coal production — and an in-depth conversation on what that means for free market forces and renewables.

See the full agenda [here](#) and watch the livestream [here](#).

WELCOME TO TUESDAY! I'm your host, Kelsey Tamborrino. Citizens' Climate Lobby's Brett Cease was first to correctly identify the two presidents who threw out the first pitch at an All-Star game in D.C.: Franklin D. Roosevelt in 1937 and John F. Kennedy in 1962. For today: Which state or states have just one consonant in its spelling? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytm](#), [@Morning_Energy](#) and [@POLITICOPro](#).

JUST RELEASED: [View the latest POLITICO/AARP poll](#) to better understand Arizona voters over 50, a voting bloc poised to shape the midterm election outcome. Get up to speed on priority issues for Hispanic voters age 50+, who will help determine whether Arizona turns blue or stays red.

HITCHING A RIDE ON THE 'MINIBUS': The House Rules Committee late Monday made 70 amendments to the EPA and Interior title of the spending minibuss, [H.R. 6147 \(115\)](#). The amendments focus on blocking a host of Obama-era environmental regulations even as the Trump administration is in the process of rolling back many of those. Some of the amendments that caught ME's eye:

— **Diesel emissions grants:** Rep. [Gary Palmer's amendment](#) would eliminate the popular bipartisan Diesel Emissions Reduction Grant program used to retrofit diesel engines like those in school buses,

— **WOTUS:** Rep. Don Beyer's amendment would remove language blocking the Obama administration's Waters of the U.S. regulation,

— **Obama-era methane rule:** Rep. Markwayne Mullin's amendment would block enforcement of the Obama-era regulation aimed at curbing methane emissions from new oil and gas sources, which the Trump administration is already reconsidering,

— **Social cost of carbon:** Another amendment from conservatives would bar the use of the social cost of carbon in rulemakings,

— **Trailer efficiency:** Reps. Barry Loudermilk and Morgan Griffith's amendment would bar EPA from applying stricter fuel efficiency and greenhouse gas emissions standards to certain truck trailers,

— **Chesapeake Bay:** Rep. Bob Goodlatte's effort would limit EPA's ability to go after states that miss Chesapeake Bay cleanup milestones,

— **Ozone:** Rep. Glenn Grothman's amendment would block implementation of EPA's 2015 tightened ozone standard,

— **Coal ash:** A Democratic amendment would block the Trump EPA from revisiting an Obama-era coal ash regulation,

— **Endangered Species Act riders:** Several measures would bar the administration from issuing or enforcing Endangered Species Act rules relating to species like the lesser prairie chicken and Preble's meadow jumping mouse,

— **Attorney fees:** An amendment from Reps. Jason Smith and Greg Gianforte would block attorney fees from being awarded in any Clean Air Act, Clean Water Act or Endangered Species Act settlement, and,

— **Inspectors general:** Nothing related to former Administrator Scott Pruitt was made in order, but the House will consider an amendment from Rep. Raúl Grijalva that would increase the budget of the Interior Department's inspector general by \$2.5 million.

Read the full list of amendments made in order to the measure here.

'SECRET SCIENCE' OUT IN THE OPEN: EPA's controversial proposal to consider only research with publicly available data gets a public hearing at agency headquarters today starting at 8 a.m. Nearly 70 health, medical, academic and science groups — including the American Lung Association, American Heart Association, American Medical Association and American Academy of Pediatrics — oppose the plan, which they say could hamstring public health and environment protections.

EPA's Science Advisory Board voted unanimously to review the proposal, which Pruitt said was meant to bolster transparency. Paul Billings, national senior vice president of advocacy at the American Lung Association, called the rule a "coordinated effort to ignore the science that is inconvenient to the EPA's agenda," and compared it to lobbying efforts by the tobacco industry in the 1990s to exclude studies that showed secondhand smoke could kill.

What's at stake? The proposal could move forward quickly enough to allow EPA to roll back certain air quality standards currently under review. According to the Natural Resources Defense Council, the plan could undercut computer models meant to test chemicals under the new Toxic Substances Control Act and could toss

out landmark studies that relied on personal health records following extraordinary events, including when Hiroshima and Nagasaki victims were tested over time to find out the effects of radiation on humans.

The meeting will run until 8 p.m. or an hour after the last of more than 100 registered speakers has commented. Speakers, aside from many environment and public health groups, include the American Petroleum Institute, the U.S. Chamber of Commerce, the American Chemistry Council, FreedomWorks Foundation and climate science critic Steve Milloy. Dan Byers of the Chamber of Commerce's Global Energy Institute is expected to applaud the agency's efforts and commend EPA for going through the formal public comment and rulemaking process. "It is one thing to be cavalier about transparency principles when their application has little or no import to public policy, but federal rules that impact millions of people and billions of dollars should be held to a higher standard," he is expected to say. Also registered are Reps. Paul Tonko, Suzanne Bonamici and Dan Lipinski. Comments can be submitted until Aug. 16.

Related reading: Competitive Enterprise Institute senior fellow Angela Logomasini looks at the science transparency rule in analysis published today. "The rule is actually far more modest and flexible than depicted by its critics, and its goals are in fact achievable," Logomasini writes. Read it here.

FOR THE RECORD: The House Rules Committee meets at 3 p.m. this afternoon to formulate a rule on an anti-carbon tax resolution, H. Con. Res. 119 (115), that calls a tax on carbon released from fossil fuels "detrimental to the United States economy." The Rules panel will tee up a vote later this week on the resolution, which is led by Majority Whip Steve Scalise and would put a range of lawmakers — most notably the Climate Solutions Caucus — on the record on the issue.

WHERE'S ZINKE? Interior Secretary Ryan Zinke will deliver remarks this morning at the first meeting of the "Made in America" Outdoor Recreation Advisory Committee. The committee is tasked with advising the secretary on "public-private partnerships across all public lands, with the goal of expanding access to and improving infrastructure on public lands and waterways." See the meeting agenda.

AMERICA'S PLEDGE STILL WORKING ON PLEDGES: Michael Bloomberg and California Gov. Jerry Brown, the co-chairs of climate organization "America's Pledge," have unveiled a preview of the report they will release at the Global Climate Action Summit in San Francisco in September, detailing "bottom-up" opportunities for climate action sans federal leadership. The list is familiar: boosting renewables, accelerating coal retirements, retrofitting buildings for energy efficiency, electrifying building energy use, accelerating electric vehicle adoption, phasing out HFCs, preventing methane leaks at the wellhead, reducing methane leaks in cities, reducing emissions from land and starting carbon markets.

Vice Chairman Carl Pope said the group still plans to debut a quantitative analysis outlining what state and local governments are already doing, what they have committed to and what they are keying up. "We have every reason to believe the rest of the world is watching this very closely," Pope said, noting that the U.N.'s top climate official, Patricia Espinosa, mentioned the group and summit by name at the Vatican earlier this month. Read it here.

ESA GETS ITS DAY: Proposed tweaks to the Endangered Species Act will be front and center at a Senate Environment and Public Works hearing this morning. The hearing will feature testimony from Wyoming Gov. Matt Mead, Colorado Parks and Wildlife's Bob Broscheid and Virginia's Secretary of Natural Resources Matthew J. Strickler, and will focus on a discussion draft released by Chairman John Barrasso earlier this month aimed at changing the statute. **If you go:** The hearing kicks off at 9:45 a.m. in 406 Dirksen. Livestream here.

TAKEN BY STORMWATER: The House on Monday passed by voice vote H.R. 3906 (115), the Innovative Stormwater Infrastructure Act of 2017, which would "establish centers of excellence" for stormwater control infrastructure. The legislation, introduced last year by Democratic Rep. Denny Heck, directs EPA to create a

stormwater infrastructure funding task force to make recommendations on the availability of public and private funding for stormwater infrastructure.

DOE ISSUES FIRST TRIBAL LOAN GUARANTEE: The Energy Department will issue its first solicitation for the Tribal Energy Loan Guarantee Program today. The program provides up to \$2 billion in partial loan guarantees to support energy development in Native American and Alaska Native communities. According to DOE, today's solicitation marks more than \$40 billion in energy infrastructure loans and loan guarantees from DOE's Loan Programs Office in five areas.

HOUSE PANEL TO HOLD GRID HEARING: House Natural Resources will hold a hearing on July 25 on Puerto Rico's electric grid recovery and possible improvements to make it more efficient and resilient to future hurricanes. On top of the devastation caused by Hurricane Maria last year, Puerto Rico's electric utility owes bondholders \$9 billion, and most of its leadership departed last week after clashes with Gov. Ricardo Rosselló over executive compensation and political control of the utility, which is quasi-governmental.

MAKING THE GRADE: The Environment America Research & Policy Center is out today with its state-by-state report card, "Renewables on the Rise," which details increases in solar, wind, energy efficiency, electric vehicles and battery storage. The report says the U.S. now produces almost six times as much renewable electricity from wind and solar than it did in 2008. It also found that in March of last year, wind and solar produced 10 percent of the United States' electricity — marking a first. On the state level, the report said California, Arizona, North Carolina, Nevada and Texas saw the greatest total increases from 2008 until 2017 in solar energy generation. See the report [here](#) and a state-by-state interactive map [here](#).

YOU DOWN WITH TIP? A bipartisan group of four senators wrote to Energy Secretary Rick Perry on Monday in support of the Western Area Power Administration's Transmission Infrastructure Program, which was axed under the Trump administration's fiscal 2019 budget proposal. "TIP is one of the few federal programs that directly supports new and upgraded electric transmission," according to the letter, signed by Sens. Catherine Cortez Masto, Martin Heinrich, Dean Heller and Cory Gardner.

HOUSE PLANS FLOOD INSURANCE VOTE: The House is planning to vote next week to extend the National Flood Insurance Program, ahead of its July 31 expiration, sources familiar with the matter tell Pro Financial Services' Zachary Warmbrodt. There are already a few options on the table for the program: one from Financial Services Chairman Jeb Hensarling, who has been trying to put together an extension bill that includes reforms, and a new bill introduced by Scalise and Rep. Tom MacArthur that would reauthorize the program through Nov. 30. Read [more](#).

FOR YOUR RADAR: Republican Sen. Chuck Grassley introduced bipartisan legislation on Monday targeting price fixing by OPEC. The bill would amend the Sherman Act to make oil-producing and exporting cartels illegal, and was co-sponsored by Sens. Amy Klobuchar, Mike Lee and Patrick Leahy. "It's long past time to put an end to illegal price fixing by OPEC," Grassley said in a statement. Read the legislation [here](#).

MAIL CALL! National Rural Electric Cooperative Association CEO Jim Matheson sent a letter to the leadership of the Energy and Commerce Environment Subcommittee on Monday in support of legislation to reform the New Source Review permitting program.

— **More than 100 Democrats** signed onto a letter to members of both House and Senate Armed Services committees today to urge them to oppose any provisions to the National Defense Authorization Act that would "have widespread, negative consequences for the conservation of our imperiled wildlife and public lands." Read the letter [here](#).

— **Iowa's congressional delegation** invited acting EPA Administrator Andrew Wheeler to their state to discuss the Renewable Fuel Standard. Read it [here](#).

What role will Hispanic voters over 50 play in Arizona this Fall? Read POLITICO Magazine's new series "The Deciders" which focuses on this powerful voting bloc that could be the determining factor in turning Arizona blue.

Subject: POLITICO's Morning Energy, presented by America's Pledge: Battle in the Bakken state? — Groups sue over EPA waiver exemptions — Deja vu on formaldehyde

By Kelsey Tamborrino | 05/30/2018 10:00 AM EDT

With help from Annie Snider and Ben Lefebvre

BATTLE IN THE BAKKEN STATE? As the election year kicks into high gear, President Donald Trump's friendly relationship with Democratic Sen. Heidi Heitkamp is worrying some within the Republican party, POLITICO's Alex Isenstadt and Burgess Everett report. Republicans have grown increasingly frustrated with Trump's ongoing flirtation with the freshman senator from the No. 2 oil-producing state, especially at a time when many in the GOP fear that the president's unpredictable style will undercut their midterm plans. Heitkamp, who is seeking reelection in a state where Trump won nearly two-thirds of the vote, has a friendly relationship with the president, even after Trump aggressively recruited Rep. Kevin Cramer — who advised his campaign on energy issues — to give up his House seat and enter that race, leaving some of Cramer's closest allies feeling snubbed.

In an interview, Cramer said there would soon be "clarity" on who Trump supports in the race. But the congressman declined to predict whether the president would go after Heitkamp aggressively, as Trump has done with other Democratic incumbents. Cramer seemed aware of the warmth between the president and the senator, Alex and Burgess report. Trump has asked Cramer if he likes Heitkamp, and when the congressman responds yes, the president seems to be "relieved," Cramer said. "Politically, North Dakota's a pretty nice state. So I don't know that turning it on her is necessarily politically helpful to me," Cramer said. "They may just be concerned that she's a woman and maybe that has an impact. I just don't know."

For her part, Heitkamp said she's proud of her ability to work with the president. "I have a friendly relationship, I have a very important working relationship," she said in an interview, "not just with him but other members of the administration." Read the story here.

WELCOME TO WEDNESDAY! I'm your host Kelsey Tamborrino, and Peter Robertson of the Pebble Partnership was the first to correctly identify California and Ohio as the two states that don't have an avenue named after them in D.C. Instead, there's a California Street and Ohio Drive. For today: Which president was the first to see a major league baseball game in his hometown, and which town was it? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

GROUPS SUE ON WAIVER EXEMPTIONS: Ethanol and farm groups say they've filed a lawsuit against EPA over some of the waivers granted to small refineries allowing them to shed their Renewable Fuel Standard requirements on blending biofuels, Pro's Eric Wolff reports. The Renewable Fuels Association, National Corn Growers Association, American Coalition for Ethanol and National Farmers Union are challenging the waivers granted to CVR Refining's Wynnewood, Okla., refinery and the HollyFrontier refineries at Cheyenne, Wyo. and Woods Cross, Utah. Those refineries have collectively saved \$170 million in compliance costs, the coalition said.

Those waivers, which ethanol backers say violate the volume mandates under the RFS, are also the subject of some horse-trading in the discussions between EPA Administrator Scott Pruitt and USDA Secretary Sonny Perdue. The two are trying to put the final touches on a compromise deal over EPA's rules for biofuels. Read [more](#).

CHEVRON SHAREHOLDERS VOTE: Shareholders at Chevron's annual meeting today will vote on a pair of climate change-related provisions. First up is a proposal that the oil giant report to investors how it will change its business model to account for any decreased demand for oil and gas resulting from greater development of renewable energy sources. Another proposal is that Chevron start providing reports on steps it is taking to minimize methane emissions from its fracking operations. Chevron's board of directors have advised against both proposals, saying the company is already making sufficient efforts on both matters.

Exxon, which also holds its annual meeting today, is getting a break this year from the sort of environmental proposals its shareholders considered in 2017.

**** A message from America's Pledge:** America's Pledge is flipping the script on climate action. One year after the federal government announced it would pull out of the Paris Agreement, 2,700+ U.S. cities, states, and businesses are saying, "We Are Still In." See how far we've come: <https://politi.co/2koAHZb> **

DEJA VU? Already under fire for their handling of a controversial assessment of nonstick chemicals in drinking water, a newly uncovered EPA email suggests that public relations strategy was also front-of-mind for EPA staffers as the agency contemplated reevaluating the risks of formaldehyde. Reuters reported last week that EPA delayed release of a new assessment of the chemical that is expected to for the first time link formaldehyde with leukemia after meeting with the American Chemistry Council in January.

"They reiterated the concern you have raised about information leaking before it's been vetted and asked that the Agency have appropriate communication materials ready to use if needed," Jennifer Orme-Zavaleta, who heads EPA's Office of Research and Development, wrote in a Jan. 24 email to EPA chief of staff Ryan Jackson and Richard Yamada, deputy assistant administrator for research and development. The email was released to the Union of Concerned Scientists under the Freedom of Information Act.

Yogin Kothari, a lobbyist of UCS, said the email "sounds eerily similar" to concerns that EPA and White House officials expressed about a HHS assessment of the chemicals PFOA and PFOS. "It's not surprising that the ACC is attempting to wield its influence over EPA when its former staff are basically running the place," Kothari said by email.

WE'RE CLOSED: The Environmental Council of the States' upcoming fall meeting will close to the public certain sessions attended by EPA officials, according to the group's draft agenda for the August meeting. The draft shows ECOS will hold closed sessions on several issues, including a state-EPA roundtable on "cooperative federalism" and joint PFAS activities. (h/t E&E News' Sean Reilly)

NAFTA TALKS STILL STALLED: Recent NAFTA talks between the U.S., Mexico and Canada have not resulted in progress on the thorniest issues because the U.S. remains unwilling to offer important concessions, two sources close to the talks told Pro's Sabrina Rodriguez. Negotiators from the Office of the U.S. Trade Representative continue to demand that "they want everything, and there's no possible way they'll get everything they want," one of the sources said. "Conversations have stalled entirely." Read [more](#).

WE'LL ALWAYS HAVE PARIS: This week marks the one-year anniversary of Trump's decision to pull the U.S. out of the Paris climate agreement. The United States still technically remains in the 2015 pact for the next two-and-a-half years, but the action to implement it is playing out in the rest of the world. To mark the occasion, the World Resources Institute will host a discussion today on whether other nations have moved on since Trump's decision to exit the agreement. Among those participating is Todd Stern, the former State

Department special envoy for climate change who helped seal the deal. In the lead-up to the event, WRI's Eliza Northrop laid out the seven signs of progress since Trump's announcement [here](#), including a timeline of events over the last year. If you go: The discussion kicks off at 2:30 p.m at 10 G Street NW. Watch the livestream [here](#).

— **And the National League of Cities**, as well as mayors from across the country, will release today their latest "State of the Cities" report that will look into the trend of cities taking on clean energy goals, despite the federal government.

OFFSHORE DRILLER FINED \$4M: Oil and gas company Energy Resource Technology was fined \$4 million Tuesday by the U.S. Attorney's Office for the Eastern District of Louisiana for fabricating data about the readiness of a key piece equipment used to prevent oil spills, Interior said. The fine comes as a result of an [investigation](#) by Interior's Office of Inspector General that found that ERT management directed an employee on its rig in the Gulf of Mexico to create a fake blowout preventer pressure test chart to conceal a failed test result, Pro's Ben Lefebvre reports. Read [more](#).

EPA, KILDEE SPAR OVER SUMMIT: EPA defended its move to only allow federal agency and state representatives on the second day of last week's summit on toxic chemicals in drinking water, dismissing Democratic Rep. [Dan Kildee's](#) complaint that members of his staff had been barred from attending as a mischaracterization. EPA Associate Administrator Troy Lyons wrote in a letter Tuesday to Kildee and obtained by POLITICO that the agency worked with Kildee's office ahead of time to allow a staffer to attend the first day of the summit.

"**I trust you understand our disappointment** when we discovered that no one from your office attended the summit on May 22, particularly in light of the subsequent events on May 23," Lyons wrote. In a statement, Mitchell Rivard, Kildee's chief of staff, said that "it is hard to mischaracterize the EPA's actions — it had been widely reported that the EPA blocked both journalists and a congressional office from the taxpayer-funded PFAS summit." Read the letter [here](#).

MAIL CALL! 45Q AND YOU: Rep. Cramer shared [a letter](#) Tuesday from the Treasury Department in response to [his request](#) for direction on the expanded 45Q tax credit for capturing and storing carbon dioxide. In the letter, Assistant Secretary for Legislative Affairs Drew Maloney said Treasury is developing published guidance to provide clarity to taxpayers for the purpose of using the credit.

— **A coalition of 12 state and city attorneys general** and attorneys sent a letter to National Academy of Sciences President Marcia McNutt saying EPA's so-called secret science proposal to ban the use of studies that don't publicly disclose all data is "too vague and rushed to allow for meaningful public review." And they pressed for the group to weigh in, saying "the National Academy's input on this extremely consequential proposal." Read it [here](#).

API WRITES TO TRUMP ON SECTION 232: The American Petroleum Institute [sent a letter](#) to Trump last week requesting that the list of countries currently exempt from Section 232 tariffs on steel and aluminum be expanded "without imposing alternative measures such as quotas," and that the president remove any associated import quotas that have already been imposed. In his letter, API President and CEO Jack Gerard writes that additional import restrictions "will have a negative effect on our industry just as we have achieved the highest level of domestic hydrocarbon (oil and natural gas and natural gas liquids, or NGLs) production since 1949," according to EIA.

TRUDEAU COMMENTS ON PIPELINE: Canadian Prime Minister Justin Trudeau defended the Canadian government's plan to buy and complete the expansion of Kinder Morgan's Trans Mountain pipeline. "The project became too risky for a commercial entity to go forward with it; that's what Kinder Morgan told us," Trudeau said during a Bloomberg Businessweek event. "We are going to ensure that it gets built so that we can get our resources to new markets." More [here](#).

WHITE HOUSE TALKS PUERTO RICO: Aboard an Air Force One flight, press secretary Sarah Huckabee Sanders was asked whether the president — despite his previous comments — now thinks Puerto Rico constitutes a "real catastrophe" following the release of a Harvard University study that found at least 4,645 people died from the September 2017 storm rather than the 64 deaths federal authorities counted. The White House continues to be supportive of the governor of Puerto Rico, Sanders said according to pool reports, and of "transparency and accountability." The people of Puerto Rico "deserve nothing less than that, and were going to continue to be focused on helping in every way we can," she said. "FEMA has already done the largest response ever in history to any natural disaster. They're in Puerto Rico, and we're going to continue to give as much assistance as possible."

RBS COMMITS TO NEW ENERGY FINANCING: Ahead of its shareholder meeting today, the Royal Bank of Scotland announced Tuesday new energy financing policies to support a transition to low carbon. The bank said it would no longer provide "project-specific finance" to new coal-fired power plants, thermal coal mines or oil sands projects, among other projects. Additionally, RBS said it is tightening restrictions on general lending to mining and power companies generating more than 40 percent of their revenues from thermal coal and of electricity from coal, respectively. In response, Rainforest Action Network Executive Director Lindsey Allen said the announcement "comes as a result of groups like us pressuring banks to defund fossil fuels and deforestation," but said the "policy is only half a step forward because it leaves loopholes in place."

REPORT: COOK TAPPED FOR SUPERFUND JOB: EPA has named Steven Cook — a former senior counsel at chemical giant LyondellBasell — to the agency's Superfund Task Force in the position left vacant by Albert "Kell" Kelly, Bloomberg BNA reported. Cook has been serving as deputy assistant administrator for the agency's land and waste office, prior to his move to the Superfund spot.

ZINKE DEFENDS 'KONICHIWA' GREETING: In a wide-ranging radio interview with Breitbart Radio, Interior Secretary Ryan Zinke defended his use of the greeting "konichiwa" in response to a question from Rep. Colleen Hanabusa on preserving internment sites during a March Natural Resources hearing. "I grew up in a little logging, timber town, railroad town in Montana and a lot of my family lived through the years of the internment camps. I've long since had friends that were Japanese families that went through that," Zinke said, calling it an "appropriate salute." Listen to the full interview here.

AD WARS: Club for Growth Action said Tuesday that it would spend \$250,000 on new ads attacking Russ Fagg, a former judge and Republican candidate for Senate in Montana. Campaign Pro's James Arkin reports the new ad campaign attacks Fagg over his record during his two decades as a district judge, including the time he called a judge who "undercut" Trump's rollback of environmental rules a "thoughtful moderate." Watch the TV ad here.

MOVER, SHAKER: Stuart Siffring joined the Western Energy Alliance as a regulatory analyst, the trade group announced Tuesday. Siffring previously worked as a permit engineer at EPA and the Colorado Department of Public Health and Environment.

THE WALL STREET JOURNAL

The EPA Cleans Up Its Science

Now Congress Should Act To Lock In Place Data Transparency

Steve Milloy

March 26, 2018

<https://on.wsj.com/2IV9LeH>

The Environmental Protection Agency will no longer rely on “secret” scientific data to justify regulations, Administrator Scott Pruitt announced last week. EPA regulators and agency-funded researchers have become accustomed to producing unaccountable, dodgy science to advance a political agenda.

The saga began in the early 1990s, when the EPA sought to regulate fine particulate matter known as PM2.5—dust and soot smaller than 2.5 microns in diameter. PM2.5 was not known to cause death, but by 1994 EPA-supported scientists had developed two lines of research purporting to show that it did. When the studies were run past the EPA’s Clean Air Science Advisory Committee, it balked. It believed the studies relied on dubious statistical analysis and asked for the underlying data. The EPA ignored the request.

As the EPA prepared to issue its proposal for PM2.5 regulation in 1996, Congress stepped in. Rep. Thomas Bliley, chairman of the House Commerce Committee, sent a sharply written letter to Administrator Carol Browner asking for the data underlying studies. Ms. Browner delegated the response to a subordinate, who told Mr. Bliley the EPA saw “no useful purpose” in obtaining the data. Congress responded by inserting a provision in a 1998 bill requiring that data used to support federal regulation must be made available to the public via the Freedom of Information Act. But it was hastily written, and a federal appellate court held the law unenforceable in 2003.

The controversy went dormant until 2011, when a newly Republican Congress took exception to the Obama EPA's antioil rules, which relied on the same PM2.5 studies. Again the EPA was defiant. Administrator Gina McCarthy refused requests for the data sets and defied a congressional subpoena.

Bills to resolve the problem died in the Senate. Democrats argued that requiring data for study replication is a threat to intellectual property and an invasion of medical privacy. In fact, the legislation would protect property by requiring a confidentiality agreement, and no personal medical data or information would have been released.

This sort of data is already routinely made public for research use. In 2012 I was desperate for a way around the Obama EPA's secrecy on the PM2.5 issue, I found out in 2012 that I could get California death-certificate data in electronic form. The state's Health Department calls this sort of data "Death Public Use Files." They are scrubbed of all personal identifying and private medical information. Some of my colleagues used this data to prepare a 2017 study, which found PM2.5 was not associated with death.

The best part is that if you don't believe the result, you can get the same data for yourself from California and run your own analysis. Then we'll compare, contrast and debate. That's how science is supposed to work.

It would be better if Congress would pass a law requiring data transparency. A future administrator may backslide on the steps Mr. Pruitt is taking. In the meantime, we have science in the sunshine.

Censored Science

Udall Q17:

The recently proposed “Strengthening Transparency in Regulatory Science” rule has been on the wish-list of industry for a long time as it could lead to weaker, less-scientifically based regulations to the detriment of public health. In the EPA Press Release announcing the Proposed Rule, EPA implies this proposal is consistent with recommendations on data transparency from major scientific journals including *Science*, *Nature*, the *Proceedings of the National Academy of Sciences*. However, a joint statement signed by the Editors-in-Chief of these publications in response to the Proposed Rule said: “It does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes.”

- a) Did you consult with the leaders of the journals you cited in your press release prior to release of the Proposed Rule?

Answer:

- b) Please provide a list of all scientists, science-based organizations and associations, lobbyists, industry trade associations, and industry representatives you consulted in developing the Proposed Rule.

Answer:

It has been reported that EPA staff analysis of a similar policy (HONEST Act) that governs which scientific analyses can be used by the Agency in regulatory proceedings found the costs to EPA of implementing such policy would be enormous – “\$250 million a year for the next few years.” This seems to undermine your goal of making EPA “lean.”

- c) Why did EPA opt to not release this staff analysis of implementing a policy like the HONEST Act? Or why did EPA fail to complete a new analysis of the costs of implementing the Proposed Rule?

Answer:

- d) Will you commit to providing a quantitative assessment of the estimated costs to EPA of implementing the Proposed Rule?

Answer:

Numerous organizations and scientific experts have been highlighting consequential human health studies that could be excluded from consideration by EPA under the Proposed Rule. A study that looked at the high level of neurotoxic mercury found in newborns in the Great Lakes area, for example, would be excluded if the Proposed Rule is finalized.

- e) Given the sensitivity of the unborn to pollution, in particular, will EPA commit to allowing all peer-reviewed, scientific studies that show harmful impacts to the unborn from various forms of pollution to continue to be used in regulatory decision-making, as appropriate, regardless of whether they meet the so-called “transparency” guidelines you are trying to establish under the Proposed Rule? Why or why not?

Answer:

- f) Have you prepared a list of all scientific analyses that EPA has used in regulatory decision making that would be excluded under the requirements of the Proposed Rule? Will you commit to release that for public review?

Ban On "Secret Science" In EPA Regulation Makes Sense

Editorial

March 26, 2018

<http://newsok.com/article/5588210/ban-on-secret-science-in-epa-regulation-makes-sense>

The Environmental Protection Agency has announced it will now base new regulations only on the findings of scientific studies whose data and methodology are made public so they can be subjected to independent review. That's a sound move in line with basic scientific transparency and professionalism.

Yet it's being treated as a sign of impending apocalypse by some on the left, which says much about the questionable validity of that group's policy prescriptions.

In an interview with The Daily Caller News Foundation, Administrator Scott Pruitt said the EPA will end its use of studies that do not publish underlying data, only conclusions. "Otherwise, it's not transparent. It's not objectively measured, and that's important," Pruitt said.

In the past, the EPA has advanced air-quality regulations that imposed massive costs based primarily on the findings of two studies done in the 1990s that linked fine particulate pollution to premature death. Neither study made associated data public.

U.S. Rep. Lamar Smith, R-Texas and chairman of the House Committee on Science,

Space and Technology, has long criticized the use of “secret science” and authored legislation to curtail its use by regulators. Last year, Smith said the EPA had “routinely relied on questionable science based on nonpublic information that could not be reproduced, a basic requirement of the scientific method.”

“Americans deserve to see the science for themselves,” Smith said. “If the EPA has nothing to hide, why not make the scientific data it uses for its regulations publicly available? What was the EPA hiding?”

That will strike most people as a fair question. But to some activists, the idea that science should involve review and scrutiny is apparently anathema. In response to a prior effort to ban “secret science” at the EPA, Andrew Rosenberg, director of the Union of Concerned Scientists’ Center for Science and Democracy, said transparency would “gut the EPA at the expense of public health and safety.”

That same group has claimed release of data would require publicizing the confidential patient data of individuals. But Steve Milloy, publisher of JunkScience.com and a senior fellow at the Energy and Environmental Legal Institute, notes that California already makes similar data available in its “Public Use Death Files,” and that has been accomplished without violating patient privacy.

Other critics object that there are costs involved in scrubbing data sets so patient privacy is protected. Perhaps, but that doesn’t mean the public should be kept in the dark about the data and methods used to justify literally billions in new regulatory burden.

Scientific studies are as susceptible to human error and even outright fraud as any other endeavor — particularly when such studies are used in the political realm. Facilitating transparency and independent review will reduce the chances of bad science harming Americans with half-baked regulations, and should enhance the case for regulations when the underlying science has withstood independent scrutiny.

Given the stakes for public health and the national economy, Americans must be assured government regulations are based on sound science, not someone’s “trust me” assurances.

Subject: POLITICO's Morning Energy, presented by ExxonMobil: Democrats try to make GOP pay at the pump — Nukes out at PJM even as capacity prices double — Senate Appropriations marks up Energy-Water

By Kelsey Tamborrino | 05/24/2018 10:00 AM EDT

With help from Anthony Adragna and Eric Wolff

PUMP UP THE VOLUME: Days away from the Memorial Day weekend, gas prices are on the rise — and Democrats didn't have to look far for someone to blame. During a press conference in front of a notably pricey Exxon gas station, Democratic leaders blamed President Donald Trump's foreign policy decisions — including his move to reimpose sanctions on Iran — for the 50-cent-per-gallon surge in prices since he took office. "There's a straight line between Trump's policies and the price of gasoline," Sen. [Brian Schatz](#) told Pro's Ben Lefebvre and Anthony Adragna.

A page out of the Trump playbook: In pushing the blame onto Republicans, Democrats aren't breaking new ground. Trump himself called for former President Barack Obama's firing when in October 2012 gas prices hit "crazy levels." Republicans weren't surprised by the Democratic talking point, either. "Everyone's going to look for whatever political leverage they have going into an election," Sen. [Lisa Murkowski](#) said. "[But do] you think that Republicans created the high prices? No."

Roadblocks ahead: The Democratic message faces a big obstacle: Short of an energy crisis like the one President Jimmy Carter faced in his 1980 reelection campaign, it's tough to convince voters the president is to blame for expensive gas. Especially because the White House has little control over gas prices, which largely track the movement in global crude oil market prices. Energy market watchers say the price rally is largely due to moves by OPEC and Russia, in addition to the collapse of Venezuela's oil industry. Read [more](#).

RELATED DOC: Trump has staffed his administration with oil and auto industry insiders, according to a new report from ethics watchdog group Public Citizen. The report breaks down industry influence by the numbers and finds 52 administration staff members have oil and gas ties, 15 with auto industry ties and 10 who have ties to both. Those industry ties are most concentrated at EPA, Interior and the White House. Read [the report](#).

GOOD THURSDAY MORNING! I'm your host Kelsey Tamborrino. Congrats to the American Petroleum Institute's Khary Cauthen, who was the first to identify Franklin D. Roosevelt as the first president to have a state car custom built to Secret Service standards. For today: In what year did someone first attempt to jump the White House fence? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](#), [@Morning_Energy](#) and [@POLITICOPro](#).

POLITICO and the South China Morning Post are partnering to expand coverage of U.S.-China relations. Read our note from POLITICO Editor-in-Chief John Harris and Editor Carrie Budoff Brown to [learn more](#).

COMMENT PERIOD EXTENDED: EPA [extended](#) the comment period for its controversial "secret science" proposal that was set to end on May 30. The public will now have until Aug 16 to make their voices heard on the proposal to ban the use of studies that don't publicly disclose all data. EPA also said it would hold a public hearing July 17 in Washington on the proposal rule, heeding public requests to do so.

NUKES OUT OF PJM EVEN AS CAPACITY PRICES DOUBLE: PJM Interconnection, which manages the nation's largest power market, shed almost a third of its nuclear capacity in capacity auction results released yesterday for the 2021-22 delivery year. The auction, which provides extra payments to generators in return for staying available to run at any time, saw prices nearly double to \$140 per megawatt-day, and it will generate \$9.3 billion in revenue for companies with plants that cleared. Stu Bressler, PJM's senior vice president for Operations and Markets said prices rose because companies were trying to make up revenue lost to lower energy prices. "The offers from supply resources into the capacity auction take into account the actual as well as the anticipated energy revenues when they construct those offers in order to meet their required revenues," he told reporters Wednesday.

More megawatts cleared the auction for every other fuel type. Solar capacity quadrupled and wind added 529 MW, making up for ground lost in last year's auction. Coal added 500 MW compared to the previous auction, something that may catch the attention of the Department of Energy, which is trying to save coal plants. "The results of this auction should reassure everyone that the electricity markets are working and maintaining a reliable system," said Susan Buehler, a spokeswoman for the grid operator. "PJM has always said we don't believe there is any need for intervention."

Plenty of power: PJM continues to have far more power than it needs to meet reserve requirements. In 2021-22, it will have a 21.5 percent reserve, well above the 15.8 percent target. That reserve is actually down 2 points from the auction to supply power for 2020-21.

EVERY BILL GETS ITS DAY: The Senate Appropriations Committee will mark up its fiscal 2019 Energy-Water appropriation bill, which puts discretionary funding at \$43.8 billion — \$566 million more than this year's appropriation and \$7.2 billion more than the administration requested. The bill provides \$6.65 billion for the Office of Science — a \$390 million boost — and would increase funds for ARPA-E, which the White House has sought to eliminate. The committee will also consider so-called 302(b) allocations.

How it'll play out: Lamar Alexander is already eyeing how the Senate might move on the title in the coming weeks. "My guess would be two or three bills would come over from the House, Sen. [Mitch] McConnell could put those bills together, put them on the floor at once and allow amendments to them all," Alexander, who chairs the Energy and Water Subcommittee, told reporters. He added that 83 senators had provided input into his bill and that his subcommittee was able to address those suggestions "to some degree in almost every case."

If you go: The markup kicks off at 10:30 a.m. in 106 Dirksen.

BRIDENSTINE'S CLIMATE EVOLUTION COMPLETE: NASA Administrator Jim Bridenstine endorsed a major federal report that echoed the scientific consensus that human activity is the primary driver of climate change. Under questioning Wednesday from Sen. Brian Schatz, the former Oklahoma lawmaker said the National Climate Assessment "has clearly stated that it is extremely likely ... that human activity is the dominate cause of global warming and I have no reason to doubt the science that comes from that." Bridenstine agreed that his new position on the science constituted an evolution of his views and vowed to protect climate science work at the space agency. Keep in mind: The climate report in question is the same assessment Administrator Scott Pruitt sought to rebuff in his proposed "red team-blue team" debate. Watch the Bridenstine clip here.

WHEN WE LAST LEFT OUR HEROES: Top deputies across the Trump administration — including EPA Deputy Administrator Andrew Wheeler, Deputy Energy Secretary Dan Brouillette and USDA Deputy Secretary Stephen Censky — will meet today to try to resolve long-standing tensions over the Renewable Fuel Standard. The group will pick up where the president left off during his meeting on the topic last month, including the unfinished business of whether to allow biofuel exports to receive Renewable Identification Numbers, and whether to reallocate the gallons small refiners were exempted from blending under economic hardship waivers from EPA. A refining source previously told Pro's Eric Wolff the USDA is trying to capitalize on the controversies surrounding EPA and has been pressing the agency to move quickly on allowing year-round sales of 15 percent ethanol fuel.

And with small refinery exemptions on the table, ME will be looking to see how Wednesday's news that Marathon Petroleum asked EPA for an exemption plays out. Ahead of today's meeting, the ethanol and biofuel trade association Growth Energy released a statement that called out the "flood of illegitimate waivers" and their resulting "'demand destruction' for U.S. farmers at a time when rural communities can least afford it."

**** Presented by ExxonMobil:** Biofuels refined from algae could transform how we power the vehicles that move people and things. It's energy-rich and emits significantly less CO₂ than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're researching how to scale up algae biofuels production in a meaningful way. EnergyFactor.com **

BIODIESEL WANTS MORE: Biodiesel producers think EPA should crank up the biodiesel requirement, not leave it flat, as POLITICO reported yesterday. "These rumored numbers are disappointing," Kurt Kovarik, VO for federal affairs for the National Biodiesel Board said in a statement. "Holding biomass based diesel flat is a missed opportunity to signal growth, which is what the RFS is intended to do. ... The easiest way to fix this and turn around growing dissatisfaction among rural voters is to provide growth to the biodiesel industry and increase this number."

STILL WORKING: John Cornyn, the Senate's No. 2 Republican, said he continues to have discussions on his legislation to overhaul the Renewable Fuel Standard "almost daily, certainly at the staff level," but wasn't sure the talks would bear fruit this year. "We keep making progress but the goal line still seems some ways away," he told reporters. "I'd love to solve the problem this year, but I just don't know."

CARB AND EPA HAVE A MEET: EPA and the California Air Resources Board met Wednesday to open negotiations on a single unified standard for fuel economy, following a White House meeting with automakers earlier in the month. EPA and the National Highway Traffic Safety Administration are threatening to try and revoke California's waiver, risking a lengthy court battle that could balkanize the auto market. "Today's conversations between Administration Officials and the California Air Resources Board were productive," EPA and the Department of Transportation said in a joint statement following the meeting. "We are fully supportive of an open dialogue that proceeds in an expedited manner. EPA and USDOT look forward to moving ahead on a joint proposed rule and receiving practical and productive feedback from all stakeholders."

MOVING QUICKLY: Senate EPW Chairman John Barrasso said Wednesday he's working to reach a time agreement with Democrats to speed floor consideration of a broad water infrastructure package S. 2800 (115) that cleared his panel unanimously earlier this week. Barrasso said it would "be great" to get the bill passed before the Fourth of July recess. His Democratic counterpart on the panel, Sen. Tom Carper, agreed it wouldn't take long for the Senate to complete its work on the bill: "I don't think we're going to need a week. We might need a day," he said.

N.J. GOV DEFENDS EXXON SETTLEMENT USE: New Jersey Gov. Phil Murphy defended using money from a \$225 million settlement with Exxon Mobil to help balance his state's budget. The Democratic governor told reporters he wasn't happy about the decision, but said the state had "been dealt a lousy hand." Environmental groups are appealing the settlement in the hopes of negotiating a new deal, Pro New Jersey's Danielle Muoio reports.

MAIL CALL! FINISH UP, FERC: A new letter from 16 Democratic senators calls on FERC to finish up its rule to allow distributed energy resources to connect to the grid. The letter, led by Sheldon Whitehouse and Ed Markey, concerns the integration of DERs and renewable aggregators into capacity and energy markets. "This will enable consumers to play a central role in strengthening reliability and avoiding unnecessary costs by supplying localized energy services," the senators write. Read the letter.

REPORT: TRIBAL COMMUNITIES AT RISK: The Clean Air Task Force published a new brief Wednesday on the adverse health effects from oil and gas pollution on tribal lands. The report, which looked at lands in New Mexico, North Dakota and Utah, found that Native Americans face disproportionate health risks from living near sources of pollutants, such as VOCs, NOx and resultant smog.

WHAT'S HAPPENING IN COLORADO? The Colorado Association of Commerce and Industry and the National Association of Manufacturers will host an event today with former Interior Secretary and Colorado Attorney General Gale Norton, focusing on the Boulder, Colo., climate lawsuit against energy manufacturers over their role in contributing to climate change. Ahead of the event, Independent Petroleum Association of America's Energy in Depth is launching a digital ad buy in the state on the opposition against the lawsuit. Watch the video.

THANKS, CHARLIE: Citizens for Responsible Energy Solutions will announce a \$185,000 television and digital ad buy today, thanking Massachusetts Gov. Charlie Baker for his actions addressing climate change and on clean energy solutions. The ads will run across the state and encourage residents to thank Baker for his leadership.

MOVER, SHAKER: Van Ness Feldman announced Wednesday that Jason Larrabee, former Interior principal deputy assistant secretary for fish and wildlife and parks, has joined the firm as a senior policy adviser.

QUICK HITS

- Critics: EPA can't keep prior fuel economy data in its blind spot, Bloomberg BNA.
- Coal company claims bank did not allow it to make loan payments, S&P Global.
- Zinke, Burgum tout innovation over regulation at oil conference, Bismarck Tribune.
- How more carbon dioxide can make food less nutritious, The New York Times.
- New documents show why Pruitt wanted a "campaign-style" media operation, Mother Jones.

THAT'S ALL FOR ME!

**** Presented by ExxonMobil:** Energy is fundamental to modern life and drives economic prosperity - in small communities across America and around the world. We need a range of solutions to meet growing energy demand while reducing emissions to address the risk of climate change. Visit the Energy Factor to learn more about some of the bold ideas and next-generation technologies we're working on to meet this challenge: EnergyFactor.com **

U.S. ENVIRONMENTAL PROTECTION AGENCY
NEWS RELEASE
WWW.EPA.GOV/NEWSROOM

EPA'S WEEKLY REPORT

This week Environmental Protection Agency (EPA) Administrator Scott Pruitt sat down with more than a dozen reporters across all mediums to discuss the important work the Agency is doing to ensure regulatory certainty for America's farmers, ranchers, and businesses during National Agriculture Week. Pruitt also advanced the Trump Administration's infrastructure agenda with a push to eradicate lead from drinking water and convene a [national leadership summit](#) on PFAS to update America's crumbling water infrastructure.

NATIONAL NEWS ...

In an exclusive interview with the [Daily Caller](#), EPA Administrator Scott Pruitt laid out his plans to end the use of "secret science" to craft Agency regulations. "Pruitt will reverse long-standing EPA policy allowing regulators to rely on non-public scientific data in crafting rules. Such studies have been used to justify tens of billions of dollars worth of regulations. EPA regulators would only be allowed to consider scientific studies that make their data available for public scrutiny under Pruitt's new policy. Also, EPA-funded studies would need to make all their data public."

EPA Administrator Pruitt sat down with [AgDay](#) to talk about issues impacting farmers and ranchers including EPA's efforts to provide certainty by redefining "Waters of the U.S." According to Pruitt, a substitute or replacement definition will be issued sometime this year, a definition that will recognize private property ownership and the roles of states, and will answer the question of what exactly is a water of the United

States. 'We're going to get that right going forward, and the definition is going to provide clarity, objective measurements by which we know where federal jurisdiction begins and ends,' he said."

OP-ED ...

In the Washington Times, EPA Administrator Pruitt outlined the Agency's efforts to overhaul the permitting process to "rebuild and revitalize our nation's crumbling infrastructure." "The president's ambitious proposal calls for the U.S. Environmental Protection Agency to play a leading role in the administration's efforts ... America's infrastructure was once the envy of the world. The president's proposal will restore our roads, bridges and waterways to greatness and create a safer, stronger America. Through regulatory reforms and targeted investments, EPA will spearhead the much-needed repairs to infrastructure in a way that provides tangible environmental benefits to all Americans."

REGIONAL NEWS ...

The Detroit News reported that eradicating lead from drinking water is one of EPA Administrator Pruitt's top priorities. "I do think that what happened in Flint is something that could happen elsewhere. We just simply need to take steps to do all that we can to address it prospectively and proactively,' Pruitt said. Pruitt said President Donald Trump's \$1.5 trillion plan to bolster the nation's infrastructure over the next decade would include investments in aging water infrastructure."

While speaking with the New York Post, Pruitt called for a local, state, and federal response to the lead crisis in New York City and across the country. "EPA Administrator Scott Pruitt called for a 'coordinated' response between New York State and City officials to address the ongoing lead crisis."

In an interview with Newark Star-Ledger, Pruitt discussed efforts to make cleaning up Superfund sites a priority to advance the Agency's core mission. "The Environmental Protection Agency plans to step up efforts to get companies who dumped toxic waste at New Jersey's Superfund sites to pay to clean them up, Administrator Scott Pruitt said. Pruitt on Monday blamed a lack of urgency... New Jersey has 114 designated Superfund sites, the most in the nation, included three of Pruitt's 21 highest-priority locations."

Pruitt reiterated his commitment to prioritizing the Superfund program to clean up America's most contaminated sites, including Tar Creek, in an interview with the Tulsa World. "Administrator Scott Pruitt of the U.S. Environmental Protection Agency said his new push on the nation's Superfund program finally can provide clarity and accountability to the Tar Creek area, for decades one of the oldest, largest and most complex toxic sites in the nation. 'It is really unacceptable,' Pruitt said as he

recalled the history of the Tar Creek area in far northeastern Oklahoma, whose Superfund legacy dates back to 1983, as well as the amount of money and time deployed there."

At this week's regional roundtable, the [Albuquerque Journal](#) reported on progress the Trump Administration is making on claim stemming from the 2015 Gold King Mine spill. "Environmental Protection Agency Administrator Scott Pruitt said Monday that the federal government is close to finishing its assessment of roughly 400 claims for financial damages stemming from the 2015 Gold King Mine spill, which dumped toxic chemicals into waters in New Mexico, Colorado and Utah, and final recommendations could be ready by the end of the month."

RADIO ...

This week, Administrator Pruitt joined [WZFG 1100 AM The Flag - North Dakota](#) to talk about his first year accomplishments, including repeal and replacement of both "Waters of the U.S." rule and Clean Power Plan.

Administrator Pruitt also joined the [Lars Larson Show](#), based in Portland, Ore., and discussed how he's working to get the EPA back to basics and provide regulatory certainty for all Americans.

On the St. Louis, Missouri's own [Mark Reardon Show](#), Administrator Pruitt talked a little about baseball and a lot about the good work the Agency is doing to improve environmental outcomes across the country.

Scott Voorhees on [1110 KFAF-Omaha](#) had Administrator Pruitt on his show Wednesday to talk about what's to come at the EPA this year, including a continued focused on Superfund clean-up and regulatory transparency.

EPA Administrator Scott Pruitt

EPA Awards Grants to 31 College Teams for Innovative Technology Projects

WASHINGTON (March 22, 2018) — Today, the U.S. Environmental Protection Agency (EPA) announced over \$463,000 in funding for 31 Phase I student teams through the People, Prosperity, and the Planet (P3) grants program. These teams, made up of college students from across the country, are developing sustainable technologies to solve current environmental and public health challenges.

“This year’s P3 teams are applying their classroom learning to create innovative and practical technologies,” said **EPA Administrator Scott Pruitt**. “This next generation of scientists has

Cut down on the way home

Megan Piri holds a wedding photo of her and her husband, Joseph Piri, on Monday. Joe Piri, 32, died approximately a week after suffering injuries in a road-rage assault in Deepford Township on March 7. Lori M. Siskind, for South Jersey Times

Victim of deadly road rage, a devoted father 'came face-to-face with evil' during storm

Max Kury for South Jersey Times

Sitting on a couch in the living room of her Blackwood home, Megan Piri carefully recalled the last conversation she had with her husband.

Joe Piri was preparing to head home from work and wanted his wife to know he might be a little later than usual. It was March 7 and a nor'easter was dumping rain on the region, making for a drive fraught with peril.

"Just take your time and be careful," she told him. They ended their conversation with their traditional "I love you."

Joe Piri never made it home that night. Piri, 32, was killed in the face during a road-rage assault in Deepford Township that afternoon. He died of his injuries a week later.

"He just wanted to come home and he didn't make it home," his wife said, her voice cracking with grief.

Piri was able to speak to emergency responders and gave them his wife's phone number. By the time his family arrived at the hospital, they couldn't speak with him, explained Megan Piri's mother, Betty Jean Hampton.

"He was confused," she said. "He never spoke to."

His injury was covered by the time they saw him. "It went from one side of his nose to the other side of his face," Hampton said. "We don't know what happened. No one knew a very good man was taken from all of us."

He remained on life support until Thursday.

Piri was on oxygen during and "he coughed some blood," she said, pointing the doctors and nurses who cared for him at

4 who trafficked dogs for pit fights are sent to prison

Thomas Moravitz for South Jersey Times

Three South Jersey men were using four sentenced this month to years in federal prison for their roles in a criminal network person who sold trafficked dogs across state lines for bloody pit fights.

In the course of a sprawling multi-state investigation, the U.S. attorney's office said in a statement, federal agents discovered the basement of a defendant's home called in blood, evidence it had been used as a fighting pit. One man admitted his dog died on the way home after losing a fight.

Of the four defendants, Vladimir Vladimirovich "Manny" Gattuso and David Harris received sentences of 42 months and

37 months, respectively, for charges that included conspiracy and possessing a dog with the intent to use it in a dog fight.

Frank Nichols, of Millville, was sentenced to 37 months on charges that included being a felon in possession of a firearm. The fourth defendant, Pedro Carlos of Willow Springs, Illinois, received a year in prison after pleading guilty to a conspiracy charge.

All four of the men previously had pleaded guilty before U.S. District Judge Mary L. Casper in Trenton.

Prosecutors said their agents stumbled upon the operation in Camden Township, a court-ordered report suggesting dog fighting across multiple federal districts.

Court records show agents seized six pit

bulls when they served a search warrant at Gattuso's home in November 2015, and federal authorities have said a total of 44 dogs were recovered in New Jersey as part of the investigation. Investigators said they also seized thousands of dollars' worth of breeding stands — meant to restrain female dogs — as they built their case against the men.

Prosecutors said a fifth defendant, 42-year-old Asbury Park resident Andre Atkinson, has also pleaded guilty and is scheduled to be sentenced on April 18. Other defendants remain awaiting trial.

Thomas Moravitz, NJ Attorney Media, tom.moravitz@njattorneymedia.com

STATEHOUSE

AG orders random drug tests for police

S.F. Sullivan for South Jersey Times

All police officers in New Jersey are now subject to random drug testing under a directive from the state's new attorney general.

Police departments are also required to implement "early warning systems" triggered by problem behaviors such as misconduct, excessive use of force, domestic abuse and excessive driving, under a separate directive announced by Attorney General Gurbir Grewal's office.

Grewal, who was appointed by Gov. Phil Murphy in January, said Tuesday that most police departments and county prosecutors already have such policies in place. The two new directives would mandate those statewide.

"We support our officers in their difficult jobs, and at times that means intervening with a troubled officer to protect the public, the individual officer, and his or her fellow officers," he said in a statement announcing the move.

HOW IT WORKS

Under the new rules, every state, county and local law enforcement agency is required to conduct random drug screening in 2018 and perform such tests twice a year going forward.

Departments are required to report any failed tests — or officers who refuse a test — as well as any resulting discipline to the county prosecutor or other supervising agency.

The early warning system requirement spells out 15 "performance indicators" that

WASHINGTON

EPA to make polluters clean Superfund sites in N.J.

Jonathan D. Salant for South Jersey Times

The Environmental Protection Agency plans to step up efforts to get the companies that dumped toxic waste at New Jersey's Superfund sites to pay to clean them up, administration officials said.

Prior to Monday's decision, a lack of urgency, not a lack of funding, for the slow progress to cleaning up the sites, New Jersey has 14 designated Superfund sites, the most in the nation, including three of the nation's highest priority locations.

"I'm going to get accountability with whomever it is on these Superfund sites and we will see every instance of accountability to do so," Pruitt said. "I don't think we've done it as well as we should have historically and we're going to do better going forward."

While President Donald Trump has proposed cutting the EPA's budget, Pruitt said the agency will have the money it needs by ensuring that the companies responsible for the contamination clean it up.

"Most of our sites across the country have a responsible party," Pruitt said. "We have very few orphan sites."

Former Albuquerque Public Schools teacher Julia Peralta says she left a PS after two years because she felt the school was too toxic to work in.

She often tried to share her story in classroom and community settings with administrators, saying she was often told that she was "too emotional."

But Peralta, now a second-grade teacher at Mission Academy, said she was often told that she was "too emotional."

She often tried to share her story in classroom and community settings with administrators, saying she was often told that she was "too emotional."

Julia Peralta, former Albuquerque Public Schools teacher, says she left a PS after two years because she felt the school was too toxic to work in.

Residents smelled gas before fire

30 stay in shelter after fire destroys, damages SE Albuquerque apartments

By KYLE S. COLEMAN
Journal Staff Writer

Residents say a fire that destroyed or damaged a number of units at a Southeast Albuquerque apartment complex Sunday was caused by the same leaky gas meter that they

later to have responsibility reported to the apartment manager for more than a year.

The apartment manager Tuesday denied making the report, saying about 20 people who lived in the apartment building in the 400 block of Georgia St. were temporarily relocated to the Mountain Mesa Multigenerational Center, where they were housed overnight, and given assistance by the city of Albuquerque and the Red Cross.

The city's Office of Senior Affairs, which is located in the public building, said the building would be open for normal activities and services today.

A statement by the city said the fire provided vouchers for some displaced families, which include people under age 18, and if they are a local resident, the city will

Congress of the United States

Washington, DC 20515

June 7, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20004

Dear Administrator Pruitt:

We write to express grave concerns about the Environmental Protection Agency's (EPA) proposed rule, published on April 30, 2018, titled Strengthening Transparency in Regulatory Science (Docket No. EPA-HQ-OA-2018-0259). Contrary to its name, the proposed rule would implement an opaque process allowing EPA to selectively suppress scientific evidence without accountability and in the process undermine bedrock environmental laws. We join nearly a thousand scientists^[1] and many leading scientific organizations^[2] in opposing this policy and urge you to withdraw the proposed rule.

The proposed rule suffers from significant procedural flaws including lack of supporting evidence, insufficient detail in the proposal itself, and conflicts with EPA's statutory obligations. The substance of the rule is also concerning. It appears to be targeted at excluding important public health studies while privileging industry-sponsored research. It also fails to adequately consider the costs of implementation and the potential privacy implications. Finally, the discretion it grants the Administrator to grant case-by-case exemptions completely undermines the stated goal of transparency.

Without any significant evidence supporting it, the proposed rule is a solution in search of a problem. The proposed rule fails to identify specific weaknesses in EPA's current scientific approach, which is grounded in peer review. Wendy Wagner, author of two of the studies EPA cites to rationalize the rule, said in response to the proposed rule: "They don't adopt any of our recommendations, and they go in a direction that's completely opposite, completely different."^[3] The proposed rule also invokes policies from *Nature*, *Science*, and the *Proceedings of the National Academies of Science*, but each of these organizations has argued against the rule.^[4] Additionally, EPA fails to cite any specific language providing authority for the rule and asks commenters where the authority may be found. Key issues including how data would be made available to the public and how private information would be protected are not addressed. This is a serious deficiency in a rule meant to increase access to data for the public.

^[1] <https://s3.amazonaws.com/ucs-documents/science-and-democracy/secret-science-letter-4-23-2018.pdf>

^[2] <https://blog.ucsusa.org/michael-halpern/a-list-of-scientific-organizations-that-have-supported-and-opposed-limiting-what-research-epa-can-use-to-make-decisions>

^[3] <https://www.theatlantic.com/science/archive/2018/04/how-the-epas-new-secret-science-rule/558878/>

^[4] <https://www.aaas.org/news/scientific-leaders-speak-out-epa-s-proposed-transparency-rule>

The proposed rule is inconsistent with EPA's statutory obligations to ground its actions on scientific evidence. The Toxic Substances Control Act (TSCA) and the Safe Drinking Water Act (SDWA) require that EPA use the "best available science." Courts have found this language to require that agencies "seek out and consider all existing scientific evidence" and not ignore existing data.^[5] This standard would be impossible to meet under the proposed rule.

The proposed rule requires that data underlying EPA's regulatory actions be made publicly available to allow for independent validation. Such a standard could exclude studies that utilize confidential industry and health data that are vital to understanding the nature of chemical pollutants, the impacts of pollution, and the most effective ways to protect the environment and public health. One such piece of health research is the "Six Cities" study,^[6] which followed more than 8,000 participants for nearly twenty years and was key in establishing a link between chronic air pollution exposure and increased mortality. The results of this study have stood up to extensive subsequent analysis, highlighting the strength of such research.^[7] This is just one example of an entire class of studies that the rule would remove from consideration. Excluding such health studies would hobble EPA's ability to implement laws like the Clean Air Act, SDWA, and TSCA and to fulfill its mission to protect public health and the environment.

Attempting to comply with the publication requirement and health privacy laws would place enormous burdens on EPA and researchers. According to an internal EPA analysis of the HONEST Act, which had a similar data-publishing requirement, the EPA would have to spend more than \$250 million annually to redact private health information before releasing study data to the public.^[8] EPA failed to provide a cost-benefit analysis of the proposed rule, only stating that EPA shall implement the provisions "in a manner that minimizes cost." Even with careful redaction, there is still a possibility of study participants being identified due to the amount of information that would have to be revealed under the proposed rule for the purposes of reproducibility. The rule is costly and a threat to the privacy of Americans.

Concerns with the proposed rule are not limited to the public health community. Dr. Nancy Beck, Deputy Assistant Administrator of the Office of Chemical Safety and Pollution Prevention, has expressed reservations about the publishing requirements of the proposed rule for industry as well.^[9] Industry representatives have expressed concerns about requiring public disclosure of data, such as Confidential Business Information, citing the potential for improper use of such data by competitors.^[10]

In addition, the proposal to allow the EPA Administrator to grant exemptions on a case-by-case basis would enable the Administrator to interfere in the rulemaking process in an arbitrary and capricious manner. The Administrator is not required to present the reasoning behind such

decisions. This waiver provision establishes an opaque process, completely at odds with the stated purpose of the rule, that would bring additional uncertainty to the regulatory process.

We support transparency and scientific integrity. However, the proposed rule will limit transparency and undermine the scientific integrity of EPA's rulemaking process. Given its numerous flaws and the lack of an underlying rationale, we urge you to withdraw the proposed rule.

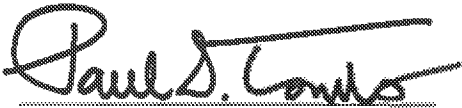

Sincerely,

Diana DeGette

Subject: POLITICO's Morning Energy: Another mess for Pruitt — Virgin Islands party boss: Zinke ties improved hurricane response — Coal magnate delivered draft orders to Trump

By Kelsey Tamborrino | 06/07/2018 10:00 AM EDT

With help from Darius Dixon, Anthony Adragna and Annie Snider

ANOTHER MESS FOR PRUITT: Scott Pruitt has an appetite for food from the White House mess — a U.S. Navy-run restaurant for use only by White House officials, Cabinet members and other dignitaries. In fact, he loves eating there so much, the White House asked him to stop coming by so often, POLITICO's Emily Holden, Andrew Restuccia and Anthony Adragna report.

The message was clear, according to one person close to Pruitt: "We love having Mr. Pruitt, but it's not meant for everyday use." A member of the White House's Cabinet affairs team told agency chiefs of staff last year that their bosses shouldn't treat the mess like their personal dining hall — a comment that came in response to Pruitt's recurring use of the restaurant, sources said.

Pruitt's allies privately disputed that the warning about overuse of the mess was aimed squarely at him, but nobody contests that he's a frequent presence at the establishment in the basement of the West Wing. The White House did not respond when asked about his lunch habits, and EPA declined to comment.

A billing statement from July 2017 offered a glimpse into Pruitt's trips to the mess, racking up a bill of \$400 over nine trips that month — a relative bargain in downtown Washington considering the menu. A cheeseburger at the White House runs just \$6.35, according to Pruitt's bill. Compare that to the \$17 you'd pay for a burger from another favorite Pruitt spot, French bistro Le Diplomate. Read [more](#).

Support for Pruitt is also falling on Capitol Hill, Anthony and Emily report, in the wake of this week's news that Pruitt sought to buy a used mattress from the Trump Hotel and inquired about securing a Chick-fil-A franchise for his wife. Two more top aides to Pruitt — scheduler Millan Hupp and counsel Sarah Greenwalt — also are leaving the agency. "I'm not going to come down here, just because he happens to be a nominee of a president I support or a nominee from my party, and try to defend the indefensible," Sen. [John Neely Kennedy](#) said. More [here](#).

On the other hand, [Cory Gardner](#), who heads the Senate GOP campaign arm, told reporters he doesn't think Pruitt's ongoing ethics woes will harm his party in the midterms. "The states like Missouri, Indiana, North Dakota have benefited from a regulatory approach this administration has taken," Gardner said.

Environmentalists' "Boot Pruitt" campaign will gather a "group of cows" outside the Capitol South Metro station today from 8 a.m. to 9:15 a.m. to hand out fake Chick-fil-A coupons for a free chicken sandwich with a donation to Pruitt's legal defense fund. They'll hold signs reading: "Breeth Mor Carhun" and "What the Cluck, Pruitt?"

VIRGIN ISLANDS BOSS PLAYS UP ZINKE RELATIONSHIP: The head of the Virgin Islands Republican Party suggested his fundraising group's longstanding relationship with Interior Secretary Ryan Zinke helped improve the department's response to last year's hurricanes that struck the island territory, Pro's

Ben Lefebvre reports. John Canegata said he had direct access to Interior officials after the storm thanks to money his group raised for Zinke when he was a member of Congress.

Calling Zinke a "close friend," Canegata boasted of his connections in a televised appearance that aired in the Virgin Islands last month but has not received widespread attention outside of the territory. While numerous officials played a role in helping the islands recover from hurricanes Maria and Irma, "behind the scenes, trust me, a lot of telephone calls, a lot of maneuvering was going on because, I think, some of the relationships we built," Canegata said of Zinke.

Interior acknowledged that officials contacted Canegata after the hurricanes but said they did so as part of a wider effort to contact business leaders based in the territory and Zinke did not call him personally. Canegata works for Cruzan Rum, but a company representative told Ben he was not involved in coordinating its relief efforts. Interior expedited the reimbursement of taxes on Virgin Islands rum following the storms, but it was unclear whether Canegata influenced that decision; he did not respond to a request for comment.

For his part, Zinke has known Canegata since at least 2015, Ben reports. The secretary previously came under fire for a fundraiser for the VIGOP, as the group is known, during an official trip to the islands in his first month in President Donald Trump's Cabinet. Read more.

IT'S THURSDAY! I'm your host Kelsey Tamborrino. NRECA's Dan Riedinger correctly identified John Tyler as the only president to have not been a resident of the U.S. when he died. Tyler resided in Virginia at the time, which was part of the Confederate States of America. Today's question: Which Congress had the largest number of veterans in office? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter [@kelseytam](https://twitter.com/kelseytam), [@Morning_Energy](https://twitter.com/Morning_Energy) and [@POLITICOPro](https://twitter.com/POLITICOPro).

MURRAY DELIVERED EXECUTIVE ORDERS TO TRUMP: Coal magnate Bob Murray handed off drafts of six executive orders that would roll back Obama-era environmental regulations to Trump during the beginning of his administration, according to documents from DOE released under FOIA. The documents include a letter to Energy Secretary Rick Perry from Murray praising Trump's March 2017 energy independence executive order, and included a note where Murray wrote, "we have developed the enclosed materials for your review and consideration, consisting of: six (6) Executive Orders further rescinding anti-coal regulations of the Obama administration; and one (1) memorandum outlining the legal rationale for each of these action, and others."

While Trump did not sign those exact orders, the administration has moved to enact similar policies, Pro's Darius Dixon reports. The documents, which were sent to DOE the day Trump signed his energy independence order and one day before Murray met with Perry and DOE chief of staff Brian McCormack, also included concepts about grid security and "resiliency" that Perry later touted as part of his push to stop coal power plants from closing. Read more.

BAILOUT ON HIS MIND: In private remarks given during his visit to FEMA headquarters Wednesday, Trump mentioned a slew of topics that had nothing to do with hurricanes, The Washington Post reports, while only briefly mentioning Puerto Rico. Trump instead encouraged Perry to make an announcement about rescuing economically struggling coal and nuclear power plants, the Post reports. "I'd love to put it out — 'clean coal, nuclear,' it's a very important message," he said, telling Perry he needed to hold a news conference.

WRDA MOVES AHEAD: The House passed the Water Resources Development Act of 2018 (H.R. 8 (115)) last night, marking the first major piece of infrastructure legislation to move under the Trump administration, Pro's Annie Snider reports. Lawmakers signed off on the measure on a broadly bipartisan vote of 408-2. The bill — markedly narrower than the Senate's measure — would authorize six new Army Corps of Engineers projects and enact a suite of policy reforms at the red tape-laden agency.

What about the Senate? For those wondering, EPW Chairman John Barrasso told ME he'd not yet locked down a time for the Senate to consider its broader version of the water resources infrastructure legislation. Separately, Sen. Tammy Baldwin sent this letter to Trump, calling on him to urge Congress to include a permanent Buy America provision in the legislation.

MUM'S THE WORD: Barrasso, whose state produces a lot of coal and uranium, told ME he isn't ready to back Trump's proposed bailout for coal and nuclear power plants. "I've read the article but I want to actually see what the proposal is," he said. DOE is still formulating the details of how it would intervene to save the struggling plants.

RESCISSIONS VOTE TODAY: The House is set to vote today on Trump's \$15 billion rescissions bill, Pro's Sarah Ferris reports. The House Rules Committee teed up the bill, H.R. 3 (115), on Wednesday, a quick turnaround that surprised even some GOP lawmakers.

ALL ABOARD: After the rescissions package, the House is ready to start debate on its "minibus" appropriations package, which includes energy and water, legislative branch and military construction-VA spending bills, Pro's Kaitlyn Burton reports. The Rules Committee has set up floor votes on 50 amendments to the energy and water title. A final vote on the overall bill is expected Friday.

SHIMKUS SPEAKS: Rep. John Shimkus, one of the most ardent Yucca Mountain champions in Congress, said his loud floor dispute with Paul Ryan on Tuesday was simply a dispute over "strategy going forward." Other members suggested it had to do with the timing of the Energy-Water bill, since Shimkus thinks delaying until after the midterms might allow Yucca language to make it into the title. The Senate has avoided tackling Yucca due to Sen. Dean Heller's close reelection contest.

POWER OF THE PEN: The House Appropriations Committee agreed to bar EPA from spending more than \$50 on a fountain pen. The amendment — an apparent reference to the \$1,560 Pruitt spent on a dozen fancy writing implements — passed on a voice vote at Wednesday's markup. The panel cleared its version of the fiscal 2019 EPA-Interior bill, on a vote of 25-20. Committee Republicans blocked an effort from Democrats to boost EPA's Office of Inspector General by \$12 million, but approved an amendment that would change revenue sharing for drilling in the Arctic National Wildlife Refuge. And while the pen amendment passed, the committee shot down another amendment from Democratic Rep. Mike Quigley related to Pruitt's travel.

MEETING WITH A FULL DECK: The last time the leadership of FERC and the Nuclear Regulatory Commission got together, there were just enough commissioners between the two agencies to fill one five-member board. Fast-forward to today, and it's a full house for the first time in years thanks to confirmation of two new NRC leaders last month. The get-together is slated to run for just over two hours. An agenda hasn't been released but the meetings usually involve staff presentations on grid reliability — and how it might be impacted by the retirement of nuclear plants — and cybersecurity regulations. Finding the areas where an

economic regulator overlaps with a safety watchdog isn't always obvious. The meeting is slated to run from 9 a.m. to 11:15 a.m. at FERC headquarters, and will be [webcast](#).

ROYALTY RUMPUS: Interior's Royalty Policy Committee approved recommendations Wednesday aimed at expanding energy lease sales and lowering royalty rates, Ben recaps. But during the advisory committee's meeting, two members questioned whether it had the power to suggest changes to federal environmental review. "NEPA is not referred to in the [committee] charter," Rod Eggert, a professor at the Colorado School of Mines, said during the meeting. "The text in the charter refers to royalties and collections of royalties." Read more [here](#).

Later Wednesday, BLM sent out a [memo](#) instructing field offices to look for ways to speed up permit processing, including by using categorical exclusions, Ben [reports](#).

— **Meanwhile, the Central Arizona Project will meet today** on proposals for sourcing cheaper power to run the Navajo Generating Station. The Bureau of Land Reclamation last week sought to delay the coal-fired power plant's closure, arguing that a 1968 law gives Zinke the authority to require the Arizona water project buy energy from the power plant. Reuters has the rundown [here](#).

GROUPS WARY OF INTERIOR DRAFT BILL: A coalition of sportsmen's groups is concerned about draft legislation that appeared before the House Natural Resources Energy Subcommittee on Wednesday. According to the [draft bill](#), it would enable Interior to recover the costs of administrative protests to oil and gas lease sales, drilling permits and other applications. The bill, [they say](#), would make it more difficult for sportsmen and women to comment on oil and gas lease sales on public land.

BLANKENSHIP IS BACK: Former coal baron Don Blankenship hasn't given up hope to take on the establishment and earn himself a spot in the Senate. After losing a primary bid to West Virginia Attorney General Patrick Morrisey, Blankenship's campaign [announced](#) Wednesday it is petitioning to gain ballot access for the general election as the nominee for the Constitution Party.

BIPARTISAN LETTER ASKS PRUITT TO DROP 'SECRET SCIENCE': More than 100 lawmakers — including Republican Reps. [Brian Fitzpatrick](#), [Carlos Curbelo](#), [Ryan Costello](#) and [Ileana Ros-Lehtinen](#) — signed onto a letter to Pruitt today, asking him to withdraw EPA's so-called secret science proposal to bar EPA from using studies that don't make public all their data. Read the letter [here](#).

DEMS WARN AGAINST E15: Democratic Sens. [Tom Udall](#) and [Peter Welch](#) are calling on EPA to abide "by all legal and regulatory requirements" as the Trump administration weighs the year-round sale of 15 percent ethanol blends of gasoline. "We are very concerned that career EPA officials may be being directed to reverse over 25 years of the agency's position to manufacture legal and scientific justifications for a politically-directed decision on E15," they write. Read the [letter](#).

MAIL CALL! RELEASE THE STUDY: A coalition of environmental groups will send [this letter](#) today to HHS Secretary Alex Azar, calling on him to release the controversial federal chemical pollution study [blocked](#) by EPA officials.

— **Nineteen environmental groups filed a letter** to the House in opposition of [H.R. 5895 \(115\)](#), the so-called minibus, which they say sets up an improper use of water and natural resources, and undermines safe nuclear waste disposal. Read it [here](#).

FOR YOUR RADAR: The International Wildlife Conservation Council, which came [under fire](#) for the big-game trophy hunters added to its ranks, will hold its next meeting June 19 in Atlanta, according to the [Federal Register](#).

ON THE WEB: The Center for American Progress is launching a new website today that is dedicated to tracking legal challenges to the Trump administration's conservation agenda. See it [here](#).

QUICK HITS

- The heat is back on high: May smashes U.S. temperature records, [Associated Press](#).
- Man dies at Randolph County mine, [Charleston Gazette-Mail](#).
- Hurricanes are traveling more slowly — which makes them even more dangerous, [The Washington Post](#).
- Trump falsely claims "We're now exporting energy for the first time," [The New York Times](#).
- Trump's move to please farmers on biofuels reform draws refinery union ire, [Reuters](#).

THAT'S ALL FOR ME!

Subject: POLITICO's Morning Energy: How 'the swamp' could overtake West Virginia's primary — Groups react to EPA's proposed 'secret science' rule — API to tap Mike Summers

By Kelsey Tamborrino | 05/01/2018 10:00 AM EDT

With help from Garrett Ross

HOW 'THE SWAMP' COULD OVERTAKE WEST VIRGINIA'S PRIMARY: West Virginia Attorney General Patrick Morrisey may be touting himself in the GOP Senate primary as a Washington outsider who wants to "blow up" D.C., but his opponents are dragging him through the muddy swamp. "Morrisey got filthy rich in the swamp lobbying for special interests," says the narrator of one of his opponent Rep. Evan Jenkins' ads, Pro's Theodoric Meyer reports. And while Morrisey, who's hoping to take on Democratic Sen. Joe Manchin this fall, has so far weathered the attacks and continues to do well in public polling, the May 8 vote will ultimately test whether GOP voters are willing to send a former lobbyist to Washington.

"Morrisey's self-described 'outsider' rhetoric cloaks an insider record: Before he was elected attorney general, Morrisey spent eight years as a Washington lobbyist, and the influence industry has fueled his campaign with hundreds of thousands of dollars in contributions," Theo writes. "It's going to be challenging, because the word 'lobbyist' has such negative connotations," said Cam Savage, a Republican operative who helped run Sen. Todd Young's successful 2016 campaign against former Democratic Sen. Evan Bayh, whose work for a Washington law and lobbying firm hindered his campaign. Read more.

IN THE OTHER CORNER of the Republican primary sits coal baron Don Blankenship, who spent a year in prison following the 2010 explosion at his Upper Big Branch Mine that killed 29 workers and who continues to escalate his attacks against Senate Majority Leader Mitch McConnell, POLITICO's Alex Isenstadt reports. The Senate hopeful is out with a new ad that dubs McConnell "Cocaine Mitch" as polls show Blankenship falling behind his more mainstream opponents. "One of my goals as U.S. senator will be to ditch Cocaine Mitch," Blankenship says toward the end of the new ad, possibly referring to a 2014 report in the liberal Nation magazine that drugs were once found aboard a shipping vessel owned by the family of McConnell's wife, Transportation Secretary Elaine Chao, Alex reports.

WELCOME TO TUESDAY! I'm your host Kelsey Tamborrino. BP America's Bob Stout was the first to correctly guess that former President Calvin Coolidge was the first president to attend the White House Correspondents' Dinner. For today: Which president brought the first professional baseball team to the White House to visit? Send your tips, energy gossip and comments to ktamborrino@politico.com, or follow us on Twitter @kelseytam, @Morning_Energy and @POLITICOPro.

POLITICO's Ben White is bringing Morning Money to the Milken Institute Global Conference to provide coverage of the day's events and evening happenings. The newsletter will run April 29 - May 2. Sign up to keep up with your daily conference coverage.

WHILE CONGRESS IS AWAY, THE CONFERENCES WILL PLAY: The National Hydropower Association continues its Waterpower Week in Washington today with remarks from FERC Chairman Kevin McIntyre and Thomas Smith, chief of operations and regulatory division for the U.S. Army Corps of Engineers. McIntyre will discuss the "global frontiers of waterpower," providing an update on FERC's

hydropower activities and his perspective on the industry's future. Smith will deliver remarks during the presidential luncheon this afternoon, alongside Herbie Johnson, hydro general manager at the Southern Company. The annual conference is tied to three co-located conferences, including the NHA conference, the International Marine Renewable Energy Conference and the Marine Energy Technology Symposium.

- **The Solar Summit 2018 also kicks off today in San Diego**, where Abigail Ross Hopper, president and CEO of the Solar Energy Industries Association, will discuss solar in the Trump era, with a focus on the corporate tax reform, Section 201 and other macro-level risks. Hopper will be joined on stage by Avangrid Renewables' Laura Beane and Charlie Gray, director of the Solar Energy Technologies Office at DOE's Office of Energy Efficiency & Renewable Energy.

A LOAN IN THE SUN: Coinciding with the solar conference, GTM Research is out with a new report this morning on U.S. residential solar financing. The report found that last year was the first year since 2011 when more systems have been purchased with cash and loans (59 percent) than with leases and power purchase agreements (41 percent). That's in part due to the availability of loan products, as well as a shortage of third-party ownership suppliers, and Tesla and Vivint's move away from third-party ownership, the GTM report found.

The report also said that competition has intensified in solar loans, with various solar-specific loan providers, traditional banks and credit unions entering the realm. The increased competition has led to "uber-competitive rates and therefore compressed margins, leaving questions about the financial health and long-term viability of many of these loan providers," a summary of the report said.

RULE REACTIONS: EPA is moving full-speed ahead in its controversial scientific policy that would exclude the use of studies that don't publicly disclose all data. The agency published the proposed rule in the Federal Register on Monday, kicking into gear a 30-day comment period. And already, several groups have come forward to oppose the policy, laying out what they see as the policy's adverse effects - and calling for more consideration before any formal change.

- **The Union of Concerned Scientists** - which sent a letter signed by more than 1,000 scientists to EPA Administrator Scott Pruitt last week asking him to reverse course prior to the rule's announcement - plans to send another urging for the comment period to be extended a minimum of 60 days and calling for the agency to hold three public hearings across the U.S. to receive additional input. "The current timeframe and lack of opportunities for engagement are wholly inadequate and will not allow for thorough public input of this proposed rule and its impact on science-based health and environmental safeguards." Read the letter here.

- **A group of scientific journals** released a joint statement saying that the proposal "does not strengthen policies based on scientific evidence to limit the scientific evidence that can inform them; rather, it is paramount that the full suite of relevant science vetted through peer review, which includes ever more rigorous features, inform the landscape of decision making. Excluding relevant studies simply because they do not meet rigid transparency standards will adversely affect decision-making processes."

A SOMMERS DAY: The American Petroleum Institute is expected to tap Mike Summers to replace Jack Gerard to lead the oil and gas industry lobbying group, two sources tell POLITICO's Emily Holden and Eric Wolff. Summers was former House Speaker John Boehner's chief of staff and has since spent two years leading the American Investment Council, a private equity trade group. Gerard announced earlier this year that he would step down in August. Read more.

TRUMP GRANTS TARIFF EXTENSION FOR SOME: The president extended a temporary exemption by one month for Canada, Mexico and the European Union from heavily watched steel and aluminum tariffs, the White House announced Monday. The move gives the key U.S. allies until June 1 to reach a deal with the administration to avoid the tariffs of 25 percent on steel and 10 percent on aluminum exports sent to the United

States. The tariffs were slated to take effect at 12:01 a.m. today if President Donald Trump had not moved to extend the deadline, POLITICO's Megan Cassella [reports](#).

WHISTLEBLOWER SAYS PRUITT LIED: Kevin Chmielewski, the former deputy chief of staff for operations at EPA, told ABC News Pruitt was telling a "bold-faced" lie last week when he testified to lawmakers that none of his employees were retaliated against for raising concerns about his spending decisions. Chmielewski, who was dismissed and is now acting as a whistleblower, told ABC that chief of staff Ryan Jackson called him into his office and said: "Hey - Administrator Pruitt either wants me to fire you or put you in an office so that he doesn't have to see you again." Chmielewski added: "And in addition to that, he wants to put Millan (Hupp) in your spot, as your title and your pay grade."

EPA declined to comment to ABC in response to Chmielewski's allegations, but the outlet said it obtained a personnel form filled out by EPA human resources officials that said Chmielewski resigned on March 17. "The form is not signed by Chmielewski, who says he was actually forced to leave a month before that date," ABC writes. [Read more.](#)

DEMOCRATS PRESS PRUITT ON TESTIMONY: Separately, Democratic Reps. [Doris Matsui](#) and [Paul Tonko](#) sent a letter Monday calling out a different aspect of Pruitt's testimony last week before Congress. The pair point to a contradiction between Pruitt's remarks and reports that the administration has [drafted](#) a proposed rulemaking to block California's waiver authority to set stricter standards for light-duty vehicles. "If true, these reports directly contradict your testimony last week. As you were reminded at the start of that hearing, it is a violation of the law to knowingly make false statements to a Congressional committee," Matsui and Tonko write in a letter to Pruitt. Asked last week about whether he would revoke California's special Clean Air Act waiver, Pruitt [told lawmakers](#) "not at present." The lawmakers requested Monday that Pruitt provide all documentation related to the development of the notice of proposed rulemaking by Friday. [Read the letter here.](#)

SAGE SUIT: Conservation groups are suing the Trump administration over policies that they say would "adversely impact essential habitats and populations" for the greater sage grouse. The lawsuit, filed in the U.S. District Court in Boise, concerns Interior Department's oil and gas lease auctions in Nevada, Utah, Montana, Wyoming and Idaho - and calls on the court to reverse the sales. "There's no scientific or legal support behind these policies, and no public support for them either," said Michael Saul, a senior attorney at the Center for Biological Diversity. "They're clearly intended to make fossil fuel development the dominant use of public land, and that's illegal." [Read the complaint.](#)

DOE 'ENCOURAGED' BY PJM MOVE: The Energy Department said it was "encouraged" by news Monday that PJM Interconnection [will perform](#) "stress tests" on different parts of the grid to identify fuel supply vulnerabilities. "PJM's concerns are consistent with what DOE, NERC, and others have been saying for years: premature retirements of fuel-secure resources are putting the future of our nation's electric grid at risk, and that undermines our national security," DOE press secretary Shaylyn Hynes said in a statement. DOE urges the regulatory agency "to take immediate action to stop the loss of fuel-secure capacity," Hynes said, adding that DOE continues to review all of its options within its authority to ensure a resilient grid. Recently, Energy Secretary Rick Perry [has considered](#) invoking the 1950 Defense Production Act to keep money-losing power plants running by designating them as crucial for national security.

BY PROXY: A new report from the American Council for Capital Formation out today found that proxy advisory firms - which advise shareholders on how to assess and vote on company plans - are operating with minimal oversight and are moving toward an increasingly activist stance on issues relating to the environment, as well as social and political issues. The report, titled "The Conflicted Role of Proxy Advisors," examines the impact such proxy firms have on major policies at most publicly traded companies. [Read it here.](#)

FIRST OFFICIAL DAY ON THE JOB: Today is Secretary of State Mike Pompeo's first full day in Foggy Bottom, where he will deliver a speech to introduce himself to the department. POLITICO's Nahal Toosi breaks

down the differences between Pompeo and his predecessor and former Exxon Mobil CEO Rex Tillerson [here](#). But keep an ear out for any climate mentions, as diplomats and environmentalists [gather](#) today in Bonn, Germany, to work out the kinks of the Paris climate agreement. Greens have hit Pompeo as a climate science doubter, while others like Competitive Enterprise Institute's Myron Ebell have said the Kansas Republican will be a "forceful advocate" of Trump's decision to exit the Paris accord.

A PENNY FOR YOUR FREETHOUGHT CAUCUS: Democratic Reps. [Jared Huffman](#), [Jamie Raskin](#), [Jerry McNerney](#) and [Dan Kildee](#) launched the Congressional Freethought Caucus on Monday "to promote sound public policy based on reason, science, and moral values, protect the secular character of our government, and champion the value of freedom of thought worldwide." In a [statement](#), Huffman said the caucus "will help spark an open dialogue about science and reason-based policy solutions."

PAY THE PRICE: The New York Independent System Operator and state policymakers released [a draft plan](#) on Monday to price carbon as part of the electric system, [Pro New York's Marie French](#) reports. The move comes as an early step toward addressing the impact of state subsidies for renewables and nuclear power on the competitive market. "Under the proposal, a social cost of carbon set by state regulators would be added on to regional energy prices," Marie writes. Read [more](#).

MAIL CALL! A coalition of more than 160 groups sent a letter to Interior Secretary Ryan Zinke on Monday in opposition to the department's [proposal](#) to rescind the "blanket rule" the U.S. Fish and Wildlife Service used to extend protections for endangered species. Read the [letter](#).

- **Oregon Sens. [Ron Wyden](#) and [Jeff Merkley](#)** and Reps. [Earl Blumenauer](#), [Peter DeFazio](#), [Suzanne Bonamici](#) and [Kurt Schrader](#) sent a letter Monday to Office of Management and Budget Director Mick Mulvaney and Assistant Army Secretary R.D. James., requesting federal officials support a flood protection feasibility study for Portland. Read it [here](#).

MOVER, SHAKER: The White House is expected to tap California agriculture attorney Michael Stoker to lead EPA's San Francisco-based Region 9 office, [sources tell E&E News](#). The regional office is the only one to which Trump has not appointed a leader.

A NEW LOOK: Trade association the American Exploration & Production Council is launching today a [new website](#) and [Twitter](#) and [Facebook](#) accounts. The new website will include videos, fact sheets, info-graphics and issue pages.

QUICK HITS

Congress of the United States
Washington, DC 20515

June 6, 2018

The Honorable Scott Pruitt
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20004

Dear Administrator Pruitt:

We write to request additional information regarding actions by the U.S. Environmental Protection Agency (EPA) on per- and polyfluoroalkyl substances (PFAS). PFAS are a chemical class used in firefighting and by industry in the production of products including Teflon and Scotchguard.¹ Associated human health risks include cancer, immune effects, birth defects, and liver effects.² According to the Environmental Working Group, PFAS may be present in drinking water systems across the country that serve up to 110 million Americans.³

EPA continues to withhold critical public health information on PFAS from Congress and the public. Last month, members of the Committee wrote to you regarding EPA political appointees engaging with staff at the White House to impede plans by the Agency for Toxic Substances and Disease Registry (ATSDR) to release an assessment of PFAS. To date, the study has still not been released. Last month's National Leadership Summit on PFAS excluded members of the public, the press, and others. At one point, a reporter was physically removed from the building. Taken together, these actions serve to undermine public awareness and continue the troubling pattern of secrecy by the Trump EPA.

We are deeply concerned that these ongoing EPA regulatory and policy failures will undermine the ability of the Agency to effectively address human health risks, including those related to PFAS and other toxic chemicals. EPA recently proposed a rule to severely restrict the use of certain public health data and related research findings, while also giving the Administrator discretion to exempt some studies from the proposal's requirements on a case-by-

¹ U.S. Environmental Protection Agency, *Understanding PFAS in the Environment* (Feb. 26, 2018) (www.epa.gov/sciencematters/understanding-pfas-environment).

² U.S. Environmental Protection Agency, *FACT SHEET: PFOA & PFOS Drinking Water Health Advisories* (Nov. 2016) (www.epa.gov/sites/production/files/2016-06/documents/drinkingwaterhealthadvisories_pfoa_pfos_updated_5.31.16.pdf).

³ Environmental Working Group, *Report: Up to 110 Million Americans Could Have PFAS-Contaminated Drinking Water* (May 22, 2018).

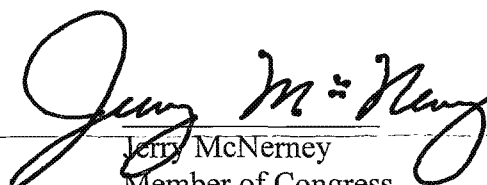

case basis.⁴ If finalized, this proposal could limit the type of information used to develop toxicity values for PFAS by preventing EPA from considering studies that include confidential medical records. Furthermore, we are troubled that, in a recent interview, a senior EPA official was unable to explain how this proposal could impact the Agency's efforts to protect the public from PFAS.⁵

In order to more fully understand how the EPA proposal to restrict the Agency's use of certain public health data will impact its ability to address human health risks associated with PFAS, we request that you respond to the following no later than June 20, 2018:

1. Please provide a list of all members of the Action Development Workgroup for the proposed "Strengthening Transparency in Regulatory Science" rulemaking, including name, title, and EPA office.
2. Provide copies of all comments or feedback provided by EPA staff, including but not limited to members of the Action Development Workgroup and staff of the Office of Ground and Drinking Water, on the proposed "Strengthening Transparency in Regulatory Science" rulemaking.
3. Provide a list of all upcoming EPA plans to visit communities impacted by PFAS including the event date, location, list of invitees, and whether the event is open to the press.

Thank you for your immediate attention to this matter. Should you have any questions, please contact Teresa Frison in Rep. Jerry McNerney's office at 202-225-1947.

Sincerely,

Jerry McNerney

Subject: BRIEFING REQUEST: HONEST ACT-HSST : EPA PRE-PLANNING CALL

Hi Everyone,

Chairman Smith of the House Science, Space and Technology Committee (HSST) recently met with the Administrator regarding the subject area of HONEST Act implementation. Resulting from that meeting OCIR will be coordinating a follow-up meeting with HSST committee staff.

In effort to plan for that follow up meeting, OCIR would like coordinate an internal EPA meeting together with your offices to discuss and plan for the Agency's follow up meeting with HSST committee staff. We'd like to set up two meetings- preferably via-phone to ease in the flexibility of everyone's schedules.

I'd like to set-up our first call for **FRIDAY-1/19**, with our second meeting for next week. This first initial call will be to give you more background on what we in OCIR know, and understand what you know from your AA-ship perspective. From there we will also decide on possible meeting dates with the HSST committee and draft up a potential delegate list who will attend.

To make things easier, I'd like coordinate schedules via-outlook, and set up an invitation with agenda and details. As I do this, please let me know whom else to include.

Happy to answer any questions or concerns.

Best,

Laura

Subject: EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

EPA Announces Extended Comment Period and Public Hearing on Proposed Rule to Strengthen Science Transparency in EPA Regulations

WASHINGTON (May 24, 2018) - Today, the U.S. Environmental Protection Agency (EPA) announced an extension of the comment period on the proposed rule, "Strengthening Transparency in Regulatory Science." EPA is also announcing a public hearing for the proposed rule, which will be held on July 17, 2018, in Washington, D.C.

"EPA is committed to public participation and transparency in the rulemaking process," said EPA Administrator Scott Pruitt. **"By extending the comment period for this rule and holding a public hearing, we are giving stakeholders the opportunity to provide valuable input about how EPA can improve the science underlying its rules."**

On April 30, 2018, EPA announced the proposed rule with a 30-day comment period that was scheduled to close on May 30. With today's extension, the comment period will now close on August 17. EPA is soliciting comments on all aspects of the proposal and specifically on the issues identified in Section III. The public hearing will provide a forum for interested parties to present data, views, and arguments regarding EPA's proposed rule.

The proposed rule will strengthen the science used in regulations issued by EPA. It will require that underlying scientific information be publicly available. Also, this rule is consistent with data access requirements for major scientific journals and builds upon Executive Orders 13777 and 13783.

Comments should be identified by Docket ID No. is EPA-HQ-OA-2018-0259 and submitted through the Federal eRulemaking Portal: <http://www.regulations.gov>.

The public hearing will be held at the U.S. Environmental Protection Agency Headquarters, William Jefferson Clinton East Building, Main Floor Room 1153, 1201 Constitution Avenue NW, in Washington, D.C. 20460. The public hearing will convene at 8:00 a.m. EST and continue until 8:00 p.m. EST. Parties interested in presenting oral testimony at the public hearing should register online by July 15, 2018, at <https://www.epa.gov/osa/strengthening-transparency-regulatory-science>.

While we have taken steps to ensure the accuracy of this [Internet version of the rule](#), it is not the official version of the rule for purposes of public comment. Please refer to the official version in a forthcoming *Federal Register* publication.

Subject: BRIEFING REQUEST: HONEST ACT-HSST : EPA PRE-PLANNING CALL

Hi Everyone,

Chairman Smith of the House Science, Space and Technology Committee (HSST) recently met with the Administrator regarding the subject area of HONEST Act implementation. Resulting from that meeting OCIR will be coordinating a follow-up meeting with HSST committee staff.

In effort to plan for that follow up meeting, OCIR would like coordinate an internal EPA meeting together with your offices to discuss and plan for the Agency's follow up meeting with HSST committee staff. We'd like to set up two meetings- preferably via-phone to ease in the flexibility of everyone's schedules.

I'd like to set-up our first call for **FRIDAY-1/19**, with our second meeting for next week. This first initial call will be to give you more background on what we in OCIR know, and understand what you know from your AA-ship perspective. From there we will also decide on possible meeting dates with the HSST committee and draft up a potential delegate list who will attend.

To make things easier, I'd like coordinate schedules via-outlook, and set up an invitation with agenda and details. As I do this, please let me know whom else to include.

Happy to answer any questions or concerns.

Best,

Laura

DATE: October 31, 2017

SUBJECT: Strengthening and Improving Membership on EPA Federal Advisory Committees

Federal Advisory Committees (FACs) serve important and influential roles for federal agencies – particularly the U.S. Environmental Protection Agency (EPA).¹ EPA's FACs presently provide advice on a broad array of subjects, including pesticides,² drinking water quality,³ air quality,⁴ rural community welfare,⁵ and children's health.⁶ FACs can be established by statutory requirement, at the discretion of federal agencies, or through presidential directive.⁷ Currently, EPA manages 22 FACs that provide valuable expertise, insight and recommendations that guide the Agency's decision-making in fulfilling its core mission of protecting human health and the environment.⁸

¹ "Advisory committees have played an important role in shaping programs and policies of the federal government from the earliest days of the Republic. Since President George Washington sought the advice of such a committee during the Whiskey Rebellion of 1794, the contributions made by these groups have been impressive and diverse." FACA 101, <https://www.gsa.gov/policy-regulations/policy/federal-advisory-committee-management/finding-information-on-faca-committees/faca-101>.

² Pesticide Program Dialogue Committee (PPDC), <https://www.epa.gov/pesticide-advisory-committees-and-regulatory-partners/pesticide-program-dialogue-committee-ppdc>.

³ National Drinking Water Advisory Council (NDWAC), <https://www.epa.gov/ndwac>.

⁴ Clean Air Scientific Advisory Committee (CASAC), <https://yosemite.epa.gov/sab/sabpeople.nsf/WebCommittees/CASAC>.

⁵ Farm, Ranch, and Rural Communities Advisory Committee (FRRCC), <https://www.epa.gov/faca/frrcc>.

⁶ Children's Health Protection Advisory Committee (CHPAC), <https://www.epa.gov/children>.

⁷ The Clean Air Scientific Advisory Committee (CASAC) was established under the Clean Air Act. The Board of Scientific Counselors (BOSC) was established by EPA. The Good Neighbor Environmental Board (GNEB) was established by presidential authority.

⁸ All Federal Advisory Committees at EPA, <https://www.epa.gov/faca/all-federal-advisory-committees-epa>.

E. SCOTT PRUITT
ADMINISTRATOR

The Federal Advisory Committee Act (FACA)⁹ generally requires that FACs operate in an independent, orderly, balanced, and transparent manner.¹⁰ Critical to the integrity of FACs is the selection of qualified and knowledgeable candidates. Since each FAC serves a unique purpose, FACs differ in specific composition requirements,¹¹ but all FACs must be “fairly balanced in terms of the points of view represented and functions to be performed by the committee.”¹² The EPA Administrator should choose qualified candidates to serve on the EPA’s FACs.¹³ In addition to knowledge and expertise, other qualifications should also factor strongly into selecting FAC members. Candidates should be independent from the Agency, must avoid any conflicts of interest within the scope of their review, and should be fully committed to objectively serving the Agency and public.

In the spirit of cooperative federalism and recognition of the unique experience of state, tribal and local government officials, committee balance should reflect prominent participation from state, tribal and local governments. Such participation should be appropriate for the committee’s purpose and function. Furthermore, FAC membership should be balanced with persons from different parts of the country to create geographic diversity. Finally, in order to ensure broader participation in FACs, and to ensure that advancements in scientific and technological thinking continually factor into committee reviews, regular rotation of members to assure fresh perspectives should also guide the Agency’s choice of FAC members.

This memorandum accompanies, and explains the principles underlying, a set of directives intended to strengthen and improve the composition of EPA’s FACs in ways that advance the Agency’s mission to protect public health and welfare, that are consistent with the principles of cooperative federalism, and that follow the rule of law and agency directives and guidance.

⁹ 5 U.S.C. app., <https://www.gsa.gov/cdnstatic/FACA-Statute-2013.pdf>.

¹⁰ FACA Essentials at EPA for Federal Advisory Committee Members, https://www.epa.gov/sites/production/files/2017-02/documents/faca_essentials_for_2016_pending.pdf.

¹¹ For example, the Clean Air Scientific Advisory Committee (CASAC) is comprised of seven members, including one physician, one state air pollution control agency representative, and one member of the National Academy of Sciences. See 42 U.S.C. § 7409(d)(2). However, not all FACs have statutory membership requirements.

¹² 5 U.S.C. app. § 5(b)(2).

¹³ 41 CFR 102-3.60(b)(3) (“Fairly balanced membership. A description of the agency’s plan to attain fairly balanced membership. The plan will ensure that, in the selection of members for the advisory committee, the agency will consider a cross-section of those directly affected, interested, and **qualified**, as appropriate to the nature and functions of the advisory committee.”) (emphasis added).

E. SCOTT PRUITT
ADMINISTRATOR

A. Strengthen Member Independence

A vital part of ensuring integrity and confidence in EPA's FACs comes from guaranteeing that FAC members remain independent of the Agency during their service. EPA FAC members should avoid financial entanglements with EPA to the greatest extent possible.

Non-governmental and non-tribal members in direct receipt of EPA grants while serving on an EPA FAC can create the appearance or reality of potential interference with their ability to independently and objectively serve as a FAC member. FAC members should be motivated by service and committed to providing informed and independent expertise and judgment.

Ensuring FAC member independence strengthens the integrity, objectivity and reliability of EPA FACs. Accordingly, in addition to EPA's existing policies and legal requirements preventing conflicts of interest among the membership of the Agency's FACs, it shall be the policy of the Agency that no member of an EPA federal advisory committee currently receive EPA grants, either as principal investigator or co-investigator, or in a position that otherwise would reap substantial direct benefit from an EPA grant. This principle should not apply to state, tribal or local government agency recipients of EPA grants.

B. Increase State, Tribal and Local Government Participation

EPA alone cannot fully meet the environmental challenges this country faces. Under the principle of cooperative federalism, environmental protection is a duty shared between state, tribal, local and federal governments. EPA relies on states, tribes and local communities to assist in, and in some cases assume primary responsibility for, planning and overseeing environmental protection.¹⁴ Rather than solely rely on the opinions of federal officials in Washington, D.C., the Agency should seek the expertise and unique perspectives of public servants at all levels of government across the country. Cooperative federalism underlies many of the environmental statutes passed by Congress since states, tribes and local governments have a better understanding of, and are well-positioned to address, their environmental challenges.

Therefore, state, tribal and local government officials should figure prominently in FAC membership. Increasing state, tribal and local government participation on FACs strengthens EPA decision-making through enhanced public inclusion in EPA policy and programs choices, and joint accountability at all levels of government.

¹⁴ The Clean Air Act, Clean Water Act, and Safe Drinking Water Act contain provisions giving states and tribes primary responsibility for environmental protection.

E. SCOTT PRUITT
ADMINISTRATOR

C. Enhance Geographic Diversity

EPA's FACs should be balanced to ensure the inclusion and consideration of different viewpoints, consistent with a fundamental goal of FACA.¹⁵ Participation of members from a broad range of geographic regions – especially areas that have historically been unrepresented or underrepresented – should prominently factor into creating balanced membership on FACs.¹⁶ The distinctive experiences, climates and environmental issues facing citizens spread across the United States naturally necessitates strong geographic diversity so that extensive regional perspectives are represented on FACs.¹⁷

Accordingly, with the exception of FACs established to specifically address regional/area specific issues, EPA shall seek to ensure that FAC membership is geographically diverse. Emphasis should be given to candidates from states or EPA regions that are unrepresented or underrepresented on EPA FACs.

D. Promote Fresh Perspectives

Experts serving on FACs should regularly rotate on and off committees to allow for new opinions and fresh ideas. Members who serve on FACs for an extended and continuous period of time risk minimizing viewpoints, lessening diversity, and preventing other qualified candidates from serving. EPA acknowledges the importance of fresh perspectives in its peer review handbook to “keep balance” and “avoid repeated use” of persons that could diminish original feedback.¹⁸

¹⁵ “(a) The Congress finds that there are numerous committees, boards, commissions, councils, and similar groups which have been established to advise officers and agencies in the executive branch of the Federal Government and that they are frequently a useful and beneficial means of furnishing expert advice, ideas, and **diverse opinions** to the Federal Government.” 5 U.S.C. app. § 2(a), <https://www.gsa.gov/cdnstatic/FACA-Statute-2013.pdf> (emphasis added).

¹⁶ “The composition of an advisory committee’s membership will depend upon several factors, including: (i) The advisory committee’s mission; (ii) The **geographic**, ethnic, social, economic, or scientific impact of the advisory committee’s recommendations. . .” 41 C.F.R. Part 102-3, App. A to Subpart B (emphasis added); https://www.gsa.gov/cdnstatic/FACAFinalRule_R2E-cNZ_0ZSRDZ-i34K-pR.pdf.

¹⁷ See CASAC Membership Balance Plan stating that “Geographic location may be considered” as an “important” factor in achieving a balanced FAC, <https://www.facadatabase.gov/committee/charters.aspx?cid=634&aid=51>; Board of Scientific Counselors stating that “Balances in disciplines, work sector (i.e., academia, government – federal/state/local, industry, environmental associations), diversity, and geographic distribution area are also considered.” <https://www.facadatabase.gov/committee/charters.aspx?cid=1577&aid=51>.

E. SCOTT PRUITT
ADMINISTRATOR

New members also help to ensure that FACs remain current with innovative and new scientific and technological expertise. Membership should therefore be dynamic and open to a broad, diverse array of experts who can potentially provide unique and informative new perspectives.¹⁹

Conclusion

EPA's FAC members provide essential and invaluable advice and support to the Agency. Strengthening FAC membership independence from EPA, increasing state, tribal and local government participation, and emphasizing geographic diversity and fresh perspectives, to the greatest extent practicable, serve to enhance the diversity of viewpoints and thereby provide robust and appropriately balanced advice to EPA. These changes also further help EPA meet its core mission of providing the American people with clean air, land, and water.

¹⁹ EPA's Peer-Review Handbook considers adding fresh perspectives through new peer reviewers an "important qualification" to add balance of views and avoid the repeated use of the same persons. See https://www.epa.gov/sites/production/files/2016-03/documents/epa_peer_review_handbook_4th_edition.pdf.

Congress of the United States

House of Representatives

COMMITTEE ON SCIENCE, SPACE, AND TECHNOLOGY

2321 RAYBURN HOUSE OFFICE BUILDING

WASHINGTON, DC 20515-6301

(202) 225-6371
www.science.house.gov

March 19, 2014

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Dear Administrator McCarthy:

The Committee on Science, Space, and Technology has longstanding concerns with the Environmental Protection Agency's (EPA) scientific advisory processes. In particular, there has been a troubling lack of independence and transparency within EPA's Clean Air Scientific Advisory Committee (CASAC) Ozone Review Panel. In establishing CASAC, Congress gave clear direction that this committee is intended "to have complete independence."¹ The CASAC Ozone Review Panel appears to violate agency policies designed to ensure balance, independence, and impartiality. Additional transparency is necessary to assure Congress and the American people that EPA is basing its costly regulatory decisions on the best available science and not a predetermined regulatory agenda.

In a hearing before the Committee last November, you stated that CASAC "provides independent advice to the EPA Administrator on the science that supports the EPA's National Ambient Air Quality Standards."² However, recent testimony and the current makeup of the panel reveal a number of problems, including: panelists reviewing their own work; a lack of turnover among CASAC Ozone Review Panel members; and, existing financial relationships between panelists and the Agency. Dr. Robert Phalen, Professor of Medicine and Co-Director of the Air Pollution Health Effects Laboratory at University of California, Irvine, and a former member of the CASAC panel on fine particulate matter, stated in testimony that the "current [CASAC] process... is seriously flawed, it is narrowly focused, and it is even ethically questionable."³ Due to the substantial economic cost associated with finalizing a more stringent ozone standard, EPA should make every effort to ensure the transparency of the regulatory process.

¹ H.R. Rep. No. 95-294 at 182-83 (1977).

² Committee on Science, Space, and Technology, "Strengthening Transparent and Accountability within the Environmental Protection Agency," Testimony of EPA Administrator Gina McCarthy, 113th Cong., 1st sess., 14 November, 2013, <https://science.house.gov/sites/republicans.science.house.gov/files/documents/HHRG-113-SY-WState-GMccarthy-20131114.pdf>.

³ Committee on Science, Space, and Technology, "Quality Science for Quality Air," 112th Cong., 1st sess., 4 October 2011, <http://www.gpo.gov/fdsys/pkg/CHRG-112hhr70587/html/CHRG-112hhr70587.htm>.

Lowering the ozone National Ambient Air Quality Standards (NAAQS) to the range being discussed by CASAC could represent the most expensive regulation in history, with EPA's own cost estimates approaching nearly \$100 billion per year. An ozone NAAQS below the existing standards may place large swaths of the United States in non-attainment with the Clean Air Act and result in severe economic sanctions. Moreover, testimony before this Committee indicates that standards in the range EPA is considering are below naturally-occurring background levels in many parts of the country.⁴ Setting standards at these levels could therefore limit growth and impose penalties on communities whose means of compliance is beyond their control.

This Committee is not alone in its concerns about the independence and transparency of the CASAC process, and this Ozone Review panel in particular. As noted below, independent scientists who have been involved with CASAC have testified to our Committee with serious concerns.

Recusals and Reviewing One's Own Work

EPA's *Peer Review Handbook* states that "An independent peer reviewer is an expert who was not associated with the generation of the specific work product either directly... or indirectly...."⁵

Within the NAAQS process, EPA's CASAC Ozone Review panelists are asked to review three documents generated by EPA: the Integrated Science Assessment;⁶ the Health and Welfare Risk and Exposure Assessments;⁷ and the Policy Assessment.⁸ Among the current CASAC Ozone Review panel, **16 of the 20 panel members** are cited by EPA in the current versions of these key documents. Indeed, the Agency cites the work of these panel members **more than 700 times** in these regulatory science documents they are being asked to critically assess.

This does not appear to be an isolated incident, as Dr. Roger McClellan, a former Chair of CASAC, testified, "The [CASAC] membership has been excessively dominated by scientists that to a large extent have developed the scientific information contained in the documents."⁹ In addition, a 2013 review of CASAC's processes by the EPA Inspector General (IG) found multiple instances where recusals for concerns related to independence were not documented.

⁴ Committee on Science, Space, and Technology, "Background Check: Achievability of New Ozone Standards," 113th Cong., 1st sess., 12 June 2013, <https://science.house.gov/hearing/subcommittee-environment-background-check-achievability-new-ozone-standards>.

⁶ U. S. Environmental Protection Agency, Office of Research and Development, National Center for Environmental Assessment, *Integrated Science Assessment for Ozone and Related Photochemical Oxidants*, 2013. EPA 600/R-10/076F, http://oaspub.epa.gov/eims/eimscomm.getfile?p_download_id=511347.

⁷ U. S. Environmental Protection Agency, National Ambient Air Quality Standards, Ozone Standards, Documents from Current Review, Risk and Exposure Assessments, http://www.epa.gov/ttn/naaqs/standards/ozone/s_o3_2008_rea.html.

⁸ U. S. Environmental Protection Agency, National Ambient Air Quality Standards, Ozone Standards, Documents from Current Review, Policy Assessments, http://www.epa.gov/ttn/naaqs/standards/ozone/s_o3_2008_pa.html.

⁹ Committee on Science, Space, and Technology, "Quality Science for Quality Air," 112th Cong., 1st sess., 4 October 2011, <http://www.gpo.gov/fdsys/pkg/CHRG-112hhrg70587/html/CHRG-112hhrg70587.htm>.

The IG also found those recusals often came after the fact, lacked detail or their resolution was not adequately documented.¹⁰ Independent reviewers should not be reviewing their work and the Agency needs to guarantee panelists recuse themselves for Agency documents that rely upon or cite their work.¹¹

Lack of Turnover and Financial Relationships with EPA

EPA's *Peer Review Handbook* states "that the agency [should] rotate membership among qualified scientists in order to obtain fresh perspectives and reinforce the reality and perception of independence from the agency."¹² Despite this requirement, half of the current CASAC Ozone Review Panel members (10 out of 20) also served on the Agency's panel for the reconsideration of the 2008 Ozone NAAQS and five of these members served on both the reconsideration panel and the CASAC Ozone Review Panel for the 2008 NAAQS. Moreover, these panels were highly critical of the Administrator's decision concerning the 2008 ozone standard, suggesting bias in the current panel makeup.

EPA's *Peer Review Handbook* also states that Federal grants or contracts may constitute a direct financial stake, and thus a conflict or lack of impartiality in a specific review for potential peer reviewers. And in 2013, EPA's Inspector General found that "[a] prospective or active member's research or grant is a potential area of concern if the [Federal Advisory Committee], panel, or subcommittee plans to address work performed under the research grant."¹³ Yet, since 2000, **70 percent or 14 of the 20 members** of the CASAC Ozone Review Panel have been principal or co-investigators for EPA grants totaling more than \$120 million.¹⁴ Many of these grants focus on ozone- and air pollution-related issues at the heart of these advisory activities.

The lack of turnover in a panel whose composition includes members with a direct financial relationship with the Agency related to the very issues under review suggests a critical lack of impartiality. As Dr. Michael Honeycutt, Director of Toxicology at the Texas Commission on Environmental Quality, stated before the Committee, "Having study authors, grant recipients, and panelists who have taken public stands on relevant topics who are handpicked by the Administrator gives the perception that the CASAC may not be truly independent."¹⁵

¹⁰ U. S. Environmental Protection Agency, Office of Inspector General, 2013. *EPA Can Better Document Resolution of Ethics and Partiality Concerns in Managing Clean Air Federal Advisory Committees*, Report no. 13-P-0387, <http://www.epa.gov/oig/reports/2013/20130911-13-P-0387.pdf>.

¹¹ Dr. Honeycutt testified that: "It is not appropriate for scientists to peer review their own work; it presents a clear conflict of interest. When a panel reviews a document in which a member's work is cited, that member should recuse himself from review of the document." Available from: <http://www.gpo.gov/fdsys/pkg/CHRG-112hhrg70587/html/CHRG-112hhrg70587.htm>.

¹⁴ These totals only include grants from the National Center for Environmental Research. Grant information available at: http://cfpub.epa.gov/ncer_abstracts/index.cfm/fuseaction/search.welcome.

¹⁵ Committee on Science, Space, and Technology, "Improving EPA's Scientific Advisory Process," 113th Cong., 1st sess., 20 March 2013, <http://www.gpo.gov/fdsys/pkg/CHRG-113hhrg80553/pdf/CHRG-113hhrg80553.pdf>.

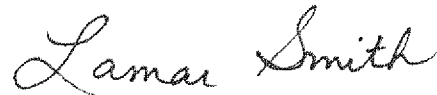

Need for Transparency

In testimony before the Committee last year, Dr. Roger McClellan stated that “[v]ery little of the CASAC panel work is done in public view. Most of the discussion takes place off-line and is only manifest in the written draft comments of the CASAC Panel Members in response to EPA staff written questions.”¹⁶ In light of these serious concerns, it is unacceptable for EPA to move forward with new rules without first addressing potential conflicts of interest and a lack of transparency within a panel intended to provide the Agency with independent scientific assessments.

Please provide all communications between EPA staff, CASAC staff, and the CASAC Ozone Review Panel related to potential revisions to the ozone NAAQS. This should include all e-mail correspondence and meeting records since the start of the panel formation process in 2008. Please provide these communications to the Committee by March 25, 2014.

Your staff has indicated that the upcoming CASAC Ozone Review Panel meeting to be held March 25-27, 2014 will be webcast live on the Agency’s website. Please ensure that an archived version of this webcast will be available online to the public following the meeting.

Sincerely,

Lamar Smith
Chairman
Committee on Science, Space, and
Technology

115TH CONGRESS
1ST SESSION

H. R. 1431

To amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to provide for Scientific Advisory Board member qualifications, public participation, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

MARCH 8, 2017

Mr. LUCAS (for himself, Mr. PETERSON, Mr. SMITH of Texas, Mr. BIGGS, Mr. BANKS of Indiana, Mr. ROHRABACHER, Mr. POSEY, Mr. BROOKS of Alabama, Mr. WEBER of Texas, Mr. BABIN, Mr. HIGGINS of Louisiana, Mr. HULTGREN, Mr. BRIDENSTINE, Mr. ABRAHAM, Mr. LAHOOD, Mr. WEBSTER of Florida, Mr. MARSHALL, Mr. DUNN, Mr. SESSIONS, Mr. CHAFFETZ, Mr. SCHWEIKERT, Mr. PALAZZO, Mr. YOUNG of Alaska, Mr. BARTON, Mr. PEARCE, Mr. FARENTHOLD, Mr. GOSAR, Mr. TIPTON, and Mr. GOODLATTE) introduced the following bill; which was referred to the Committee on Science, Space, and Technology

A BILL

To amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to provide for Scientific Advisory Board member qualifications, public participation, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “EPA Science Advisory
5 Board Reform Act of 2017”.

1 **SEC. 2. SCIENCE ADVISORY BOARD.**

2 (a) INDEPENDENT ADVICE.—Section 8(a) of the En-
3 vironmental Research, Development, and Demonstration
4 Authorization Act of 1978 (42 U.S.C. 4365(a)) is amend-
5 ed by inserting “independently” after “Advisory Board
6 which shall”.

7 (b) MEMBERSHIP.—Section 8(b) of the Environ-
8 mental Research, Development, and Demonstration Au-
9 thorization Act of 1978 (42 U.S.C. 4365(b)) is amended
10 to read as follows:

11 “(b)(1) The Board shall be composed of at least nine
12 members, one of whom shall be designated Chairman, and
13 shall meet at such times and places as may be designated
14 by the Chairman.

15 “(2) Each member of the Board shall be qualified by
16 education, training, and experience to evaluate scientific
17 and technical information on matters referred to the
18 Board under this section. The Administrator shall ensure
19 that—

20 “(A) the scientific and technical points of view
21 represented on and the functions to be performed by
22 the Board are fairly balanced among the members of
23 the Board;

24 “(B) at least ten percent of the membership of
25 the Board are from State, local, or tribal govern-
26 ments;

1 “(C) persons with substantial and relevant ex-
2 pertise are not excluded from the Board due to af-
3 filiation with or representation of entities that may
4 have a potential interest in the Board’s advisory ac-
5 tivities, so long as that interest is fully disclosed to
6 the Administrator and the public and appointment
7 to the Board complies with section 208 of title 18,
8 United States Code;

9 “(D) in the case of a Board advisory activity on
10 a particular matter involving, or for which the Board
11 has evidence that it may involve, a specific party, no
12 Board member having an interest in the specific
13 party shall participate in that activity;

14 “(E) Board members may not participate in ad-
15 visory activities that directly or indirectly involve re-
16 view or evaluation of their own work, unless fully
17 disclosed to the public and the work has been exter-
18 nally peer-reviewed;

19 “(F) Board members shall be designated as
20 special Government employees;

21 “(G) no registered lobbyist is appointed to the
22 Board; and

23 “(H) a Board member shall have no current
24 grants or contracts from the Environmental Protec-
25 tion Agency and shall not apply for a grant or con-

1 tract for 3 years following the end of that member's
2 service on the Board.

3 “(3) The Administrator shall—

4 “(A) solicit public nominations for the Board by
5 publishing a notification in the Federal Register;

6 “(B) solicit nominations from relevant Federal
7 agencies, including the Departments of Agriculture,
8 Defense, Energy, the Interior, and Health and
9 Human Services;

10 “(C) solicit nominations from—

11 “(i) institutions of higher education (as de-
12 fined in section 101(a) of the Higher Education
13 Act of 1965 (20 U.S.C. 1001(a))); and

14 “(ii) scientific and research institutions
15 based in work relevant to that of the Board;

16 “(D) make public the list of nominees, includ-
17 ing the identity of the entities that nominated each,
18 and shall accept public comment on the nominees;

19 “(E) require that, upon their provisional nomi-
20 nation, nominees shall file a written report disclosing
21 financial relationships and interests, including Envi-
22 ronmental Protection Agency grants, contracts, co-
23 operative agreements, or other financial assistance,
24 that are relevant to the Board's advisory activities
25 for the three-year period prior to the date of their

1 nomination, and relevant professional activities and
2 public statements for the five-year period prior to
3 the date of their nomination; and

4 “(F) make such reports public, with the excep-
5 tion of specific dollar amounts, for each member of
6 the Board upon such member’s selection.

7 “(4) Disclosure of relevant professional activities
8 under paragraph (3)(E) shall include all representational
9 work, expert testimony, and contract work as well as iden-
10 tifying the party for which the work was done.

11 “(5) Except when specifically prohibited by law, the
12 Agency shall make all conflict of interest waivers granted
13 to members of the Board, member committees, or inves-
14 tigative panels publicly available.

15 “(6) Any recusal agreement made by a member of
16 the Board, a member committee, or an investigative panel,
17 or any recusal known to the Agency that occurs during
18 the course of a meeting or other work of the Board, mem-
19 ber committee, or investigative panel shall promptly be
20 made public by the Administrator.

21 “(7) The terms of the members of the Board shall
22 be three years and shall be staggered so that the terms
23 of no more than one-third of the total membership of the
24 Board shall expire within a single fiscal year. No member
25 shall serve more than two terms over a ten-year period.”.

1 (c) RECORD.—Section 8(c) of such Act (42 U.S.C.
2 4365(c)) is amended—

3 (1) in paragraph (1)—

4 (A) by inserting “or draft risk or hazard
5 assessment,” after “at the time any proposed”;

6 (B) by striking “formal”; and

7 (C) by inserting “or draft risk or hazard
8 assessment,” after “to the Board such pro-
9 posed”; and

10 (2) in paragraph (2)—

11 (A) by inserting “or draft risk or hazard
12 assessment,” after “the scientific and technical
13 basis of the proposed”; and

14 (B) by adding at the end the following:
15 “The Board’s advice and comments, including
16 dissenting views of Board members, and the re-
17 sponse of the Administrator shall be included in
18 the record with respect to any proposed risk or
19 hazard assessment, criteria document, standard,
20 limitation, or regulation and published in the
21 Federal Register.”.

22 (d) MEMBER COMMITTEES AND INVESTIGATIVE PAN-
23 ELS.—Section 8(e)(1)(A) of such Act (42 U.S.C.
24 4365(e)(1)(A)) is amended by adding at the end the fol-

1 lowing: “These member committees and investigative pan-
 2 els—

3 “(i) shall be constituted and operate
 4 in accordance with the provisions set forth
 5 in paragraphs (2) and (3) of subsection
 6 (b), in subsection (h), and in subsection
 7 (i);

8 “(ii) do not have authority to make
 9 decisions on behalf of the Board; and

10 “(iii) may not report directly to the
 11 Environmental Protection Agency.”.

12 (e) PUBLIC PARTICIPATION.—Section 8 of such Act
 13 (42 U.S.C. 4365) is amended by amending subsection (h)
 14 to read as follows:

15 “(h)(1) To facilitate public participation in the advi-
 16 sory activities of the Board, the Administrator and the
 17 Board shall make public all reports and relevant scientific
 18 information and shall provide materials to the public at
 19 the same time as received by members of the Board.

20 “(2) Prior to conducting major advisory activities, the
 21 Board shall hold a public information-gathering session to
 22 discuss the state of the science related to the advisory ac-
 23 tivity.

24 “(3) Prior to convening a member committee or in-
 25 vestigative panel under subsection (e) or requesting sci-

1 entific advice from the Board, the Administrator shall ac-
2 cept, consider, and address public comments on questions
3 to be asked of the Board. The Board, member committees,
4 and investigative panels shall accept, consider, and ad-
5 dress public comments on such questions and shall not ac-
6 cept a question that unduly narrows the scope of an advi-
7 sory activity.

8 “(4) The Administrator and the Board shall encour-
9 age public comments, including oral comments and discus-
10 sion during the proceedings, that shall not be limited by
11 an insufficient or arbitrary time restriction. Public com-
12 ments shall be provided to the Board when received, and
13 shall be published in the Federal Register grouped by com-
14 mon themes. If multiple repetitious comments are re-
15 ceived, only one such comment shall be published along
16 with the number of such repetitious comments received.
17 Any report made public by the Board shall include written
18 responses to significant comments, including those that
19 present an alternative hypothesis-based scientific point of
20 view, offered by members of the public to the Board.

21 “(5) Following Board meetings, the public shall be
22 given 15 calendar days to provide additional comments for
23 consideration by the Board.”.

1 (f) OPERATIONS.—Section 8 of such Act (42 U.S.C.
2 4365) is further amended by amending subsection (i) to
3 read as follows:

4 “(i)(1) In carrying out its advisory activities, the
5 Board shall strive to avoid making policy determinations
6 or recommendations, and, in the event the Board feels
7 compelled to offer policy advice, shall explicitly distinguish
8 between scientific determinations and policy advice.

9 “(2) The Board shall clearly communicate uncertain-
10 ties associated with the scientific advice provided to the
11 Administrator or Congress.

12 “(3) The Board shall ensure that advice and com-
13 ments reflect the views of the members and shall encour-
14 age dissenting members to make their views known to the
15 public, the Administrator, and Congress.

16 “(4) The Board shall conduct periodic reviews to en-
17 sure that its advisory activities are addressing the most
18 important scientific issues affecting the Environmental
19 Protection Agency.

20 “(5) The Board shall be fully and timely responsive
21 to Congress.”.

1 **SEC. 3. RELATION TO THE FEDERAL ADVISORY COM-**
2 **MITTEE ACT.**

3 Nothing in this Act or the amendments made by this
4 Act shall be construed as supplanting the requirements of
5 the Federal Advisory Committee Act (5 U.S.C. App.).

6 **SEC. 4. RELATION TO THE ETHICS IN GOVERNMENT ACT OF**
7 **1978.**

8 Nothing in this Act or the amendments made by this
9 Act shall be construed as supplanting the requirements of
10 the Ethics in Government Act of 1978 (5 U.S.C. App.).

Members Introduce Legislation to Reform EPA's Scientific Advisory Process

Apr 9, 2013 | Press Release

Subcommittee on Environment Chairman Chris Stewart (R-Utah) today introduced legislation to reform the Environmental Protection Agency's (EPA's) scientific advisory processes. The bill, H.R. 1422 (/sites/republicans.science.house.gov/files/documents/HR%201422_0.pdf), the *EPA Science Advisory Board Reform Act of 2013*, makes changes to the EPA's Science Advisory Board (SAB) to enhance public participation, improve the process for selecting expert advisors, expand transparency requirements and limit non-scientific policy advice. Original cosponsors of the bill include: Chairman Lamar Smith (R-Texas), Vice Chairman Dana Rohrabacher (R-Calif.), Chairman Emeritus Ralph Hall (R-Texas), Rep. Andy Harris (R-Md.) and Rep. Dan Benishek (R-Mich.).

00020

Environment Subcommittee Chairman Stewart: "Through the EPA, the Obama Administration is aggressively pursuing costly regulations that impact nearly every sector of the American economy. Most of these rules are based on controversial scientific assertions and conclusions, so it is critical they be reviewed by a balanced panel of experts in an open and transparent manner. This bill directs EPA to undertake reforms to do just that."

Chairman Smith: "Time and again, we see instances where American businesses are unnecessarily harmed by the EPA's regulatory and political agenda. The changes in this bill will help to ensure that multi-billion dollar rulemakings are based on good science and hard fact, rather than fiction. The bill also makes sure that EPA regulations are reviewed in a balanced and transparent manner."

The Members' SAB reform effort builds on similar legislation introduced in the 112th Congress. The Committee plans to mark up ([/markup/full-committee-markup-hr-875-hr](#)) the measure on Thursday, April 11 at 10:00 a.m.

At a March hearing on the legislation, Rep. Stewart emphasized ([/sites/republicans.science.house.gov/files/documents/HHRG-113-%20SY18-WState-S001192-20130320.pdf](#)) that these reforms will help instill confidence in EPA regulatory science, saying that the EPA's credibility suffers when the Agency's scientific process is viewed as being biased or one-sided.

Established by Congress in 1978, the SAB plays an important role in reviewing the scientific foundation of EPA regulatory decisions and advising the Agency broadly on science and technology-related matters.

Criticisms of the current advisory process include:

- According ([/crs-memo-re-epa-grants-members-selected-epa-advisory-committees](#)) to the Congressional Research Service, almost 60 percent of the members of EPA's standing scientific advisory panels directly received National Center for Environmental Research grants from the Agency since 2000. These advisors served as investigators for grants representing hundreds of millions of taxpayer dollars. And the research they are being asked to independently review is often directly related to the grants they received.
- Private sector industry expertise on panels is typically minimal, and in some cases is entirely excluded, despite existing statutory requirements

that membership "be fairly balanced in terms of the points of view represented."

- Many panel members state strong policy preferences in areas they are being asked to provide impartial scientific reviews, and in certain cases advisors review EPA products based on their own work.
- Public participation is limited during most SAB meetings, and virtually no ability exists for interested parties to comment on the scope of SAB reviews.

To address these shortcomings, H.R. 1422

([/sites/republicans.science.house.gov/files/documents/HR%201422_0.pdf](https://sites/republicans.science.house.gov/files/documents/HR%201422_0.pdf)):

- Strengthens public participation and public comment opportunities.
- Improves the make-up of SAB and its sub-panels by reinforcing peer review requirements regarding balance and independence. The bill also reduces potential conflicts of interest by requiring enhanced disclosure of members' financial relationships relevant to board activities.
- Requires opportunities for dissenting panelists to make their views known.
- Requires communication of uncertainties in scientific findings and conclusions.
- Limits non-scientific policy advice and recommendations, while requiring explicit disclosure of such advice when SAB feels compelled to provide it.

These provisions draw upon recent recommendations from the Keystone Center's Research Integrity Roundtable

(<https://www.keystone.org/images/keystone-center/spp-documents/Health/Research%20Integrity%20Rountable%20Report.pdf>), the Bipartisan Policy Center (<https://bipartisanpolicy.org/library/report/science-policy-project-final-report>), and other stakeholders (<https://yosemite.epa.gov/sab/sabproduct.nsf/WebSABSO/June%201%202011%20Public%20involvement%20session?OpenDocument>), as well as relevant testimony ([/sab-bill-press-release-quotes](#)) received by the Committee on Science, Space, and Technology during the 112th and 113th Congresses.

Lucas, Peterson Introduce Bipartisan Bill to Strengthen EPA Independent Scientific Advice

Feb 24, 2015 | Press Release

Washington D.C. – House Science, Space, and Technology Committee Vice-Chairman Frank Lucas (R-Okla.) and Rep. Collin Peterson (D-Minn.) today introduced the bipartisan *EPA Science Advisory Board Reform Act* to bring fairness, transparency, and independence to the EPA's expert panel. Similar legislation passed the House in the 113th Congress with bipartisan support. Companion legislation was also introduced today in the Senate by Sens. John Boozman (R-Ark.) and Joe Manchin (D-W.Va.).

Vice-Chairman Lucas: "The Science Advisory Board (SAB) informs the EPA on regulations that impact the lives of millions of Americans. Some members on this board have received grant money from the EPA, and several of the members have openly expressed policy preferences in the same areas they are asked to independently study. The heavy costs of EPA's regulations

00023

warrant some degree of public oversight to ensure SAB's findings are free from bias or conflicts of interest and not simply provided by a set of handpicked advisors. The *EPA Science Advisory Board Reform Act* addresses these issues by ensuring the science guiding EPA's regulatory policy is open to review by the public and requiring members who serve on this board to disclose their professional backgrounds."

Rep. Peterson: "The Science Advisory Board's work is important to making sure the EPA considers all scientific information when writing regulations that will impact American farmers, families and small businesses. This legislation builds on the work done in the 2014 Farm Bill and is necessary to ensure the EPA takes into account the best information possible, with input from the public and independent stakeholders. A balanced and independent Science Advisory Board will help alleviate some of the unintended consequences surrounding EPA regulations."

The SAB was created to provide independent expert advice to the EPA and Congress on scientific and technical information that may be used to justify federal regulations. Over the past decades, shortcomings with the current process have arisen, including limited public participation, EPA interference with expert advice, and potential conflicts of interest. As a result, the law should be updated to restore scientific integrity to the process and independence to the Board. The *EPA Science Advisory Board Reform Act* addresses these shortcomings guaranteeing a well-balanced expert panel, increasing transparency, and encouraging public participation to empower the SAB to provide meaningful and unbiased scientific advice.

July 20, 2016

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Dear Administrator McCarthy:

I write to comment on the list of candidates nominated to serve on the U.S. Environmental Protection Agency's (EPA or Agency) chartered Clean Air Scientific Advisory Committee (CASAC). The CASAC is a seven-member member Federal Advisory Committee (FAC) tasked with providing the EPA independent scientific advice related to the national ambient air quality standards (NAAQS). As you know, I have long expressed concerns over the composition of previously appointed CASAC panels, but I am hopeful you will use this opportunity to appoint an expert that will bring much needed balance and integrity to CASAC.

Pursuant to Section 109(d)(2) of the Clean Air Act, the chartered CASAC must be composed of at least "one person representing State air pollution control agencies."¹ On April 6, 2016, EPA published a notice in the Federal Register requesting nominations for candidates to fill this statutorily required state-affiliated position.² Nominations were due by May 6, 2016. On June 20, 2016, EPA posted a list of seven candidates who were nominated on its website and announced the Agency would accept public comments on those candidates until July 20, 2016.³ Among the seven candidates, the EPA Science Advisory Board (SAB) staff office will make a recommendation to you, as the EPA Administrator, who will then appoint a member to the chartered CASAC for a three-year term beginning in October 2016.⁴

This is a critical position on CASAC that warrants robust review of the candidates' qualifications both individually and within the context of the other six members of CASAC to ensure balance of the panel. EPA should consider the historical composition of the chartered CASAC as well as those serving in this specific state-affiliated position on CASAC, and how one of the nominees may fill a void on the panel. With these factors in mind, I want to highlight several issues related to the lack of geographic diversity and fresh perspectives on the chartered CASAC that EPA

¹ 42 U.S.C. § 7409(d)(2).

² U.S. Envtl. Prot. Agency, Notice, Request for Nominations of Candidates to the EPA's Clean Air Scientific Advisory Committee (CASAC) and the EPA Science Advisory Board (SAB), 81 Fed. Reg. 19967, Apr. 6, 2016, available at <https://www.gpo.gov/fdsys/pkg/FR-2016-04-06/pdf/2016-07918.pdf>.

³ [https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebProjectsCurrentCASAC/3CDA169D2187C6C885257F85006D3AF1/\\$File/List%20of%20Candidates-CASAC.pdf](https://yosemite.epa.gov/sab/sabproduct.nsf/LookupWebProjectsCurrentCASAC/3CDA169D2187C6C885257F85006D3AF1/$File/List%20of%20Candidates-CASAC.pdf)

⁴ "Appointments are anticipated to be filled by the start of Fiscal Year 2017 (October 2016). . . Members are appointed by the EPA Administrator for a three-year term and serve as Special Government Employees who provide independent expert advice to the agency." 81 Fed. Reg. 19967.

SAB staff office should take into account when evaluating the nominees. While not providing an endorsement of any of the candidates, I note in this letter my concerns with two of the nominees under consideration for the chartered CASAC.

In the first instance, EPA's record for ensuring geographic diversity on its advisory panels has been lacking under the Obama Administration. As for the current seven-member chartered CASAC; there are no members from EPA Regions 2, 4, 6, 7, or 8. In fact, over the course of this Administration, EPA has not appointed a single person from EPA Regions 6, 7, or 8 to serve on the chartered CASAC. These regions include 15 states, which represent 30 percent of the country; yet represent zero percent of the chartered CASAC during the last six years. As I have stated before, these regions cover vast parts of the country that are among the most impacted by the NAAQS, so qualified experts from these areas would have particularly unique experience with air quality issues that CASAC has not benefited from in recent years. Meanwhile, the coastal EPA Regions 1 and 9 have been overrepresented on the panel. The following chart illustrates the geographic representation of the members appointed to the chartered CASAC by this Administration:

Source: FACA Database, Clean Air Scientific Advisory Committee: http://facadatabase.gov/rpt/_message.asp

This seeming geographic bias on the chartered CASAC cannot be ignored. It is also important to note that with respect to this specific state-based position on CASAC, there has been no meaningful geographic diversity at all. In last 20 years, there have been only four individuals filling this position on the chartered CASAC, two of which were from EPA Region 1 and the others were from Regions 2 and 5. Indeed, the last time this position was vacant there were six candidates nominated, with many from the west coast and northeast.⁵ This was disappointing in light of the overrepresentation of those areas on the panel. This time there is a more diverse group of nominees from EPA Regions 4, 5, 6, and 8. As such, there is no reason for EPA to overlook well-qualified candidates from these areas that would clearly balance the panel with respect to geographic diversity.

As you are aware, the chartered CASAC is a federal advisory committee (FAC), subject to the Federal Advisory Committee Act (FACA) of 1972, which provides uniform procedures for the establishment, operation, administration, and duration of FACs.⁶ FACA regulations require membership on FACs be balanced and provide several factors for agencies to consider in reaching balance, including the geographic impact of the FAC's recommendations.⁷ EPA's FAC Management Handbook also states that the Designated Federal Office (DFO), who is charged with ensuring compliance with FACA and its implementing regulations, should compose FACs with a balance of views, which includes geographic considerations.⁸ EPA's CASAC Membership Balance Plan, updated in April 2015, specifically added "geographic location may be considered" as the only other factor to consider the balance of the chartered CASAC.⁹

These requirements must be considered when evaluating the nomination of Bart Croes of the California Air Resources Board (CARB), who would not provide geographic diversity to the panel. In fact, there has been one member from California on the chartered CASAC since the beginning of the Administration. For one of 50 states to constantly have a member on a seven-member panel does not suggest EPA has meaningfully considered geographic representation on CASAC. Even more, the current chartered CASAC already includes a member from California, Ron Wyzga, who was just reappointed in October 2015 to serve a term ending in 2018. Therefore, if EPA appointed Mr. Croes to CASAC, for the next two years, 30 percent of the

⁹ CASAC Membership Balance Plan, April 15, 2015, *available at* <http://facadatabase.gov/committee/charters.aspx?cid=634&aid=51>.

panel would be from one state, which is wholly unacceptable. Such an appointment would be counter to EPA policy and would suggest the Agency does not take geographic diversity seriously given the high caliber of other candidates from regions not currently represented, as well as regions that have not been represented on the chartered CASAC for many years.

In addition, EPA must take into account concerns over the lack of fresh perspectives on the chartered CASAC when assessing the balance of the panel. For instance, the current chartered CASAC includes four of seven members that previously served on the chartered CASAC. As you are aware, EPA's Peer Review Handbook advises the Agency to select new members "to obtain fresh perspectives and reinforce the reality and perception of independence from the Agency."¹⁰ EPA's FAC Handbook dictates that members of the chartered CASAC can serve only six years "in order to provide fresh perspectives to the committee."¹¹

I applaud EPA's commitment to this term limit on the chartered CASAC since 2010.¹² However, as a practical matter, the six-year tenure policy does not necessarily ensure a balanced panel with respect to fresh perspectives per FACA. Indeed, since the Clean Air Act requires CASAC to review the NAAQS every five years, there could be instances where CASAC members review and vote on the standard for the same criteria pollutant that they had previously reviewed, especially when members do not serve in consecutive three-year terms. EPA now has an opportunity to fill this opening in a manner that addresses this past concern and is consistent with EPA's Peer Review and FAC Handbooks.

Specifically, EPA must consider these factors when evaluating Dr. Donna Kenski of the Lake Michigan Air Directors Consortium, who was nominated to serve on CASAC. Dr. Kenski has already served on the chartered CASAC for a three-year term from 2008 to 2010. During this time, Dr. Kenski reviewed and provided advice on each of the six criteria pollutants. Critically, as a member of the chartered CASAC, she was a voting member authorized to make recommendations to the Administrator on the NAAQS, which is distinct from members of CASAC subcommittees who do not directly advise the Administrator. Accordingly, if she were appointed again to serve another three-year term, she would review and make recommendations on a number of the same criteria pollutants. This scenario is exactly what I cautioned against in 2011, when I requested a review of CASAC membership by the EPA Office of Inspector General (OIG).¹³ In addition to not providing a fresh perspective, when an individual is tasked with reviewing the same standard, it also calls into question the impartiality of the member as they would essentially be reviewing their past work in advising on the last standard. In the interest of

Administrator McCarthy

July 20, 2016

Page 5 of 5

showing a good faith effort to ensure fresh perspectives and balance on the panel, I urge you to choose among the other expert candidates whom have not served on the chartered CASAC.

Moreover, during Dr. Kenski's previous term on the chartered CASAC, there was significant controversy generated by members of the committee, who did not act impartially and overstepped the statutory authority delegated to CASAC. Specifically, Dr. Kenski joined members of the chartered CASAC in a letter to then-EPA Administrator Stephen Johnson that challenged the ozone NAAQS in 2008, which did not conform to the range advised by CASAC.¹⁴ In the correspondence Dr. Kenski signed, CASAC members ridiculed then-Administrator Johnson and muddled the lines of science and policy decision-making that were clearly outside the bounds of CASAC's statutory charge. As you are aware, the Clean Air Act does not require the EPA Administrator to follow CASAC's recommendation. This interaction between CASAC and EPA was then subject to numerous Congressional investigations and oversight, which casts a shadow over Dr. Kenski's previous experience on CASAC. Given that there are other highly qualified individuals nominated to serve on the chartered CASAC that have not previously served and have not been subject to such controversy, I see no reason to appoint someone who has raised this significant concern.

Thank you for your attention to this matter. If you have any questions with this request, please contact the Committee on Environment and Public Works at (202) 224-6176.

Sincerely,

James M. Inhofe

WASHINGTON, DC 20510-6175

RYAN JACKSON, MAJORITY STAFF DIRECTOR
BETTINA FORRELL, DEMOCRATIC STAFF DIRECTOR

April 29, 2016

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Dear Administrator McCarthy:

On April 6, 2016, a notice requesting nominations to seven U.S. Environmental Protection Agency (EPA) scientific advisory panels was published in the Federal Register, with nominations due by May 6, 2016.¹ As you are aware, the Senate Committee on Environment and Public Works (EPW) has long conducted oversight of EPA advisory panels. These panels, including the Clean Air Scientific Advisory Committee (CASAC) and the Science Advisory Board (SAB), play a critical role in influencing the Agency's regulatory actions and have significant implications for the next administration. However, circumstances surrounding the recent nomination request and correspondence between EPA and the EPW Committee raise new concerns the Agency is not committed to a transparent or meaningful public input process for selecting CASAC and SAB members.

At the outset, the current 30-day request for nominations is not an adequate period of time to ensure an eligible collection of candidates has an opportunity to consider nomination to these vacant positions. Indeed, the notice requested nominations to CASAC, the chartered SAB, and five SAB standing committees, all of which require differing expertise and perspectives, as well as a significant time commitment. As prescribed by the Clean Air Act Amendments of 1977, CASAC makes recommendations to the EPA Administrator related to the National Ambient Air Quality Standards (NAAQS).² The statute also specifies that CASAC be "composed of seven members including . . . one person representing state air pollution control agencies."³ The April 6, 2016, notice requests nominations to fill this specific state-based role on CASAC.⁴ The Environmental, Research, Development and Demonstration Authorization Act of 1978 established the SAB to provide independent advice and recommendations regarding the science underlying EPA actions.⁵ The April 6, 2016, notice requests nominations to fill several SAB

¹ U.S. Env'tl. Prot. Agency, Notice, Request for Nominations of Candidates to the EPA's Clean Air Scientific Advisory Committee (CASAC) and the EPA Science Advisory Board (SAB), 81 Fed. Reg. 19967, Apr. 6, 2016, available at <https://www.gpo.gov/fdsys/pkg/FR-2016-04-06/pdf/2016-07918.pdf>.

⁴ 81 Fed. Reg. 19967.

⁵ 42 U.S.C. § 4363.

positions with experts ranging in disciplines such as chemistry, to climate change, to social, behavioral and decision sciences, to name a few.⁶ Importantly, candidates appointed to any of these panels will serve for a three-year term.⁷

Moreover, in a February 2, 2016, letter⁸ I requested information about the Agency's last round of CASAC nominations,⁹ and I was troubled to learn in EPA's February 25, 2016, response that each of the five members selected to serve on CASAC beginning in fiscal year 2016 were nominated by an EPA employee or a Designated Federal Officer (DFO).¹⁰ DFOs oversee and manage the operations of federal advisory committees such as CASAC and SAB.¹¹ In other words, none of the potential members who were nominated by an individual or organization outside the EPA or those who self-nominated were selected. Notably, EPA's response did not provide the names or titles of those EPA employees and DFOs nominating such candidates. These findings only lend further credence to my concerns that these panels may not be fully independent of the Agency.

I am equally concerned by EPA's lack of transparency throughout the selection process. Based on EPA's February 25, 2016, letter, the Agency appointed five candidates to CASAC on August 3, 2015, yet the names of those selected were not posted on EPA website until October 5, 2015, and the Agency did not contact candidates who were not selected until October 6, 2015.¹² It is wholly inappropriate that more than two months had passed from the time EPA appointed CASAC members, to the time the public and those who were not selected were notified of the Agency's decision. The fact that the Agency, for seemingly no reason, kept those nominated but not selected in the dark is deeply inconsiderate to those candidates who may have otherwise been making personal and career plans in the event they were appointed. I have said time and again, greater transparency within the selection process would benefit all.

⁶ 81 Fed. Reg. 19967.

⁷ "Appointments are anticipated to be filled by the start of Fiscal Year 2017 (October 2016). . . Members are appointed by the EPA Administrator for a three-year term and serve as Special Government Employees who provide independent expert advice to the agency." 81 Fed. Reg. 19967.

Agency, <http://yosemite.epa.gov/sab/sabpeople.nsf/WebExternalCommitteeRosters?OpenView&committee=CASAC&secondname=Clean%20Air%20Scientific%20Advisory%20Committee>.

¹⁰ Letter from Christopher S. Zarbar, Dir., EPA Science Advisory Board Staff Office, U.S. Env'tl. Prot. Agency, to Hon. James M. Inhofe, Chairman, S. Comm. on Env't & Public Works (Feb. 25, 2016) (on file with Committee).

¹¹ 5 U.S.C. §10 (e)-(f). "(e) There shall be designated an officer or employee of the Federal Government to chair or attend each meeting of each advisory committee. The officer or employee so designated is authorized, whenever he determines it to be in the public interest, to adjourn any such meeting. No advisory committee shall conduct any meeting in the absence of that officer or employee.

(f) Advisory committees shall not hold any meetings except at the call of, or with the advance approval of, a designated officer or employee of the Federal Government, and in the case of advisory committees (other than Presidential advisory committees), with an agenda approved by such officer or employee."

¹² Letter from Christopher S. Zarbar, Dir., EPA Science Advisory Board Staff Office, U.S. Env'tl. Prot. Agency, to Hon. James M. Inhofe, Chairman, S. Comm. on Env't & Public Works (Feb. 25, 2016) (on file with Committee).

As you are aware, I am not the only one to raise concerns over EPA's lack of meaningful public input and transparency in the process for selecting members of the Agency's independent advisory panels.¹³ Yet, it appears EPA has taken no serious actions to ameliorate these concerns. Accordingly, I respectfully request the Agency commit to the following steps towards improving the integrity and transparency of EPA's scientific advisory nomination and selection process:

1. Please extend the deadline for submitting nominations by thirty days.
2. When providing a List of Candidates on EPA's website, please list who referred that candidate, including relevant title and organization/agency affiliation.
3. When soliciting public comments on the List of Candidates, please make all comments publicly available on the EPA webpage that provides the List of Candidates.
4. When the appointments have been made, all candidates, including those who were not selected, must be notified on the same day.
5. Within seven business days of notifying candidates of appointments, EPA must make the list of newly appointed candidates available on its website, including the date on which appointments were made.

Thank you for your prompt attention to this matter. If you have any questions with this request, please contact the Committee on Environment and Public Works at (202) 224-6176.

Sincerely,

James M. Inhofe
Chairman

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

WASHINGTON, DC 20510-6175

BETINA PORRER, MAJORITY STAFF DIRECTOR
JAK BARR, REPUBLICAN STAFF DIRECTOR

February 19, 2014

The Honorable Arthur A. Elkins, Jr.
Inspector General
U.S. Environmental Protection Agency
Office of Inspector General
1200 Pennsylvania Avenue, NW
Washington, DC 20460

Dear Mr. Elkins:

We have serious concerns over the manner in which you have conducted investigations and disseminated information in recent Environmental Protection Agency (EPA) Office of Inspector General (OIG) reports. These issues should be familiar to the OIG, as they have been the subject of several conversations and briefings between OIG and Senate Committee on Environment and Public Works (EPW) staff, including a meeting that you attended.¹ Recent OIG audits and investigations have called into question your office's commitment to upholding the mission of the OIG to conduct independent investigations. Our offices are dedicated to exposing waste, fraud, and abuse within the Federal Government, and in that light we are sharing our concerns over the OIG's report, "EPA Can Better Document Resolution of Ethics and Partiality Concerns in Managing Clean Air Federal Advisory Committees."²

This report was issued in response to requests by Senator Inhofe in 2011, while he was EPW Ranking Member.³ He asked the OIG to evaluate EPA's management of the Clean Air Scientific Advisory Committee (CASAC), the Advisory Council on Clean Air Compliance Analysis (Council), and the Agency's peer review process.⁴ Despite the OIG's taking nearly two years to complete the report, a thorough review of the OIG's methodology, findings, and recommendations reveals a complacent OIG that ignored key sources of information and questions from Congress in an apparent attempt to validate the Agency's practices.

At the outset, the OIG's report methodology reveals weaknesses in the narrow sample of CASAC and Council members chosen for review. The OIG reviewed case files on 47 of 126 members appointed to CASAC and Council from 1998-2012, and conducted an "in depth" review of only 27 members. In addition, the OIG interviewed only six of the most recent

¹ Meeting between Office of Inspector Gen., Env'tl. Prot. Agency, & Republican Staff, S. Comm. on Env't. & Pub. Works (Oct. 24, 2013, 10:00 AM EST).

² OFFICE OF INSPECTOR GEN., ENVTL. PROT. AGENCY, REPORT NO. 13-P-0387 *EPA Can Better Document Resolution of Ethics and Partiality Concerns in Managing Clean Air Federal Advisory Committees* (Sept. 11, 2013).

³ Press Release, Minority Office, S. Comm. On Env't & Pub. Works, *Inhofe Welcomes EPA Inspector General's Office Investigation into EPA's Scientific Process* (Mar. 26, 2012), available at http://www.epw.senate.gov/public/index.cfm?FuseAction=Minority.PressReleases&ContentRecord_id=503cd8ab-802a-23ad-45e8-1d8528fa6847.

⁴ *Id.*

CASAC members. However, the OIG has refused to disclose who was reviewed, making it impossible to assess whether the sample was adequate. Moreover, the OIG simply relied on member's financial disclosure forms to perform its audit instead of collecting information on members. OIG staff did not even attempt to utilize any search engines (Lexis, Google, etc.) to research potential impartiality concerns and "did not conduct searches to independently verify the information reported on the financial disclosure forms."⁵

Separate from the limited scope of review, the OIG's slight treatment of certain information reveals potentially flawed findings. The original inquiry requested OIG review members' receipt of EPA research grants, yet the report summarily stated that research grants did not present a conflict of interest. Accordingly, the OIG did not conduct further inquiry into members' receipt of research grants and instead treated it as an inconsequential factor in assessing impartiality concerns with members. This omission is concerning because 75% of CASAC and Council members combined from 2006 to the present have received EPA and related multi-agency research grants.⁶

In addition, the OIG narrowly interpreted the requirement that CASAC and Council have balanced membership instead of the comprehensive review that was requested. Such review would have considered individual members' independence or impartiality concerns, viewpoints, receipt of research grants, or membership tenure, in assessing membership balance. However, the OIG only examined membership balance in the context of meeting the statutorily mandated requirements under the Clean Air Act.⁷ This narrow review risks that, while the panel may have the prescribed expertise, it may nonetheless be imbalanced.

We are equally concerned by the OIG's improper finding regarding the 2007 ozone reanalysis. While the report identified EPA's failure to subject its 2007 ozone reanalysis to required peer review prior to dissemination, the report improperly concluded that subsequent peer review of the reanalysis was adequate. In this case, the OIG drew a conclusion based on a narrow review of the subsequent peer reviewers and failed to consider the original author's comments which directly contradict the results of the 2007 ozone reanalysis.

Aside from the potentially flawed findings, we identified several instances where the OIG revealed flaws, but inexplicably declined to recommend reforms at EPA. For example, rather than recommending specific actions for EPA to mitigate independence and impartiality concerns, the OIG merely recommended that EPA better document membership decisions, indicating that EPA's current documentation is inadequate. As such, the OIG essentially opined that so long as there is documentation, it is acceptable to select members with potential impartiality and independence concerns. While the report identified nine out of 27 members where impartiality concerns were not well-documented and additional steps were needed, the OIG failed to address

Page 3 of 3

the fact these members represent 33% of members selected for “in depth” review. As such, a more thorough analysis, including more than just 27 anonymous members, as well as a review of the literature through available search engines, is likely to reveal that the rate of members with impartiality concerns is much higher than 33%. It appears EPA’s current process is neither fully transparent nor provides assurance of neutrality.

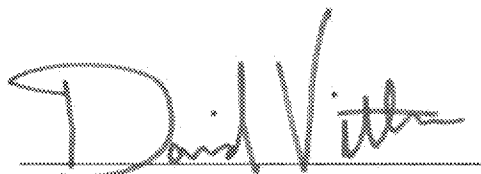

The OIG also missed an opportunity to make a recommendation on remedial action to ensure employees follow the procedures for financial disclosures and failed to recommend EPA alter the policy on updating financial disclosure forms. While the report identified an instance where procedures were blatantly violated, the OIG merely recommended EPA educate employees of the procedures – something employees should have already known – rather than provide specifics on the case from which further information could have been derived. The OIG did not conduct more than a cursory review of financial disclosures and there is no requirement or specific time frame members must update their forms, suggesting the accuracy of these forms is questionable.

The report indicated that EPA did not apply membership tenure policy to review panels and subcommittees, which led the OIG to conclude that “EPA may not be achieving the policy’s intent of providing fresh perspectives.” The lack of adherence to the membership tenure policy is significant: between 1998 and 2012, 36% of all CASAC members and consultants violated the six-year policy. Membership tenure has implications for membership balance; however, the OIG did not use tenure as a criterion for reviewing membership balance and failed to make any meaningful recommendation to ensure fresh perspectives.

Overall, the report buries a few significant findings that call into question the selection of CASAC and Council members. The report illustrates work product by the OIG that appears to be less than thorough, as evidenced by the limited number of members reviewed. The OIG refrained from making recommendations to address concerns found and instead took a narrow approach and permitted EPA policies to maintain the status quo.

These concerns require your immediate attention. It is our hope that this analysis will improve the OIG’s work moving forward, reinforce your responsibility as an “independent” watchdog of EPA, and ensure the Federal Government operates in the most effective and responsible manner in serving the American people.

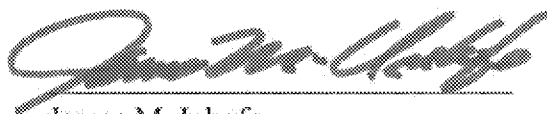

Sincerely,

David Vitter

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

WASHINGTON, DC 20510-6175

RYAN JACKSON, MAJORITY STAFF DIRECTOR
BETTINA FORIER, DEMOCRATIC STAFF DIRECTOR

February 2, 2016

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

Dear Administrator McCarthy:

I write regarding the Environmental Protection Agency's (EPA) incessant lack of transparency and impartiality in its process for selecting members of the Clean Air Scientific Advisory Committee (CASAC). I have observed EPA, under the Obama Administration, cherry-picking the same allies to serve on this advisory committee and its subcommittees at the expense of having an open and robust process for selecting external advisors. In 2011, I requested the EPA's Office of Inspector General (OIG) review EPA's management of CASAC.¹ While the subsequent OIG report² affirmed concerns I had with respect to EPA's failure to recruit new members, address independence concerns, and comply with conflict of interest policies, the recommendations did not bring the much needed reforms to EPA's selection process.³ As evidenced by EPA's newly appointed CASAC members,⁴ this misguided and opaque process calls for renewed Congressional oversight.

As you are aware, the 1977 Clean Air Act Amendments established CASAC in order to provide independent expert advice to the EPA Administrator on the National Ambient Air Quality Standards (NAAQS).⁵ Section 109 of the Clean Air Act also delineates that CASAC shall be "composed of seven members including at least one member of the National Academy

It is not clear when EPA made the appointments; however, the online list of members was updated in early October 2015.

⁵ 42 U.S.C. § 7409(d)(2).

of Sciences (NAS), one physician, and one person representing state air pollution control agencies.”⁶ CASAC’s composition is further governed by EPA policies on financial conflicts of interest and peer review as well as the Federal Advisory Committee Act of 1972⁷ and corresponding guidance.⁸ Aside from these mandates, given CASAC’s role in shaping the NAAQS, it is critical EPA use a clear and unbiased process for selecting CASAC members to keep the public fully informed and involved in the NAAQS program. Moreover, since members are appointed to serve a three-year term on CASAC, the new appointments are particularly important as they will be responsible for advising the next administration, including the highly anticipated review of NAAQS for fine particulate matter (PM 2.5) by 2017.

While EPA issued a public notice in the Federal Register on April 2, 2015, soliciting nominations of candidates to CASAC by May 4, 2015,⁹ the steps EPA has taken since then have essentially occurred in a black box. Instead of posting the list of nominees to the Federal Register and accepting public comments through the well-established form on regulations.gov, EPA buried the list of 27 nominees and biosketches on its website.¹⁰ On a document dated May 20, 2015, EPA invited public comments on the nominees by June 10, 2015, but that too was limited to a hidden post on its website and conducted via email rather than the open regulations.gov format.¹¹ EPA made no public announcement of its new CASAC member appointments. Indeed, there is no way for the public to know the extent to which EPA received comments on the nominees or how EPA fully reached its decision to select certain nominees over others.

In addition to EPA’s opaque process for making CASAC appointments, the composition of the panel outright violates the Clean Air Act requirements for CASAC. Per Section 109 of the Clean Air Act, the Administrator must select at least one member from the NAS.¹² However, for no apparent reason, the EPA has violated this very prescriptive requirement with the new panel—none of the seven members are listed in NAS’s online directory or mention the NAS in their biosketches. Alarming, there has not been a member of the NAS on CASAC since 2009.

The new CASAC panel further illustrates EPA’s disregard for policies requiring EPA shift membership on CASAC. Specifically, EPA’s Peer Review Handbook advises membership rotation on standing committees, such as CASAC, “to obtain fresh perspectives and reinforce the

¹¹ Env’tl. Prot. Agency, Invitation for Public Comment on the List of Candidates For the Environmental Protection Agency’s Clean Air Scientific Advisory Committee (May 20, 2015), [http://yosemite.epa.gov/sab/sabproduct.nsf/WebProjectsRequestsforCommentsCASAC/7E3873008970553085257E1A004FE862/\\$File/List%20of%20Candidates-CASAC-052015.pdf](http://yosemite.epa.gov/sab/sabproduct.nsf/WebProjectsRequestsforCommentsCASAC/7E3873008970553085257E1A004FE862/$File/List%20of%20Candidates-CASAC-052015.pdf).

¹² Section 109(d)(2); 42 U.S.C. 7409(d)(2).

reality and perception of independence from the Agency.”¹³ However, the chartered CASAC includes four of seven members that have already served on CASAC.¹⁴ Among the three who have not served on the chartered CASAC, two have served on CASAC subcommittees¹⁵ while the other one has served on EPA’s Advisory Council on Clean Air Compliance Analysis (Council)¹⁶ which is also designed to advise the Administrator on the impacts of the Clean Air Act on the public health, economy, and environment of the U.S.¹⁷ Given the number of well-qualified nominees and thousands of scientific experts across the country, it is deeply concerning EPA continues to select the same people. This practice runs counter to EPA policy and unnecessarily blocks other experts from serving as advisors.

The majority of CASAC members have also received considerable financial support from EPA, which calls into question their independence and therefore the integrity of the overall panel. While EPA has taken the position that receipt of grants do not constitute a financial conflict of interest, the NAS and EPA’s own Peer-Review Handbook state that grants can constitute a conflict or lack of impartiality.¹⁸ For the newly appointed panel this conflict is on full display—six of the seven members have received a total of \$119,217,008 in EPA research grants.¹⁹ Much to my dismay, three of the seven members have received in excess of \$25 million each.²⁰ This is not limited to the chartered CASAC as 22 of the 26 newly appointed members to the CASAC subcommittee on particulate matter²¹ have received more than \$330 million in EPA grants.²² These vast sums of money certainly constitute a conflict of interest and at a minimum give the appearance of a lack of impartiality.

Moreover, the newly appointed CASAC does not conform to EPA’s commitment to select members with geographic diversity. In EPA’s Federal Register notice request for nominations of candidates to CASAC, the Agency specifically states one of the selection criteria for CASAC includes “background and experiences that would help members contribute to the

¹⁹ See Appendix I.

²⁰ See Appendix I.

²¹ Env’tl. Prot. Agency, CASAC Particulate Matter Review Panel (2015-2018), [http://yosemite.epa.gov/sab/sabpeople.nsf/WebCommitteesSubcommittees/CASAC%20Particulate%20Matter%20Review%20Panel%20\(2015-2018\)](http://yosemite.epa.gov/sab/sabpeople.nsf/WebCommitteesSubcommittees/CASAC%20Particulate%20Matter%20Review%20Panel%20(2015-2018)). Note that member appointments were posted online on November 20, 2015.

²² See Appendix II.

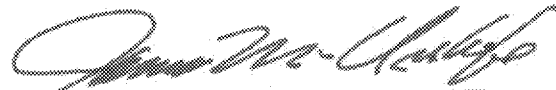

diversity of perspectives on the committee, e.g., geographic[.]”²³ Yet, among the seven members, three are from the northeast and two are from the west coast—not a single member is from a state within EPA’s region four, six, seven or eight, which represent vast parts of the country impacted by the NAAQS.²⁴

In light of these findings, Congressional oversight of EPA’s process for appointing members to CASAC is absolutely necessary. Accordingly, I request you thoroughly respond to the following requests by no later than February 23, 2016:

1. Please provide a copy of all public comments submitted in response to EPA’s Federal Register notice soliciting nominations for candidates to CASAC.
2. Please provide a copy of all public comments submitted to EPA in response to the Agency’s call for comments on the list of candidates nominated and biosketches.
3. Please explain EPA’s process for soliciting nominations and comments on candidates, including its decision to call for comments on candidates via website post and email rather than the Federal Register. Why did the Federal Register notice for solicitation of nominations fail to state the specific number of member appointments available?
4. Why has the Agency violated Section 109 of the Clean Air Act’s requirement to appoint at least one member of the NAS to CASAC? How does the Agency weigh the geographic diversity of candidates? What steps does the Agency take to ensure CASAC has fresh and diverse perspectives?
5. When did the Agency make its determination of which candidates to appoint? When did the Agency post the new panel on its website? Why didn’t the Agency make a formal announcement of the new panel via press release or Federal Register notice?
6. How and when did the Agency notify candidates that were not selected to serve on the panel? How and when did the Agency notify candidates that were selected?
7. Did the Agency conduct any additional external outreach or consultation (e.g. those submitting public comments or non-governmental organizations) on the candidates prior to making its decision? If so, please explain this process and who was consulted.

Thank you for your prompt attention to this matter. If you have any questions with this request, please contact the Committee on Environment and Public Works at (202) 224-6176.

Sincerely,

James M. Inhofe
Chairman
Committee on Environment and Public Works

April 11, 2016

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20460

Dear Administrator McCarthy:

The Environmental Protection Agency's Science Advisory Board (SAB) is comprised of non-EPA experts who broadly advise the agency on scientific and technical matters and conduct peer review of EPA science and regulations.¹ The Clean Air Scientific Advisory Committee (CASAC) consists of non-EPA experts who provide technical advice and consultation regarding EPA's national ambient air quality standards program.² Under the law, all members who serve on the SAB and CASAC must be strictly and independently objective.³ For vetting purposes, all prospective members must disclose to EPA all activities that "would present a conflict of interest or might raise an appearance of a lack of impartiality."⁴

To help the Committee understand the reliability of EPA's conflicts assessment for SAB and CASAC appointees, please provide all forms entitled "Confidential Financial Disclosure Form for Environmental Protection Agency Special Government Employees (EPA Form 3110-48)" submitted to EPA from current SAB and CASAC members. EPA's "Confidential Financial Disclosure Form for Environmental Protection Agency Special Government Employees (EPA Form 3110-48)" expressly provides that this information may be provided to the Committee.⁵

Please provide this information as soon as possible, but no later than 5:00 p.m. on April 25, 2016. When producing documents to the Committee, please deliver production sets to the

The Honorable Brenda L. Lawrence, Ranking Member
Subcommittee on the Interior

Responding to Committee Document Requests

1. In complying with this request, you are required to produce all responsive documents that are in your possession, custody, or control, whether held by you or your past or present agents, employees, and representatives acting on your behalf. You should also produce documents that you have a legal right to obtain, that you have a right to copy or to which you have access, as well as documents that you have placed in the temporary possession, custody, or control of any third party. Requested records, documents, data or information should not be destroyed, modified, removed, transferred or otherwise made inaccessible to the Committee.
2. In the event that any entity, organization or individual denoted in this request has been, or is also known by any other name than that herein denoted, the request shall be read also to include that alternative identification.
3. The Committee's preference is to receive documents in electronic form (i.e., CD, memory stick, or thumb drive) in lieu of paper productions.
4. Documents produced in electronic format should also be organized, identified, and indexed electronically.
5. Electronic document productions should be prepared according to the following standards:
 - (a) The production should consist of single page Tagged Image File ("TIF"), files accompanied by a Concordance-format load file, an Opticon reference file, and a file defining the fields and character lengths of the load file.
 - (b) Document numbers in the load file should match document Bates numbers and TIF file names.
 - (c) If the production is completed through a series of multiple partial productions, field names and file order in all load files should match.
 - (d) All electronic documents produced to the Committee should include the following fields of metadata specific to each document:

BEGDOC, ENDDOC, TEXT, BEGATTACH, ENDATTACH,
PAGECOUNT, CUSTODIAN, RECORDTYPE, DATE, TIME, SENTDATE,
SENTTIME, BEGINDATE, BEGINTIME, ENDDATE, ENDTIME, AUTHOR, FROM,
CC, TO, BCC, SUBJECT, TITLE, FILENAME, FILEEXT, FILESIZE,
DATECREATED, TIMECREATED, DATELASTMOD, TIMELASTMOD,
INTMSGID, INTMSGHEADER, NATIVELINK, INTFILPATH, EXCEPTION,
BEGATTACH.
6. Documents produced to the Committee should include an index describing the contents of the production. To the extent more than one CD, hard drive, memory stick, thumb drive, box or folder is produced, each CD, hard drive, memory stick, thumb drive, box or folder should contain an index describing its contents.

7. Documents produced in response to this request shall be produced together with copies of file labels, dividers or identifying markers with which they were associated when the request was served.
8. When you produce documents, you should identify the paragraph in the Committee's schedule to which the documents respond.
9. It shall not be a basis for refusal to produce documents that any other person or entity also possesses non-identical or identical copies of the same documents.
10. If any of the requested information is only reasonably available in machine-readable form (such as on a computer server, hard drive, or computer backup tape), you should consult with the Committee staff to determine the appropriate format in which to produce the information.
11. If compliance with the request cannot be made in full by the specified return date, compliance shall be made to the extent possible by that date. An explanation of why full compliance is not possible shall be provided along with any partial production.
12. In the event that a document is withheld on the basis of privilege, provide a privilege log containing the following information concerning any such document: (a) the privilege asserted; (b) the type of document; (c) the general subject matter; (d) the date, author and addressee; and (e) the relationship of the author and addressee to each other.
13. If any document responsive to this request was, but no longer is, in your possession, custody, or control, identify the document (stating its date, author, subject and recipients) and explain the circumstances under which the document ceased to be in your possession, custody, or control.
14. If a date or other descriptive detail set forth in this request referring to a document is inaccurate, but the actual date or other descriptive detail is known to you or is otherwise apparent from the context of the request, you are required to produce all documents which would be responsive as if the date or other descriptive detail were correct.
15. Unless otherwise specified, the time period covered by this request is from January 1, 2009 to the present.
16. This request is continuing in nature and applies to any newly-discovered information. Any record, document, compilation of data or information, not produced because it has not been located or discovered by the return date, shall be produced immediately upon subsequent location or discovery.
17. All documents shall be Bates-stamped sequentially and produced sequentially.
18. Two sets of documents shall be delivered, one set to the Majority Staff and one set to the Minority Staff. When documents are produced to the Committee, production sets shall be delivered to the Majority Staff in Room 2157 of the Rayburn House Office Building and the Minority Staff in Room 2471 of the Rayburn House Office Building.

19. Upon completion of the document production, you should submit a written certification, signed by you or your counsel, stating that: (1) a diligent search has been completed of all documents in your possession, custody, or control which reasonably could contain responsive documents; and (2) all documents located during the search that are responsive have been produced to the Committee.

Definitions

1. The term “document” means any written, recorded, or graphic matter of any nature whatsoever, regardless of how recorded, and whether original or copy, including, but not limited to, the following: memoranda, reports, expense reports, books, manuals, instructions, financial reports, working papers, records, notes, letters, notices, confirmations, telegrams, receipts, appraisals, pamphlets, magazines, newspapers, prospectuses, inter-office and intra-office communications, electronic mail (e-mail), contracts, cables, notations of any type of conversation, telephone call, meeting or other communication, bulletins, printed matter, computer printouts, teletypes, invoices, transcripts, diaries, analyses, returns, summaries, minutes, bills, accounts, estimates, projections, comparisons, messages, correspondence, press releases, circulars, financial statements, reviews, opinions, offers, studies and investigations, questionnaires and surveys, and work sheets (and all drafts, preliminary versions, alterations, modifications, revisions, changes, and amendments of any of the foregoing, as well as any attachments or appendices thereto), and graphic or oral records or representations of any kind (including without limitation, photographs, charts, graphs, microfiche, microfilm, videotape, recordings and motion pictures), and electronic, mechanical, and electric records or representations of any kind (including, without limitation, tapes, cassettes, disks, and recordings) and other written, printed, typed, or other graphic or recorded matter of any kind or nature, however produced or reproduced, and whether preserved in writing, film, tape, disk, videotape or otherwise. A document bearing any notation not a part of the original text is to be considered a separate document. A draft or non-identical copy is a separate document within the meaning of this term.
2. The term “communication” means each manner or means of disclosure or exchange of information, regardless of means utilized, whether oral, electronic, by document or otherwise, and whether in a meeting, by telephone, facsimile, email (desktop or mobile device), text message, instant message, MMS or SMS message, regular mail, telexes, releases, or otherwise.
3. The terms “and” and “or” shall be construed broadly and either conjunctively or disjunctively to bring within the scope of this request any information which might otherwise be construed to be outside its scope. The singular includes plural number, and vice versa. The masculine includes the feminine and neuter genders.
4. The terms “person” or “persons” mean natural persons, firms, partnerships, associations, corporations, subsidiaries, divisions, departments, joint ventures, proprietorships, syndicates, or other legal, business or government entities, and all subsidiaries, affiliates, divisions, departments, branches, or other units thereof.

5. The term “identify,” when used in a question about individuals, means to provide the following information: (a) the individual's complete name and title; and (b) the individual's business address and phone number.
6. The term “referring or relating,” with respect to any given subject, means anything that constitutes, contains, embodies, reflects, identifies, states, refers to, deals with or is pertinent to that subject in any manner whatsoever.
7. The term “employee” means agent, borrowed employee, casual employee, consultant, contractor, de facto employee, independent contractor, joint adventurer, loaned employee, part-time employee, permanent employee, provisional employee, subcontractor, or any other type of service provider.

Congress of the United States
Washington, DC 20515

July 15, 2016

The Honorable Gina McCarthy
Administrator
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue NW
Washington, D.C. 20460

Dear Administrator McCarthy:

On April 6, 2016, EPA published a notice in the Federal Register seeking nominations to fill an open seat on the seven-member Clean Air Scientific Advisory Committee (CASAC).¹ CASAC is a Federal Advisory Committee made up of non-EPA experts who advise the Administrator on various aspects regarding national ambient air quality standards (NAAQS).² EPA's notice specifically seeks a representative of a state air pollution control agency with knowledge of "air quality relating to criteria pollutants."³

On June 20, 2016, EPA announced the nominations of seven candidates to fill this key position.⁴ These experts come from multiple EPA Regions, including areas in the Southeast and Western United States that remain unrepresented on the Committee.⁵

When considering nominees, it is vitally important that different EPA Regions are represented to ensure a fair balance of experts and experience. EPA specifically acknowledges in the notice that geographic diversity is an important selection criteria.⁶ Currently, no CASAC members come from Region 8 (MT, WY, ND, SD, UT, CO), Region 6 (NM, TX, OK, AR, LA), Region 7 (NE, KS, IA, MO), or Region 4 (KY, TN, MS, AL, FL, GA, SC, NC).⁷ Additionally, not a single CASAC member has come from Regions 6, 7 or 8 since 2010.⁸ Accordingly, in order for balance, fairness and geographic diversity on CASAC, we request that EPA fill the open position with someone from an area not represented on the Committee.

Sincerely,

Bruce Westerman
Member of Congress

Jason Chaffetz
Member of Congress

The Honorable Lisa P. Jackson
Administrator, U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Dear Administrator Jackson:

On March 16, 2012, Elizabeth Grossman, the Environmental Protection Agency's (EPA) Acting Assistant Inspector General for Program Evaluation, notified EPA staff that the Agency's Office of Inspector General (OIG) plans to begin an evaluation of EPA's management of the Clean Air Scientific Advisory Committee (CASAC) and the Advisory Council on Clean Air Compliance Analysis (ACCACA). The investigation will focus on whether EPA has managed these committees in accordance with applicable laws, regulations, and guidance pertaining to "appearances of impartiality, balance of committee viewpoints and perspectives, rotation of members, potential conflicts of interest, and peer review."

The OIG's announcement is a significant development. It reflects the gravity of the mounting evidence and the seriousness of the issues raised by Senator Inhofe and this Committee that suggest that EPA has not managed its scientific advisory committees in accordance with applicable laws, regulations and guidance to assure that they provide the necessary impartial critique of EPA science. These are grave concerns and we applaud the OIG's decision to undertake this warranted investigation.

The OIG's announcement also caps a growing list of concerns regarding EPA's general handling of scientific issues that were addressed most notably in the National Academy of Sciences' (NAS) recent report, *Review of the Environmental Protection Agency's Draft IRIS Assessment of Formaldehyde*. This report identified significant errors in EPA's review of the scientific evidence with regard to formaldehyde and proposed programmatic changes to the way EPA assesses risk from individual pollutants. Many of the concerns raised by the NAS have direct parallels with the way EPA conducts its scientific review of the National Ambient Air Quality Standards (NAAQS).

ED_002389_00011925-00051

Given the OIG's announcement and the resulting cloud of controversy surrounding the CASAC review of the PM_{2.5} NAAQS and its ongoing review of the ozone NAAQS we request that EPA wait until the OIG has released its findings before proposing or promulgating revisions to the PM_{2.5} or ozone standard. Proceeding with either of these standards without waiting for the OIG to complete its investigation could invite unnecessary litigation, create regulatory uncertainty for states and industry, and undermine public support for this critically important program.

Thank you for your attention to this important issue. I look forward to your timely response.

Sincerely,

A handwritten signature in black ink, appearing to read "Andy Harris", written in a cursive style.

Andy Harris, M.D.
Member of Congress

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

JUN 20 2012

OFFICE OF
AIR AND RADIATION

The Honorable Andy Harris
U.S. House of Representatives
Washington, D.C. 20515

Dear Congressman Harris:

Thank you for your letter of April 12, 2012, to U. S. Environmental Protection Agency (EPA) Administrator Lisa Jackson, regarding plans by the agency's Office of Inspector General (OIG) to begin an evaluation of the EPA's management of scientific advisory committees, specifically the Clean Air Scientific Advisory Committee (CASAC) and the Advisory Council on Clean Air Compliance Analysis (ACCACA). This review is in response to a request from Senator Inhofe on August 4, 2011. The Administrator asked me to respond to your letter on her behalf.

It is important to note that the OIG is an independent office within EPA. A decision by the OIG to conduct an investigation does not indicate in any way its view of the expected outcome of the investigation. The existence of an investigation should not be interpreted as making any statement regarding any problem with the EPA's scientific advisory committee process. Rather, the investigation will evaluate whether or not any problems exist.

We believe the agency has complied with all peer-review requirements in working with CASAC and ACCACA. Our meetings with these scientific advisory committees are always open to the public, providing transparency for the rigorous external review of the science and technical analyses that inform the agency's decisions.

Additionally, the IRIS process referenced in your letter and the NAAQS standard-setting process are quite different, but both are fundamentally sound and science-based. Moreover, the National Academy of Sciences' (NAS) formaldehyde review report praised the NAAQS review process as an example for a revised IRIS process.

Given these circumstances, the EPA believes it would be inappropriate to delay action on the health-based PM_{2.5} and ozone national ambient air quality standards (NAAQS) pending an OIG evaluation. Accordingly, the agency plans to move forward with its ongoing review of these standards.

Again, thank you for your letter. If you have further questions, please contact me or your staff may call Cheryl Mackay in the EPA's Office of Congressional and Intergovernmental Relations at (202) 564-2023.

Sincerely,

A handwritten signature in black ink, appearing to read "Gina McCarthy", with a large, sweeping flourish at the end.

July 27, 2017

The Honorable Scott Pruitt
Administrator
Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington D.C. 20460

Dear Administrator Pruitt:

You have begun a proceeding to solicit nominations for the Clean Air Scientific Advisory Committee (CASAC).¹ As you review nominations, we request that you also revisit past CASAC practices to make them compliant with the statute.

Established by Section 109(d)(2) of the Clean Air Act, CASAC is to provide independent scientific advice to the Administrator regarding the development of National Ambient Air Quality Standards (NAAQS). The independent, seven-member body is to include diverse perspectives, notably one member of the National Academy of Sciences, one physician, and a representative of State air pollution control agencies. CASAC is statutorily required to provide information to the Administrator regarding:

- (i) Areas in which additional knowledge is required to appraise the adequacy and basis of existing, new, or revised NAAQS;
- (ii) Research efforts necessary to provide the required information;
- (iii) The relative contribution to air pollution concentrations of natural as well as anthropogenic activity; and
- (iv) Any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of NAAQS.

In the past, CASAC has failed to address these required statutory obligations. With regard to item (iv) above, a 2015 Government Accountability Office report² concluded that "CASAC has never provided advice on adverse social, economic, or energy effects related to NAAQS because EPA has never asked CASAC to do so." Additionally, in comments on the 2015 ozone NAAQS proposal,³ the States of Alabama, Indiana, Mississippi, North Dakota, West Virginia, and

¹ Environmental Protection Agency (EPA), Request for Nominations of Candidates to the EPA's Clean Air Scientific Advisory Committee (CASAC) and the EPA Science Advisory Board (SAB); 82 Fed. Reg. 29077 (June 27, 2017), available at: <https://www.gpo.gov/fdsys/pkg/FR-2017-06-27/pdf/2017-13332.pdf>.

² Government Accountability Office, "EPA's Science Advisory Board: Improved Procedures Needed to Process Congressional Requests for Scientific Advice" (June 2015), available at: <http://www.gao.gov/assets/680/670647.pdf>.

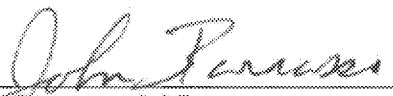

³ States of Alabama, Indiana, Mississippi, North Dakota, West Virginia and Wyoming on 79 Fed. Reg. 75234 (December 17, 2015), Docket ID No. EPA-HQ-OAR-2008-0699 (March 17, 2015), available at <https://www.regulations.gov/document?D=EPA-HQ-OAR-2008-0699-2570>.

Wyoming identified failures of CASAC to address both item (iv) and issues concerning background ozone, required by item (iii). The comments highlighted unique background ozone issues faced by Western states.

As you review 2017 nominations for CASAC members, we request that you put measures in place to ensure that moving forward, CASAC complies with these statutory obligations. CASAC must be constituted of experts who can provide independent counsel to you in all of the above areas.

Please direct further communication on these issues to Elizabeth Horner of the Committee's staff at 202-224-6176.

Sincerely,

John Barrasso, M.D.

Management and Regulatory Oversight

114TH CONGRESS
1ST SESSION

S. 543

To amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to provide for Scientific Advisory Board member qualifications, public participation, and for other purposes.

IN THE SENATE OF THE UNITED STATES

FEBRUARY 24, 2015

Mr. BOOZMAN (for himself, Mr. MANCHIN, and Mr. INHOFE) introduced the following bill; which was read twice and referred to the Committee on Environment and Public Works

A BILL

To amend the Environmental Research, Development, and Demonstration Authorization Act of 1978 to provide for Scientific Advisory Board member qualifications, public participation, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “EPA Science Advisory
5 Board Reform Act of 2015”.

6 **SEC. 2. SCIENCE ADVISORY BOARD.**

7 (a) INDEPENDENT ADVICE.—Section 8(a) of the En-
8 vironmental Research, Development, and Demonstration

1 Authorization Act of 1978 (42 U.S.C. 4365(a)) is amend-
2 ed by inserting “independently” after “Advisory Board
3 which shall”.

4 (b) MEMBERSHIP.—Section 8(b) of the Environ-
5 mental Research, Development, and Demonstration Au-
6 thorization Act of 1978 (42 U.S.C. 4365(b)) is amended
7 to read as follows:

8 “(b)(1) The Board shall be composed of at least nine
9 members, one of whom shall be designated Chairman, and
10 shall meet at such times and places as may be designated
11 by the Chairman.

12 “(2) Each member of the Board shall be qualified by
13 education, training, and experience to evaluate scientific
14 and technical information on matters referred to the
15 Board under this section. The Administrator shall ensure
16 that—

17 “(A) the scientific and technical points of view
18 represented on and the functions to be performed by
19 the Board are fairly balanced among the members of
20 the Board;

21 “(B) at least ten percent of the membership of
22 the Board are from State, local, or tribal govern-
23 ments;

24 “(C) persons with substantial and relevant ex-
25 pertise are not excluded from the Board due to af-

1 filiation with or representation of entities that may
2 have a potential interest in the Board’s advisory ac-
3 tivities, so long as that interest is fully disclosed to
4 the Administrator and the public and appointment
5 to the Board complies with section 208 of title 18,
6 United States Code;

7 “(D) in the case of a Board advisory activity on
8 a particular matter involving a specific party, no
9 Board member having an interest in the specific
10 party shall participate in that activity;

11 “(E) Board members may not participate in ad-
12 visory activities that directly or indirectly involve re-
13 view or evaluation of their own work, unless fully
14 disclosed to the public and the work has been exter-
15 nally peer-reviewed;

16 “(F) Board members shall be designated as
17 special Government employees; and

18 “(G) no federally registered lobbyist is ap-
19 pointed to the Board.

20 “(3) The Administrator shall—

21 “(A) solicit public nominations for the Board by
22 publishing a notification in the Federal Register;

23 “(B) solicit nominations from relevant Federal
24 agencies, including the Departments of Agriculture,

1 Defense, Energy, the Interior, and Health and
2 Human Services;

3 “(C) make public the list of nominees, including
4 the identity of the entities that nominated each, and
5 shall accept public comment on the nominees;

6 “(D) require that, upon their provisional nomi-
7 nation, nominees shall file a written report disclosing
8 financial relationships and interests, including Envi-
9 ronmental Protection Agency grants, contracts, co-
10 operative agreements, or other financial assistance,
11 that are relevant to the Board’s advisory activities
12 for the three-year period prior to the date of their
13 nomination, and relevant professional activities and
14 public statements for the five-year period prior to
15 the date of their nomination; and

16 “(E) make such reports public, with the excep-
17 tion of specific dollar amounts, for each member of
18 the Board upon such member’s selection.

19 “(4) Disclosure of relevant professional activities
20 under paragraph (3)(D) shall include all representational
21 work, expert testimony, and contract work as well as iden-
22 tifying the party for which the work was done.

23 “(5) Except when specifically prohibited by law, the
24 Agency shall make all conflict of interest waivers granted

1 to members of the Board, member committees, or inves-
 2 tigative panels publicly available.

3 “(6) Any recusal agreement made by a member of
 4 the Board, a member committee, or an investigative panel,
 5 or any recusal known to the Agency that occurs during
 6 the course of a meeting or other work of the Board, mem-
 7 ber committee, or investigative panel shall promptly be
 8 made public by the Administrator.

9 “(7) The terms of the members of the Board shall
 10 be three years and shall be staggered so that the terms
 11 of no more than one-third of the total membership of the
 12 Board shall expire within a single fiscal year. No member
 13 shall serve more than two terms over a ten-year period.”.

14 (c) RECORD.—Section 8(c) of such Act (42 U.S.C.
 15 4365(c)) is amended—

16 (1) in paragraph (1)—

17 (A) by inserting “or draft risk or hazard
 18 assessment,” after “at the time any proposed”;

19 (B) by striking “formal”; and

20 (C) by inserting “or draft risk or hazard
 21 assessment,” after “to the Board such pro-
 22 posed”; and

23 (2) in paragraph (2)—

(A) by inserting “or draft risk or hazard assessment,” after “the scientific and technical basis of the proposed”; and

(B) by adding at the end the following:
 “The Board’s advice and comments, including dissenting views of Board members, and the response of the Administrator shall be included in the record with respect to any proposed risk or hazard assessment, criteria document, standard, limitation, or regulation and published in the Federal Register.”.

(d) MEMBER COMMITTEES AND INVESTIGATIVE PANELS.—Section 8(e)(1)(A) of such Act (42 U.S.C. 4365(e)(1)(A)) is amended by adding at the end the following: “These member committees and investigative panels—

“(i) shall be constituted and operate in accordance with the provisions set forth in paragraphs (2) and (3) of subsection (b), in subsection (h), and in subsection (i);

“(ii) do not have authority to make decisions on behalf of the Board; and

“(iii) may not report directly to the Environmental Protection Agency.”.

1 (e) PUBLIC PARTICIPATION.—Section 8 of such Act
2 (42 U.S.C. 4365) is amended by amending subsection (h)
3 to read as follows:

4 “(h)(1) To facilitate public participation in the advi-
5 sory activities of the Board, the Administrator and the
6 Board shall make public all reports and relevant scientific
7 information and shall provide materials to the public at
8 the same time as received by members of the Board.

9 “(2) Prior to conducting major advisory activities, the
10 Board shall hold a public information-gathering session to
11 discuss the state of the science related to the advisory ac-
12 tivity.

13 “(3) Prior to convening a member committee or in-
14 vestigative panel under subsection (e) or requesting sci-
15 entific advice from the Board, the Administrator shall ac-
16 cept, consider, and address public comments on questions
17 to be asked of the Board. The Board, member committees,
18 and investigative panels shall accept, consider, and ad-
19 dress public comments on such questions and shall not ac-
20 cept a question that unduly narrows the scope of an advi-
21 sory activity.

22 “(4) The Administrator and the Board shall encour-
23 age public comments, including oral comments and discus-
24 sion during the proceedings, that shall not be limited by
25 an insufficient or arbitrary time restriction. Public com-

1 ments shall be provided to the Board when received. The
2 Board's reports shall include written responses to signifi-
3 cant comments offered by members of the public to the
4 Board.

5 “(5) Following Board meetings, the public shall be
6 given 15 calendar days to provide additional comments for
7 consideration by the Board.”.

8 (f) OPERATIONS.—Section 8 of such Act (42 U.S.C.
9 4365) is further amended by amending subsection (i) to
10 read as follows:

11 “(i)(1) In carrying out its advisory activities, the
12 Board shall strive to avoid making policy determinations
13 or recommendations, and, in the event the Board feels
14 compelled to offer policy advice, shall explicitly distinguish
15 between scientific determinations and policy advice.

16 “(2) The Board shall clearly communicate uncertain-
17 ties associated with the scientific advice provided to the
18 Administrator or Congress.

19 “(3) The Board shall ensure that advice and com-
20 ments reflect the views of the members and shall encour-
21 age dissenting members to make their views known to the
22 public, the Administrator, and Congress.

23 “(4) The Board shall conduct periodic reviews to en-
24 sure that its advisory activities are addressing the most

1 important scientific issues affecting the Environmental
2 Protection Agency.

3 “(5) The Board shall be fully and timely responsive
4 to Congress.”.

5 **SEC. 3. RELATION TO THE FEDERAL ADVISORY COM-**
6 **MITTEE ACT.**

7 Nothing in this Act or the amendments made by this
8 Act shall be construed as supplanting the requirements of
9 the Federal Advisory Committee Act (5 U.S.C. App.).

10 **SEC. 4. RELATION TO THE ETHICS IN GOVERNMENT ACT OF**
11 **1978.**

12 Nothing in this Act or the amendments made by this
13 Act shall be construed as supplanting the requirements of
14 the Ethics in Government Act of 1978 (5 U.S.C. App.).

○

114TH CONGRESS
1ST SESSION

H. R. 1029

IN THE SENATE OF THE UNITED STATES

MARCH 18, 2015

Received; read twice and referred to the Committee on Environment and
Public Works

AN ACT

To amend the Environmental Research, Development, and
Demonstration Authorization Act of 1978 to provide for
Scientific Advisory Board member qualifications, public
participation, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

1 **SECTION 1. SHORT TITLE.**

2 This Act may be cited as the “EPA Science Advisory
3 Board Reform Act of 2015”.

4 **SEC. 2. SCIENCE ADVISORY BOARD.**

5 (a) INDEPENDENT ADVICE.—Section 8(a) of the En-
6 vironmental Research, Development, and Demonstration
7 Authorization Act of 1978 (42 U.S.C. 4365(a)) is amend-
8 ed by inserting “independently” after “Advisory Board
9 which shall”.

10 (b) MEMBERSHIP.—Section 8(b) of the Environ-
11 mental Research, Development, and Demonstration Au-
12 thorization Act of 1978 (42 U.S.C. 4365(b)) is amended
13 to read as follows:

14 “(b)(1) The Board shall be composed of at least nine
15 members, one of whom shall be designated Chairman, and
16 shall meet at such times and places as may be designated
17 by the Chairman.

18 “(2) Each member of the Board shall be qualified by
19 education, training, and experience to evaluate scientific
20 and technical information on matters referred to the
21 Board under this section. The Administrator shall ensure
22 that—

23 “(A) the scientific and technical points of view
24 represented on and the functions to be performed by
25 the Board are fairly balanced among the members of
26 the Board;

1 “(B) at least ten percent of the membership of
2 the Board are from State, local, or tribal govern-
3 ments;

4 “(C) persons with substantial and relevant ex-
5 pertise are not excluded from the Board due to af-
6 filiation with or representation of entities that may
7 have a potential interest in the Board’s advisory ac-
8 tivities, so long as that interest is fully disclosed to
9 the Administrator and the public and appointment
10 to the Board complies with section 208 of title 18,
11 United States Code;

12 “(D) in the case of a Board advisory activity on
13 a particular matter involving, or for which the Board
14 has evidence that it may involve, a specific party, no
15 Board member having an interest in the specific
16 party shall participate in that activity;

17 “(E) Board members may not participate in ad-
18 visory activities that directly or indirectly involve re-
19 view or evaluation of their own work, unless fully
20 disclosed to the public and the work has been exter-
21 nally peer-reviewed;

22 “(F) Board members shall be designated as
23 special Government employees;

24 “(G) no registered lobbyist is appointed to the
25 Board; and

1 “(H) a Board member shall have no current
2 grants or contracts from the Environmental Protec-
3 tion Agency and shall not apply for a grant or con-
4 tract for 3 years following the end of that member’s
5 service on the Board.

6 “(3) The Administrator shall—

7 “(A) solicit public nominations for the Board by
8 publishing a notification in the Federal Register;

9 “(B) solicit nominations from relevant Federal
10 agencies, including the Departments of Agriculture,
11 Defense, Energy, the Interior, and Health and
12 Human Services;

13 “(C) solicit nominations from—

14 “(i) institutions of higher education (as de-
15 fined in section 101(a) of the Higher Education
16 Act of 1965 (20 U.S.C. 1001(a))); and

17 “(ii) scientific and research institutions
18 based in work relevant to that of the Board;

19 “(D) make public the list of nominees, includ-
20 ing the identity of the entities that nominated each,
21 and shall accept public comment on the nominees;

22 “(E) require that, upon their provisional nomi-
23 nation, nominees shall file a written report disclosing
24 financial relationships and interests, including Envi-
25 ronmental Protection Agency grants, contracts, co-

1 operative agreements, or other financial assistance,
2 that are relevant to the Board's advisory activities
3 for the three-year period prior to the date of their
4 nomination, and relevant professional activities and
5 public statements for the five-year period prior to
6 the date of their nomination; and

7 “(F) make such reports public, with the excep-
8 tion of specific dollar amounts, for each member of
9 the Board upon such member's selection.

10 “(4) Disclosure of relevant professional activities
11 under paragraph (3)(E) shall include all representational
12 work, expert testimony, and contract work as well as iden-
13 tifying the party for which the work was done.

14 “(5) Except when specifically prohibited by law, the
15 Agency shall make all conflict of interest waivers granted
16 to members of the Board, member committees, or inves-
17 tigative panels publicly available.

18 “(6) Any recusal agreement made by a member of
19 the Board, a member committee, or an investigative panel,
20 or any recusal known to the Agency that occurs during
21 the course of a meeting or other work of the Board, mem-
22 ber committee, or investigative panel shall promptly be
23 made public by the Administrator.

24 “(7) The terms of the members of the Board shall
25 be three years and shall be staggered so that the terms

1 of no more than one-third of the total membership of the
2 Board shall expire within a single fiscal year. No member
3 shall serve more than two terms over a ten-year period.”.

4 (c) RECORD.—Section 8(c) of such Act (42 U.S.C.
5 4365(c)) is amended—

6 (1) in paragraph (1)—

7 (A) by inserting “or draft risk or hazard
8 assessment,” after “at the time any proposed”;

9 (B) by striking “formal”; and

10 (C) by inserting “or draft risk or hazard
11 assessment,” after “to the Board such pro-
12 posed”; and

13 (2) in paragraph (2)—

14 (A) by inserting “or draft risk or hazard
15 assessment,” after “the scientific and technical
16 basis of the proposed”; and

17 (B) by adding at the end the following:
18 “The Board’s advice and comments, including
19 dissenting views of Board members, and the re-
20 sponse of the Administrator shall be included in
21 the record with respect to any proposed risk or
22 hazard assessment, criteria document, standard,
23 limitation, or regulation and published in the
24 Federal Register.”.

1 (d) MEMBER COMMITTEES AND INVESTIGATIVE PAN-
 2 ELS.—Section 8(e)(1)(A) of such Act (42 U.S.C.
 3 4365(e)(1)(A)) is amended by adding at the end the fol-
 4 lowing: “These member committees and investigative pan-
 5 els—

6 “(i) shall be constituted and operate
 7 in accordance with the provisions set forth
 8 in paragraphs (2) and (3) of subsection
 9 (b), in subsection (h), and in subsection
 10 (i);

11 “(ii) do not have authority to make
 12 decisions on behalf of the Board; and

13 “(iii) may not report directly to the
 14 Environmental Protection Agency.”.

15 (e) PUBLIC PARTICIPATION.—Section 8 of such Act
 16 (42 U.S.C. 4365) is amended by amending subsection (h)
 17 to read as follows:

18 “(h)(1) To facilitate public participation in the advi-
 19 sory activities of the Board, the Administrator and the
 20 Board shall make public all reports and relevant scientific
 21 information and shall provide materials to the public at
 22 the same time as received by members of the Board.

23 “(2) Prior to conducting major advisory activities, the
 24 Board shall hold a public information-gathering session to

1 discuss the state of the science related to the advisory ac-
2 tivity.

3 “(3) Prior to convening a member committee or in-
4 vestigative panel under subsection (e) or requesting sci-
5 entific advice from the Board, the Administrator shall ac-
6 cept, consider, and address public comments on questions
7 to be asked of the Board. The Board, member committees,
8 and investigative panels shall accept, consider, and ad-
9 dress public comments on such questions and shall not ac-
10 cept a question that unduly narrows the scope of an advi-
11 sory activity.

12 “(4) The Administrator and the Board shall encour-
13 age public comments, including oral comments and discus-
14 sion during the proceedings, that shall not be limited by
15 an insufficient or arbitrary time restriction. Public com-
16 ments shall be provided to the Board when received. The
17 Board’s reports shall include written responses to signifi-
18 cant comments offered by members of the public to the
19 Board.

20 “(5) Following Board meetings, the public shall be
21 given 15 calendar days to provide additional comments for
22 consideration by the Board.”.

23 (f) OPERATIONS.—Section 8 of such Act (42 U.S.C.
24 4365) is further amended by amending subsection (i) to
25 read as follows:

1 “(i)(1) In carrying out its advisory activities, the
2 Board shall strive to avoid making policy determinations
3 or recommendations, and, in the event the Board feels
4 compelled to offer policy advice, shall explicitly distinguish
5 between scientific determinations and policy advice.

6 “(2) The Board shall clearly communicate uncertain-
7 ties associated with the scientific advice provided to the
8 Administrator or Congress.

9 “(3) The Board shall ensure that advice and com-
10 ments reflect the views of the members and shall encour-
11 age dissenting members to make their views known to the
12 public, the Administrator, and Congress.

13 “(4) The Board shall conduct periodic reviews to en-
14 sure that its advisory activities are addressing the most
15 important scientific issues affecting the Environmental
16 Protection Agency.

17 “(5) The Board shall be fully and timely responsive
18 to Congress.”.

19 **SEC. 3. RELATION TO THE FEDERAL ADVISORY COM-**
20 **MITTEE ACT.**

21 Nothing in this Act or the amendments made by this
22 Act shall be construed as supplanting the requirements of
23 the Federal Advisory Committee Act (5 U.S.C. App.).

1 **SEC. 4. RELATION TO THE ETHICS IN GOVERNMENT ACT OF**
2 **1978.**

3 Nothing in this Act or the amendments made by this
4 Act shall be construed as supplanting the requirements of
5 the Ethics in Government Act of 1978 (5 U.S.C. App.).

 Passed the House of Representatives March 17,
2015.

PROCEEDINGS AND DEBATES OF THE 114th CONGRESS, FIRST SESSION

Vol. 161

WASHINGTON, THURSDAY, DECEMBER 17, 2015

No. 184—Book III

House of Representatives

EXPLANATORY STATEMENT SUBMITTED
BY MR. ROGERS OF KENTUCKY, CHAIRMAN
OF THE HOUSE COMMITTEE ON
APPROPRIATIONS REGARDING HOUSE
AMENDMENT NO. 1 TO THE SENATE
AMENDMENT ON H.R. 2029—Continued
CONSOLIDATED APPROPRIATIONS ACT,
2016

DIVISION F—DEPARTMENT OF HOMELAND SECURITY APPROPRIATIONS ACT, 2016

Funding provided in this Act not only sustains existing programs that protect the nation from all manner of threats, it ensures the ability of the Department of Homeland Security (DHS) to address evolving chal-

lenges like those witnessed in recent events around the world. To that end, additional resources have been identified to improve preparedness at the state and local levels, to prevent and respond to terrorist attacks, and to hire, train, and equip DHS frontline forces protecting the homeland.

The following is an explanation of the effects of Division F, which makes appropriations for DHS for fiscal year 2016. Unless otherwise noted, references to the House and Senate reports are to House Report 114-215 and Senate Report 114-68, respectively. The language and allocations contained in the House and Senate reports warrant full compliance and carry the same weight as language included in this explanatory statement, unless specifically addressed to the

contrary in the bill or this explanatory statement. While repeating some language from the House or Senate report for emphasis, this explanatory statement does not intend to negate the language referred to above unless expressly provided herein. When this explanatory statement refers to the Committees or the Committees on Appropriations, this reference is to the House Appropriations Subcommittee on Homeland Security and the Senate Appropriations Subcommittee on the Department of Homeland Security. It is assumed that any cost of living adjustment for federal employees directed by the President for fiscal year 2016 will be funded from within the amounts provided in this Act.

NOTICE

If the 114th Congress, 1st Session, adjourns sine die on or before December 24, 2015, a final issue of the *Congressional Record* for the 114th Congress, 1st Session, will be published on Thursday, December 31, 2015, to permit Members to insert statements.

All material for insertion must be signed by the Member and delivered to the respective offices of the Official Reporters of Debates (Room HT-59 or S-123 of the Capitol), Monday through Friday, between the hours of 10:00 a.m. and 3:00 p.m. through Wednesday, December 30. The final issue will be dated Thursday, December 31, 2015, and will be delivered on Monday, January 4, 2016.

None of the material printed in the final issue of the *Congressional Record* may contain subject matter, or relate to any event, that occurred after the sine die date.

Senators' statements should also be formatted according to the instructions at http://webster.senate.gov/secretary/Departments/Reporters_Debates/resources/cong_record.pdf, and submitted electronically, either on a disk to accompany the signed statement, or by e-mail to the Official Reporters of Debates at "Record@Sec.Senate.gov".

Members of the House of Representatives' statements may also be submitted electronically by e-mail, to accompany the signed statement, and formatted according to the instructions for the Extensions of Remarks template at <https://housenet.house.gov/legislative/research-and-reference/transcripts-and-records/electronic-congressional-record-inserts>. The Official Reporters will transmit to GPO the template formatted electronic file only after receipt of, and authentication with, the hard copy, and signed manuscript. Deliver statements to the Official Reporters in Room HT-59.

Members of Congress desiring to purchase reprints of material submitted for inclusion in the *Congressional Record* may do so by contacting the Office of Congressional Publishing Services, at the Government Publishing Office, on 512-0224, between the hours of 8:00 a.m. and 4:00 p.m. daily.

By order of the Joint Committee on Printing.

GREGG HARPER, *Chairman*.

DIVISION G—DEPARTMENT OF THE INTERIOR, ENVIRONMENT, AND RELATED AGENCIES APPROPRIATIONS ACT, 2016

The following statement is an explanation of the effects of Division G, which makes appropriations for the Department of the Interior, the Environmental Protection Agency (EPA), the Forest Service, the Indian Health Service, and related agencies for fiscal year 2016. Report language contained in House Report 114-170 and Senate Report 114-70 providing specific guidance to agencies regarding the administration of appropriated funds and any corresponding reporting requirements carries the same emphasis as the language included in this explanatory statement and should be complied with unless specifically addressed to the contrary herein. This explanatory statement, while repeating some language for emphasis, is not intended to negate the language referred to above unless expressly provided herein.

In cases where the House report, Senate report, or this explanatory statement directs the submission of a report, such report is to be submitted to both the House and Senate Committees on Appropriations. Where this explanatory statement refers to the Committees or the Committees on Appropriations, unless otherwise noted, this reference is to the House Subcommittee on Interior, Environment, and Related Agencies and the Senate Subcommittee on Interior, Environment, and Related Agencies.

The Committees direct each department and agency funded in this Act to follow the directions set forth in this Act and the accompanying statement, and not reallocate resources or reorganize activities except as provided herein or otherwise approved by the Committees through the reprogramming process as described in this explanatory statement. This explanatory statement addresses only those agencies and accounts for which there is a need for greater explanation than provided in the Act itself. Funding levels for appropriations by account, program, and activity, with comparisons to the fiscal year 2015 enacted level and the fiscal year 2016 budget request, can be found in the table at the end of this division.

Unless expressly stated otherwise, any reference to “this Act” or “at the end of this statement” shall be treated as referring only to the provisions of this division.

Drought, Forests and Wildfires.—Severe and prolonged drought can increase the rate at which trees die and devastating wildfires occur. In light of the number of dead and downed trees on public lands in the West, the Forest Service, National Park Service and Bureau of Land Management are directed to work with State and local governments in drought-stricken regions to facilitate the prompt removal of dead and downed trees on these lands and to prioritize funding to reduce the threat of devastating wildfire threats to communities, drinking water supplies, utilities, and groves of ancient trees.

Making Litigation Costs Transparent.—The Department of the Interior, EPA, and the Forest Service are directed to provide to the House and Senate Committees on Appropriations, and to make publicly available no later than 60 days after enactment of this Act, detailed Equal Access to Justice Act (EAJA) fee information as specified in the Consolidated and Further Continuing Appropriations Act, 2015.

State Wildlife Data.—The Department of the Interior and the Forest Service are expected to prioritize continued coordination with other Federal agencies and State fish and wildlife agencies to recognize and fully utilize State fish and wildlife data and analyses as a primary source to inform land use, planning, and related natural resource decisions. Federal agencies should not unnecessarily duplicate raw data, and when appropriate, should evaluate existing analysis of data prepared by the States, and reciprocally share data with State wildlife managers, to ensure that the most complete data set is available for decision support systems.

Land Grants, Acequias and Community Ditches.—The Secretaries of the Interior and Agriculture are urged to recognize the traditional use of State-recognized community land grants, acequias, and community ditches in the American Southwest during the land use planning process.

Multi-Agency Transparency.—In order to increase transparency, the Department of the Interior, Forest Service, and Environmental Protection Agency are encouraged to disclose costs associated with analyses required by the National Environmental Policy Act.

Greater Sage-Grouse.—The agreement provides a total of \$63,250,000 for sage-grouse conservation, including \$60,000,000 for the Bureau of Land Management and \$3,250,000 for the Fish and Wildlife Service. The agencies are directed to focus this funding toward on-the-ground conservation measures to improve and preserve sage-grouse habitat and the sagebrush ecosystem. The Bureau is reminded of the concerns outlined in the House and Senate reports as Congress continues to hear complaints about the effect of the sage-grouse land use plan amendments, which are not limited to activities within Bureau controlled sage-grouse habitat. In order for the sage-grouse, communities, and States to thrive, all partners must work in good faith. As such, the Bureau and the Forest Service are directed to closely work with each of the 11 States and the affected communities to address the issues unique to each State and seek to collaboratively resolve all issues. The Bureau is directed to provide guidance to its State offices and partners on how it will update sage-grouse habitat maps, adopt new scientific information, as appropriate, and engage State, local, nongovernmental, and private partners.

Land and Water Conservation Fund.—The agreement includes \$450,000,000 derived from the Land and Water Conservation Fund for programs consistent with chapter 2003 of title 54 of the United States Code, as identified in the table below. This one-time increase of \$143,859,000 above the fiscal year 2015 enacted level is intended for worthy projects at the local, State, and Federal levels. The Department of the Interior and the Forest Service are directed to include a table in future budget requests, separating State and local programs from Federal land acquisition, as displayed below.

	FY 2015 Enacted	Budget Request (Discretionary)	This Bill
Land and Water Conservation Fund	\$306,141,000	\$400,000,000	\$450,000,000
State and Local Programs	87,503,000	112,147,000	160,800,000
National Park Service State Assistance	48,117,000	53,161,000	110,000,000
Coop. Endangered Species Conservation Fund	27,400,000	50,000,000	30,200,000
American Battlefield Protection Act	8,986,000	8,986,000	10,000,000
Highlands Conservation Act	3,000,000	0	10,000,000
Forest Legacy Program	53,000,000	61,000,000	62,347,000
Federal Land Acquisition	165,638,000	226,853,000	226,853,000
Forest Service	47,500,000	63,000,000	63,435,000
Fish and Wildlife Service	44,535,000	58,500,000	58,500,000
National Park Service	41,857,000	55,353,000	53,670,000
Bureau of Land Management	19,746,000	38,000,000	38,630,000
Department of the Interior Valuation Services	12,000,000	12,000,000	12,618,000

Federal projects are funded in priority order by agency according to the budget request, with amounts adjusted downward as necessary due to updated project information and support. Many of the requested projects lacked sufficient information for the Committees to determine with a high degree of confidence that funds appropriated could be obligated in this fiscal year. Ideally, requested projects should have: identified properties, willing sellers, updated appraisals or market information, and the support of Federal, State, and local officials. Agencies should include the feasibility of phasing projects as well as a description of which parcels are being considered for conservation easements or fee simple acquisition in any supplemental information sent to the Committees. The agencies are also urged to increase the transparency of the project selection and prioritization processes in annual

budget requests, particularly in regard to collaborative landscape projects.

The Department of the Interior did not consult the Committees on a decision to reprogram \$995,000 from one project to acquire a property in another project identified in the fiscal year 2016 budget request. Therefore, the agreement includes a new reprogramming limitation of not to exceed \$1,000,000 or 10 percent from any project, whichever amount is less, as detailed under the Reprogramming Guidelines heading later in this statement.

The Committees believe increasing access to public lands for hunting, fishing, and other recreational activities is important. This agreement includes new funding for these activities for the National Park Service and Fish and Wildlife Service while increasing funds for the Bureau of Land Management and Forest Service. The Commit-

tees expect the agencies to report within 30 days of enactment of this Act on how this funding will be spent, and the agencies should include a description and explanation of the use of funds in future budget requests. The agencies are also directed to include in future budget requests a description and explanation on the use of funds within their inholdings line items.

Paper Reduction Efforts.—The Committees urge each agency funded by this Act to work with the Office of Management and Budget (OMB) to reduce printing and reproduction costs and direct each agency to report to the Committees within 60 days of enactment of this Act on what steps have been taken to achieve this goal. The report should specifically identify how much money each agency expects to save by implementing these measures.

OFFICE OF THE SOLICITOR
SALARIES AND EXPENSES

The agreement provides \$65,800,000 for the Office of the Solicitor. The detailed allocation of funding is included in the table at the end of this explanatory statement.

OFFICE OF INSPECTOR GENERAL
SALARIES AND EXPENSES

The agreement provides \$50,047,000 for the Office of Inspector General. The detailed allocation of funding is included in the table at the end of this explanatory statement.

OFFICE OF THE SPECIAL TRUSTEE FOR
AMERICAN INDIANS
FEDERAL TRUST PROGRAMS
(INCLUDING TRANSFER OF FUNDS)

The agreement provides \$139,029,000 for the Office of the Special Trustee for American Indians. The detailed allocation of funding by activity is included in the table at the end of this explanatory statement.

DEPARTMENT-WIDE PROGRAMS
WILDLAND FIRE MANAGEMENT
(INCLUDING TRANSFERS OF FUNDS)

The agreement provides \$816,745,000 for Department of the Interior Wildland Fire Management, which is \$11,966,000 above the fiscal year 2015 enacted level. Of the funds provided, \$291,673,000 is for suppression operations, which combined with \$177,000,000 in the FLAME Wildfire Suppression Reserve Fund, provides a total of \$468,673,000 for Department of the Interior fire suppression activities. This amount exceeds the ten-year average for suppression by \$85,000,000 to provide additional resources, as requested, based upon up-to-date forecasting models. The detailed allocation of funding for these accounts is included in the table at the end of this explanatory statement.

Hazardous Fuels Management.—The agreement provides \$170,000,000 for hazardous fuels management activities, which is \$6,000,000 above the fiscal year 2015 enacted level.

FLAME WILDFIRE SUPPRESSION RESERVE FUND
(INCLUDING TRANSFER OF FUNDS)

The agreement provides \$177,000,000 for the FLAME Wildfire Suppression Reserve Fund.

CENTRAL HAZARDOUS MATERIALS FUND

The agreement provides \$10,010,000 for the Central Hazardous Materials Fund.

NATURAL RESOURCE DAMAGE ASSESSMENT AND
RESTORATION

NATURAL RESOURCE DAMAGE ASSESSMENT FUND
The agreement provides \$7,767,000 for the Natural Resource Damage Assessment Fund. The detailed allocation of funding by activity is included in the table at the end of this explanatory statement.

WORKING CAPITAL FUND

The agreement provides \$67,100,000 for the Department of the Interior, Working Capital Fund. The increase above the fiscal year 2015 enacted level is to improve cybersecurity throughout the Department and its bureaus.

GENERAL PROVISIONS, DEPARTMENT OF THE
INTERIOR
(INCLUDING TRANSFERS OF FUNDS)

The agreement includes various legislative provisions affecting the Department in Title I of the bill, "General Provisions, Department of the Interior." The provisions are:

Section 101 provides Secretarial authority for the intra-bureau transfer of program funds for expenditures in cases of emergencies when all other emergency funds are exhausted.

Section 102 provides for the Department-wide expenditure or transfer of funds by the Secretary in the event of actual or potential emergencies including forest fires, range

fires, earthquakes, floods, volcanic eruptions, storms, oil spills, grasshopper and Mormon cricket outbreaks, and surface mine reclamation emergencies.

Section 103 provides for the use of appropriated funds by the Secretary for contracts, rental cars and aircraft, telephone expenses, and other certain services.

Section 104 provides for the transfer of funds from the Bureau of Indian Affairs and Bureau of Indian Education, and Office of the Special Trustee for American Indians.

Section 105 permits the redistribution of tribal priority allocation and tribal base funds to alleviate funding inequities.

Section 106 authorizes the acquisition of lands for the purpose of operating and maintaining facilities that support visitors to Ellis, Governors, and Liberty Islands.

Section 107 continues Outer Continental Shelf inspection fees to be collected by the Secretary of the Interior.

Section 108 authorizes the Secretary of the Interior to continue the reorganization of the Bureau of Ocean Energy Management, Regulation, and Enforcement in conformance with Committee reprogramming guidelines.

Section 109 provides the Secretary of the Interior with authority to enter into multi-year cooperative agreements with non-profit organizations for long-term care of wild horses and burros.

Section 110 addresses the U.S. Fish and Wildlife Service's responsibilities for mass marking of salmonid stocks.

Section 111 modifies a provision addressing Bureau of Land Management actions regarding grazing on public lands.

Section 112 continues a provision prohibiting funds to implement, administer, or enforce Secretarial Order 3310 issued by the Secretary of the Interior on December 22, 2010.

Section 113 extends a provision allowing the Bureau of Indian Education authority to rent or lease land and facilities and retain the receipts.

Section 114 addresses the National Park Service's ability to implement the Volunteers in Parks program in anticipation of increased volunteer activity related to the Service's Centennial in 2016.

Section 115 allows the Bureau of Indian Affairs and Bureau of Indian Education to more efficiently and effectively perform reimbursable work.

Section 116 addresses National Heritage Areas.

Section 117 addresses the issuance of rules for sage-grouse.

Section 118 continues a provision providing the Secretary of the Interior certain onshore pay authority.

Section 119 extends authorization for certain payments to the Republic of Palau for fiscal year 2016.

Section 120 allows certain funds to be used for waterfowl conservation.

Section 121 continues a provision which directs the Secretary of the Interior to make certain certifications with respect to existing rights of way. The section also retains a provision limiting funding for a proposal to approve specified rights-of-way on the Mojave National Preserve or lands managed by the Needles Field Office of the Bureau of Land Management.

TITLE II—ENVIRONMENTAL
PROTECTION AGENCY

The bill provides \$3,139,887,000 for the Environmental Protection Agency (EPA).

Congressional Budget Justification.—The Agency is directed to continue to include the information requested in House Report 112–331 and any proposals to change State allocation formulas that affect the distribution of

appropriated funds in future budget justifications.

Reprogramming.—The Agency is held to the reprogramming limitation of \$1,000,000 and should continue to follow the reprogramming directives as provided in the front of this explanatory statement. Further, the Agency may not use any amount of deobligated funds to initiate a new program, office, or initiative, without the prior approval of the Committees.

Within 30 days of enactment of this Act, the Agency is directed to submit to the House and Senate Committees on Appropriations its annual operating plan for fiscal year 2016, which shall detail how the Agency plans to allocate funds at the program project level.

SCIENCE AND TECHNOLOGY

The bill provides \$734,648,000 for Science and Technology programs and transfers \$18,850,000 from the Hazardous Substance Superfund account to this account. The bill provides the following specific funding levels and direction:

Homeland Security.—The agreement includes \$37,122,000 and the Agency shall allocate funds to programs under this heading consistent with fiscal year 2015 levels.

Indoor Air and Radiation.—The agreement includes \$5,997,000 and the proposed elimination of radon activities has been rejected.

Research: National Priorities.—The bill provides \$1,100,000 which shall be used for extramural research grants, independent of the Science to Achieve Results (STAR) grant program, to fund high-priority water quality and availability research by not-for-profit organizations who often partner with the Agency. Because these grants are independent of the STAR grant program, the Agency should strive to award grants in as large an amount as is possible to achieve the most scientifically significant research. Funds shall be awarded competitively with priority given to partners proposing research of national scope and who provide a 25 percent match. The Agency is directed to allocate funds to grantees within 180 days of enactment of this Act. Further, the bill provides \$3,000,000 as directed in House Report 114–170. In addition, the bill provides \$7,000,000 for certification and compliance activities related to vehicle and engine emissions, of which the Agency is directed to provide at least \$5,000,000 in extramural resources.

Research: Safe and Sustainable Water Resources.—The agreement includes \$107,434,000 and the Agency shall follow the direction under this heading in Senate Report 114–70.

Additional Guidance.—The agreement includes the following additional guidance:

Validation of Scientifically Significant Studies.—The Agency shall follow the direction under this heading in Senate Report 114–70.

ENVIRONMENTAL PROGRAMS AND MANAGEMENT

The bill provides \$2,613,679,000 for Environmental Programs and Management and includes the following specific funding levels and direction:

Clean Air and Climate.—The Agency shall allocate funds consistent with fiscal year 2015.

Environmental Protection: National Priorities.—The bill provides \$12,700,000 for a competitive grant program to provide technical assistance for improved water quality or safe drinking water to rural and urban communities or individual private well owners. The Agency is directed to provide \$11,000,000 for grants to qualified not-for-profit organizations, on a national or multi-State regional basis, for the sole purpose of providing on-site training and technical assistance for water systems in rural or urban communities. The Agency is also directed to provide

\$1,700,000 for grants to qualified not-for-profit organizations for technical assistance for individual private well owners, with priority given to organizations that currently provide technical and educational assistance to individual private well owners. The Agency shall require each grantee to provide a minimum 10 percent match, including in-kind contributions. The Agency is directed to allocate funds to grantees within 180 days of enactment of this Act.

Geographic Programs.—The bill provides \$427,737,000, as distributed in the table at the end of this division, and includes the following direction:

Great Lakes Restoration Initiative (GLRI).—The bill provides \$300,000,000 and the Agency shall continue to follow the direction as provided in House Report 112-589.

Chesapeake Bay.—The bill provides \$73,000,000 and the Agency shall allocate funds consistent with the direction under this heading in Senate Report 114-70.

Indoor Air and Radiation.—The agreement includes \$27,637,000. The Agency shall follow the rulemaking direction under this heading in Senate Report 114-70. The proposed elimination of the radon program has been rejected and the Agency shall allocate funds consistent with fiscal year 2015.

Toxics Risk Review and Prevention.—The agreement includes \$92,521,000 and the Agency shall maintain funding for the Office of Pollution Prevention and Toxics and for the endocrine disruptor program at not less than the fiscal year 2015 level.

Water: Ecosystems.—The agreement includes \$47,788,000 and the Agency shall allocate funds consistent with fiscal year 2015. In addition, the Committees direct EPA to use the funds provided to accelerate the processing of mining permits with the Corps of Engineers. Further, the Committees direct EPA, in consultation with the Corps of Engineers, to continue to report monthly on the number of Section 404 permits under EPA's review, consistent with the direction under this heading in House Report 114-170. Additionally, the Agency is directed to provide \$600,000 to each National Estuary Program (NEP) funded under Section 320 of the Clean Water Act.

Water: Human Health Protection.—The agreement includes \$98,507,000. The proposed elimination of the beach program has been rejected and funding is maintained at the fiscal year 2015 level.

Water Quality Protection.—The agreement includes \$210,417,000 and the Agency shall allocate funds consistent with fiscal year 2015.

Additional Guidance.—The agreement includes the following additional guidance:

Combined Sewer Overflows.—The agreement includes bill language related to sewage discharges into the Great Lakes and no further directives. The Committees urge the Agency to expeditiously complete the study required by P.L. 113-235.

Conflicts of Interest.—The Agency has not yet resolved long-standing questions regarding conflicts of interest that have spanned multiple Administrations. For fiscal year 2016, the Administrator shall develop a policy statement on science quality and integrity that shall be adhered to by the Science Advisory Board (SAB) and all Board members. Such policy statement shall be consistent with the Federal Advisory Committee Act, the Ethics in Government Act, and all other applicable Federal laws and regulations. EPA's policy statement should include goals on increasing membership from States and tribes who are often underrepresented, as noted in the May 2014 National Academy of Sciences review of EPA's IRIS program. Should the Administrator decide that financial-related metrics are appropriate to identify conflicts-of-interest or

bias, then EPA's policy shall also include an evaluation of potential bias based on a variety of factors including receipt of former and current Federal grants or public statements or positions as well as other appropriate safeguards to ensure balance amongst SAB and other advisory board experts. In addition, the policy statement shall include direction on the treatment of public comments and responses to such comments.

When complete, the Committees direct EPA to submit the draft policy statement to the U.S. Government Accountability Office (GAO) for review of the updated conflict of interest policy, policy for committee composition and balance, and eligibility requirements for service on the SAB that will ensure fairness and objectivity. GAO shall determine if the updated policies meet the intent of the directives above and, if so, shall certify to the Committees on Appropriations that EPA's conflict of interest policies offer a balanced framework. The Agency is directed to submit these required documents to GAO for review no later than 90 days from the date of enactment of this Act.

Gold King Mine.—The Committees are concerned about the impacts following the Gold King Mine Spill on August 5, 2015 and believe long-term monitoring efforts are an important need following this event. Further, the Committees are concerned that EPA's monitoring plan does not have the full support from impacted States and tribes. Therefore, EPA is directed to coordinate with impacted States and tribes on development of a robust, long-term plan for independent monitoring. With existing funds, the Agency is directed to continue to seek ways to provide States and tribes with support for their contribution to monitoring efforts.

HAZARDOUS WASTE ELECTRONIC MANIFEST SYSTEM FUND

The bill provides \$3,674,000 for the Hazardous Waste Electronic Manifest System Fund. The Committees continue to support the expeditious development of a system that would allow for the electronic tracking of hazardous waste shipments pursuant to P.L. 112-195. As anticipated costs continue to exceed authorized levels, the Committees direct EPA to work with appropriate Committees to extend the authorization for appropriations beyond fiscal year 2015 and provide estimates of costs to operate the system once built.

OFFICE OF INSPECTOR GENERAL

The bill provides \$41,489,000 for the Office of Inspector General.

BUILDINGS AND FACILITIES

The bill provides \$42,317,000 for Buildings and Facilities.

HAZARDOUS SUBSTANCE SUPERFUND (INCLUDING TRANSFERS OF FUNDS)

The bill provides \$1,088,769,000 for the Hazardous Substance Superfund account and includes bill language to transfer \$9,939,000 to the Office of Inspector General account and \$18,850,000 to the Science and Technology account. The bill provides the following additional direction:

Superfund Cleanup.—The Committees understand the funding is insufficient to eliminate the backlog of unfunded new starts but the Committees expect the Agency will use funds provided to initiate remediation at highly contaminated, orphan sites and support remedial pipeline activities that are critical prior to construction.

Financial Assurance.—Prior to proposing any rule pursuant to section 108(b) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. 9608(b)), the Administrator is directed to collect and analyze information from the

commercial insurance and financial industries regarding the use and availability of necessary instruments (including surety bonds, letters of credit and insurance) for meeting any new financial responsibility requirements and to make that analysis available to the House and Senate Committees on Appropriations and to the general public on the Agency website 90 days prior to a proposed rulemaking. In addition, the analysis shall include the Agency's plan to avoid requiring financial assurances that are duplicative of those already required by other Federal agencies.

Lead at Superfund Sites.—The agreement includes the directive in the House and Senate Reports that the Agency contract with the National Academy of Sciences to conduct a study of lead at Superfund sites. The agreement narrows the scope of the study to Superfund sites within, adjacent or proximal to the nation's largest lead mining districts. The Agency's authority shall not be impacted during the pendency of the study.

LEAKING UNDERGROUND STORAGE TANK TRUST FUND PROGRAM

The bill provides \$91,941,000 for the Leaking Underground Storage Tank Trust Fund Program.

INLAND OIL SPILL PROGRAMS

The bill provides \$18,209,000 for Inland Oil Spill Programs.

STATE AND TRIBAL ASSISTANCE GRANTS

The bill provides \$3,518,161,000 for the State and Tribal Assistance Grants (STAG) program and includes the following specific funding levels and direction:

Diesel Emissions Reductions Grants (DERA).—The bill provides \$50,000,000 for DERA grants. The Agency shall continue to make at least 70 percent of DERA grants available to improve air quality in non-attainment areas. The Committees encourage EPA to provide a third report to Congress prior to January 1, 2016, that includes the analysis requested in Public Law 111-364.

Targeted Airshed Grants.—The bill provides \$20,000,000 for targeted airshed grants to reduce air pollution in non-attainment areas. These grants shall be distributed on a competitive basis to non-attainment areas that EPA determines are ranked as the top five most polluted areas relative to annual ozone or particulate matter 2.5 standards as well as the top five areas based on the 24-hour particulate matter 2.5 standard where the design values exceed the 35 µg/m³ standard. To determine these areas, the Agency shall use the most recent design values calculated from validated air quality data. The Committees note that these funds are available for emission reduction activities deemed necessary for compliance with national ambient air quality standards and included in a State Implementation Plan submitted to EPA. Not later than the end of fiscal year 2016, EPA should provide a report to the Committees on Appropriations that includes a table showing how fiscal year 2015 and 2016 funds were allocated. The table should also include grant recipients and metrics for anticipated or actual results.

Categorical Grants.—The bill provides \$1,081,041,000 for Categorical Grants and funding levels are specified in the table at the end of this division. The Agency shall allocate radon grants in fiscal year 2016 following the direction in House Report 114-170. The amount also includes \$228,219,000 for the State and Local Air Quality Management grant program, and the Agency is directed to allocate funds following the direction for this program in Senate Report 114-70.

Multipurpose Grants to States and Tribes.—The bill provides \$21,000,000 for grants to States and tribes to assist with the implementation of environmental programs.

At a Glance

Why We Did This Review

The U.S. Environmental Protection Agency Office of Inspector General conducted this review in response to a congressional request about the EPA's management of the Clean Air Scientific Advisory Committee and the Advisory Council on Clean Air Compliance Analysis. We sought to determine whether the EPA has managed the CASAC and Council in accordance with applicable laws, regulations and guidance pertaining to (1) potential conflicts of interest, (2) appearances of a lack of impartiality, (3) rotation of members (i.e., term limits), (4) balance of committee viewpoints and perspectives and (5) peer review. The EPA's Science Advisory Board Staff Office manages the CASAC and Council, which provide advice to the EPA on setting air quality standards and in developing cost-benefit analyses of the Clean Air Act.

This report addresses the following EPA Goals or Cross-Cutting Strategies:

- *Taking action on climate and improving air quality.*
- *Advancing science, research, and technological innovation.*

For further information, contact our Office of Congressional and Public Affairs at (202) 566-2391.

EPA Can Better Document Resolution of Ethics and Partiality Concerns in Managing Clean Air Federal Advisory Committees

What We Found

In general, the EPA managed the CASAC and Council in accordance with applicable statutes and regulations. These regulations allow agencies discretion in choosing federal advisory committee members and achieving balance.

We reviewed 47 CASAC and Council member appointments, including all ozone panel appointments for the last two ozone standard reviews. We found that the EPA has adequate procedures for identifying potential ethics concerns, including financial conflicts of interest, independence issues and appearances of a lack of impartiality. However, the EPA can better document its decisions on selecting members with independence and partiality concerns. This would allow for better transparency, thus giving assurance that CASAC and the Council provide independent and objective advice to the Administrator on such important decisions as setting ambient air standards. We also identified one instance where agency procedures involving a potential conflict of interest were not followed.

We also reviewed the peer review process for three EPA-developed analyses included in scientific assessments peer reviewed by the CASAC. Peer review is one method for enhancing the quality and credibility of the government's scientific information. One of these analyses was not peer reviewed in accordance with Office of Management and Budget and agency guidance. The EPA's National Center for Environmental Assessment did not have a formal process for determining whether such analyses were subject to OMB requirements and the EPA's peer review guidance before public dissemination.

Recommendations and Planned Corrective Actions

We recommend that the EPA instruct staff on the proper process for addressing potential conflicts of interest, develop procedures to document decisions and mitigating actions regarding independence and partiality concerns, and implement a process to determine whether its scientific work products are influential scientific information that require peer review in accordance with OMB and the EPA's guidance. The agency completed corrective action for one recommendation and that recommendation is closed. The agency agreed with three other recommendations and provided corrective action plans that we accepted. The agency disagreed with one recommendation but proposed an alternative action that we accepted. Thus, four recommendations are resolved but open pending completion of the corrective actions.

Noteworthy Achievements

Although not required, the EPA applies many Federal Advisory Committee Act guidelines and procedures to managing subcommittees and panels.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

THE INSPECTOR GENERAL

September 11, 2013

MEMORANDUM

SUBJECT: EPA Can Better Document Resolution of Ethics and Partiality Concerns in
Managing Clean Air Federal Advisory Committees
Report No. 13-P-0387

FROM: Arthur A. Elkins Jr.

A handwritten signature in dark ink, appearing to read "Arthur A. Elkins Jr.", is placed next to the name in the "FROM:" field.

TO: Lek Kadeli, Principal Deputy Assistant Administrator
Office of Research and Development

Avi Garbow, General Counsel
Office of General Counsel

Christopher Zarba, Director
Science Advisory Board Staff Office

This is our final report on the management of Clean Air Act federal advisory committees conducted by the Office of Inspector General of the U.S. Environmental Protection Agency. This report contains findings that describe the problems the OIG has identified and corrective actions the OIG recommends. This report presents the opinion of the OIG and does not necessarily represent the final EPA position. Final determinations on matters in this report will be made by EPA managers in accordance with established audit resolution procedures.

Action Required

The agency agreed with recommendation 1 and provided evidence of corrective action taken. This recommendation is closed and no further action is required. The agency agreed with recommendations 2, 3 and 5 and provided planned corrective actions and completion dates that meet the intent of these recommendations. The agency disagreed with recommendation 4 but provided an alternative action that we accepted. Therefore, the agency is not required to provide a written response for these four recommendations, which remain open with corrective actions ongoing. For these recommendations, please update the EPA's Management Audit Tracking System as you complete the planned corrective actions. Please notify my staff if there is a significant change in the agreed-to corrective actions. We will post this report to our website at <http://www.epa.gov/oig>.

If you or your staff have any questions regarding this report, please contact Assistant Inspector General for Program Evaluation Carolyn Copper at (202) 566-0829 or copper.carolyn@epa.gov, or Director for Air Evaluations Rick Beusse at (919) 541-5747 or beusse.rick@epa.gov.

Chapter 1

Introduction

Purpose

In response to a congressional request, our objective was to determine whether the U.S. Environmental Protection Agency has managed the Clean Air Scientific Advisory Committee and the Advisory Council on Clean Air Compliance Analysis in accordance with applicable laws, regulations and guidance pertaining to:

- Potential conflicts of interest.
- The appearances of a lack of impartiality.
- The rotation (i.e., term limits) of members.
- A balance of committee viewpoints and perspectives.
- Peer review.

Background

Advisory committees have provided advice to the federal government since its inception. Congress enacted the Federal Advisory Committee Act in 1972 to address the use of federal advisory committees that had developed over the years. Congress had two major concerns with FACs before 1972. First was a public perception that many commissions were duplicative, inefficient, and lacked adequate controls or oversight. Second was a widespread belief that FACs did not adequately represent the public interest and that meetings were often closed to the public.

FACA addressed these concerns by creating a process for establishing, operating, overseeing and terminating FACs. FACA requires that no FAC can meet or take any action until a charter has been filed with the head of the agency to whom the FAC reports and with the appropriate standing committees of the Senate and House of Representatives. FAC members appointed as Special Government Employees are subject to federal financial conflict of interest laws with some exceptions. FACA requires each agency sponsoring a FAC to appoint a committee management officer to oversee the administration of FACA's requirements. Further, a designated federal officer must be assigned to each FAC to ensure compliance with FACA.

FACA also required the administrator of the U.S. General Services Administration to prescribe administrative guidelines and management controls for FACs. Each federal agency head must establish administrative guidelines and management controls for FACs formed by its agency, consistent with the directives issued by GSA.

Federal Advisory Committee Rule

GSA's rule¹ on FAC management provides administrative and interpretative guidelines and management controls for federal agencies to implement FACA. The rule provides requirements for many aspects of managing a FAC. For example, the rule establishes requirements for FAC charters, recordkeeping and public notification. However, the rule allows for agency discretion in managing certain aspects of a FAC. For example, unless otherwise provided by statute or presidential directive, the length of FAC memberships is at the sole discretion of the appointing authority.

The rule restates the FACA requirement that FACs be fairly balanced with respect to the points of view represented and function to be performed. However, the rule does not prescribe specific procedures for achieving balance. Instead, the rule provides factors for an agency to consider in developing a fairly balanced FAC.

GSA's rule does not prescribe procedures for addressing appearances of a lack of impartiality or peer review. However, the EPA has established procedures governing these and for balancing FAC member viewpoints, potential conflicts of interest, and rotation of members.

The EPA's FACA Management Process

The EPA's Office of Federal Advisory Committee Management and Outreach is the national program manager for the EPA's committee management program. OFACMO provides policy, coordination, oversight, consultation, advice and technical assistance to FAC managers and the EPA's senior officials. OFACMO has issued a handbook² which provides the EPA's administrative guidelines and management controls for FACs.

The EPA's key personnel for establishing and managing an FAC include the Administrator, the Deputy Administrator, the relevant program office's assistant administrator, the committee management officer, and the designated federal officer. Table 1 shows FAC responsibilities of key agency officials.

¹ GSA Final Rule on Federal Advisory Committee Management, 41 CFR Parts 101-6 and 102-3.

² EPA Federal Advisory Committee Handbook, March 2012. The previous EPA Handbook was issued in October 2003.

Table 1: FAC Responsibilities of key EPA officials

EPA official	Summary of FAC responsibilities
Administrator	Responsible for the establishment, management and termination of the EPA's FACs. The Administrator has delegated most of these responsibilities to other agency personnel but remains fully accountable for ensuring compliance with the statutory and regulatory requirements of the FACs. The Administrator also appoints FAC members and FAC subcommittee members.
Deputy Administrator	Approves membership packages for FACs (authority delegated to the Deputy Administrator by the Administrator). Approves establishment and renewal charters for FACs.
Assistant Administrator	Responsible for the request and justification of the establishment of proposed FACs. The assistant administrator ensures that the FAC is balanced by points of view for the function to be performed, appoints a DFO for each FAC, and ensures that the FAC's advice and recommendations are the result of the FAC's independent judgment.
Committee Management Officer	Provides oversight for the establishment and operation of the EPA's FACs. The committee management officer also serves as a resource for DFOs and ensures proper recordkeeping for FACs (appointed by the director of OFACMO).
Designated Federal Officer	Responsible for the day-to-day operations and management of the FAC. The DFO works closely with the committee management officer to ensure full compliance with FACA requirements.

Clean Air Scientific Advisory Committee Created to Provide Advice on Ambient Air Quality Standards

The Clean Air Act required the EPA to establish an independent scientific review committee to provide advice to the Administrator in developing criteria and standards for national ambient air quality. Thus, the EPA established the CASAC. The CASAC has seven members who provide advice on criteria and standards for six air pollutants. These pollutants are carbon monoxide, lead, nitrogen dioxide, ozone, particulate matter and sulfur dioxide.

The CAA requires the EPA, with the assistance of CASAC, to review the criteria for the National Ambient Air Quality Standards every 5 years. The EPA augments CASAC with panels of expert consultants to help review the six pollutants. The review panels we examined generally included 16 consultants plus the seven CASAC members.

Each panel reviews and comments on the supporting documentation for its specific pollutant. Prior to 2007, the two primary documents the panels reviewed were the criteria document and the staff white paper. The EPA's Office of Research and Development prepared the criteria document. This document was a comprehensive and integrative assessment of relevant scientific studies related to the pollutant. The EPA's Office of Air Quality Planning and Standards prepared the staff white paper. The staff used the information in ORD's criteria document and the results of the EPA's OAQPS risk and exposure assessments to develop

and support their conclusions and recommendations for an air quality standard. The OAQPS staff paper also included various ranges of standards for the Administrator to consider.

The EPA revised its process for developing NAAQS in December 2006. The EPA replaced the criteria document and the staff white paper with an integrated science assessment, a risk/exposure assessment, and a policy assessment. The EPA also decided it would publish the policy assessment in the Federal Register as an Advanced Notice of Proposed Rulemaking. The revised process also called for CASAC to be more involved in the initial planning for conducting the NAAQS review. In May 2009, the EPA ended the requirement to publish the policy assessment in an Advanced Notice of Proposed Rulemaking. Instead, the EPA releases a draft of the policy assessment to CASAC and for public comment. This policy assessment includes the air quality staff's conclusions and recommendations for a range of standards for senior agency management to consider.

Advisory Council on Clean Air Compliance Analysis Created to Provide Advice on Cost-Benefit Analyses

The Advisory Council on Clean Air Compliance Analysis was established in 1991, pursuant to the CAA Amendments of 1990. The Council's purpose is to review the data, methodology and findings of a statutorily mandated agency report³ that assesses the costs and benefits of the CAA. The Council must include at least nine members. The Council is to include experts in the fields of the health and environmental effects of air pollution, economic analysis, and environmental sciences. Members can also be appointed from other fields that the Administrator determines to be appropriate.

As of July 2012, the Council included 15 members. The Council is supplemented with subcommittees and consultants as needed. The Council has commented on three CAA cost-benefit studies.⁴ In 2002, the agency requested the Council's assistance in planning a third study assessing the benefits and costs of the CAA for the period 1990 through 2020. From 2004 through 2011, the Council issued several reports providing advice to the agency with respect to the third study. This included advice on planning the study and selecting data, methods and models, and commenting on draft findings and conclusions. To review the study, the EPA augmented the Council with the Special Council Panel, the Air Quality Modeling Subcommittee, the Health Effects Subcommittee and the Ecological Effects Subcommittee.

³ This report was mandated by Section 812 of the CAA Amendments of 1990 but the requirement for the report to Congress was repealed by the Federal Reports Elimination and Sunset Act of 1995 (P.L. 104-66).

⁴ The Benefits and Costs of the Clean Air Act, 1970 to 1990, October 1997; The Benefits and Costs of the Clean Air Act, 1990 to 2010, November 1999, EPA-410-R99-001; and The Benefits and Costs of the Clean Air Act from 1990 to 2020, March 2011.

Science Advisory Board Staff Office Manages the CASAC and Council

The EPA's Science Advisory Board Staff Office manages the CASAC and the Council. The SAB Staff Office develops the required FAC documentation, including charters and membership packages. The SAB Staff Office also collects and reviews financial disclosure forms submitted by prospective SGEs. The SAB Staff Office director recommends members for the committees to the Administrator for approval. The SAB Staff Office director also has the authority to select expert consultants to assist the chartered FACs. These consultant appointments are not submitted to the Administrator for approval.

All CASAC and Council committee, subcommittee and panel members are appointed to serve as SGEs, or in rare cases as regular government employees. As government employees, they are covered by federal ethics and conflicts of interest statutes and regulations. The SAB Staff Office director is also the agency deputy ethics official for the office. The DEO is responsible for reviewing and resolving ethics and conflicts of interest concerns with respect to members of the CASAC, the Council, and their respective subcommittees and panels.

Prior Audit Reports

The OIG has not conducted any prior audits or evaluations of CASAC or Council activity, or of the EPA's management of FACs. We reported on the EPA's external peer review process in April 2009.⁵ Our 2009 report focused on contractor-developed peer review panels. In response to the report, the EPA developed an addendum to the Peer Review Handbook that provided additional guidance for identifying appearances of a lack of impartiality in any of the peer reviewers.

The U.S. Government Accountability Office reported on FAC independence and balance in 2004.⁶ GAO's report was based on a review of policies and practices at nine federal departments and agencies, including the EPA. According to the GAO report, GSA's guidance on FAC management did not address what types of information could be helpful to agencies in assessing the points of view of potential FAC members. Additionally, agency procedures did not identify the type of information that should be collected about potential members to make decisions about FAC balance. Thus, eight of the nine departments and agencies that GAO reviewed did not identify and systematically collect and evaluate information pertinent to determining the points of view of potential FAC members. Such information would include previous public positions or statements on matters being reviewed. The EPA was the only agency to routinely collect and evaluate this information.

⁵ EPA Can Improve Its Process for Establishing Peer Review Panels, EPA OIG Report No. 09-P-0147, April 29, 2009.

⁶ GAO-04-328, FEDERAL ADVISORY COMMITTEES: Additional Guidance Could Help Agencies Better Ensure Independence and Balance, April 2004.

Noteworthy Achievements

FACA regulations do not apply to subcommittees or working groups that provide advice to the parent FAC. Still, the EPA applies many of its FACA guidelines and procedures when assembling these subcommittees and panels. That includes:

- Requiring subcommittee and panel members designated as SGEs to complete financial disclosure forms.
- Reviewing and vetting these forms for financial conflicts of interest and appearances of a lack of impartiality.
- Preparing membership grids showing each proposed member's qualifications and background.

The EPA's revised Federal Advisory Committee Management Handbook incorporates new procedures and factors to consider in selecting FAC members. The Handbook now requires the EPA's DFOs to prepare an outreach plan. This plan describes how the DFO plans to publicize the proposed FAC and solicit members from various groups to achieve FAC diversity.

Scope and Methodology

Our evaluation assessed the EPA's management of the CASAC and Council during the period 2006 through 2011, although we did review older records as necessary. In particular, we focused on management of CASAC's ozone and PM panels, and the Council's Health Effects Subcommittee. We evaluated the procedures the EPA used to ensure compliance with FACA and applicable federal and agency guidance. We did not evaluate the quality of scientific advice the CASAC or Council provided to the EPA.

We performed our work at the EPA's OFACMO, SAB Staff Office, and Office of General Counsel in Washington, D.C. We also conducted work at the ORD's National Center for Environmental Assessment in Research Triangle Park, North Carolina. We interviewed the EPA staff and managers tasked with overseeing the EPA's compliance with FACA, and obtained data and documents as appropriate. We also interviewed staff and managers responsible for managing the CASAC and Council.

To assess the EPA's management of the CASAC and Council we selected a sample of FAC, subcommittee and panel member appointments for review. Our selection criteria were all members of the last two NAAQS ozone panels, any expert who served on both the 2006 and 2011 PM review panels, and any expert specifically cited in the requester's letters to the OIG. This represented 47 of 126 members appointed during the period of fiscal years 1998 through 2012. We reviewed the SAB Staff Office case files for these 47 members for evidence of independence, impartiality, or financial conflicts of interest concerns. Based on potential concerns we identified during our initial file review, we reviewed 27 of

these cases in depth. We also interviewed six CASAC members to obtain their views on membership balance.

We conducted our evaluation from April 2012 through May 2013. We conducted this evaluation in accordance with generally accepted government auditing standards. Those standards require that we obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our objectives. We believe the evidence obtained provides a reasonable basis for our findings and conclusions based on our objectives.

Chapter 2

Financial Conflicts of Interest

The EPA has implemented a process to manage the CASAC and Council in accordance with applicable laws, regulations and guidance regarding financial conflicts of interest. The EPA requires prospective and active SGEs to complete financial disclosure forms. The SAB Staff Office reviews these forms for financial conflicts of interest. We identified one instance where agency procedures involving a potential conflict of interest were not followed.

SGEs Are Generally Subject to Federal Statutes and Regulations Governing Financial Interests

Rules governing conflicts of interest for federal employees can be found in the Code of Federal Regulations. Specifically, 5 CFR Part 2635 Subpart D provides in part that:

An employee is prohibited by criminal statute, 18 U.S.C. 208(a), from participating personally and substantially in an official capacity in any particular matter in which, to his knowledge, he or any person whose interests are imputed to him under this statute has a financial interest, if the particular matter will have a direct and predictable effect on that interest.

SGEs are generally subject to financial conflict of interest provisions with some exceptions. In certain circumstances, SGEs who serve on FACs, within the meaning of the FACA, are uniquely eligible for a particular waiver of the prohibition of Section 208(a). Under 18 U.S.C. 208(b)(3), an SGE serving on a FAC may be eligible for a waiver where the official responsible for his or her appointment certifies in writing that the need for the SGE's services outweighs the potential for a conflict of interest posed by the otherwise disqualifying financial interest involved. EPA Order 1000.28A states that only the designated agency ethics official or the alternate agency ethics official may issue such waivers. According to the EPA's OGC, this should occur only upon consultation with the U.S. Office of Government Ethics.

SGEs serving on FACs are also covered by certain exemptions from Section 208 that have been promulgated by the U.S. Office of Government Ethics, pursuant to 18 U.S.C. 208(b). The most significant of these is 5 CFR 2640.203(g), which pertains to certain financial interests arising from the SGE's outside employment. This exemption permits SGEs serving on FACs to participate in matters of general applicability where the disqualifying interest arises from the SGE's non-federal employment or prospective employment. This exemption is subject to the following limitations:

- The matter cannot have a special or distinct effect on either the SGE or the SGE's non-federal employer, other than as part of a class.
- The exemption does not cover interests arising from the ownership of stock in the employer or prospective employer.

Further, according to the EPA's OGC the non-federal employment must involve an actual employee/employer relationship, as opposed to an independent contractor relationship.

The EPA's Process for Identifying Conflicts of Interest

The EPA requires prospective charter FAC, panel and subcommittee members to complete the EPA's Form 3110-48.⁷ Active members must also update their forms annually as well as before any particular matter is considered by a given member. The form includes sections for listing employment and consulting work, paid expert testimony, research or project funding for the past 2 years, and assets. The form also includes a section for describing prior activities or statements that could affect, or appear to affect, an expert's ability to provide impartial advice.

The SAB Staff Office's ethics officer (assistant to the SAB Staff Office DEO) and the SAB Staff Office DEO review each active or prospective member's financial disclosure form for potential ethical issues, including financial and other conflicts, and possible lack of impartiality. Both reviewers sign and date the first page of the form to document their review. The forms may include the reviewer's handwritten notes if issues are noted.

If the review identifies potential issues, the SAB Staff Office informs the prospective or active member and asks for an explanation. The SAB Staff Office may also discuss any concerns with the member and require that the member take action to mitigate the concern. The SAB Staff Office director's personal practice was to not grant financial conflict of interest waivers. We did not identify any waivers for financial conflicts of interest for the 47 CASAC and Council charter, subcommittee and panel members we reviewed from FYs 2002 through 2012.

Receipt of Federal Grant Is Not a Financial Conflict of Interest

The EPA does not consider a prospective or current member's receipt of an agency or other federal research grant to create the basis for a financial conflict of interest. This is consistent with other federal guidance in this area. For example, OMB's Final Bulletin on Peer Review states that:

When an agency awards grants through a competitive process that includes peer review, the agency's potential to influence the scientist's research is limited. As such, when a scientist is awarded

⁷ *Confidential Financial Disclosure Form for Special Government Employees Serving on Federal Advisory Committees at the U.S. Environmental Protection Agency* (EPA Form 3110-48).

a government research grant through an investigator-initiated, peer-reviewed competition, there generally should be no question as to that scientist's ability to offer independent scientific advice to the agency on other projects.

The above guidance does not mean that a prospective or active member's work on a specific grant or research project could not potentially present an independence concern. A prospective or active member's research or grant is a potential area of concern if the FAC, panel, or subcommittee plans to address work performed under the research grant. Prospective and active EPA SGE members must report any research grants received during the past 2 years in Section 4 of the EPA's Form 3110-48. Our review of impartiality and independence is discussed in chapter 3.

Review of Financial Conflict of Interest Procedures

We reviewed 47 financial disclosure forms completed by prospective CASAC and Council committee, panel and subcommittee members from 2002 through 2012. We identified one instance where agency procedures regarding a potential conflict of interest were not followed.

Conclusions

The EPA has adequate procedures for identifying financial conflicts of interest. Nonetheless, we identified one instance where the agency's procedures for handling a potential conflict of interest were not followed. As such, we believe the agency should remind DEOs of the proper procedures for addressing potential conflicts of interest to prevent any future occurrences.

While receipt of grant funds from the EPA may not constitute a financial conflict of interest on the part of a FACA member, receipt of such funding could raise concerns of independence depending upon the nature of the research conducted under the grant and the issues addressed by the FAC.

Recommendation

We recommend that the EPA designated agency ethics official:

1. Instruct DEOs and assistant DEOs on the proper process for handling potential conflicts of interests for SGEs, including the process for implementing any applicable steps to remedy the conflicts of interest.

Agency Comments and OIG Evaluation

The agency agreed with our recommendation and responded that the DAEO will review already available reference material and guidance to determine whether

any additional guidance is warranted for SGEs. Further, the agency provided us with documentation that the DAEO has instructed DEOs on the proper process to follow in addressing conflicts of interest. Thus, this recommendation is closed and no further response is required from the agency.

Chapter 3

Independence and Impartiality

In general, the EPA has implemented an adequate process to identify independence and impartiality concerns. However, the EPA can improve its controls over this process by better documenting how it addressed concerns identified during the financial disclosure review process. We reviewed financial disclosure forms and associated SAB Staff Office files for 47 members from FYs 2002 through 2012. In nine instances, final determination on and steps taken to mitigate independence or partiality matters were either not adequately documented or, in our view, needed additional steps to sufficiently address potential independence or partiality concerns. Better documentation of ethics decisions will help ensure that the FAC process is transparent and that advice to the Administrator on important issues such as setting ambient air standards to protect public health and the environment is impartial and objective.

The EPA's Guidance Recommends Avoiding Experts Who Appear to Lack Impartiality

FACA requires that FACs provide independent advice free of inappropriate influence from the appointing authority or special interests. FACA does not establish requirements for reviewing the independence or impartiality of FAC members. However, SGEs are subject to federal ethics regulations and should avoid appearances of a lack of impartiality in performing their work. Title 5 CFR Part 2635.502(a) in large part addresses impartiality with respect to particular matters involving specific parties. Since the CASAC and Council address matters of general applicability this provision would not normally apply to CASAC and Council members. However, 5 CFR Part 2635.502(a)(2) addresses impartiality concerns that may arise under other circumstances. It states that:

An employee who is concerned that circumstances other than those specifically described in this section would raise a question regarding his impartiality should use the process described in this section to determine whether he should or should not participate in a particular matter.

Based on 5 CFR 2635.502 (c) and (d), EPA Order 1000.28A authorizes DEOs to make determinations as to whether a reasonable person would be likely to question the employee's impartiality in a particular matter under 5 CFR Part 2635, Subpart E. In instances where impartiality is likely to be questioned, but would not violate 18 USC 208(a), the Order further authorizes DEOs to determine whether the employee should be allowed to participate in the matter, and if so, authorize participation in writing.

The EPA's *Peer Review Handbook* provides guidance for how the EPA should address impartiality and independence concerns on peer review panels. The Handbook states that the EPA should make every effort to use reviewers who are independent and do not have an appearance of a lack of impartiality. The Handbook states, as a general rule, experts who have made public pronouncements on an issue or who have clearly "taken sides" may lack impartiality and should be avoided. The Handbook recognizes that these reviewers with appearances of a lack of impartiality may still serve on a panel to fill the need for experience or technical balance and representation. For example, if an SGE has an appearance of a lack of impartiality, it may still be possible to make a written determination that the SGE may serve on the FAC or to ensure that the SGE is recused from certain areas of a review. With respect to impartiality, the Handbook states:

... it is also important that any decision that is made concerning advisory committee members or peer reviewers be appropriately documented. ...

The *Peer Review Handbook* defines an independent reviewer as an expert who was not associated with developing the work product, either directly by substantial contribution to its development or indirectly by significant consultation during its development.

The EPA's Financial Disclosure Forms Include Questions to Identify Independence Concerns and Appearances of a Lack of Impartiality

As discussed in chapter 2, the EPA requires FAC committee, subcommittee and panel candidates who are designated as SGEs to complete EPA Form 3110-48. Once selected, members must also periodically update their form. The form includes a supplemental set of questions specifically designed to help the EPA identify any potential appearance of a lack of impartiality (table 2).

Table 2: Supplemental questions to identify concerns with independence and impartiality

No.	Questions asked
1	Do you know of any reason that you might be unable to provide impartial advice on the matter to come before the panel/committee/subcommittee or any reason that your impartiality in the matter might be questioned?
2	Have you had any previous involvement with the review document(s) under consideration including authorship, collaboration with the authors, or previous peer review functions? If so, please identify and describe that involvement.
3	Have you served on previous advisory panels, committees or subcommittees that have addressed the topic under consideration? If so, please identify those activities.
4	Have you made any public statements (written or oral) on the issue that would indicate to an observer that you have taken a position on the issue under consideration? If so, please identify those statements.

Source: OIG-developed table based on section 6 of EPA Form 3110-48.

The EPA Can Better Document Identification and Resolution of Independence and Impartiality Concerns

We reviewed the SAB Staff Office's files for 47 of the 126 SGE appointments to CASAC and the Council, including subcommittees and review panels, over the period of FYs 1998 through 2012. We reviewed 27 appointments in greater detail based on information in the case files that in our opinion indicated the SGE's appointment might raise ethical concerns with respect to the FAC's or panel's work. We also reviewed the meeting minutes for 14 Council meetings held between 2003 and 2010. We found:

- Four instances where recusals for independence concerns were not documented or came after the expert had participated in activities related to the concern.
- Three instances where, in our view, potential independence concerns were not identified or their resolution was not adequately documented.
- Two instances where, in our view, potential appearances of a lack of impartiality were not identified or adequately resolved.

The following sections discuss in more detail the results of our review.

Some Recusals Were Not Documented or Came After SGE Participation in Activities That Created an Independence Concern

The SAB Staff Office determined that four members of the chartered Council should recuse themselves from certain meetings where the charge questions were related to work these members had produced. SAB Staff Office procedures state that the DFO should start each meeting by stating for the record that all participating panel members are in compliance with ethics and conflict of interest rules. If not, the DFO should note any instances where a member will recuse him/herself from discussion on a particular aspect of the meeting. The EPA's FAC Handbook also recommends that meeting minutes document all recusals.

- In two instances, the EPA appointed experts as members to the chartered Council who had co-authored studies that the EPA used to support conclusions in the EPA's CAA Section 812 cost benefit analysis. These studies pertained to the monetized benefit of reducing ozone and PM mortality. The DFO told us they orally instructed members to recuse themselves from any meeting where charge questions related to the application of their work in the Section 812 study were discussed. However, the meeting minutes did not state whether these two members recused themselves from meetings where the charge questions related to their work.

- In one instance, a potential independence concern about a Council member was raised and discussed at a Council meeting. The concern was that the member was one of five experts selected to serve on a pilot expert elicitation study panel on PM mortality. The Council was asked to review the design of the pilot study. Because of the information discussed at this meeting, the DFO sent a written notice to the member instructing him to recuse himself from meetings where his prior work on the pilot elicitation study was to be discussed. Meeting minutes we reviewed indicate that this member recused himself from applicable meetings after receiving SAB's notice for a period of several years. The member later served as one of 12 participants in the full-scale expert elicitation study. According to the SAB Staff Office, when the Council met in 2008 to advise the agency on the potential use and presentation of expert elicitation study results, the member did not participate in the meeting. However, 6 years after the initial independence issue arose, this member attended a meeting as a member of the Council's Health Effects Subcommittee where the interpretation and presentation of the results of the elicitation study were discussed. Meeting minutes did not indicate whether this member recused himself from discussing the EPA's application of the results of the study he had worked on.
- In one instance, a Council member had contributed significantly to a product peer reviewed by the Council. Both the member and the SAB Staff Office identified this member's participation as an independence concern. The SAB Staff Office director noted that the member would be required to recuse himself from any discussion of that portion of the document. The meeting minutes for two Council subcommittee meetings did not indicate whether this member recused himself from any portion of the deliberations. A draft peer review report was prepared after these two meetings. Prior to a third meeting where this topic was discussed, the DFO sent the member a written recusal reminder notice. Meeting minutes we reviewed indicated the member recused himself from meetings after receiving the written recusal notice.

Some Potential Independence Concerns Were Not Identified

We identified three instances where the SAB Staff Office appointed experts to panels that reviewed work products that the experts had helped develop or incorporated extensive information from work products the experts had developed. In all three instances, the experts reported their involvement in these precursor work products on EPA Form 3110-48.

- In two instances, experts appointed to a CASAC review panel had participated substantially in preparing chapters included in ORD's ozone and PM criteria documents for the prior review period. These members were allowed to serve as reviewers for the next 5-year review's criteria

document. The SAB Staff Office director told us that these members were allowed to serve because they had not worked on producing the document under review by the CASAC. However, our review of the integrated science assessments (formerly known as criteria documents) found that these work products included conclusions and information from the chapters that had been written by the experts for the prior criteria documents. Further, the charge questions for the ISA reviews included commenting on the usefulness and completeness of the scientific information in chapters that included information from these experts' prior work. Thus, even though these experts did not develop the ISA documents, in our view, their service on the panels created a risk that they could potentially review their own work. Further, the agency should document in writing its determination that the expert's service will not create an independence concern and any steps needed to reduce the risk that this could occur.

- In one instance, an expert selected to serve on the Council's Health Effects Subcommittee was a member of the project team that developed the methodology for both the pilot and later full-scale expert elicitations. This member also interviewed experts for the elicitation study. This member's participation in the expert elicitation studies was noted at a Council meeting. Later, this member attended at least two meetings where the Health Effects Subcommittee charge included interpretation and presentation of the results of the pilot expert elicitation study for the section 812 cost-benefit analysis. The meeting minutes did not record any recusals from the member. We found no indication in the SAB case file that the SAB Staff Office identified this as a potential independence issue. In our view, this member indirectly participated in the work product being reviewed based on his significant consultation during its development. We concluded that such participation does not meet the definition of an independent reviewer as described in the EPA's *Peer Review Handbook*.

Appearances of a Lack of Impartiality Not Identified or Adequately Resolved

The *Peer Review Handbook* states that, as a general rule, "... experts who have made public pronouncements or have had a predominant influence on the position for a given organization on an issue, those who have clearly "taken sides," may have an appearance of a lack of impartiality." We reviewed two instances where experts had expressed public viewpoints on NAAQS standards but were appointed to serve on the CASAC or one of its panels.

- The requester questioned the appointment of a CASAC member who had co-authored an article⁸ in 2006 opposing the EPA's PM standard and was later appointed chair of the PM review panel. This member's case file

⁸ William N. Rom and Jonathan M. Samet, "Small Particles with Big Effects," 173 Am. J. Resp. & Crit. Care Med. 365, 366 (2006).

included a bibliography of publications that included the article in question. However, the member did not list this article in section 6 of the disclosure forms we reviewed, and the EPA's notes to the file did not include any discussion regarding this article. The article made the following conclusion about the PM standard:

In the face of the extensive evidence on PM and health and the strong mandate of the Clean Air Act for public health protection, the PM NAAQS proposed by Administrator Johnson appear lax. Based on the same evidence, the American Thoracic Society and other health organizations have recommended 12 and 25 $\mu\text{g}/\text{m}^3$ for the average annual and 24-h $\text{PM}_{2.5}$ standards, respectively. The proposed, less stringent standard does not protect the nation's health, as required by the Clean Air Act.

In our view, the above statement presents an appearance of a lack of impartiality based on guidance in the *Peer Review Handbook*. This guidance states that, generally, experts who have made a public pronouncement on an issue should be avoided. This expert served as a consultant on the PM review panel that advised the Administrator on the 2006 proposed and final PM standard. This expert was later appointed to the CASAC and the next 5-year PM review panel in 2007. While public statements expressing an opinion would not automatically disqualify a member, we believe that the SAB Staff Office, if aware of this article, should have prepared a written determination justifying the selection.

We noted that the case file did include documentation of the SAB Staff Office's resolution of potential concerns with respect to an article the expert had co-authored in 2004. According to notes in the case file, the SAB Staff Office intended to remind the expert to list such articles in section 6 of his disclosure form.

- In the remaining instance, a nitrogen oxide/sulfur oxide review panel member reported on his disclosure form that he had made statements at scientific meetings and in classrooms that the body of epidemiological evidence warranted consideration of a lower nitrogen oxide standard. The SAB Staff Office initially flagged this as a potential appearance of a lack of impartiality. However, the Staff Office later noted in the case file that there was not an appearance of a lack of impartiality since the member stated that he had not made these statements while serving on the panel during the past year. Guidance in the EPA's *Peer Review Handbook* does not limit statements that could create the appearance of a lack of impartiality to those only made while serving on a panel. In our view, refraining from making public statements on a topic while on the panel does not mitigate any appearances created by making public statements prior to an expert's appointment to the panel.

SAB Staff Office Does Not Treat Viewpoints Expressed as Part of Committee Functions as Appearance of a Lack of Impartiality

The requester raised concerns about two letters from CASAC members to the EPA Administrator. These letters encouraged the EPA Administrator to set the NAAQS at the levels CASAC had recommended following its review of the supporting technical documents and proposed standards. Many of the members who signed these letters were later re-appointed to the CASAC review panels that convened for the next 5-year NAAQS review cycle. The requestor expressed concerns that these members had an appearance of a lack of impartiality based on their publicly expressed viewpoints.

The SAB Staff Office director told us that her office distinguishes between viewpoints expressed outside of the FAC's activities and those expressed as part of the FAC's chartered function to provide advice to the Administrator. She considered these letters to be a normal part of the FAC's advice function and did not consider the viewpoints expressed to be appearances of a lack of impartiality that would affect the member's future service. However, she noted that if a panel member were to express a personal viewpoint outside of the FAC process, this could potentially present the appearance of a lack of impartiality. For opinions voiced outside of the member's FAC duties, the director told us that an expert must advocate a specific NAAQS level for the SAB Staff Office to consider it a viewpoint that would present the appearance of a lack of impartiality. According to the agency's alternate agency ethics official, she would instruct the CASAC after they have made their final communications to the Administrator to make any further communications through the DFO.

Procedures for Addressing and Documenting Resolution of Concerns Raised During Disclosure Form Reviews Could be Strengthened

The SAB Staff Office procedures include documenting any relevant correspondence between the file reviewer and the active or potential member regarding ethics questions. Further, these procedures state that the DFO should start each meeting by stating for the record that all participating panel members are in compliance with ethics and conflict of interest rules. If not, the DFO should note any instances where a member will recuse him/herself from discussion on a particular aspect of the meeting.

SAB Staff Office procedures do not address making written determinations when members with ethical concerns are allowed to serve. The EPA's *Peer Review Handbook* states that written determination should be made when SGEs with the appearance of a lack of impartiality are allowed to serve on FACs. Further, EPA Order 1000.28.A, *Duties of EPA Ethics Officials*, states that DEOs are authorized to:

When informed by an employee of an impartiality issue under 5 CFR Part 2635, Subpart E, or when requested by the employee's supervisor or other person responsible for the employee's assignment, make determinations as to whether a reasonable person would be likely to question the employee's impartiality in a particular matter. If impartiality is likely to be questioned, determine whether the employee should be allowed to participate in the matter, and if so, authorize participation in writing [5 CFR § 2635.502(c) and (d)].

In general, the files we reviewed contained handwritten notes, typed notes to the file, emails, or other documentation pertaining to concerns that arose during the review. However, in some cases the files did not contain the SAB Staff Office's final determination explaining how potential issues they identified were resolved. We needed additional oral explanation from SAB staff to ascertain how the Staff Office resolved these cases and the reasoning behind those determinations. Further, the meeting minutes we reviewed did not contain a record of the DFO's statements on recusals when the SAB Staff Office had recommended recusals.

Conclusions

The SAB Staff Office has adequate procedures for identifying independence and impartiality concerns. However, SAB's final determinations and evidence that mitigating measures were implemented were not always documented in the files we reviewed. Such documentation will better ensure that the FAC process is transparent and the advice from FACs is impartial. When experts with independence or impartiality concerns are allowed to serve on FACs without sufficient written justification it can potentially undermine the credibility of: (1) the FAC's advice, (2) the agency's scientific and technical documents, and (3) the corresponding regulations issued by the agency.

Recommendations

We recommend that the director, Science Advisory Board Staff Office:

2. Develop procedures to adequately document the resolution of ethical concerns. This should include:
 - a. Preparing written determinations as to why members with independence concerns or the appearance of a lack of impartiality are allowed to serve on FACs, subcommittees and panels, including any steps recommended for mitigating these concerns or appearances.
 - b. Documenting that all recommended steps for mitigating independence concerns, such as recusals from certain meetings, are implemented.

We recommend that the EPA designated agency ethics official:

3. Periodically review the SAB Staff Office's resolution of independence concerns and appearances of a lack of impartiality, including the sufficiency of recordkeeping documentation, and recommend corrective actions to the SAB Staff Office as appropriate.

We recommend that the director, Science Advisory Board Staff Office:

4. Develop a framework to guide decisions regarding public pronouncements made by current or prospective FAC members related to topics under consideration by the FAC.

Agency Comments and OIG Evaluation

The agency agreed with recommendations 2 and 3, and provided a corrective action plan and milestones that meet the intent of these recommendations. The agency did not agree with recommendation 4 and offered an alternative corrective action. The agency responded that public pronouncements did not fall under the purview of federal ethics regulations since they were not "covered relationships" and that the SAB typically deals with matters of general applicability, not "specific party" matters. We interpreted 5 CFR Part 2635.502(a)(2), which addresses impartiality concerns that may arise under other circumstances not described in that section, as potentially applying to particular matters of general applicability. However, we believe the SAB Staff Office's proposal to develop a framework to guide decisions regarding public pronouncements by current or prospective FAC members will be an appropriate management control. As such, the agency's proposed alternative action meets the intent of the draft report's recommendation. Thus, we revised our recommendation to reflect the agency's proposed alternative corrective action. All three recommendations are resolved and open pending the agency's completion of the agreed-to corrective actions.

Chapter 4

Membership Tenure

The EPA's policy on tenure generally limits FAC members to 6 years of service, with any service over 6 years based on written justification from the program office and approval by the Administrator or Deputy Administrator. The EPA generally followed this policy in its management of the CASAC and Council. In three instances prior to 2010, EPA approved FAC chairs to serve more than 6 years based on written justification submitted to the Administrator. Beginning in FY 2010 under former Administrator Jackson's term (2009-2013), the EPA has more strictly limited the granting of extensions for service more than 6 years.

The EPA's policy on tenure does not apply to review panel or subcommittee memberships. From FYs 1998 through 2012, 36 percent of all CASAC members/consultants served more than 6 years as a charter CASAC member or review panel consultant. During the same period, 12 percent of all Council members/consultants served more than 6 years as a Council charter member, or review panel or subcommittee consultant. By not applying its membership policy to review panels and subcommittees, the EPA may be not be achieving the policy's intent of providing fresh perspectives to its FACs.

The EPA's Policy Limits Committee Terms to 6 Years

Title 41 CFR Section 102-3.130(a), regarding policies that apply to the appointment and compensation or reimbursement of advisory committee members, staff, experts and consultants, states that:

Unless otherwise provided by statute, Presidential directive, or other establishment authority, advisory committee members serve at the pleasure of the appointing or inviting authority. Membership terms are at the sole discretion of the appointing or inviting authority.

As noted in the EPA's 2003 Federal Advisory Committee Handbook membership terms should be no longer than 6 years to provide fresh perspectives on the FAC. The Handbook notes the deputy administrator may grant appointments beyond the 6-year limit if the program office provides adequate justification as to why the office cannot find an appropriate replacement. In the case of the CASAC and Council, appointments are made by the Administrator, who may grant (and has granted) appointments beyond the 6-year limit if the SAB Staff Office provides adequate justification for the extension.

According to the former SAB Staff Office director and staff in the EPA's OFACMO, since 2010 former Administrator Jackson more strictly limited FAC

service to no longer than 6 years. OFACMO noted that Administrator Jackson granted some extensions but only in exceptional circumstances based on a detailed written justification. The EPA's 2012 revised Handbook reiterated the 6-year limit and clarified that members should be appointed for no longer than a total of 6 years (typically in 2- or 3-year terms), with an extension limited to 1-year upon approval of a detailed written justification.

The EPA applies its term policy only to FAC charter members and not to SGEs who serve on panels or subcommittees that supplement the charter FAC. The SAB Staff Office director noted that the consultants on the CASAC review panel are not voting members. Further, these panels often meet over a period of several years. Thus, the time spent in service on one NAAQS review panel could last approximately 6 years. The director also noted that the Staff Office's practice is to replace about two-thirds of the members on subsequent panels. In their view, subsequent panels benefit from the experience and working knowledge provided by having some of the previous panel members serve on the next panel.

The EPA Followed Its Policy on Tenure

The EPA generally applied its policy of limiting terms of service. We reviewed the length of service for all CASAC and Council members who served from FYs 1998 through 2012. Only three members served more than 6 years (one CASAC and two Council committee members). In all three instances written justifications were provided for the members' extended service. These three FAC members' length of service ranged from 7 to 10 years. Figure 1 (see next page) shows the percentage of CASAC and Council charter members who served more than 6 years from FYs 1998 through 2012.

Many Members Served More than 6 Years If Service on Review Panels Were Considered

The EPA augmented both the CASAC and Council with review panels and subcommittees comprised of consultants that provided technical advice on important matters under consideration by the FAC. While not voting members of the FAC, these consultants could influence the FAC's advice with their input. Therefore, we applied the 6-year term limit to all types of FAC and consultant services starting in 1998, including service on chartered FACs, subcommittees and review panels. If time served as a charter FAC member and review panel consultant or subcommittee member were combined, the percentage of experts exceeding 6-year terms is greater than the percentage for charter members only.

During FYs 1998 through 2012, the CASAC had 74 members either serve as one of the seven chartered FAC members or as an expert consultant on a NAAQS review panel. When this combined service is considered, 27 of 74 members (or 36 percent of CASAC members) served more than 6 years. Of the 27 CASAC members/consultants who served more than 6 years, the years of service as a

member and/or consultant ranged from 7 years (12 members/consultants) to 15 years (one member/consultant).

During FYs 1998 through 2012, the Council had 67 members serving either directly on the FAC, on a related subcommittee, or as a consultant. When this combined service is considered, eight members (or 12 percent of Council members) served more than the 6 years. Of the eight members who served more than 6 years, the years of service ranged from 7 years (six members) to 10 years (one member). Figure 1 shows the percentage of all CASAC- and Council-related members with length of service of more than 6 years.

Figure 1: Percentage of CASAC and Council members serving more than 6 years, FY 1998-FY 2012.

Source: OIG analysis of CASAC and Council membership lists.

Conclusions

Neither the FACA nor its implementing regulations prescribe membership term limits for FAC members. However, the EPA has established a policy on membership terms to help provide fresh perspectives on FACs. The EPA's policy applies only to charter FAC members and not expert consultants who serve on review panels or members selected to serve on subcommittees. In particular, the CASAC review panelists provide significant input regarding the EPA's criteria

and standards for ambient air quality. Our analysis indicated the SAB Staff Office was achieving its goal of about two-thirds turnover on its NAAQS review panels. This turnover ratio is intended to balance the need for fresh perspectives versus maintaining continuity and experience.

Chapter 5

Committee Balance

In general, we found that the CASAC and Council were balanced with respect to the primary functions of the FACs and the required scientific “points of view.” The FACA and its implementing regulations require FACs to be fairly balanced but allow agencies discretion in how they achieve balance. The EPA’s guidance instructs DFOs to describe the agency’s plan to attain fairly balanced membership for their FACs and to prepare membership grids showing proposed members’ qualifications and background. The SAB Staff Office prepared membership grids for the CASAC and Council. The Staff Office also described the factors that it considered for selecting members in Federal Register notices announcing opportunities for the public to nominate members. SAB Staff Office management and staff told us that their primary concern in achieving balance for the CASAC and Council was ensuring that the members have the necessary range of technical expertise. With the EPA’s release of its updated FAC Handbook in March 2012, the EPA added steps to its FAC membership selection process to help achieve FAC balance. In our view, this new process will provide additional assurance that balance is achieved on these FACs.

FACs Should Be Fairly Balanced in Terms of Viewpoints Represented and Functions Performed

FACA requires that the membership of FACs be “fairly balanced in terms of the points of view represented and the functions to be performed by the advisory committee.” In the preamble to the 2001 FACA Final Rule, the GSA stated it believed FACA’s provisions were broad enough to allow agency discretion in achieving membership balance. However, the rule included a list of possible considerations for agencies in developing a plan for achieving balance. These include the:

- Committee’s mission.
- Geographic, ethnic, social, economic or scientific impact of the committee’s recommendations.
- Specific perspectives required, such as those of consumers, technical experts, the public at-large, academia, business or other sectors.
- Need to obtain divergent points of view on the issues before the committee.
- Relevance of state, local and tribal governments to the development of the advisory committee’s recommendations.

Title 41 CFR Part 102-3.60 requires agencies to describe their plans for achieving balance on discretionary FACs. These plans are not required for non-discretionary

FACs such as the CASAC and Council. However, GSA guidance⁹ issued in 2011 “strongly recommended” these plans for non-discretionary FACs as well.

The EPA’s FAC Handbook (prior and current versions) incorporates FACA requirements on balance and describes the EPA’s procedures for ensuring this requirement is met. The EPA’s Handbook requires that the justification statements that accompany a request to charter or renew a charter for both discretionary and non-discretionary FACs describe plans for achieving balance. The Handbook lists general guidelines to consider in achieving balance. The 2012 updated FAC Handbook incorporated an additional consideration for members with experience with issues of concern to low-income, rural, urban, medically underserved, sensitive/vulnerable, or disproportionately impacted community populations, and whether that experience would be useful.

The membership grid is a key tool prepared by the EPA as part of the annual membership process. The EPA uses the membership grid to review and ensure balance. For each FAC, the DFO must create a membership grid that provides a snapshot of the FAC makeup, including both current members and proposed candidates for membership. The membership grid is part of the overall membership package, which is submitted to the Administrator for approval.

Both the CASAC and Council are statutorily mandated FACs with specific membership requirements mandated by the CAA. The CASAC’s seven members must include at least one physician, one member of the National Academy of Sciences, and one person representing state air pollution control agencies. The Council must have at least nine members and include recognized experts in the fields of health and the environmental effects of air pollution, economic analysis, environmental sciences and such other fields the Administrator deems appropriate.

Preparation of Balance Plans Could Provide More Transparency to Efforts to Achieve Balanced CASAC and Council Committees

In general, we found the CASAC and Council were balanced with respect to the primary functions of the FACs and the required scientific “points of view.” We noted that prior to 2011, the justification packages for these FACs did not describe the plan for attaining balanced membership. However, in Federal Register notices announcing opportunities for the public to nominate members for service on the Council and CASAC, the SAB Staff Office described factors it considers when selecting FAC members. These factors included relevant scientific perspectives, which, among other factors can be influenced by work history and affiliation.¹⁰ As part of the annual membership process, the SAB Staff

⁹ FAC Membership Balance Plan, GSA Committee Management Secretariat, Office of Committee and Regulatory Management, January 2011.

¹⁰See e.g., 69 Fed. Reg. 33,900-01 (June 17, 2004).

Office prepared membership grids for the CASAC and Council which summarized the proposed FAC membership in terms of members' expertise, affiliation category (e.g., academic, state, private sector, nongovernmental organization), and geographic location (state). The SAB Staff Office used a similar process in forming panels that work under the auspices of the chartered FACs.

SAB Staff Office DFOs told us they address balance from the standpoint of scientific and technical expertise. If a potential or current member were to express a public opinion on matters before the FAC, this might create an appearance of a lack of impartiality. One DFO told us the SAB Staff Office would address such a concern specifically with that individual, not by balancing the panel with an opposing point of view.

New Agency Procedures Designed to Improve Diversity and Balance

In March 2012, the EPA updated its FAC Management Handbook and incorporated new procedures for achieving diversity and balance on the EPA's FACs. The updated Handbook:

- Added a consideration for whether members with experience with issues of concern to low-income, rural, urban, medically underserved, sensitive/vulnerable populations, or communities experiencing disproportionate environmental or public health burdens, could be useful on the FAC.
- Requires an outreach plan for obtaining a diverse pool of nominees. The plan must be submitted to the EPA's OFACMO for review and concurrence. The outreach plan should describe in detail how the DFO intends to solicit a diverse set of nominees, including women and minorities. For example, it should explain the specific forms of public solicitation the DFO plans to use and the organizations and academic institutions the DFO plans to contact.

The SAB Staff Office developed an outreach plan for the April 2012 CASAC charter renewal. Further, the SAB Staff Office developed a draft outreach plan for the April 2013 Council charter renewal. The balance plan for CASAC and the Council, prepared to support charter renewal, describes the plan for ensuring that the committees are balanced in terms of scientific points of view (including statutory requirements for membership). The Outreach Plan, developed to support the annual membership process, is designed to ensure that membership recommendations draw upon a "diverse set of nominees, including women and minorities." While there is overlap between the goals of diversity and balance, they are not synonymous.

Conclusions

Agencies have discretion in determining how balance is achieved on their FACs. In requiring descriptions of plans to achieve balance for non-discretionary FACs, the EPA has established procedures for balance that go beyond the minimum requirements established by the regulations. Preparing membership balance plans and implementing outreach plans as described in the EPA's updated FAC Handbook should make the selection process more transparent and help ensure that balance is achieved on the CASAC and Council.

Chapter 6

Peer Review

In addition to assessing the EPA's management of CASAC and the Council, we reviewed the EPA's conformity with OMB and the EPA's peer review policies and guidance with respect to three National Center for Environmental Assessment analyses supporting NAAQS revisions. All three analyses were conducted in conjunction with and included in larger assessment documents that synthesized numerous studies and analyses. These assessment documents underwent formal peer review by the CASAC. The requester questioned whether CASAC review of assessment documents sufficed for the rigor and specificity of a separate peer review of each individual analysis.

We determined that two of the three analyses were sufficiently peer reviewed before the EPA publicly disseminated them by placing them in the rulemaking docket. However, one of the NCEA analyses containing influential scientific information—a re-analysis of data from an ozone health effects study—was not peer-reviewed in accordance with OMB and the EPA's guidance. OMB and the EPA's guidance call for all ISI to be peer reviewed before public dissemination. However, NCEA did not have a formal process for determining whether individual analyses and work products met the definition of ISI. Thus, NCEA did not subject its ozone data re-analysis to peer review before disseminating it in support of the ozone NAAQS. The analysis was later peer reviewed and published in a journal article. This peer review did not alter the conclusions of the analysis as presented in the EPA documents. Thus, the lack of peer review prior to public dissemination did not appear to affect the ozone NAAQS rulemaking. Nonetheless, proper peer review of the EPA's internal analyses before dissemination to the public is an important tool for ensuring the quality and integrity of the agency's scientific information.

Federal and Agency Guidance Require Peer Review of Influential Scientific Information Before Public Dissemination

Peer review involves the review of a draft product for quality by specialists in the field who were not involved in producing the draft. OMB's *Final Information Quality Bulletin for Peer Review* establishes government-wide guidance for peer review of government science documents. The OMB bulletin requires each agency to subject ISI to peer review prior to dissemination. It defines ISI as "scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions." The OMB bulletin provides agencies broad discretion in determining the type of peer review and the procedures used to select reviewers.

The EPA's *Peer Review Handbook* (3rd Edition) incorporates the provisions of the OMB bulletin and outlines the agency's policy, procedures and processes for peer review. Consistent with OMB guidelines, the EPA's *Peer Review Handbook* states that "[t]he principle underlying the Peer Review Policy is that all influential scientific and technical work products used in decision making will be peer reviewed" (underlining in original). However, it cites exceptions to this principle. One of these exceptions states that peer review is not necessary for ISI if an application of an adequately peer reviewed work product does not depart significantly from its scientific or technical approach.

The EPA's *Peer Review Handbook* states that, generally, determinations as to whether a work product is "influential" will occur on a case-by-case basis. The agency decision maker should determine whether a work product is ISI. The applicable assistant administrator or regional administrator is the ultimate agency decision maker and is accountable for the decisions regarding the identification of ISI, and the mechanisms of peer review used for these work products. The assistant administrator or regional administrator may designate office directors or division directors as the front-line decision maker.

NCEA's Review of One Analysis Did Not Adhere to OMB Requirements and EPA Peer Review Guidance for Influential Scientific Information

We reviewed NCEA's compliance with OMB and the EPA's peer review guidance for three work products NCEA produced in support of ambient air quality standards for ozone, sulfur dioxide and nitrogen dioxide. EPA included parts of these three analyses in larger assessment documents that the CASAC peer reviewed. These three NCEA work products were:

1. A reanalysis of data from a previously published clinical study on the effects of human exposure to ozone (ozone reanalysis).
2. An analysis of the results of earlier human clinical studies on the effects of human exposure to SO₂ (SO₂ analysis).
3. An update to a previously published meta-analysis on the effects of human exposure to NO₂ (updated NO₂ meta-analysis).

In our view, all three analyses fit the description of ISI. However, NCEA did not have its ozone reanalysis peer reviewed before it was disseminated to the public. As such, the EPA did not adhere to OMB and EPA peer review guidance for this particular analysis. The SO₂ analysis was sufficiently peer reviewed. The updated NO₂ meta-analysis primarily updated and re-presented previously peer reviewed information, and thus was not required to be peer reviewed again per the EPA's guidance. Details concerning the development, dissemination and peer review of each of the three analyses follow.

2007 Ozone Reanalysis

In response to a CASAC comment on the second draft of the 2006 ozone air quality criteria document, NCEA decided to include the results of a recent human exposure study (Adams study)¹¹ in the final air quality criteria document. According to NCEA staff, in reviewing the Adams study they observed certain traits in the study's data which caused them to question whether the data would show statistically significant effects of ozone exposure at less than 0.08 parts per million. In reviewing the final air quality criteria document, one CASAC member also questioned whether additional statistical analysis of the data would show statistically significant effects at ozone levels below 0.08 ppm. These observations led NCEA to re-analyze the Adams study data using a different statistical approach. NCEA concluded that there was a statistically significant effect of ozone at 0.06 ppm as compared to filtered clean air (0.00 ppm). NCEA placed the results of its reanalysis¹² in the ozone rulemaking docket in June 2007 without having it peer reviewed.

NCEA's 2007 ozone reanalysis met the definition of ISI. The Adams study was the first such study to present human exposure data at ozone levels below 0.08 ppm. At that time, the level of the ozone standard was 0.08 ppm averaged over 8 hours. NCEA's reanalysis concluded that ozone effects occurred at levels below 0.08 ppm. Thus, NCEA reasonably could determine that its reanalysis would have an impact on the 2008 NAAQS ozone rulemaking process.

At a technical conference in December 2006, NCEA made a presentation on the health effects of exposure to air pollutants. This presentation included NCEA's initial ozone analysis illustrating the distribution of effects for individuals and group mean estimates at levels below 0.08 ppm. In January 2007, NCEA staff discussed the ozone reanalysis with the EPA's OAQPS. OAQPS asked NCEA if it could include the ozone reanalysis in the OAQPS staff paper for the 2008 NAAQS ozone rulemaking. However, NCEA did not want to do so at that time because staff believed it might constitute new analysis that had not been peer reviewed. Thus, OAQPS only presented NCEA's general observations about the Adams study in the staff paper and not the detailed statistical analysis. NCEA had the reanalysis internally reviewed by EPA scientists and addressed public comments received at a March 2007 CASAC meeting. In NCEA's view, it was appropriate to include the reanalysis after these internal reviews. Thus, they entered the reanalysis into the rulemaking docket in June 2007.

¹¹ Dr. William Adams, *Comparison of Chamber 6.6-h Exposures to 0.04–0.08 PPM Ozone via Square-wave and Triangular Profiles on Pulmonary Responses*, Inhalation Toxicology, February 2006.

¹² Dr. James Brown, *The effects of ozone on lung function at 0.06 ppm in healthy adults*, EPA memorandum, June 14, 2007.

NCEA's 2007 ozone reanalysis was published in an August 2008 peer reviewed journal article.¹³ However, this peer review was after NCEA disseminated its reanalysis in the June 2007 memorandum.

2008 SO₂ Analysis

In 2007, in support of the SO₂ NAAQS review, NCEA began working on a draft analysis of SO₂ human exposure data from studies conducted in the 1980s and 1990s. This draft analysis was circulated to CASAC in December 2007, and CASAC encouraged NCEA to proceed with the analysis. NCEA's SO₂ analysis was included in the EPA's second draft integrated science assessment¹⁴ for sulfur oxides in 2008. NCEA concluded that human responses to SO₂ concentrations increased as exposures to SO₂ increased and that more pronounced effects were observed at lower concentrations among SO₂-sensitive asthmatics. As part of the normal NAAQS review process, CASAC peer reviewed the draft integrated science assessments. Prior to submitting the second draft ISA to CASAC for peer review, the EPA formally requested the CASAC to review its analyses of data from human clinical studies. We reviewed the CASAC comments on the SO₂ analysis and, in our view, this review fulfilled OMB and EPA peer review requirements.

After the SO₂ NAAQS final rule was issued, NCEA's SO₂ analysis was again peer reviewed and published in a December 2010 journal article.¹⁵

2008 NO₂ Meta-Analysis

During a May 1, 2008, CASAC meeting (one of several held for the 5-year review of the nitrogen dioxide NAAQS), NCEA and CASAC discussed a 1992 NO₂ meta-analysis¹⁶ of 19 studies of individuals with asthma included in the 1993 criteria document. CASAC recommended that NCEA present this data in the current NO₂ ISA. Before including the 1992 meta-analysis in the ISA, NCEA removed one study from the analysis¹⁷ and added a recent study that it considered to be of a similar nature to the other studies. NCEA also added a concentration range (i.e., 0.1 ppm) to its presentation that was not included in the original 1992 meta-analysis. NCEA's conclusions on the effects of NO₂ exposure were essentially the same in its 2008 update as those from the 1992 meta-analysis.

¹³ Dr. James Brown et al., *Effects of Exposure to 0.06 ppm Ozone on FEV in Humans: A Secondary Analysis of Existing Data*, Environmental Health Perspectives, August 2008.

¹⁴ *Integrated Science Assessment for Sulfur Oxides – Health Criteria (Second External Review Draft)*, Table 3-1 and related text, May 2008.

¹⁵ Dr. Douglas Johns et al., *Analysis of the concentration-respiratory response among asthmatics following controlled short-term exposures to sulfur dioxide*, Inhalation Toxicology, December 2010.

¹⁶ Dr. Lawrence J. Folinsbee, *Does Nitrogen Dioxide Exposure Increase Airways Responsiveness?*, Toxicology and Industrial Health, Vol. 8, No. 5, 1992.

¹⁷ According to NCEA, one study in the 1992 meta-analysis was based on a specific exposure while all the others were based on non-specific exposures. Thus, in NCEA's view, this one study should not be included in the 2008 analysis.

An NCEA branch chief told us that the updated NO₂ meta-analysis was not submitted for publication because the revisions made to the original NO₂ meta-analyses were not a new analysis that would merit publication in a journal. Further, she said all of the information about the revisions to the original meta-analysis was included in the ISA so a separate memorandum was not necessary. Both the original 1992 meta-analysis and NCEA's 2008 update of that meta-analysis were ISI. However, the 2008 updated meta-analysis did not require peer review. The EPA's *Peer Review Handbook* notes that peer review is not necessary for ISI if it is an application of an adequately peer reviewed work product that does not depart significantly from its scientific or technical approach. In our view, NCEA's 2008 update did not depart significantly from the original 1992 meta-analysis. Further, it was an acceptable application of an adequately peer reviewed work product. NCEA essentially re-presented the results of the original meta-analysis. Moreover, the conclusions about the health effects of NO₂ exposure did not change. On July 17, 2012, the U.S. Court of Appeals for the District of Columbia upheld the EPA's final NO₂ rule and reached a similar conclusion regarding the 2008 meta-analysis. The court noted that the EPA's meta-analysis "merely updated" the original Folinsbee meta-analysis.¹⁸

NCEA Did Not Have a Process for Determining Whether Internal Analyses Were Influential Scientific Information

According to an NCEA branch chief, NCEA does not have a process for determining whether internal NCEA analyses are "influential" and does not make "influential calls" on such documents. She said NCEA focuses on determining which internal analyses are most relevant to the larger assessment documents that are peer reviewed by CASAC. She said that it would be impossible to have every internal analysis peer reviewed due to time constraints. She also said that NCEA does not ask CASAC to peer review each individual analysis.

We reviewed NCEA emails and found no evidence of an NCEA process for determining whether a work product is influential. However, a January 2007 email showed that some NCEA staff were concerned about sending the ozone reanalysis to the docket without having the individual analysis peer reviewed. In the email, NCEA staff did not discuss whether the work product was ISI or whether peer review was required to meet OMB and EPA guidance. In our view, the lack of a process to assess whether internal analyses are ISI is a weakness in NCEA's management controls. This lack of control allowed the 2007 ozone reanalysis to be included without peer review and without clear accountability for the decision to proceed even though internally staff had some concerns.

¹⁸ *American Petroleum Inst. v. EPA*, 684 F.3d 1342, 1349 (D.C. Cir. 2012), *rehearing en banc denied* (D.C. Cir. Sept. 24, 2012), *cert. denied*, 133 S. Ct. 1724 (April 2013).

Subsequent Peer Review Did Not Alter Overall Conclusions of NCEA's Ozone Reanalysis

The ozone reanalysis was published in a peer reviewed journal article after the EPA publicly disseminated it. However, the peer review did not result in significant changes to the journal manuscript. Many of the peer review comments for the ozone reanalysis were editorial and required only small revisions to the text. One peer reviewer commented that the authors (including two NCEA staff members) could have more clearly described their analysis and suggested that the authors include a more rigorous defense of their analytical strategy. The authors cited text that described and defended the analysis, and did not significantly change the manuscript. The external peer reviewers' comments did not materially alter NCEA's original results or conclusions as they were presented in the EPA's documents supporting the revised NAAQS for ozone.

Conclusions

NCEA did not have a process to determine whether internal analyses were ISI and to document its decision regarding the need for peer review. Such a process would provide accountability for decisions about the need for peer review and help assure that NCEA complies with OMB and EPA peer review guidance. In the absence of a formal process to determine whether a work product is influential, NCEA is at risk of including ISI in broader assessment documents for public dissemination without the requisite peer review.

Recommendation

We recommend that the assistant administrator for the Office of Research and Development:

5. Direct NCEA to implement a process to review NCEA scientific analyses that support the EPA's rulemakings and determine the appropriate type of peer review for these work products. This process should:
 - a. Determine and document whether such analyses are influential scientific information.
 - b. Document the rationale for the type of peer review chosen for ISI, including any decision not to have such analyses externally peer reviewed before they are publicly disseminated.

Agency Comments and OIG Evaluation

The agency agreed with our recommendation and provided a corrective action plan that meets the intent of the recommendation. The recommendation is resolved and open pending the agency's completion of the agreed-to corrective action.

EPA Response to Draft Report

July 22, 2013

MEMORANDUM

SUBJECT: Response to Office of Inspector General Draft Report No. OPE-FY12-0001
*Response to Congressional Request on the EPA's Management of Clean Air
Federal Advisory Committees*, dated June 17, 2013

FROM: Lek G. Kadeli, Principal Deputy Assistant Administrator
Office of Research and Development (ORD)

Brenda Mallory, Acting General Counsel
Office of General Counsel (OGC)

Christopher Zarba, Acting Director
Science Advisory Board (SAB) Staff Office

TO: Arthur A. Elkins, Jr., Inspector General
Office of Inspector General (OIG)

Thank you for the opportunity to respond to the OIG draft report titled, *Response to Congressional Request on the EPA's Management of Clean Air Federal Advisory Committees*. We have provided a summary of the agency's overall position and our response to the OIG's recommendations. For the one recommendation with which the agency does not agree, we have provided the legal basis and a proposed alternative to the given recommendation. For your consideration, we have included our technical comments as attachments to supplement this response.

AGENCY'S OVERALL POSITION

The EPA appreciates the opportunity to comment on this report and in general agrees with the OIG's recommendations. For findings and recommendations related to the Office of General Counsel, we have provided clarifying information about the identity and parameters of the position that oversees the agency's ethics program.

Agreements

¹⁹ Subsequent to this action plan, the Senior Counsel for Ethics and Alternate Agency Ethics Official clarified the response to Recommendation 1 to note that she had already advised the SAB Director and selected staff about the proper process for handling conflicts of interest, and would instruct ethics officials across the Agency in her monthly meetings on August 13 and 14, 2013.

No.	Recommendation	High-Level Intended Corrective Action(s)	Estimated Completion by- Quarter and FY
		requirements and note any recusals for the record. The SAB Staff Office will ensure that meeting minutes accurately reflect these opening statements.	
3	Designated Agency Ethics Official (see endnote) to periodically review the SAB Staff Office's resolution of independence concerns and appearances of a lack of impartiality, including the sufficiency of recordkeeping documentation, and recommend corrective actions to the SAB Staff Office as appropriate.	<p>Pursuant to 5 CFR § 2638.203, the DAEO is responsible for managing EPA's ethics program, including ensuring that financial disclosure reports are consistently reviewed and that records are kept, when appropriate, on advice rendered.</p> <p>OGC/Ethics has been working in closer coordination with the new SAB Acting Director and staff on an as-needed basis to ensure proper resolution of concerns, including additional consultation and instruction. The DAEO will ascertain whether any additional review beyond what is already occurring is warranted.</p>	4 th Quarter FY 2013
5	<p>Direct NCEA to implement a process for reviewing NCEA scientific analyses that support the EPA's rulemakings to determine the appropriate type of peer review for these work products. This process should:</p> <p>a) Determine and document whether such analyses are influential scientific information.</p> <p>b) Document the rationale for the type of peer review chosen for ISI, including any decision not to have such analyses externally peer reviewed before they are publicly disseminated.</p>	<p>The Agency is in the process of revising the Peer Review Handbook. The new edition of the Handbook will emphasize the planning process and include procedures for creating a record-of-decision for the classification of a work product and the type of peer review planned for a work product. The National Center for Environmental Assessment (NCEA), within the Office of Research and Development, is in the process of addressing this recommendation by establishing a policy that includes the following steps.</p> <p>a) NCEA work products will be evaluated to determine whether they are ISI, in accordance with EPA's Peer Review Handbook, and the Division Director will document his or her</p>	4 th Quarter FY 2013

No.	Recommendation	High-Level Intended Corrective Action(s)	Estimated Completion by- Quarter and FY
		determination. b) NCEA will conduct a peer review for any work product that is determined to be ISI, in accordance with EPA's Peer Review Handbook, and NCEA will document the rationale for the type of peer review conducted.	

Disagreement

OIG Recommendation No. 4:

Designated Agency Ethics Official (see Endnote 1) to provide clarification or instruction to Deputy Ethics Officials for assessing whether public statements create an appearance of a lack of impartiality with respect to when the statements were made and the expert's role at the time of the statement.

Agency's Response:

Pursuant to 5 CFR § 2638.203, the DAEO is responsible for managing the Agency's ethics program, including ensuring that EPA employees adhere to the conflict of interest statutes set forth in Title 18 of the United States Code and to the Standards of Ethical Conduct for Employees of the Executive Branch, 5 CFR Part 2635. The Standards of Ethical Conduct include, at 5 CFR Part 2635, Subpart E, specific provisions for "Impartiality in Performing Official Duties."

The OIG recommendation falls outside the purview of federal ethics. These regulations set forth the standard that an employee is responsible, in the first instance, for identifying whether any of his "covered relationships" will cause a reasonable person with knowledge of the relevant facts to question his ability to carry out his official duties with respect to a specific party matter impartially. Typically, the SAB does not deal with "specific party" matters but rather with matters of general applicability. Further, a public statement does not fall within the "covered relationships" set forth at 5 CFR 2635.502, and therefore OGC ethics is not the responsible party overseeing these decisions.

From a policy perspective, however, when an individual has made public statements about a matter that will be considered by the advisory panel that may raise a concern about whether the individual has an open mind. The agency's current Peer Review Handbook recommends that staff avoid selecting people for a peer review if they have publicly expressed an opinion on the matter to be considered by the peer review. The Handbook also acknowledges the challenge of selecting advisory committee members who have the requisite experience or technical expertise and who have not made public statements. For this reason, the Handbook allows EPA the discretion to decide to include members who have made public statements.

Alternative to Given Recommendation:

The SAB Staff Office will develop a framework to guide decisions regarding public statements.

Estimated Completion by Quarter and FY:

1st Quarter FY 2014

CONTACT INFORMATION

If you have any questions for OGC, please contact Justina Fugh, Senior Counsel for Ethics and Alternate Designated Agency Ethics Official at (202) 564-1786, or Daniel Fort, Ethics Officer, at (202) 202-564-2200. For questions regarding the SAB Staff Office component of this response, please contact Christopher Zarba, Acting Director at (202) 564-0760 or Angela Nugent, Special Assistant, Science Advisory Board Staff Office at (202) 564-2218. Finally, for questions to the EPA's Office of Research and Development, please contact Deborah Heckman at (202) 564-7274 or John Vandenberg at (919) 541-4527.

- C. Technical Comments from the ORD

ENDNOTE

¹ Please note that the General Counsel, a Presidentially appointed/Senate confirmed position, has neither a statutory nor regulatory role in EPA's ethics program. OGC/Ethics therefore assumes that the OIG intended to identify the Designated Agency Ethics Official as the correct action official. Brenda Mallory was designated by the Administrator pursuant to 5 CFR 2638.202(b) and (c) when she became the Principal Deputy General Counsel. Although Ms. Mallory is also currently acting as the General Counsel, the acting position does not imbue her with her authority to oversee EPA's ethics program. Rather, that authority derives from her appointment as the Designated Agency Ethics Official (DAEO).

EPA'S SCIENCE ADVISORY BOARD

Improved Procedures Needed to Process Congressional Requests for Scientific Advice

GAO Highlights

Highlights of GAO-15-500, a report to congressional requesters

Why GAO Did This Study

EPA formulates rules to protect the environment and public health. To enhance the quality and credibility of such rules, EPA obtains advice and recommendations from the SAB and CASAC—two federal advisory committees that review the scientific and technical basis for EPA decision-making. ERDDAA requires the SAB to provide both the EPA Administrator and designated congressional committees with scientific advice as requested. Amendments to the Clean Air Act established CASAC to, among other things, provide advice to the Administrator on NAAQS.

GAO was asked to look into how the SAB and CASAC are fulfilling their statutory obligations in providing such advice. This report examines (1) the extent to which EPA procedures for processing congressional requests to the SAB ensure compliance with ERDDAA; (2) the extent to which CASAC has provided advice related to NAAQS; and (3) policies EPA has to ensure that the SAB and CASAC maintain their independence when performing their work. GAO reviewed relevant federal regulations and agency documents, and interviewed EPA, SAB, and other relevant officials.

What GAO Recommends

GAO recommends that to better ensure compliance with ERDDAA, EPA take steps to improve its procedures for processing congressional committee requests to the SAB for advice. EPA agreed with GAO's recommendations.

View GAO-15-500. For more information, contact J. Alfredo Gómez at (202) 512-3841 or gomezj@gao.gov.

June 2015

EPA'S SCIENCE ADVISORY BOARD

Improved Procedures Needed to Process Congressional Requests for Scientific Advice

What GAO Found

The Environmental Protection Agency's (EPA) procedures for processing congressional requests for scientific advice from the Science Advisory Board (SAB) do not ensure compliance with the Environmental Research, Development, and Demonstration Authorization Act of 1978 (ERDDAA) because these procedures are incomplete. For example, they do not clearly outline how the EPA Administrator, the SAB staff office, and others are to handle a congressional committee's request. While the procedures reflect EPA's responsibility to exercise general management controls over the SAB and all its federal advisory committees under the Federal Advisory Committee Act (FACA), including keeping such committees free from outside influence, they do not fully account for the specific access that designated congressional committees have to the SAB under ERDDAA. For example, EPA's policy documents do not establish how EPA will determine which questions would be taken up by the SAB. EPA officials told GAO that in responding to congressional requests, EPA follows the same process that it would apply to internal requests for questions to the SAB, including considering whether the questions are science or policy driven or are important to science and the agency. However, under ERDDAA, the SAB is required to provide requested scientific advice to select committees, regardless of EPA's judgment. By clearly documenting how to handle congressional requests received under ERDDAA consistent with federal standards of internal control, EPA can provide reasonable assurance that its staff process responses consistently and in accordance with the law.

The Clean Air Scientific Advisory Committee (CASAC) has provided certain types of advice related to the review of national ambient air quality standards (NAAQS), but has not provided others. Under the Clean Air Act, CASAC is to review air quality criteria and existing NAAQS every 5 years and advise EPA of any adverse public health, welfare, social, economic, or energy effects that may result from various strategies for attainment and maintenance of NAAQS. An EPA official stated that CASAC has carried out its role in reviewing the air quality criteria and the NAAQS, but CASAC has never provided advice on adverse social, economic, or energy effects related to NAAQS because EPA has never asked CASAC to do so. In a June 2014 letter to the EPA Administrator, CASAC indicated it would review such effects at the agency's request.

EPA has policies and guidance to help ensure that its federal advisory committees—including the SAB and CASAC—maintain their independence from the agency when the advisory committees perform their work. Under General Services Administration regulations for implementing FACA, an agency must develop procedures to ensure that its federal advisory committees are independent from the agency when rendering judgments. EPA policies and guidance to help ensure the independence of its federal advisory committees include guidance specifically for the SAB and general requirements that apply to all of EPA's federal advisory committees, including the SAB and CASAC. For example, EPA's Scientific Integrity Policy states that EPA prohibits managers and other agency leadership from intimidating or coercing scientists to alter scientific data, findings or professional opinions, or inappropriately influencing scientific advisory boards.

June 4, 2015

The Honorable James M. Inhofe
Chairman
Committee on Environment and Public Works
United States Senate

The Honorable Lamar Smith
Chairman
Committee on Science, Space, and Technology
House of Representatives

The Environmental Protection Agency (EPA) uses scientific studies and methodologies when formulating rules to protect the environment and public health. EPA seeks to enhance the quality and credibility of such rules by obtaining reviews from experts of the underlying studies and methodologies. For example, EPA requests and obtains advice and recommendations from the Science Advisory Board (SAB) and the Clean Air Scientific Advisory Committee (CASAC). The Environmental Research, Development, and Demonstration Authorization Act of 1978 (ERDDAA) mandated that EPA establish the SAB and required the SAB to provide the EPA Administrator with scientific advice as requested. In 1980, Congress amended ERDDAA by adding a provision requiring the SAB to also provide scientific advice to designated congressional committees when requested.¹ CASAC was established pursuant to amendments to the Clean Air Act in 1977 to, among other things, provide advice to the Administrator with regard to EPA's National Ambient Air Quality Standards (NAAQS). The Clean Air Act requires EPA to set and periodically review and revise NAAQS for certain air pollutants, the emission of which cause or contribute to air pollution that may endanger public health or welfare.

The SAB and CASAC are both federal advisory committees and therefore must comply with the Federal Advisory Committee Act (FACA) and its

¹These designated committees currently include the Senate Committee on Environment and Public Works; the House Committee on Science, Space, and Technology; the House Committee on Energy and Commerce; and the House Committee on Transportation and Infrastructure.

implementing regulations.² For example, the SAB and CASAC are required to operate in accordance with charters.³ In addition, EPA must have procedures to ensure that the advice or recommendations of its federal advisory committees, including the SAB and CASAC, are products of their independent judgment and not “inappropriately” influenced by EPA.⁴ The SAB consists of the Board, standing and ad hoc committees, panels, and workgroups. CASAC also has subcommittees and panels. The EPA Administrator appoints members to the SAB (and its standing committees) and CASAC, and the SAB staff director appoints consultants to the SAB ad hoc committees, panels, and workgroups and CASAC subcommittees and panels.⁵ The SAB staff office, among other things, oversees the selection and formation of SAB and CASAC panels and work groups and processes EPA requests for scientific and technical advice.⁶ The SAB, its staff office, and CASAC report directly to the EPA Administrator.

Recent interactions between the House Committee on Science, Space, and Technology and the SAB related to specific SAB reviews on hydraulic fracturing and water body connectivity have raised questions with the Committee regarding whether the SAB is fulfilling its statutory obligations

²FACA governs the establishment, operation, and termination of advisory committees within the executive branch of the federal government. The General Services Administration (GSA) prepares regulations on federal advisory committees to be prescribed by the GSA Administrator and issues other administrative guidelines and management controls for advisory committees.

³Charters must be filed with EPA and the congressional committees with legislative jurisdiction over the agency. The purpose of the advisory committee charter is to specify the committee's mission or charge and general operational characteristics.

⁴41 C.F.R. § 102-3.105(g) (2014).

⁵SAB ad hoc committees, panels, and workgroups and CASAC subcommittees and panels include both members and consultants and are established for limited periods to provide advice on specific matters where the Board or standing committee members do not have all the requisite expertise.

⁶The SAB staff office is staffed by EPA employees and is responsible for two of EPA's 20 FACA committees—the SAB and CASAC. The SAB staff office publishes a Federal Register Notice announcing opportunities for the public to nominate candidate experts to serve on the SAB, certain SAB standing committees, and CASAC.

to provide scientific advice to the designated congressional committees.⁷ In addition, recent testimony received by the Committee has raised questions regarding whether CASAC is carrying out its statutory obligations to advise EPA of any adverse public health, welfare, social, economic, or energy effects that may result from various strategies for attainment and maintenance of NAAQS.

You asked us to review how the SAB and CASAC are fulfilling their statutory obligations in providing scientific advice. This report examines (1) the extent to which EPA procedures for processing congressional committees' requests for scientific advice from the SAB ensure compliance with ERDDAA; (2) the extent to which CASAC has provided advice related to NAAQS; and (3) policies, if any, EPA has to ensure the SAB and CASAC maintain their independence from the agency when performing their work.

To examine the extent to which EPA procedures for processing congressional committees' requests for scientific advice from the SAB ensure compliance with ERDDAA, we reviewed ERDDAA and its legislative history, the SAB's charters, legal cases involving the SAB, and EPA documents to determine how requests to the SAB from congressional committees were addressed. We also interviewed officials from the SAB staff office, EPA's Office of General Counsel, and EPA's Office of Congressional and Intergovernmental Relations (OCIR). To examine the extent to which CASAC has provided advice related to NAAQS, we reviewed the Clean Air Act, its legislative history, and legal cases involving the act. We also interviewed SAB staff office and EPA Office of General Counsel officials. To examine what policies, if any, EPA has to ensure the SAB and CASAC maintain their independence from the agency when performing their work, we reviewed and analyzed FACA, the General Services Administration's (GSA) regulations for implementing FACA, and EPA documents. We interviewed officials from the SAB staff office about written policies concerning FACA's requirements about independence. We also interviewed officials from GSA to discuss the

⁷Hydraulic fracturing is a process used in natural gas wells where millions of gallons of water, sand, and chemicals are pumped underground to break apart the rock and release the gas. Water body connectivity is the biological, chemical, and hydrologic connectivity of waters and the effects that small streams, wetlands, and open waters have on larger downstream waters such as rivers, lakes, estuaries, and oceans.

agency's regulations requiring federal agencies to develop procedures to ensure the independence of their federal advisory committees.

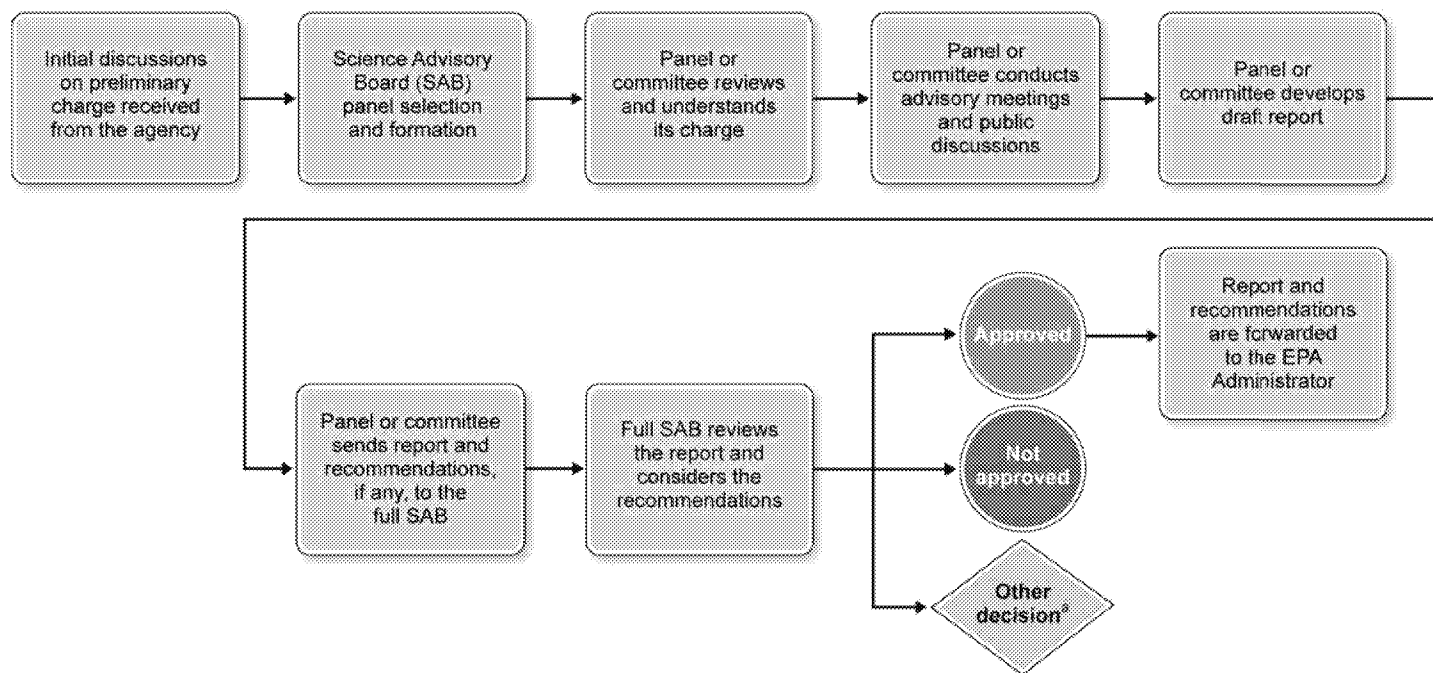

We conducted this performance audit from June 2014 to June 2015, in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Background

The SAB provides a mechanism for EPA to receive peer review and other advice in the use of science at EPA. The SAB is authorized to, among other things, review the adequacy of the scientific and technical basis of EPA's proposed regulations. The SAB and its subcommittees or panels focus on a formal set of charge questions on environmental science received from the agency.⁸ Depending on the nature of the agency's request, the entire advisory process generally takes 4 to 12 months from the initial discussion on charge questions with EPA offices and regions to the delivery of the final SAB report. Figure 1 depicts the stages of the SAB advisory process.

⁸The charge guides, but need not limit, the deliberations of the committee or panel.

Figure 1: The SAB Advisory Process

Source: GAO analysis of EPA documents. | GAO-15-500

^aIn addition to approving or not approving a report and recommendations, the full SAB has other options it can take, such as making revisions to the draft report or sending the draft report back to the authoring panel or committee for further work.

CASAC provides independent advice to EPA on “air quality criteria.”⁹ Under the Clean Air Act as amended, CASAC is to review the criteria and the existing NAAQS every 5 years and make recommendations to EPA for new standards and revisions of existing standards, as appropriate. In addition, CASAC is directed to advise EPA of the areas in which additional knowledge is required to appraise the adequacy and basis of the NAAQS and describe the research efforts necessary to provide the required information. CASAC also is directed to advise EPA of the relative contribution to air pollution of concentrations of natural as well as human

⁹Under the Clean Air Act, air quality criteria must accurately reflect the latest scientific knowledge useful in indicating the kind and extent of all identifiable effects on public health or welfare, which may be expected from the presence of certain air pollutants in the ambient air.

activity, and any adverse public health, welfare, social, economic, or energy effects that may result from various strategies for attainment and maintenance of the NAAQS. CASAC's advisory process is similar to the SAB's process, including the option of establishing subcommittees and panels that send their reports and recommendations to CASAC.

As federal advisory committees, the SAB and CASAC are subject to FACA, which broadly requires balance, independence, and transparency. FACA was enacted, in part, out of concern that certain special interests had too much influence over federal agency decision makers. The head of each agency that uses federal advisory committees is responsible for exercising certain controls over those advisory committees. For example, the agency head is responsible for establishing administrative guidelines and management controls that apply to all of the agency's advisory committees, and for appointing a Designated Federal Officer (DFO) for each advisory committee. Advisory committee meetings may not occur in the absence of the DFO, who is also responsible for calling meetings, approving meeting agendas, and adjourning meetings.¹⁰ As required by FACA, the SAB and CASAC operate under charters that include information on their objectives, scope of activities, and the officials to whom they report. Federal advisory committee charters must be renewed every 2 years, but they can be revised before they are due for renewal in consultation with GSA.

In addition to being subject to FACA, the SAB is subject to ERDDAA, which requires the SAB not only to provide advice to its host agency but also to designated congressional committees. (There is no similar statutory provision that allows congressional committees to request or receive scientific advice from CASAC). Specifically, in 1980, Congress amended ERDDAA by adding a provision requiring the SAB to provide scientific advice to designated congressional committees when requested.¹¹ According to SAB staff office officials, since that time, the SAB has responded to general congressional questions and concerns. However, in 2013, representatives of a congressional committee formally

¹⁰A DFO is required by FACA to chair or sit in attendance of each advisory committee meeting and is authorized to adjourn any such meeting whenever he/she determines it to be in the public interest. FACA also requires that no advisory committee shall conduct any meeting in the absence of that officer or employee.

¹¹An analysis of changes in the SAB's charter regarding to whom the SAB is to provide advice is included in appendix I.

requested advice from the SAB regarding two reviews the SAB was conducting. According to EPA officials, this was the first time representatives of a congressional committee formally requested advice from the SAB. Both requests were addressed and submitted directly to the SAB Chair and the Chair of the relevant SAB panel and sent concurrently to the SAB staff office and EPA Administrator.¹² While ERDDAA does not outline a role for EPA in mediating responses from the SAB to the designated congressional committees, EPA identifies such a role for itself under FACA. Specifically, EPA points to the DFO's responsibility to manage the agenda of an advisory committee. Also under FACA, EPA is responsible for issuing and implementing controls applicable to its advisory committees. Responses to the committee's requests for scientific advice were handled by the SAB staff office and EPA's Office of Congressional and Intergovernmental Relations (OCIR). The SAB staff office and, later, OCIR responded to the committee's first request for advice, and OCIR responded to the committee's second request for advice. See table 1 for more information on these requests.

¹²The first request was copied to EPA's Acting Administrator.

Table 1: Congressional Committee’s Formal Requests for Advice from the Scientific Advisory Board (SAB) and the Environmental Protection Agency’s (EPA) Acknowledgments since 1980

Congressional committee request letter	Nature of request	Agency acknowledgment
May 2, 2013, by Representative Chris Stewart, Subcommittee on Environment, Committee on Science, Space and Technology	The Committee requested that the SAB and its Hydraulic Fracturing Research Advisory Panel consider additional areas for inquiry as it began its examination of EPA’s study of the potential impacts of hydraulic fracturing on drinking water resources. The Committee submitted 14 questions that it wanted the SAB and the panel to answer.	<p>May 31, 2013—The SAB staff office acknowledged the Committee’s letter.</p> <p>The SAB staff office responded to the Committee’s request for advice and provided responses to 3 of the 14 questions outlined in the Committee’s request. The SAB staff office also explained that the SAB would have an opportunity to independently consider the remaining 11 questions. The Committee’s letter was provided to the SAB panel at its meeting on May 7– 8, 2013, and posted on the SAB website.</p> <p>December 11, 2013—EPA’s Office of Congressional and Intergovernmental Relations (OCIR) acknowledged the Committee’s letter.</p> <p>OCIR’s Associate Administrator stated that an Aug. 4, 2011, SAB advisory report on EPA’s draft <i>Plan to Study the Potential Impacts of Hydraulic Fracturing on Drinking Water Resources</i> addressed many of the themes embodied in the remaining 11 questions contained in the House Committee’s request. The Associate Administrator also stated that the Committee’s questions not addressed in the 2011 report would require new research or would be considered once EPA has completed its <i>Draft Hydraulic Fracturing Drinking Water Assessment Report</i>.</p>
November 6, 2013, by Representatives Lamar Smith, Chairman, Committee on Science, Space, and Technology and Chris Stewart, Subcommittee on Environment, Committee on Science, Space and Technology	The Committee requested that the SAB and the SAB panel for the review of EPA’s Water Body Connectivity Report address additional charge questions as part of their review.	<p>December 16, 2013—EPA’s OCIR acknowledged the Committee’s letter.</p> <p>OCIR stated that EPA had begun an initial review of the questions, but that many of the questions were already being addressed under the existing charge questions being reviewed by the SAB panel or “went beyond the scientific review that is the expert technical panel’s statutory focus.”</p>

EPA's Procedures for Processing Congressional Requests to the SAB Do Not Ensure Compliance with ERDDAA

EPA's procedures for processing congressional requests for scientific advice from the SAB do not ensure compliance with ERDDAA because the procedures are incomplete and do not fully account for the statutory access designated congressional committees have to the SAB. Specifically, EPA policy documents do not clearly outline how the EPA Administrator, the SAB staff office, and members of the SAB panel are to handle a congressional committee's request for advice from the SAB. In addition, EPA policy documents do not acknowledge that the SAB must provide scientific advice when requested by select congressional committees.

EPA's written procedures for processing congressional committee requests to the SAB are found in the SAB charter and in the following two documents that establish general policies for how EPA's federal advisory committees are to interact with outside parties:

- *EPA Policy Regarding Communication Between Members of Federal Advisory Committee Act Committees and Parties Outside of the EPA* (the April 2014 policy), and
- *Clarifying EPA Policy Regarding Communications Between Members of Scientific and Technical Federal Advisory Committees and Outside Parties* (the November 2014 policy clarification).

Collectively, the SAB's charter, EPA's April 2014 policy, and EPA's November 2014 policy clarification provide direction for how EPA and the SAB are to process requests from congressional committees. However, these documents do not clearly outline procedures for the EPA Administrator, the SAB staff office, and members of the SAB panel to use in processing such requests.

At the time of the House committee's two requests to the SAB in 2013, the SAB charter was the only EPA document that contained written policy relating to congressional committee requests under ERDDAA. The SAB charter briefly noted how congressional committees may access SAB advice, stating; "While the SAB reports to the EPA Administrator, congressional committees specified in ERDDAA may ask the *EPA Administrator to have SAB provide advice* on a particular issue." (GAO italics) Beyond what the charter states, however, no EPA policy specified a process the Administrator should use to have the SAB provide advice and review a congressional request.

In response to a request from the SAB staff office that EPA clarify the procedures for handling congressional committee requests, EPA, through an April 4, 2014, memorandum informed the SAB that committee members themselves and the federal advisory committees as a whole should refrain from directly responding to these external requests. Attached to the memorandum was the April 2014 policy that stated: “if a FACA committee member receives a request relating to the committee’s work from members of Congress or their staff, or congressional committees, the member should notify the DFO, who will refer the request to the EPA OCIR. OCIR will determine the agency’s response to the inquiry, after consulting with the relevant program office and the DFO.” This policy, however, did not provide more specific details on processing requests from congressional committees under ERDDAA.

In November 2014, EPA issued a clarification to the April 2014 policy, specifying that SAB members who receive congressional requests pursuant to ERDDAA should acknowledge receipt of the request and indicate that EPA will provide a response. The November 2014 policy clarification does not identify the SAB as having to provide the response. The November 2014 policy clarification also stated that the request should be forwarded to the appropriate DFO and that decisions on who and how best to respond to the requests would be made by EPA on a case-by-case basis. While the November 2014 policy clarification provides greater specificity about processing requests, it is not consistent with the SAB charter because the policy indicates that congressional committee requests should be handled through the DFO, whereas the charter indicates that they should be handled through the EPA Administrator and provides no further information. A senior-level EPA official stated that the agency considered that the charter and the November 2014 policy clarification differed in the level of detail, but not in the broad principle that the agency is the point of contact for congressional requests to the SAB (and SAB responses to those requests). However, under the federal standards of internal control,¹³ agencies are to clearly document internal controls, and the documentation is to appear in management directives, administrative policies, or operating manuals. While EPA has documented its policies, they are not clear, because the charter and the November 2014 policy

¹³GAO, *Standards for Internal Control in the Federal Government*, GAO/AIMD-00-21.3.1 (Washington, D.C.: November 1999).

clarification are not consistent about which office should process congressional requests. Agency officials said that the SAB charter is up for renewal in 2015. By modifying the charter when it is renewed to reflect the language in the November 2014 policy clarification—that congressional requests should be forwarded to the appropriate DFO—EPA can better ensure that its staff process congressional committee requests consistently when the agency receives such a request.

Moreover, neither the April 2014 policy nor the November 2014 policy clarification clearly documents EPA's procedures for reviewing congressional committee requests to determine which questions would be taken up by the SAB consistent with the federal standards of internal control. Because EPA's procedures for reviewing congressional committee requests are not documented, it will be difficult for EPA to provide reasonable assurance that its staff are appropriately applying criteria when determining which questions the SAB will address. EPA officials told us that internal deliberations in response to a congressional request follow those that the agency would apply to internal requests for charges to the SAB. Specifically, officials told us that EPA considers whether the questions are science or policy driven, whether they are important to science and the agency, and whether the SAB has already undertaken a similar review. In addition, under ERDDAA, the SAB is required to provide requested scientific advice to select committees, regardless of EPA's judgment. As EPA has not fully responded to the committee's two 2013 requests to the SAB, by clearly documenting its procedures for reviewing congressional requests to determine which questions should be taken up by the SAB and criteria for evaluating requests, the agency can provide reasonable assurance that its staff process these and other congressional committee requests consistently and in accordance with both FACA and ERDDAA.

Furthermore, the charter states that when scientific advice is requested by one of the committees specified in ERDDAA, the Administrator will, when appropriate, forward the SAB's advice to the requesting congressional committee. Neither the charter nor the April 2014 policy and November 2014 policy clarification specify when it would be "appropriate" for the EPA Administrator to forward the SAB's advice to the requesting committee. Such specificity would be consistent with federal standards of internal control that call for clearly documenting internal controls. Without such specification, the perception could be created that EPA is withholding information from Congress that the SAB is required to provide under ERDDAA. EPA officials stated that the EPA Administrator does not attempt to determine whether advice of the SAB contained in

written reports should be forwarded to the requesting committee and that all written reports are publically available on the SAB website at the same time the report is sent to the EPA Administrator. By modifying the charter or other policy documents to reflect when it is and when it is not appropriate for the EPA Administrator to forward the advice to the requesting committee, EPA can better ensure transparency in its process.

In general, under FACA, as a federal advisory committee, the SAB's agenda is controlled by its host agency, EPA.¹⁴ As such, the SAB generally responds only to charge questions put to it by EPA although, under ERDDAA, the SAB is specifically charged with providing advice to its host agency as well as to designated congressional committees. In addition, it is EPA's responsibility under GSA regulations for implementing FACA to ensure that advisory committee members and staff understand agency-specific statutes and regulations that may affect them,¹⁵ but nothing in the SAB charter, the April 2014 policy, or the November 2014 policy clarification communicates that, ultimately, SAB must provide scientific advice when requested by congressional committees. For example, we found no mechanism in EPA policy for the SAB to respond on its own initiative to a congressional committee request for scientific advice unrelated to an existing EPA charge question. A written policy for how the SAB should respond to a congressional committee request that does not overlap with charge questions from EPA would be consistent with federal internal control standards. Moreover, such a policy would better position the SAB to provide the advice it is obligated to provide under ERDDAA and for EPA to provide direction consistent with GSA regulations for implementing FACA.

¹⁴An advisory committee under FACA is a committee "established or utilized by" a federal agency for the purpose of obtaining advice or recommendations. 5 U.S.C. App. 2 § 3(2) (2015). The term "utilized" means "under the actual management or control of the agency." See, e.g. *Town of Marshfield v. F.A.A.* 552 F.3d 1, 6 (1st Cir. 2008).

¹⁵41 C.F.R. § 102-3.125(c) (2014).

CASAC Has Provided Certain Types of Advice Related to Air Quality Standards

CASAC has provided certain types of advice related to the review of NAAQS. The Clean Air Act requires CASAC to review air quality criteria and existing NAAQS every 5 years and advise EPA of any adverse public health, welfare, social, economic, or energy effects that may result from various strategies for attainment and maintenance of NAAQS.¹⁶

According to a senior-level EPA official, CASAC has carried out its role in reviewing the air quality criteria and the NAAQS, but has never provided advice on adverse social, economic, or energy effects related to NAAQS because to date EPA has not asked CASAC to do so. This is in part because NAAQS are to be based on public health and welfare criteria, so information on the social, economic, or energy effects of NAAQS are not specifically relevant to setting NAAQS.

In a June 2014 letter to the EPA Administrator, CASAC indicated that, at the agency's request, it would review the impacts (e.g., the economic or energy impacts) of strategies for attaining or maintaining the NAAQS but stressed that such a review would be separate from reviews of the scientific bases of NAAQS.¹⁷ In response to such a request, the letter stated that an ad hoc CASAC panel would be formed to obtain the full expertise necessary to conduct such a review.

¹⁶42 U.S.C. §§ 7409(d)(2)(B), (d)(2)(C)(iv) (2015).

¹⁷A senior-level EPA official stated that EPA continues to examine this issue and is considering how to proceed. Information from EPA-requested reviews could be useful for the states, which implement the strategies necessary to achieve the NAAQS. EPA is required to provide states, after consultation with appropriate advisory committees, with information on air pollution control techniques, including the cost to implement such techniques. 42 U.S.C. § 7408(b)(1) (2015). According to a senior-level EPA official, EPA collects this information from other federal advisory committees, the National Academy of Sciences, and state air agencies, among others, and EPA fulfills its statutory obligation by issuing Control Techniques Guidelines and other implementation guidance.

EPA Has Policies and Guidance to Ensure That the SAB and CASAC Maintain Their Independence from the Agency

EPA has policies and guidance to help ensure that its federal advisory committees maintain their independence from the agency when performing their work.¹⁸ Under GSA regulations for implementing FACA, agencies must develop procedures to ensure that the federal advisory committees are independent from the agency when rendering judgments.¹⁹ EPA policies and guidance to help ensure the independence of its federal advisory committees include general discussions of FACA requirements that apply to all of EPA's federal advisory committees as well as those specifically for the SAB.²⁰ For example, the April 2014 Policy refers to the agency's responsibilities under FACA to maintain its separation from its federal advisory committees. In addition, EPA's Scientific Integrity Policy sets out the expectation that all agency employees, including scientists, managers and political appointees, will ensure, among other things, that the agency's scientific work is of the highest quality and free from political interference or personal motivations.²¹ This policy states that EPA prohibits managers and other agency leadership from intimidating or coercing scientists to alter scientific data, findings, or professional opinions or to inappropriately influence scientific advisory boards. The agency has also developed the *EPA Peer Review Handbook* to provide guidance to EPA staff and managers who are planning to conduct peer reviews.²² The handbook

¹⁸Independence is defined here as freedom from institutional or ideological bias regarding the issues under review. U.S. Environmental Protection Agency, *Peer Review Handbook*, 3rd Edition.

¹⁹41 C.F.R. §102-3.105(g) (2014). The form that these procedures should take (e.g., whether as guidance or policies and amount of detail) is not defined in the regulations and, according to GSA officials, it is up to the discretion of each agency.

²⁰We did not review the adequacy of these policies and procedures or those currently in place to ensure the independence and balance of specific SAB members or panelists. We have previously reported issues with the policies and procedures associated with the independence of individual SAB members. In June 2001, we recommended to EPA that the SAB develop policies and procedures that better identify and mitigate potential conflicts of interest and support the development of balanced panels. See GAO, *EPA's Science Advisory Board Panels: Improved Policies and Procedures Needed to Ensure Independence and Balance*, GAO 01-536 (Washington, D.C.: June 12, 2001). The agency implemented a number of new procedures in response to this report's recommendations.

²¹The U.S. EPA Scientific Integrity Policy provides a framework intended to ensure scientific integrity throughout EPA and promote, among other things, scientific and ethical standards and the use of peer review and advisory committees.

²²The goal of peer review is to obtain an independent, third party review of a product from experts who have not substantially contributed to its development as a product.

includes information on planning and conducting a peer review as well as the types of peer reviews performed by external peer reviewers, such as federal advisory committees. Specifically, the handbook provides information on the independence aspects of a peer review, such as how closely EPA officials should interact with peer reviewers when a review is being conducted to maintain independence.

The SAB staff office has also developed documents that contain some references to how the SAB and CASAC can maintain their independence from EPA. Specifically, the SAB Office developed a handbook for SAB members that includes a section on how SAB members should expect to maintain their independence.²³ For example, the handbook states that SAB committee and panel members are expected to avoid interaction with anyone—including agency representatives or members of the interested public—who might create a perception of conflict of interest. The SAB handbook also has a section on the role of the agency during the SAB's report preparation phase. This section states that the agency should not in any way approve or attempt to influence the content of draft panel or committee reports. In addition, EPA officials explained that the agency does not review or comment on drafts of SAB or CASAC products, so that it cannot influence them in their final form. Finally, the SAB office, as part of a fiscal year 2012 list of initiatives to enhance public involvement in SAB and CASAC activities included a statement that the SAB office and federal advisory committees would not accept a charge from EPA that unduly narrows the scope of an advisory activity.

Conclusions

EPA's SAB plays an important role assisting the agency in using high-quality science by providing EPA with scientific advice on a wide range of matters and reviewing scientific research the agency uses when developing environmental regulations. Under ERDDAA, the SAB is also required to provide scientific advice to designated congressional committees when requested. In November 2014, EPA issued a clarification revising its policy for how it processes congressional

²³According to EPA officials, the SAB staff office supports both the SAB and CASAC, so the same processes and procedures are applied to both. The handbook notes in the introduction that although the handbook refers to the chartered SAB and its committees and panels, many of the processes and procedures also are relevant to the CASAC. New members of CASAC and its panels are provided a copy of the handbook.

committees' requests for scientific advice from the SAB. However, shortcomings exist with EPA's policy documents.

First, the November 2014 policy clarification differs from the SAB's charter regarding which offices should receive and process congressional requests. As a result, EPA staff may not process congressional committee requests consistently, since the treatment will vary depending on whether staff follow the policy clarification or the charter. Agency officials said that the SAB charter is up for renewal in 2015. By modifying the charter when it is renewed to reflect the language in the November 2014 policy clarification, that congressional requests should be forwarded to the appropriate DFO, EPA can better ensure that its staff process congressional committee requests consistently when the agency receives them.

Additionally, EPA has not documented its procedures for reviewing congressional committee requests to determine which questions should be taken up by the SAB or criteria for evaluating those requests. By documenting the agency's procedures and criteria, EPA can provide reasonable assurance that its staff handle congressional requests consistently and in accordance with both FACA and ERDDAA.

Furthermore, the SAB's charter states that the Administrator will forward the SAB's response to a committee's request when appropriate, but EPA has not specified in policy documents when it would be appropriate for the Administrator to forward the SAB's advice to the requesting committee. Without such specification, the perception could be created that EPA is withholding information from Congress that the SAB is required to provide under ERDDAA. By clarifying procedures to reflect when it is and when it may not be appropriate for the Administrator to forward the advice to the requesting committee, EPA can better ensure transparency in its process and consistency with ERDDAA.

Finally, it is EPA's responsibility to ensure that advisory committee members and staff understand agency-specific statutes and regulations that may affect them under regulations for implementing FACA. However, EPA policy documents do not specify how the SAB would respond on its own initiative to a congressional committee's request for scientific advice unrelated to an existing EPA charge question, as it must do under ERDDAA. By documenting procedures on how the SAB should respond to a congressional committee request that does not overlap with charge questions from EPA, the agency would better position the SAB to provide

the advice it is obligated to provide under ERDDAA and EPA itself to provide direction consistent with regulations for implementing FACA.

Recommendations for Executive Action

To better ensure compliance with ERDDAA when handling congressional requests for scientific advice from EPA's SAB, we recommend that the EPA Administrator take the following four actions:

- Clarify in the charter when it is renewed which offices should receive and process congressional requests.
- Document procedures for reviewing congressional committee requests to determine which questions should be taken up by the SAB and criteria for evaluating such requests.
- Clarify in policy documents when it is and when it is not appropriate for the EPA Administrator to forward advice to the requesting committee.
- Specify in policy documents how the SAB should respond to a congressional committee's request for scientific advice unrelated to an existing EPA charge question.

Agency Comments

We provided EPA with a draft of this report for review and comment. In written comments, reproduced in appendix II, EPA stated that it concurred with the recommendations in the report and provided information on planned actions to address each recommendation. EPA also provided technical comments, which we incorporated as appropriate.

We are sending copies of this report to the appropriate congressional committees, the EPA Administrator, and other interested parties. In addition, this report is available at no charge on the GAO website at <http://www.gao.gov>.

If you or your staff members have any questions about this report, please contact me at (202) 512-3841 or gomezj@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made contributions to this report are listed in appendix III.

J. Alfredo Gómez
Director, Natural Resources and Environment

Appendix I: Changes to the Science Advisory Board Charter

The Environmental Research, Development, and Demonstration Authorization Act of 1978 (ERDDAA) mandated that EPA establish the SAB and required the SAB to provide the EPA Administrator with scientific advice as requested. Congress amended ERDDAA in 1980 to require EPA's SAB to provide scientific advice to designated congressional committees when requested. Below is our analysis of the changes to the charter regarding to whom the SAB is to provide advice.

In 1978, the Charter Objectives and Responsibilities stated that: "The objective of the Board is to provide advice to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. The Board reports to the Administrator. It will review issues, provide independent advice on EPA's major programs, and will perform special assignments as requested by the Agency and as required by the ERDDAA of 1978 and the CAA Amendments of 1977." In response to the ERDDAA amendments, EPA changed the charter in 1981 to reflect that certain congressional committees could also request advice. Additional changes to the charter over the years regarding to whom the SAB is to provide advice are reflected in the table below.

Table 2: EPA Science Advisory Board (SAB) Charter Changes Regarding to Whom the SAB Is to Provide Advice, 1981–2013

Year of charter	Charter's objectives and responsibilities (changes underlined and italicized)
1981	The objective of the Board is to provide advice to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. <i>While the Board reports to the administrator, it may also be requested to provide advice to the U.S. Senate Committee on Environment and Public Works or the U.S. House Committees on Science and Technology, Interstate and Foreign Commerce, or Public Works and Transportation.</i>
1983	Same as above.
1985	Similar to above. <i>House Committee name changed to Committees on Science and Technology, Energy and Commerce, or Public Works and Transportation</i>
1987	Same as above.
1989	Same as above.
1991	The objective of the Board is to provide <i>independent</i> advice to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. While the Board reports to the Administrator, it may also be requested to provide advice to the U.S. Senate Committee on Environment and Public Works or the U.S. House Committees on Science and Technology, Energy and Commerce, or Public Works and Transportation.
1993	Same as above.
1995	The objective of the Board is to provide independent advice and <i>peer review</i> to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. While the Board reports to the Administrator, it may also be requested to provide advice to <i>U.S. Senate Committees and Subcommittees and U.S. House Committees and Subcommittees, as appropriate.</i>
1997	Same as above.
1999	Same as above.

**Appendix I: Changes to the Science Advisory
Board Charter**

Year of charter	Charter's objectives and responsibilities (changes underlined and italicized)
2001	Same as above.
2003	The objective of the Board is to provide independent advice and peer review to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. While the SAB reports to the EPA Administrator, certain congressional committees <i>may ask the EPA Administrator to have the SAB provide advice on a particular issue.</i>
2005	Same as above.
2007	The objective of the Board is to provide independent advice and peer review to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. While the SAB reports to the EPA Administrator, certain congressional committees may ask the EPA Administrator to have the SAB <i>address a particular issue.</i>
2009	Same as above.
2011	Same as above.
2013	The objective of the Board is to provide independent advice and peer review to EPA's Administrator on the scientific and technical aspects of environmental problems and issues. While the SAB reports to the EPA Administrator, congressional committees <i>specified in ERDDAA</i> may ask the EPA Administrator to have the SAB provide <i>scientific advice</i> on a particular issue.

Appendix II: Comments from the Environmental Protection Agency

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON D.C. 20460

OFFICE OF THE ADMINISTRATOR

MAY 22 2015

J. Alfredo Gomez
Director
Natural Resources and Environment
U.S. Government Accountability Office
441 G Street, NW
Washington, DC 20548

Dear Mr. Gomez:

Thank you for the work of you and your staff on GAO engagement code 361573 regarding the EPA Science Advisory Board (SAB) and the Clean Air Scientific Advisory Committee (CASAC). The SAB, established in 1978 pursuant to the Environmental Research, Development and Demonstration Authorization Act (ERDDAA), and the CASAC, established pursuant to the Clean Air Act, are valued sources of independent, expert scientific and technical advice to the agency.

As noted in the draft report, ERDDAA contains a unique provision that discusses requests for scientific advice from certain congressional committees. During our discussions with GAO regarding the report, the EPA raised the potential for a Constitutionally-based separation of powers concern should that provision of ERDDAA be read as allowing congressional committees to unilaterally direct the expenditure of agency funds for the benefit of Congress wholly outside of the appropriations process. The agency explained, however, that the provision can be read to allow the agency to establish procedures for agency consideration of requests for action from these committees that both respects the unique role given to the committees by ERDDAA and avoids that Constitutional concern.

We are pleased that the GAO's report, as evidenced in the recommendations, recognizes that the agency is authorized to establish procedures for the review and processing of congressional requests for scientific advice from the SAB, including "procedures for reviewing congressional committee requests to determine which questions should be taken up by the SAB and criteria for evaluating such requests." The agency agrees with those recommendations, and will move to establish procedures for agency review and processing of such requests. Summary agency responses to each of the GAO recommendations are provided below.

GAO Recommendation 1. Clarify in the charter when it is renewed which offices should receive and process congressional requests.

Agency Response: The SAB charter currently notes that congressional committees specified in ERDDAA may ask the EPA Administrator to have the SAB provide scientific advice on a particular issue. The agency will clarify the process by which congressional requests will be received and addressed, either by including additional detail in the SAB charter or by developing additional written procedures as envisioned in the recommendations below.

GAO Recommendation 2. Document procedures for reviewing congressional committee requests to determine which questions should be taken up by the SAB and criteria for evaluating such requests.

Agency Response: The agency will develop additional written procedures for evaluating congressional committee requests for advice from the SAB, including criteria to guide the evaluation of such requests by the agency and the SAB.

GAO Recommendation 3. Clarify in policy documents when it is and when it is not appropriate for the EPA Administrator to forward advice to the requesting committee.

Agency Response: SAB advice to the EPA Administrator is provided in the form of written letters and reports, all of which are available to the public on the SAB website. When SAB letters and reports are prepared in response to a request from congressional committees specified in ERDDAA, the letters and reports will be posted to the SAB website and the agency also will forward the written SAB advice to those committees.

GAO Recommendation 4. Specify in policy documents how the SAB should respond to a congressional committee request for scientific advice unrelated to an existing EPA charge question.

Agency Response: As noted in response to Recommendation 2, the agency will develop additional written procedures for evaluating congressional committee requests for advice from the SAB, including criteria to guide the evaluation of such requests by the agency and the SAB.

Sincerely,

John E. Reeder
Deputy Chief of Staff

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's website (<http://www.gao.gov>). Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to <http://www.gao.gov> and select "E-mail Updates."

Order by Phone

The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, <http://www.gao.gov/ordering.htm>.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.

EPA Science Advisory Board: Policy Statement on Science Quality and Integrity

In formulating rules to protect the environment and public health, the Environmental Protection Agency (EPA) relies on advice from scientific and technical experts. EPA's Science Advisory Board (SAB) is one source of scientific and technical advice for EPA. The SAB consists of about 45 independent experts in the fields of science, engineering, economics, and other social sciences and is overseen by the SAB Staff Office, which is staffed by EPA employees. As a federal advisory committee, the SAB must comply with the Federal Advisory Committee Act (FACA).¹ Among other things, FACA requires that EPA establish uniform administrative guidelines and management controls for its advisory committees.

An explanatory statement accompanying the Consolidated Appropriations Act, 2016 directed EPA to develop an updated policy statement on science quality and integrity for the SAB.² According to the explanatory statement, the policy statement should include (1) goals on increasing membership from states and tribes; (2) an evaluation of potential bias, if EPA's Administrator decides that financial-related metrics are appropriate to identify conflicts of interest or bias; and (3) direction on treating public comments. The explanatory statement also directed EPA to submit a draft of the policy statement to GAO for review and included a provision for GAO to review the updated policy statement and determine whether the updated policy met the intent of the explanatory statement. The deadline for EPA's submission to us was March 17, 2016.

¹Pub. L. No. 92-463, 86 Stat. 770 (Oct. 6, 1972), codified, as amended, at 5 U.S.C. app. 2.

²The explanatory statement noted that EPA had "not yet resolved long-standing questions regarding conflicts of interest that have spanned multiple Administrations." 161 Cong. Rec. H10220 (daily ed. Dec. 17, 2015) (explanatory statement submitted by Representative Hal Rogers regarding House Amendment #1 to the Senate Amendment on H.R. 2029, later enacted as Pub. L. No. 114-113, 129 Stat. 2242 (2015)).

For this report, we assessed whether EPA drafted an updated policy statement that addressed the directives in the explanatory statement. To do this, we reviewed EPA documents and interviewed EPA officials, including SAB Staff Office officials. We conducted this performance audit from January 2017 to June 2017, in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

EPA's Response Did Not Address All Congressional Directives

EPA did not update its policies or requirements for the SAB in response to the direction in the explanatory statement, nor did it specifically address all of the directives in the statement. Instead, EPA developed a draft document that describes how the SAB Staff Office implements existing policies and procedures, according to the letter accompanying this document and SAB Staff Office officials we interviewed.³ Moreover, the letter accompanying the draft document was dated September 30, 2016—more than 6 months after the deadline for EPA to submit the draft policy statement and updated policies to us for review.

Our review of the draft document noted the following:

- The draft document states that EPA has policies to ensure that advisory committees operate in accordance with (1) FACA and its implementing regulations, (2) statutes and regulations regarding ethics requirements for members of advisory committees and panels, and (3) other relevant EPA policies, including the Scientific Integrity Policy and the Peer Review Policy.⁴
- According to the draft document, EPA addresses SAB scientific quality and integrity issues—such as independence and objectivity, committee composition and balance, and freedom from financial conflicts of interest—through its Scientific Integrity Policy, Peer Review Policy, Peer Review Handbook, and the Office of Management and Budget Peer Review Bulletin.⁵

SAB Staff Office officials we interviewed stated that to develop the draft document, EPA synthesized the policies and procedures that it has developed and continuously updated in

³Environmental Protection Agency, *Ensuring the Scientific Quality and Integrity of SAB and CASAC Advisory Processes*, Draft Document (Sept. 8, 2016).

⁴Environmental Protection Agency, *Scientific Integrity Policy* (February 2012), accessed March 16, 2017, https://www.epa.gov/sites/production/files/2014-02/documents/scientific_integrity_policy_2012.pdf; and Environmental Protection Agency, *Peer Review and Peer Involvement at the U.S. Environmental Protection Agency* (Jan. 31, 2006), accessed April 20, 2017, https://www.epa.gov/sites/production/files/2015-01/documents/peer_review_policy_and_memo.pdf. In January 2017, EPA published corrections to the *Scientific Integrity Policy*; see Environmental Protection Agency, *Supplemental Information for the U.S. Environmental Protection Agency's Scientific Integrity Policy* (January 2017), accessed April 14, 2017, https://www.epa.gov/sites/production/files/2017-01/documents/fy2017_scientific_integrity_policy_supplemental_information_0.pdf.

⁵Environmental Protection Agency, Science and Technology Policy Council, *Peer Review Handbook*, 4th Ed., EPA/100/B-15/001 (Washington, D.C.: October 2015) and Office of Management and Budget, *Final Information Quality Bulletin for Peer Review* (Dec. 15, 2004).

response to FACA, implementing regulations, SAB Staff Office guidance, and stakeholder feedback. According to these officials, EPA has made numerous updates to its policies and procedures to enhance the openness, transparency, and balance of SAB reviews. The officials stated that these updates include larger, more diverse review panels; increased opportunities for public input; and outreach to industry and other groups to ensure greater participation.⁶

With regard to the specific directives in the explanatory statement, we noted the following:

- With regard to the first directive in the explanatory statement, the draft document does not include specific or numeric goals on increasing membership from states and tribes. However, it states that the SAB Staff Office is committed to expanding the diversity of scientific perspectives on the SAB, including the perspectives of scientists from state and local governments, tribes, industry, and nongovernmental organizations. According to SAB Staff Office officials, while they seek to increase the participation of state scientists, they often receive few applications from these scientists and, therefore, meeting a numeric goal could be challenging.
- With regard to the second directive in the explanatory statement, the draft document does not discuss whether EPA's Administrator made a decision about the appropriateness of updating financial-related metrics for identifying conflicts of interest or bias. SAB Staff Office officials told us that this is because they rely on the existing legal and policy framework—including FACA requirements and Office of Government Ethics regulations—as appropriate financial metrics for identifying conflicts of interest or bias.⁷
- With regard to the third directive in the explanatory statement, the draft document refers to but does not update the practices for considering and responding to public comments that are included in the Peer Review Handbook and the SAB handbook.⁸

In conclusion, while EPA developed a draft document that describes how the SAB Staff Office implements existing policies and procedures, as well as describes past actions to update and improve these policies and procedures, EPA did not update its policies or requirements for the SAB as directed by the explanatory statement. We are not making a recommendation at this time, because EPA has not yet finalized its policy statement. However, as EPA moves forward, we encourage it to specifically address the directives provided in the explanatory statement.

Agency Comments and Our Evaluation

We provided a draft of this report to EPA for review and comment. In its written comments, reproduced in enclosure I, EPA stated that its draft document synthesized its policies and procedures to evaluate conflict of interest committee composition and balance, qualitative goals to increase state and tribal membership, and eligibility requirements for service on the SAB to ensure fairness and objectivity. In addition, EPA stated that it has and will continue to update its policies and procedures to enhance the openness, transparency, and balance of its membership. While we recognize that EPA's draft document synthesized its existing policies

⁶We did not review the composition of SAB panels for changes in diversity or other levels of participation.

⁷The Office of Government Ethics provides overall leadership and oversight of the executive branch ethics program designed to prevent and resolve conflicts of interest.

⁸Environmental Protection Agency, *Serving on the EPA Science Advisory Board: A Handbook for Members and Consultants*, EPA-SABSO-12-001 (March 2012).

and procedures, as well as describing past actions to update and improve these policies and procedures, EPA did not update its policies or requirements for the SAB as directed by the explanatory statement. Therefore, as EPA moves forward, we continue to encourage the agency to specifically address the directives provided in the explanatory statement.

We are sending copies of this report to the appropriate congressional committees, the EPA Administrator, and other interested parties. In addition, the report is available at no charge on the GAO website at <http://www.gao.gov>.

If you or your staff members have any questions about this report, please contact me at (202) 512-3841 or gomezj@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. Enclosure – 1

Enclosure I: Comments from the Environmental Protection Agency

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

May 18, 2017

J. Alfredo Gomez
Director, Natural Resources and Environment
U.S. Government Accountability Office
331 G Street, NW
Washington, DC 20548

OFFICE OF THE
ADMINISTRATOR

Dear Mr. Gomez:

Thank you for the work of you and your staff on GAO engagement code 101351 regarding the Consolidated Appropriations Act, 2016 directing the EPA Administrator to develop a policy statement on science quality and integrity for the Science Advisory Board (SAB) and all Board members.

As you may know, EPA developed the draft policy document entitled *Ensuring the Scientific Quality and Integrity of SAB and CASAC Advisory Processes* in response to the explanatory statement. EPA synthesized its policies and procedures to evaluate conflict of interest committee composition and balance, qualitative goals to increase State and tribal membership, and eligibility requirements for service on the SAB to ensure fairness and objectivity.

As we move forward under the new Administration, there will be a concerted effort to assure diversity and to look for additional ways to strengthen scientific review at EPA. Already that process is underway. The Agency is committed to diversity of scientific perspectives on the SAB to the maximum extent possible, including the perspectives of scientists from state and local governments, tribes, industry, and nongovernmental organizations, while maintaining foremost attention to essential scientific expertise. EPA has and will continue to update its policies and procedures to enhance the openness, transparency and balance of its membership. EPA has adopted and will continue to adopt new practices to improve accessibility and responsiveness to the public.

While the draft proposed GAO report does not provide specific recommendations, it does encourage the EPA to address directives provided in the explanatory statement. The agency has responded to recommendations in previous reports to improve policies in this regard and the SAB Staff Office will continue advancing and improving procedures to assure the independence, integrity and quality of the scientific and technical advice the SAB provides to the Administrator.

Sincerely,

John E. Reeder
Deputy Chief of Staff

FEDERAL ADVISORY COMMITTEES

Additional Guidance Could Help Agencies Better Ensure Independence and Balance

G A O

Accountability * Integrity * Reliability

Highlights of GAO-04-328, a report to congressional requesters

Why GAO Did This Study

Because advisory committees are established to advise federal decision makers on significant national issues, it is essential that their membership be, and be perceived as being, free from conflicts of interest and balanced as a whole. GAO was asked to (1) describe the role of federal advisory committees in the development of national policies, (2) examine the extent to which existing guidance and policies and procedures for evaluating committee members for conflicts of interest and points of view ensure independent members and balanced committees, and (3) identify practices and measures that could help ensure independence and balance.

What GAO Recommends

GAO recommends that GSA and/or OGE, as appropriate, give direction to agencies on: the proper use of representative appointments; information that would help ensure committees are, and are perceived as, balanced; and practices that would better ensure independence and balance and enhance transparency in the advisory committee process. GSA agreed with GAO's findings and agreed to work with OGE to implement the recommendations. OGE agreed that representative appointments need review but disagreed that its guidance has limitations. GAO continues to believe the guidance could be improved to better ensure that agencies are appropriately appointing committee members.

FEDERAL ADVISORY COMMITTEES

Additional Guidance Could Help Agencies Better Ensure Independence and Balance

What GAO Found

Federal advisory committees play an important role in shaping public policy by providing advice on a wide array of issues, such as stem cell research, drinking water standards, space exploration, drug approvals, and federal land management. About 950 advisory committees perform peer reviews of scientific research; offer advice on policy issues; identify long-range issues; and evaluate grant proposals, among other functions.

Additional governmentwide guidance could help agencies better ensure the independence of members—that is, that they are free from significant conflicts of interest—and balance of federal advisory committees. For example, current limitations in the Office of Government Ethics' (OGE) guidance are a factor in at least three agencies' continuing a long-standing practice of appointing most or all members as "representatives"—expected to reflect the views of the entity or group they are representing and not subject to conflict-of-interest reviews—even when the agencies call upon the members to provide advice on behalf of the government. Such members would be more appropriately appointed as "special government employees," who are reviewed for conflicts of interest. OGE officials agreed with GAO that these agencies' appointments of some members as representatives of their fields of expertise are not appropriate, and this practice avoids using the special government employee category that was created to help the government hire experts in various fields for such purposes. OGE guidance that representatives may speak for, among others, any recognizable group of persons should be clarified to state that they generally are not to represent an expertise. Also, to be effective, advisory committees must be, and be perceived as being, fairly balanced in terms of points of view and functions to be performed. However, the General Services Administration's (GSA) guidance on advisory committee management does not address what types of information could be helpful to agencies in assessing the points of view of potential committee members, nor do agency procedures identify what information should be collected about potential members to make decisions about committee balance. Consequently, many agencies do not identify and systematically collect and evaluate information pertinent to determining the points of view of potential committee members, such as previous public positions or statements on matters being reviewed.

GAO identified promising practices and measures that can better ensure independence and balance and promote transparency in the federal advisory committee system, such as obtaining nominations from the public and making public information about how members are identified and screened. Wider use of these practices—particularly for committees addressing sensitive or controversial topics—could reduce the likelihood that committees are, or are perceived as being, biased or imbalanced.

United States General Accounting Office
Washington, D.C. 20548

April 16, 2004

The Honorable Eddie Bernice Johnson
Ranking Minority Member, Subcommittee
on Research
Committee on Science
House of Representatives

The Honorable Brian Baird
House of Representatives

Federal advisory committees have been called the “fifth arm of government” because of the significant role they play in advising federal agencies, the Congress, and the President on important national issues.¹ To be effective, these advisory committees must be—and, just as importantly, be perceived as being—independent and balanced. Specifically, individual committee members who provide advice to the government must be free from significant conflicts of interest—that is, they must be “independent.” In addition, while it may be desirable to include experts on committees who have particular viewpoints, federal law requires each committee, as a whole, to be balanced in terms of the points of view and the functions to be performed. Recently, some appointments to scientific and technical advisory committees have generated controversy because of the perception by some scientists and others that these appointments were based on ideology rather than expertise or were weighted to favor one group of stakeholders over others.

In 1962, the Congress established the category of “special government employee” and made the conflict-of-interest rules for such employees less restrictive than for regular federal government employees to overcome obstacles in hiring outside experts for occasional service, such as on federal advisory committees. Members of federal advisory committees are often appointed as special government employees to provide advice on behalf of the government on the basis of their best judgment. In contrast, members may also be appointed to federal advisory committees as “representatives” to provide stakeholder advice—that is, advice reflecting

¹In this view, federal advisory committees follow the executive, legislative, judicial, and regulatory “arms” of government. *Hearings on S. 1637, S. 2064, S. 1964 before the Subcommittee on Intergovernmental Relations of the Senate Committee on Government Operations, 92nd Congress, 1st Sess., pt. 1 at 12 (1971).*

the views of the entity or interest group they are representing, such as industry, labor, or consumers.

Federal advisory committee members who are employees of the federal government must meet federal requirements pertaining to freedom from conflicts of interest—which we refer to in this report as independence—and the committees as a whole must meet requirements pertaining to balance. Federal conflict-of-interest statutes (18 U.S.C. §§ 201), including the principal criminal financial conflict-of-interest statute (18 U.S.C. § 208), apply to regular and, in large part, special government employees. The Office of Government Ethics (OGE) is responsible for developing regulations and guidance for these statutory provisions. The criminal financial conflict-of-interest statute and related OGE regulations prohibit regular and special government employees from participating in a “particular matter”² that may have a direct and predictable effect on their financial interest, unless granted a waiver. Members appointed as representatives who are neither regular nor special government employees are not subject to statutes regarding conflicts of interest. The Federal Advisory Committee Act³ (FACA) requires, among other things, that committee memberships be “fairly balanced in terms of points of view presented and the functions to be performed by the advisory committee.” Courts have interpreted this requirement as providing agencies with broad discretion in balancing their committees. The General Services Administration (GSA) is responsible for developing regulations and guidance regarding the establishment of advisory committees under FACA. In addition to OGE and GSA regulations and guidance, federal agencies have their own policies and procedures to establish and manage advisory committees.

You asked us to examine several issues regarding federal advisory committees. As agreed with your offices, this report (1) describes the role of federal advisory committees in the development of national policies; (2) examines the extent to which governmentwide guidance and agency-specific policies and procedures for evaluating committee members for conflicts of interest and points of view ensure independent members and balanced federal advisory committees; and (3) identifies practices that

²A particular matter is one that involves deliberation, decision, or action that is focused on the interests of specific people or a discrete and identifiable class of people. 5 C.F.R. § 2640.103(a)(1).

³Pub. L. No. 92-463, 86 Stat. 770 (1972) (classified at 5 U.S.C. app. 2).

could better ensure that committees are, and are perceived as being, independent and balanced.

To address these objectives, we reviewed OGE regulations and guidance to federal agencies regarding federal conflict-of-interest provisions and GSA regulations and guidance to federal agencies regarding FACA. We reviewed the policies and procedures at six federal departments and agencies that make extensive use of scientific and technical advisory committees—the Departments of Agriculture (USDA), Energy, Health and Human Services (HHS), and the Interior; the National Aeronautics and Space Administration (NASA); and the Environmental Protection Agency (EPA). Because HHS entities sponsor 26 percent of all federal advisory committees and 36 percent of all scientific and technical advisory committees, we also reviewed the policies and procedures at three HHS agencies that sponsor many advisory committees—the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), and the National Institutes of Health (NIH). We reviewed the procedures used by these nine departments and agencies to identify, screen, and appoint members for committees so as to ensure that members are free of conflicts of interest (where conflict-of-interest requirements apply) and that committees are balanced. To better understand how agencies implement OGE and GSA governmentwide regulations and guidance as well as their own policies, we examined the management of one committee at each agency.⁴ We reviewed the confidential financial disclosure forms of the committee members who were appointed as special government employees, along with other information, and discussed with staff how the committees used this information. We did not, however, make any judgments on whether conflicts of interest existed or whether these panels were properly balanced. To identify practices that promote independence and balance, we examined the relevant policies and procedures of the National Academies;⁵ the nine committees and agencies examined in this review; and EPA's Science Advisory Board, which made a number of

⁴We selected a nonprobability sample of nine committees that address scientific and technical issues using criteria described in appendix I. Results from nonprobability samples cannot be used to make inferences about a population because some elements of the population being studied have no chance or an unknown chance of being selected as part of the sample.

⁵The National Academies consist of four private, nonprofit organizations that advise the federal government on scientific and technical matters: the National Academy of Sciences, the National Academy of Engineering, the Institute of Medicine, and the National Research Council.

changes to its policies and procedures in response to our June 2001 report.⁶ We conducted our review from January 2003 through March 2004 in accordance with generally accepted government auditing standards. For more details on the scope and methodology of our review, see appendix I.

Results in Brief

Approximately 950 federal advisory committees with about 62,000 members play an important role in shaping public policy by advising policymakers on a wide array of important and challenging issues. For example, advisory committees provide advice in the form of peer reviews of scientific research that may be used to support health, environmental, and safety regulations; recommendations about specific policy decisions; identification of long-range issues facing the nation; and evaluations of grant proposals, among other functions. Federal advisory committees have been established to work in broad areas of public policy, such as national security, the economy, the environment, and public health. Illustrative of the range of issues addressed by federal advisory committees are the current committees that advise agencies on matters related to AIDS research, food safety, hazardous waste cleanup, trade policy, and homeland security. Advisory committees are sometimes established specifically to address controversial issues about which the government believes it is beneficial to solicit the advice of individuals with the relevant background and/or expertise from outside the government. For example, some of the issues addressed by advisory committees are inherently controversial because they deal with sensitive personal and ideological matters, such as stem cell research and genetic engineering. Other committees address issues that are controversial because of their potential regulatory impact, such as food and drug approvals or environmental regulations.

Additional governmentwide guidance could help agencies better ensure the independence of federal advisory committee members and the balance of federal advisory committees. For example, OGE guidance to federal agencies has shortcomings and does not adequately ensure that agencies appoint individuals selected to provide advice on behalf of the government as special government employees subject to conflict-of-interest regulations. In addition, GSA guidance to federal agencies and agency-specific policies and procedures could be improved to better ensure that

⁶U.S. General Accounting Office, *EPA's Science Advisory Board Panels: Improved Policies and Procedures Needed to Ensure Independence and Balance*, GAO-01-536 (Washington, D.C.: June 12, 2001).

agencies collect and evaluate information that could be helpful in determining the viewpoints of potential committee members regarding the subject matters being considered and in ensuring that committees are, and are perceived as being, balanced. Specifically, we found the following:

- OGE guidance on the appropriate use of representative or special government employee appointments to advisory committees has limitations that we believe are a factor in three of the agencies we reviewed continuing the long-standing practice of essentially appointing all members as representatives. That is, we found that USDA, Energy, and Interior have appointed most or all members to their federal advisory committees as representatives—even in cases where the members are called upon to provide advice on behalf of the government and thus would be more appropriately appointed as special government employees. Because conflict-of-interest reviews are only required for federal or special government employees, agencies do not conduct conflict-of-interest reviews for members appointed as representatives. As a result, the agencies cannot be assured that the real or perceived conflicts of interest of their committee members who provide advice on behalf of the government are identified and appropriately mitigated. Further, allegations that the members have conflicts of interest could call into question the independence of the committee and jeopardize the credibility of the committee's work.
- FACA requires that federal advisory committees be fairly balanced in terms of the points of view and the functions to be performed, and courts have interpreted this requirement as providing agencies with broad discretion in balancing their committees. In addition to the legal requirement for balance, it is important that committees are perceived as balanced in order for their advice to be credible and effective. However, GSA guidance does not address what types of information could be helpful to agencies in assessing the points of view of potential committee members, nor do agency procedures identify what information should be collected about potential members to make decisions about committee balance. Consequently, many agencies do not identify and systematically collect and evaluate information pertinent to determining the points of view of committee members regarding the subject matters being considered. For example, of the nine departments and agencies we reviewed, only EPA consistently (1) collected information on committee members appointed as special government employees that enabled the agency to assess the points of view of the potential members and (2) used this information to help

achieve balance. Without sufficient information about prospective committee members prior to appointment, agencies cannot ensure that their committees are, and are perceived as being, balanced.

We identified several promising practices for forming and managing federal advisory committees that can better ensure that committees are, and are perceived as being, independent and balanced. These practices include (1) obtaining nominations for committees from the public, (2) using clearly defined processes to obtain and review pertinent information on potential members regarding potential conflicts of interest and points of view, and (3) prescreening prospective members using a structured interview. In our view, these measures reflect the principles of FACA by employing clearly defined procedures to promote systematic, consistent, and transparent efforts to achieve independent and balanced committees. Some of the practices, such as seeking public comment on proposed committees, are particularly relevant to those committees addressing sensitive or controversial topics. In addition, we identified selected measures that could promote greater transparency in the federal advisory committee process and improve the public's ability to evaluate whether agencies have complied with conflict-of-interest requirements and FACA requirements for balance, such as providing information on how the members of the committees are identified and screened and indicating whether the committee members are providing independent or stakeholder advice. Implemented effectively, these practices could help agencies avoid the public criticisms to which some committees have been subjected. That is, if more agencies adopted and effectively implemented these practices, they would have greater assurance that their committees are, and are perceived as being, independent and balanced.

Because the effectiveness of competent federal advisory committees can be undermined if the members are, or are perceived as, lacking in independence or if committees as a whole do not appear to be properly balanced, we are making 12 recommendations to GSA and OGE to provide additional guidance to federal agencies. The broad categories of these recommendations include (1) clarifying the appropriate use of representative appointments; (2) systematically obtaining information that could help ensure committees are, in fact and in perception, balanced; and (3) adopting certain practices that can better ensure independent and balanced committees and increase transparency in the federal advisory process. While our report focuses primarily on scientific and technical federal advisory committees, the limitations in guidance and the promising practices we identified pertaining to independence and balance are

pertinent to federal advisory committees in general, and thus our recommendations are directed to GSA and OGE because of their responsibilities for providing guidance to federal agencies on these matters.

GSA reviewed a draft of this report and generally agreed with the findings relating to the areas directly under its purview. The agency committed to, among other things, continuing to work in partnership with OGE to address those areas under OGE's jurisdiction relating to FACA. GSA outlined a proactive approach to responding to the report's recommendations, including making changes to its on-line FACA database. OGE reviewed the draft report and also generally agreed with the problems we identified regarding appointments to federal advisory committees, but the agency disagreed that there are any limitations in its guidance that contribute to the problems and also reiterated the measures that OGE has taken to address this issue (most of which were highlighted in the draft report). OGE believes the agencies making inappropriate appointments are disregarding, rather than misinterpreting, the OGE guidance. While we recognize that there may be other reasons as well, we have identified the limitations in OGE's guidance as one factor in some agencies' continuing the long-standing practice of essentially appointing all committee members as representatives. We believe the effectiveness of OGE's and GSA's efforts to ensure that agencies make appropriate appointment decisions for members of their federal advisory committees will not improve until the limitations we identified in OGE's guidance on appointments are addressed. Our view is also that clear, unambiguous guidance would make it more difficult for agencies to misapply the guidance. GSA's and OGE's written comments are discussed further at the end of this report and their letters are provided in appendixes XII and XIII. Overall, the comments from the agencies whose advisory committee management policies and procedures we reviewed—EPA; Energy; HHS (and component agencies CDC, FDA, and NIH); Interior; NASA; and USDA—were generally positive about the draft report, viewing it as providing helpful information on federal advisory committee management. Four of these agencies also cited some specific concerns about, for example, the requirements for independence and assessing prospective members' points of view. We address these issues at the end of this report and provide the pertinent letters from these four agencies in appendixes XIV through XVII.

Background

In recent years, controversies regarding the federal advisory committee system have included concerns about the appointment of specific

individuals to committees and agency decisions to create or terminate some committees. Although a variety of concerns have been raised, the overarching concern was that ideological bias was influencing the selection of experts for scientific and health advisory panels. Publications such as *Science*, *The Lancet*, and *Chemical and Engineering News* have published editorials and articles containing criticisms of decisions seen as injecting ideology into a committee system that should be nonideological. Further, some current and potential federal advisory committee members reported being asked about their political views in the context of decisions regarding their appointment or reappointment to committees.

A number of recent articles and editorials identified specific concerns about HHS committees that address controversial scientific and technical issues. Observers have alleged that some appointees either were unqualified for the position, had extreme views that were outside the mainstream of scientific thinking, or had personal conflicts of interest that should have disqualified them from serving on particular committees. Further, observers alleged that HHS has replaced large portions of the membership of ongoing committees as a way of obtaining committees that shared the administration's viewpoint about particular issues. Finally, concerns were raised that HHS had terminated some advisory committees with which the administration allegedly had ideological differences and replaced them with committees that had different charters and a largely new membership.

In 2003, the National Academy of Sciences issued a report on organizational issues within NIH that included a discussion of the perceived politicization of the advisory committee appointment process. The report noted that these concerns had recently arisen within the scientific and health advocacy communities and were similar to concerns that were raised in the early 1970s. In response to the most recent concerns, the academy recommended, among other things, that appointments to NIH advisory committees be based solely on a person's scientific or clinical expertise or his or her commitment to and involvement in issues of relevance to the mission of the institute.

Also in 2003, the Center for Science in the Public Interest sent a letter to the director of OGE about its concerns that conflicts of interest were introducing biases into the federal advisory committee process at HHS,

Interior, and other agencies.⁷ The center's letter, signed by 21 individuals, including public health advocates and members of academia, made a number of recommendations to OGE aimed at strengthening independence, transparency, and public trust in the federal advisory committee process. Further, the National Academies is examining the selection of scientists, engineers, and health professionals to federal advisory committees addressing science-based policy or reviewing research proposals. This study stems from its regular review of senior scientific technical appointments in the federal government as well as from concerns that scientists and others have raised to the academies about some federal advisory committee appointments and the appointment practices used by some agencies. A report is planned for November 2004.

The Federal Advisory Committee Act Sets Broad Requirements and Guidelines for Advisory Committees

The Congress enacted FACA in 1972 in response to two principal concerns: (1) that federal advisory committees were proliferating without adequate review, oversight, or accountability and (2) that certain special interests had too much influence over federal agency decision makers. In this act, the Congress articulated certain principles regarding advisory committees, including broad requirements for balance, independence, and transparency. Specifically, as previously discussed, FACA requires that the membership of committees be fairly balanced in terms of points of view and functions to be performed. Further, FACA requires that any legislation or agency action that creates a committee contain provisions to ensure that the advice and recommendations of the committee will be independent and not inappropriately influenced by the appointing authority (the agency) or any special interest. Finally, FACA generally requires that agencies announce committee meetings ahead of time and give notice to interested parties about such meetings. With some exceptions, the meetings are to be open to the public, and agencies are to prepare meeting minutes and make them available to interested parties.⁸

FACA also set broad guidelines for the creation and management of federal advisory committees, most of which are created or authorized by the

⁷The Center for Science in the Public Interest is a consumer advocacy organization that conducts research and advocacy programs on health and nutrition.

⁸The President or head of an agency may determine that a meeting be closed if, for example, the meeting will include discussions of classified information, reviews of proprietary data submitted in support of federal grant applications, or deliberations involving considerations of personal privacy.

Congress. Agencies also establish committees using general statutory authority, and some are created by presidential directives (see app. II). Further, the act requires that all committees have a charter, and that each charter contain specific information, including the committee's scope and objectives, a description of duties, the period of time necessary to carry out its purposes, the estimated operating costs, and the number and frequency of meetings. As required by FACA, the advisory committee charters generally expire at the end of 2 years unless renewed by the agency or by the Congress.⁹ The requirement encourages agencies to periodically reexamine their need for committees.

GSA, through its Committee Management Secretariat, is responsible for prescribing administrative guidelines and management controls applicable to advisory committees governmentwide. However, GSA does not have the authority to approve or deny agency decisions regarding the creation or management of advisory committees. To fulfill its responsibilities, GSA has developed regulations and other guidance to assist agencies in implementing FACA requirements, provides training to agency officials, and was instrumental in creating the Interagency Committee on Federal Advisory Committee Management. GSA also has created and maintains an on-line FACA database (available to the public at www.fido.gov/facadatabase) for which the agencies provide and verify the data, including committee charters, membership rosters, budgets, and in many cases links to committee meeting schedules, minutes, and reports. The database also includes information about a committee's classification (i.e., scientific and technical or national policy issue). According to the database, 208 committees with 7,910 members were classified as scientific and technical committees. In addition, 131 committees with over 41,000 members were classified as grant review committees—a category that also often addresses scientific and technical issues. Appendix II provides data on the classifications of the federal advisory committees in fiscal year 2003.

While the GSA's Committee Management Secretariat provides FACA guidance to federal agencies, each agency also develops its own policies and procedures for following FACA requirements. Under FACA, agency heads are responsible for issuing administrative guidelines and management controls applicable to their agency's advisory committees. Generally, federal agencies have a reasonable amount of discretion with

⁹Several of Interior's committees do not expire because the legislation creating them exempts them from the biennial charter expiration.

regards to creating committees, drafting their charters, establishing their scope and objectives, classifying the committee type, determining what type of advice they are to provide, and appointing members to serve on committees.¹⁰ However, when the Congress authorizes an agency to establish a particular committee or a President establishes a committee, the agency may have less flexibility in establishing and managing the committee because such things as the committee's objectives, the types of expertise and backgrounds of members, and even the type of advice that is to be provided may be specified by the Congress or the President.

Finally, to assist with the management of their federal advisory committees, agency heads are required to appoint a committee management officer to oversee the agency's compliance with FACA requirements, including recordkeeping. Agency heads must also appoint a designated federal official for each committee to oversee the committee's activities. Among other things, the designated federal official must approve or call the meetings of the committee, approve the agendas (except for presidential advisory committees), and attend the meetings.

Criminal Financial Conflict-of-Interest Statute Applies to Some Advisory Committee Members

OGE is responsible for issuing regulations and guidance for agencies to follow in complying with the statutory conflict-of-interest provisions that apply to all federal employees, including special government employees serving on federal advisory committees. A special government employee is statutorily defined as an officer or employee who is retained, designated, appointed, or employed by the government to perform temporary duties, with or without compensation, for not more than 130 days during any period of 365 consecutive days. Many agencies use special government employees, either as advisory committee members or as individual experts or consultants. Special government employees, like regular federal employees, are to provide their own best judgment in a manner that is free from conflicts of interest and without acting as a stakeholder to represent any particular point of view.¹¹ Accordingly, special government employees appointed to federal advisory committees are hired for their expertise and skills and are expected to provide advice on behalf of the government on

¹⁰In response to Executive Order 12838 directing agencies to reduce by at least one-third the number of discretionary committees, the Office of Management and Budget established a maximum number of discretionary advisory committees for each agency.

¹¹Office of Government Ethics Letter to the Chairman of a National Commission, June 24, 1993 (93 x 14).

the basis of their own best judgment. Special government employees are subject to the federal financial conflict-of-interest requirements, although ones that are somewhat less restrictive than those for regular federal government employees.

The criminal financial conflict-of-interest statute (18 U.S.C. § 208) and related OGE regulations prohibit federal employees, including special government employees, from participating in “particular matters” that may have a direct and predictable effect on their financial interests or those interests of a spouse, minor child, or general partner. A particular matter is defined as one involving a deliberation, decision, or action that is focused on the interests of specific people or an identifiable class of people. Special government employees serving on federal advisory committees thus are prohibited from participating when the subjects they consider are particular matters in which the member has a financial interest. However, special government employees serving on federal advisory committees are provided with an exemption that allows them to participate in particular matters that have a direct and predictable effect on their financial interest if the interest arises from their nonfederal employment and the matter will not have a special or distinct effect on the employee or employer other than as part of a class. This exemption does not extend to the committee member’s personal financial and other interests in the matter, such as stock ownership in the employer. If a committee member has a potential financial conflict of interest that is not covered under this or other exemptions, a waiver of the conflict-of-interest provisions may be granted if the appointing official determines that the need for the special government employee’s services outweighs the potential for conflict of interest or that the conflict is not significant. This standard for granting waivers is less stringent than the standard for regular government employees.

The principal tool that agencies use to assess whether nominees or members of advisory committees have conflicts of interest is the OGE Form 450, Executive Branch Confidential Financial Disclosure Report, which special government employees are required to submit annually. The form 450 requests financial information about the committee member and the member’s spouse and dependent children, such as the sources of income and the identification of assets, but it does not request filers to

provide the related dollar amounts, such as salaries.¹² For committees addressing broad or general issues, rather than particular matters, committee members hired as special government employees are still generally required to complete the confidential financial disclosure form.¹³

Agencies appoint ethics officials who are responsible for ensuring agency compliance with the federal conflict-of-interest statutes. OGE conducts periodic audits of agency ethics programs to evaluate their compliance and, as warranted, makes recommendations to agencies to correct deficiencies in their ethics programs.

Under administrative guidance initially developed in the early 1960s, a number of members of federal advisory committees are not hired as special government employees, but are instead appointed as representatives. Members appointed to advisory committees as representatives are expected to represent the views of relevant stakeholders with an interest in the subject of discussion, such as an industry, a union, an environmental organization, or other such entity. That is, representative members are expected to represent a particular and known bias—it is understood that information, opinions, and advice from representatives are to reflect the bias of the particular group that they are appointed to represent.¹⁴ Because these individuals are to represent outside interests, they do not meet the statutory definition of federal employee or special government employee and are therefore not subject to the criminal financial conflict-of-interest statute. According to GSA and OGE officials, reliable governmentwide data on the number of representative members serving on federal advisory committees are not available. However, data that agencies report to OGE on special government employees serving on federal advisory committees and to GSA on the number of federal advisory committee members indicate

¹²Some agencies, such as EPA and FDA, have developed alternative confidential financial disclosure forms that request additional information on activities and affiliations, such as expert legal testimony.

¹³Special government employees who serve in excess of 60 days above a certain salary level, however, must file a public disclosure form.

¹⁴EPA noted in its comments on our draft report that in the case of a small category of advisory committees that EPA uses, known as regulatory negotiation committees, representative members may bind their organization to take a course of action.

that only about 35 percent of the government's federal advisory committee members are appointed as special government employees.¹⁵

Advisory Committees Play an Important Role in the Development of Federal Policies

Generally composed of individuals from outside of the federal government, federal advisory committees play an important role in the development of public policy and government regulations by providing advice to policymakers on a wide array of issues. In fiscal year 2003, 54 agencies sponsored approximately 950 committees with about 62,000 members to provide advice by performing peer reviews of scientific research; developing recommendations on specific policy decisions; identifying long-range issues facing the nation; and evaluating grant proposals, among other functions. Their advice—on issues such as stem cell research, space exploration, trade policy, drinking water standards, and drug approvals—can enhance the quality and credibility of federal decision making.

Advisory committees have been and continue to be involved in issues of great importance to the advancement of knowledge and the development of national policies and regulations. For example, Energy's decision to undertake the Human Genome Project was based in part on the 1987 recommendation of the department's Health and Environmental Research Advisory Committee.¹⁶ As a result, Energy, working with NIH, successfully coordinated the multibillion-dollar research effort that succeeded in identifying all of the genes on every chromosome in the human body and determining their biochemical nature—leading the way to numerous advances in medical science.

Advisory committees provide agencies with advice in a variety of broad areas of federal policy, such as the environment, public health, and the economy. Committees provide agencies with advice about a wide array of

¹⁵The estimate of the percentage of special government employees is based on data that agencies (1) provide to OGE regarding the number of special government employees serving on federal advisory committees and (2) provide on the GSA FACA database on the total number of federal advisory committee members. This estimate does not include advisory committee members serving on NIH "special emphasis panels," which are not standing committees but rather involve one-time reviews of various science and technical funding applications to NIH (grants, cooperative agreement applications, etc.). If these individuals were included in the estimate above, the percentage of advisory committee members appointed as special government employees would be reduced to about 25 percent.

¹⁶This committee is currently called the Biological and Environmental Research Advisory Committee.

specific issues, such as the management of federal lands, the development of alternative sources of energy, guidelines for assessing cancer risks, risk assessments of toxic chemicals, hazardous waste cleanup, the establishment of new standards for food safety, the delivery of health care services, and the effectiveness of new prescription drugs and medical devices. Recently, federal advisory committees were established to help agencies marshal the facts and weigh options in response to new national issues, such as information security and terrorist attacks.

Federal advisory committees are sometimes established specifically to address controversial issues about which the government believes it is necessary to solicit the advice of individuals with the relevant background and/or expertise from outside of the government. Some of the issues addressed by advisory committees are controversial because they touch upon inherently sensitive personal, religious, or ideological matters, such as stem cell research and genetic engineering. Other committees address issues that are controversial because of their potential regulatory impact on industries or consumers, such as in the case of food and drug approvals or environmental regulations.

To address controversial and other important matters, scientific and technical advisory committees—which are the primary focus of this report—play a number of different roles on behalf of agencies. One role of science committees is to advise agencies on how to address a set of particular problems. For example, the Advisory Committee on Foreign Animal and Poultry Diseases gives the Secretary of Agriculture information and advice on measures necessary to prevent and combat such threats as foot-and-mouth disease. The charter also charges the committee with providing advice on the prevention or management of other threats from foreign animal or poultry diseases. Recent recommendations from the committee addressed coordination between USDA and the Department of Homeland Security and support for a national food animal identification work plan.

In 1990, the Congress authorized the creation of the Aquatic Nuisance Species Task Force to, among other things, coordinate federal efforts to address the threats posed by nonnative aquatic plants and animals.¹⁷ The task force operates as a federal advisory committee and is composed of 7

¹⁷The Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 codified at 16 U.S.C. §§ 4701-4741.

federal agency representatives and 13 nonfederal members in an ex officio status. It reports to the Departments of the Interior and Commerce. Among the task force's accomplishments are a number of reports and publications on risk assessment, prevention initiatives, and control programs for such nonnative species as the brown tree snake and the green crab.

Some science advisory committees offer advice to agencies on specific regulatory decisions. For example, FDA established science advisory committees that offer advice on the licensing of specific drugs and on the safety and effectiveness of medical devices. These committees play an important role in determining whether drugs and other medical products make it into the marketplace and can therefore have a significant impact on specific manufacturers as well as potential patients and consumers.

Other science advisory committees make recommendations to agencies on strategic planning efforts needed to address long-range issues facing the nation. Existing committees are exploring efforts to chart new directions in research in biology, physics, astronomy, and space exploration, to name just a few. For example, Energy's Basic Energy Sciences Advisory Committee issued a report in February 2003 entitled *Basic Research Needs to Assure a Secure Energy Future*.¹⁸ In that report, the committee stated its belief that a new national energy research program is essential and must be initiated with the intensity and commitment of the Manhattan Project. The report included a lengthy list of proposed research topics.

Advisory committees may be established to provide a peer review function. For example, a peer review group could be asked to review a body of scientific literature and offer its opinion on the adequacy of the scientific data that may be used to support regulatory actions. As an illustration, in 2001, EPA revised its standards for safe levels of arsenic in drinking water using, in part, the analysis and recommendations of two federal advisory committees—the National Drinking Water Advisory Council and the EPA's Science Advisory Board. This revised standard will have a far-reaching effect on both human health and the operation of public drinking water systems. Other peer review groups are asked to judge the merits of proposals submitted to national grant competitions. For example, the

¹⁸*Basic Research Needs to Assure a Secure Energy Future: A Report from the Basic Energy Sciences Advisory Committee*, prepared by Oak Ridge National Laboratory (Oak Ridge, TN: February 2003).

National Science Foundation, NIH, and other agencies use such groups to evaluate proposals submitted for possible funding by academic or clinical researchers covering a wide range of subject matter. After the peer review groups evaluate the proposals, other science advisory committees may make recommendations to the agencies regarding which proposals to fund.

Federal Guidance Could Better Ensure Independence and Balance

OGE and GSA governmentwide guidance and the policies and procedures of the nine departments and agencies we reviewed have limitations that reduce their effectiveness in ensuring that advisory committee members are independent and that advisory committees are, and are perceived as being, balanced. First, with respect to independence, OGE guidance on whether to appoint members to advisory committees as special government employees or representatives—a decision that determines whether an agency conducts a conflict-of-interest review—has limitations that we believe are a factor in three agencies’ continuing their long-standing practice of essentially appointing all members as representatives. We found that USDA, Energy, and Interior appoint all or almost all members to their federal advisory committees as representatives, even when the members are called on to provide advice on behalf of the government on the basis of their best judgment.¹⁹ Because such members are not providing stakeholder advice, they would be more appropriately appointed as special government employees, subject to reviews for conflicts of interest. However, because conflict-of-interest reviews are only required for federal or special government employees, agencies do not conduct conflict-of-interest reviews for members appointed as representatives. As a result, the agencies cannot be assured that the real or perceived conflicts of interest of their committee members’ providing advice on behalf of the government are identified and appropriately mitigated. Further, allegations that the members have conflicts of interest could call into question the independence of the committee and jeopardize the credibility of the committee’s work. Second, with respect to balance, GSA guidance does not address what types of information would be helpful in assessing the points of view of potential committee members with regard to the matters the committees will consider, nor do agency procedures

¹⁹OGE data indicate that some other agencies, such as the Small Business Administration and the Department of Justice, also rely exclusively on representative appointments to federal advisory committees. OGE staff told us the agency did not examine whether representatives appointed to those agencies’ committees provided independent or stakeholder advice.

identify what information the agencies believe should be collected about potential members—an important step that can help agencies ensure committees are, and are perceived as being, balanced. We found that many agencies do not consistently request information that would be helpful in assessing the overall balance of committee members' viewpoints—such as previous public positions the members may have taken on the matters being reviewed. Without adequate policies and procedures, agencies are vulnerable to allegations that committee members have conflicts of interest and that committees are imbalanced. Such allegations may call into question a committee's legitimacy and may jeopardize the work of otherwise credible and competent committees.

Reviews for Conflicts of Interest Are Not Always Performed

Some agencies appoint most or all members to their advisory committees as representatives, rather than as special government employees. However, some of these committee members appointed as representatives are asked to provide agencies with advice on behalf of the government without representing any particular point of view, and thus it appears that the members would be more appropriately appointed as special government employees. Because only regular and special government employees are subject to the conflict-of-interest statutes, agencies do not conduct conflict-of-interest reviews for members appointed as representatives. Some committees thus have members who had they been appointed as special government employees would have undergone reviews for conflicts of interest, but they have not been reviewed for potential conflicts of interest because they were appointed as representatives.

Representative members and special government employees are supposed to serve different functions on advisory committees. In 1962, the Congress established the category of special government employee and amended the federal conflict-of-interest laws to overcome obstacles in hiring outside experts for occasional service. Special government employees are appointed to federal advisory committees to provide advice on behalf of the government on the basis of their best judgment. Representative members, in contrast, are generally considered as those members of advisory committees who are “chosen for committee membership only to present the views of a private interest.”²⁰

²⁰See Office of Legal Counsel, Department of Justice, Applicability of 18 U.S.C. § 219 to Representative Members of Federal Advisory Committees (Sept. 15, 1999).

In 1982, in response to uncertainties regarding when agencies should appoint members to their advisory committees as special government employees or representatives, OGE developed guidance on the appropriate use of these two appointment categories for federal advisory committees.²¹ In this guidance, OGE noted that it disagreed with “an occasional flat assertion” by agencies that advisory committee members are never subject to the federal conflict-of-interest laws. The 1982 guidance, which is still OGE’s principal guidance on this issue,²² states that a “consultant or advisor whose advice is obtained by a department or agency from time to time because of his individual qualifications and who serves in an independent capacity is an officer or employee of the government”—that is, this person is a regular federal employee or a special government employee. In contrast, a consultant or advisor “who is requested to appear before a government department or agency to present the views of a non-governmental organization or group which he represents, or for which he is in a position to speak, does not act as a servant of the government and is not its officer or employee” but is a representative member. The OGE 1982 guidance concludes by noting that if language used in the enabling legislation, executive order, charter, or other pertinent document does not specify whether the members are functioning as special government employees or representatives, it is fair to conclude that the member is a special government employee because this is the usual status of those appointed by agencies to serve the government.

OGE’s most recent guidance that addresses representative appointments to advisory committees is its February 2000 summary of ethical requirements applicable to special government employees. This summary includes a paragraph discussing representative appointments, highlighting the fact that unlike special government employees and other federal employees, representatives are not expected to render disinterested advice to the government but are expected to “represent a particular bias.” This document explains that representatives are described more fully in OGE’s 1982 guidance and also refers readers to two 1993 advisory letters that (1) conclude that representatives can make policy recommendations to the

²¹Memorandum 82 x 22, Members of Federal Advisory Committees and the Conflict-of-Interest Statutes, July 9, 1982.

²²This guidance has been amplified by several other documents in later years including Advisory Letter 93 x 14 to the Chairman of a National Commission, June 24, 1993; Advisory Letter 93 x 30 to the Executive Director of a Federal Commission, October 22, 1993; and Advisory Opinion 00 x 1, Memorandum dated February 15, 2000.

government and (2) explain the difference between the two types of appointment as follows: representatives are asked to represent a particular bias, while special government employees are asked to provide their own best judgment without representing any particular point of view and in a manner that is free from conflict of interest.

In addition to developing the 2000 guidance on special government employees, OGE has taken steps to educate agencies about special government employee and representative appointments by participating in GSA's FACA management course that includes a session on ethics, conflict-of-interest, and financial disclosure issues. According to GSA, this class is conducted five times each year, reaching about 300 advisory committee staff. According to OGE, the ethics training begins with a discussion of the special government employee/representative designation issue. The course material includes a discussion of representatives and also refers readers to OGE's 1982 guidance. Further, OGE provides training at annual ethics conferences for ethics officials in the executive branch.

Despite these efforts, a recent OGE staff study on agency management of federal advisory committees, summarized in a November 2002 memorandum, indicates that some uncertainties about appointments to federal advisory committees may continue to exist. That is, OGE found that four of the seven agencies it reviewed—Energy, Interior, the Commission on Civil Rights, and the Small Business Administration—appointed all, or nearly all, members as representatives.²³ Further, the OGE memorandum expressed concern that these agencies may be purposely designating their committee members as representatives to avoid subjecting them to the financial disclosure statements required for special government employees and may not be conducting conflict-of-interest reviews for some committee members when they should have been conducted. The OGE memorandum concluded that further scrutiny and education about the proper designation of committee appointments was warranted. As a result, at the next annual conference for agency ethics officials in March 2003, OGE included a session, Ethics Management Tools for Your Federal Advisory Committee, which was principally devoted to “designation” issues involving appointments to federal advisory

²³OGE reviewed the management of advisory committees at the Departments of Energy, the Interior, the Army, and Education; the Commission on Civil Rights; the National Endowment for the Arts; and the Small Business Administration.

committees.²⁴ In addition, in May 2003, OGE issued new audit guidelines for its periodic reviews of agency ethics programs that provide for additional focus and review of appointment designations for individuals serving on committees, councils, boards, and commissions. Finally, as previously mentioned, OGE officials conduct a segment on ethics that addresses the appointments of representatives and special government employees during GSA's FACA management course.

Nonetheless, three of the agencies we reviewed—USDA, Energy,²⁵ and Interior—appoint most or all of the members to their federal advisory committees as representatives.²⁶ Upon examining some of the specific committees at these agencies, we found that these agencies appoint members as representatives even when the members are called on to provide advice on behalf of the government on the basis of their best judgment, rather than to represent views of outside organizations. Specifically, USDA, Energy, and Interior have committees comprised entirely of representative members where, on the basis of the agencies' descriptions of the type of advice that the members are to provide, the use of special government employees seems more appropriate, such as in the following cases:

- *USDA's National Advisory Committee for Microbiological Criteria for Foods.*²⁷ According to its charter, the purpose of the committee is to provide impartial, scientific advice to federal food safety agencies on the development of an integrated national system to monitor food safety from farm to final consumption in order to ensure the safety of domestic, imported, and exported foods.

²⁴OGE also addressed the designation issue at a session of its 2004 annual conference.

²⁵In April 2003, Energy's Acting Assistant General Counsel for General Law told us that all but one of the department's committees use only representative members. The one committee that appointed special government employees was the National Nuclear Security Administration Advisory Committee, which was established in June 2001 and expired in June 2003.

²⁶Coincidentally, our review included two of the departments (Energy and Interior) included in OGE's staff study. OGE found that the Small Business Administration and the Commission on Civil Rights also appoint most or all committee members as representatives. OGE data indicate that some other agencies, such as the Departments of Justice and State, also rely primarily on representative appointments to federal advisory committees.

²⁷According to USDA, the committee is cosponsored with HHS, the Department of Defense, and Commerce but is managed by USDA.

-
- *Energy's Biological and Environmental Research Advisory Committee.* According to the committee's designated federal official, the department uses the committee to obtain independent scientific advice on Energy's Biological and Environmental Research Program. The committee addresses issues such as genomics, the health effects of low-dose radiation, DNA sequencing, medical sciences, environmental remediation, and climate change research. In addition to reviewing scientific issues, the committee provides advice on long-range research plans and priorities and appropriate levels of funding.
 - *Interior's Scientific Earthquake Studies Advisory Committee.* According to the committee's designated federal official, members are selected to provide their independent advice to the U.S. Geological Survey (USGS) on matters relating to the survey's role in the National Earthquake Hazards Reduction Program, which is a multiagency strategic program to reduce risks to lives and property resulting from earthquakes. The committee is to review the USGS National Earthquake Hazards Reduction Program's roles, goals, and objectives; assess its capabilities and research needs; provide guidance on achieving major objectives; and establish and measure performance goals. (As discussed below, in January 2004, Interior officials determined that the members of this committee should be appointed as special government employees, and the officials said that the committee would not meet again until the appointments as special government employees have been made.)

In contrast, we found that EPA, HHS, and NASA appoint members as special government employees to committees that provide advice on behalf of the government about scientific and technical issues similar to those addressed by the committees discussed above. Consequently, these agencies do evaluate committee members who provide advice on behalf of the government for potential conflicts of interest.

USDA, Energy, and Interior have 30 other committees with about 750 members that are classified as scientific and technical committees.²⁸ In addition, some committees in other categories, such as national policy advisory committees, also address scientific and technology issues—subject matters for which advice on behalf of the government on the basis of members' best judgment, rather than stakeholder advice, is typically

²⁸In total, these agencies have 189 federal advisory committees with 4,517 members.

sought. In speaking with USDA, Energy, and Interior officials about the basis for their decisions to essentially appoint all advisory committee members as representatives, we learned that this practice is long-standing and firmly rooted in agency cultures—that is, it represents the way these agencies have traditionally staffed their federal advisory committees. The agencies we reviewed generally have not developed sufficient policies, procedures, or guidance for their staff to use when determining which type of appointment is appropriate for individual committees. For example, the guidance of some agencies, such as USDA and Interior, does not address the types of appointments that may be made. Others, such as NASA and Energy, recognize in agency policies and procedures that members can be either special government employees or representatives. However, few of the agencies that have policies identifying the types of appointments specify criteria that should be used when deciding whether the members should be appointed as either special government employees or representatives.

In our view, shortcomings in the OGE 1982 guidance regarding members of federal advisory committees and the conflict-of-interest statutes may (1) contribute to the agencies' overreliance on representative appointments to their advisory committees and (2) limit the effectiveness of OGE's and GSA's education efforts on appointments to advisory committees. Specifically, we found the following shortcomings in the 1982 guidance, which OGE cites as its most complete discussion on the use of representative appointments:

- The OGE guidance is overly broad in describing the groups for which representatives may speak. That is, the guidance indicates that representatives may speak for firms or an industry; for labor or agriculture; or for “any other recognizable group of persons including, on occasion the public at large.” We found that Energy, Interior, and USDA appoint some members to their committees on the basis that they represent various scientific or technical fields, such as biology or toxicology. However, appointing individuals as representatives of a broad category of people, such as a field of expertise, appears to generally be more consistent with providing advice on behalf of the government on the basis of the individual's best judgment, rather than acting as a stakeholder to represent the views of a nongovernment entity or group with an interest in the matter. At our exit conference, OGE officials agreed that, generally, it is not appropriate to appoint committee members as representatives on the basis of their expertise. Further, this approach to classifying members does not recognize and

essentially avoids using the special government employee category, which was specifically created to facilitate the government's ability to retain the services of experts in various fields for such purposes as temporary service on federal advisory committees.

- The conclusion section of the OGE guidance implies that when the term “representative” is used in authorizing legislation, or other such documents, members should be classified as representatives, despite the fact that this term may be used for more generic purposes, such as to direct the balance of a committee. The guidance states that the decision to make representative appointments to federal advisory committees can be indicated in enabling legislation, executive orders, committee charters, or other pertinent documents by “the use of words to characterize [committee members] as the representatives of individuals or entities outside the government who have an interest in the subject matter assigned to the committee.” However, the use of some form of the terms “represent” or “representative” in these documents does not always clearly indicate that the members are to be appointed to serve as representatives; sometimes these terms are used to define committee composition or balance. For example, some of the documents use the term “representative” to identify fields of expertise or employment background needed—specifying, that is, the expertise and points of view deemed pertinent. Some of the documents do not state that the representatives identified have an interest in the matter (as the guidance quoted above calls for) or that they are to speak for their organizations; thus the documents using the term “representative” are sometimes ambiguous. Unlike the guidance on identifying committee members appointed as special government employees—“by the use of words to command the members to exercise individual and independent judgment”—the guidance on identifying representative members does not specify the nature of the advice to be provided (e.g., stakeholder advice).
- The OGE guidance states that the fact that someone is appointed to a committee on the recommendation of an outside organization tends to support the conclusion that the person has a representative function. However, a number of committees solicit recommendations from outside organizations when appointing special government employees in order to achieve appropriate balance and expertise on their committees. Thus, the guidance does not take into account a common practice that agencies use to identify potential committee members and

may overemphasize the weight that agencies should give to this factor when determining what constitutes a representative appointment.

Officials at EPA and NASA also said that the OGE guidance on representative appointments is ambiguous in some respects. They believe it would be very helpful for agencies to have clear criteria for representative appointments. Further, the officials said that training on the issue of appointments to advisory committees has limitations. Specifically, the EPA and NASA officials said that, in their view, the FACA management course does not sufficiently clarify when appointments should be made as special government employees and when they should be made as representatives. These officials also noted that the agencies' ethics officials generally are not the ones who make decisions on the appropriate appointment category; rather, appointment type is viewed more as a FACA management issue. Thus, agency officials managing federal advisory committees may look to GSA more than to OGE for clarification on appointment questions. For example, an official at EPA who has served a detail at GSA said that GSA regularly receives calls from agencies with questions about the distinction between the two types of appointments. We believe these circumstances highlight the importance of both the coordination between GSA and OGE to ensure that GSA is prepared to respond to questions about appointments and the GSA FACA management training directed at agency staff who manage federal advisory committees.

Although the FACA management course manual provides useful information on appointments to committees, we identified some limitations in this material as well. For example, the introductory sentence on appointments states that determining the status of an individual serving on a federal advisory committee is "largely a matter of personnel classification and should be coordinated with an agency's personnel office." In our view, this statement minimizes the importance of examining the type of advice that the individual is being asked to provide as a key determinant of the status of an individual (i.e., the type of appointment to be made). In this regard, in December 2003 officials at OGE told us that they have now concluded (1) that agencies should decide at the outset whether the members of each committee are going to be representatives or special government employees and (2) that this decision should be part of the chartering process. In addition, the GSA manual is not clear and unambiguous on the role of representative members, stating that, in general, representative members of advisory committees "serve as representatives of outside entities and *may* [emphasis added] represent the views of a particular industry or group (e.g., labor, agriculture or other

similar group of interests).” In contrast, OGE guidance states that representatives *are* to represent the views of identified entities or groups. Finally, the GSA manual highlights some OGE criteria from its 1982 guidance document that, as discussed above, we believe need clarification.

The consequences of appointing advisory committee members as representatives when they are in fact asked to provide advice on behalf of the government without representing any particular outside entity’s or group’s point of view exposes the relevant committees to potentially serious problems. Because representative members are not subject to reviews for potential conflicts of interest, allegations of conflicts of interest may call into question the integrity of the committee and jeopardize the credibility of the committee’s work.

Some agencies do address the potential conflicts of interest of their representative members to some extent. For example, Interior’s Bureau of Land Management prohibits its advisory committee members from participating in any matter in which they, a spouse, or dependent child have a direct interest and requires the members to disclose any direct or indirect interest in leases, licenses, permits, contracts, or claims and related litigation that involve lands or resources administered by the bureau. However, this policy does not require the representative members to identify any other financial interests. Interior officials also told us that the department has begun inserting standard language into its committee charters briefly stating the ethics obligations of the members, whether they are special government employees or representatives. The charters for committees with representative members will include a statement that “a member may not participate in matters that will directly affect, or appear to affect, the financial interests of the member or the member’s spouse or minor children, unless authorized by the designated federal official.”²⁹

In January 2004, Interior officials also said that the department has begun working with its committee management officers to develop training and distribute materials to heighten committee members’ awareness of applicable ethical obligations and to develop and institute the appropriate screening mechanisms. Similarly, Energy does not require representative

²⁹The charters will also state that compensation from employment does not constitute a financial interest of the member so long as the matter before the committee will not have a special or distinct effect on the member or the member’s employer, other than as part of a class.

members to provide information on their financial interests and affiliations but does tell representative members in letters appointing them to committees that they “are required to recuse themselves from participating in any meeting, study, recommendation, or other committee activity that could have a direct and predictable effect on the companies, organizations, agencies, or entities with which they are associated or in which they have financial interest.” Interior and Energy policies thus rely on committee members’ correctly identifying and voluntarily disclosing such circumstances. In contrast, USDA requires its representative members to provide information about their employment and sources of income in excess of \$10,000 but does not ask for information about other financial assets that may affect impartiality, such as stock holdings. However, if these members should have been, and actually were, appointed as special government employees, none of these approaches would be adequate to ensure that the members did not have conflicts of interest requiring mitigation.

At the start of our review, Interior officials told us that they had begun to review their appointment classifications for their 115 advisory committees as a result of the November 2002 OGE study. The officials noted that many of their committees addressing federal land management issues are not scientific and technical in content and, in their view, are appropriately staffed with representative members. In January 2004, Interior officials acknowledged that it was appropriate to change the nature of some committee members’ appointments upon reexamination of any underlying legislation and the purpose of the committees. The officials said the department has been reviewing the appointments to committees as their charters expire, and that the department has appointed special government employees to a few advisory committees during the past year.³⁰ Regarding the earthquake studies committee discussed above, in January 2004 the department examined the appointments while renewing the charter and determined, on the basis of its review of the committee’s authorizing legislation, that the members of this committee should properly serve as special government employees. This committee has been operating for 2 years with members appointed as representatives. Interior officials said the change in appointments will be reflected in the charter and in the

³⁰The department appointed members of the Flight 93 Advisory Commission and the Jimmy Carter National Historic Site Advisory Commission as special government employees in September 2003 and January 2004, respectively.

pending appointment letters, and the committee will not be active again until these changes are made.

While noting that it now believes the authorizing language for the earthquake committee clearly calls for the appointment of the members as special government employees, the officials said that other committees that address scientific and technical issues specifically call for the appointment of representatives, such as Interior's National Cooperative Geologic Mapping Advisory Committee. This committee, comprised primarily of officials from five federal agencies, is to review and provide advice on a 5-year plan for the geologic mapping program that the Secretary of the Interior is required to prepare. In our view, while the statute calls for the committee to include two representatives from the state geological surveys and one each from "academia" and "the private sector," it does not clearly and unambiguously call for these individuals to be appointed as representative members rather than special government employees. As previously discussed, the term "representative" may be used in a variety of ways and may be used in a more generic manner to describe a committee's composition. The term "representative" does not necessarily indicate that members should be stakeholders speaking for entities with an interest in the matter, nor is it clear in this case that academia or the private sector would have a specific point of view that could be represented. We believe the department could choose to appoint these members as special government employees to obtain their advice, if Interior decided that nonstakeholder advice was appropriate in light of the committee's function. On the other hand, if the department wants to obtain stakeholder advice from the nonfederal committee members regarding the government's 5-year geologic mapping program plan, the representative members should be clearly informed about the specific interest and points of view they are to represent.

On this point, Interior officials acknowledged that their advisory committee members themselves are not always clear on whether they are to provide stakeholder advice or advice on behalf of the government. For example, during our review we learned that this question was raised at the initial meeting of the earthquake committee in 2001, at which point in time the representative members were told that they were charged with providing advice on behalf of the government, guidance indicating that the representative members were to function as special government employees. To be certain that committee members are clear on their roles in the future, Interior officials said that the department has begun to ensure that letters appointing individuals to advisory committees clearly inform

the member of their status as either a special government employee or a representative. Further, if the members are to serve as representatives, they are to be clearly informed of the constituencies they are to represent before the committee. Clearly, this is an important fact to communicate to the committee members.

GSA officials also told us that appointment information is relevant and important to understanding the work of the various committees. The officials agreed that information on the nature of the advice being provided—and, in the case of representative appointments, of the entities or groups represented—that is not currently available to the public would be useful and informative. They further indicated that the GSA FACA database, which is available to the public and which identifies the members of the advisory committees, could be expanded to include, for each committee member, the type of appointment and the entity or group represented.

**Information That Can Help
Agencies Ensure
Committees Are Balanced Is
Not Systematically
Gathered and Evaluated**

Many agencies do not identify and systematically collect and evaluate information that can help them determine the points of view of their potential committee members regarding the subject matters the committees will consider and thus better ensure that committees are, and are perceived as being, balanced. FACA requires that committees be fairly balanced both in terms of the points of view represented and the functions to be performed. Courts have interpreted the FACA requirement for committee balance as providing agencies with broad discretion in balancing their committees. In addition to the legal requirement for balance, it is important that committees are perceived as being balanced in order to be credible and effective. However, GSA guidance does not address what types of information could be helpful to agencies in assessing the points of view of potential committee members, nor do agency procedures identify what information should be collected about potential members to make decisions about committee balance. Many agencies do not identify and systematically collect and evaluate information that would be helpful in determining the points of view of committee members relevant to the subject matters the committees will consider. For example, of the nine departments and agencies we reviewed, only EPA consistently collected information on committee members who were appointed as special government employees in order to assess the points of view of the potential members and used this information to help achieve balance.

Assessing the points of view of individual members is fundamental to ensuring that committees as a whole are, and are perceived as being, fairly balanced in terms of points of view because agencies must first know whether the members have particular viewpoints or whether they may have—or may reasonably be perceived as having—certain biases. For example, only financial interests and affiliations during the prior year are considered pertinent for conflict-of-interest purposes, but financial and other relevant affiliations—extending beyond the 12-month period—may identify a potential bias or point of view that agencies should consider both in selecting individual members and balancing the committees as a whole. Even when a legal conflict of interest does not exist, a committee member may be so closely aligned with a point of view or an organization that his or her ability to provide objective and impartial advice is impaired or appears to be impaired. Such circumstances in which a person’s impartiality may be called into question, sometimes referred to as an “apparent conflict of interest” and a “perceived conflict of interest,” are important for agencies to be aware of because the perception of bias that can harm the reputation of advisory committees is independent of the legal definition of a conflict of interest.³¹ In some cases, however, agencies may find it helpful to include individuals with known biases, perspectives, or affiliations to serve on certain advisory committees in order to ensure that the relevant points of view are considered.³² In these cases, the issue of the overall balance of viewpoints on the committees is heightened in the sense of an agency’s ability to ensure that the committee is balanced with respect to points of view. When agencies are unaware of the viewpoints and biases of its members, they cannot adequately ensure that the committees are, and are perceived as being, balanced as a whole.

³¹Under 5 C.F.R. § 2635.502, impartiality is considered in some cases in conjunction with particular matters. For example, a special government employee should not participate in a particular matter involving a specific party where the employee knows the matter will have a direct and predicable effect on the financial interest of a member of their household and where the employee determines that the circumstances would cause a reasonable person with knowledge of the relevant facts to question their impartiality in the matter, unless the employee has received authorization from an agency designee.

³²For scientific committees, the relevant points of view may be different scientific perspectives.

Agencies typically rely on two sources to collect data about committee members who were appointed as special government employees: curricula vitae (CV) or résumés and the OGE form 450, the confidential financial disclosure form. Agencies generally collect CVs³³ or résumés that may provide some information pertinent to assessing points of view, such as professional affiliations and published articles. Some agencies may also perform Internet searches for background information on candidates. However, these sources vary in content and reliability and may not be sufficient to consistently provide the information needed to assess for points of view.³⁴

The form 450, which does collect specific information in a systematic manner, was developed specifically for reviews for potential financial conflicts of interest. Some of the information on this form, however, also is relevant to assessing the overall balance of viewpoints on a committee. The form 450 requires potential committee members (and returning members at least annually) to provide information on sources of income and assets, liabilities, and outside positions during the prior year and on existing employment agreements or arrangements, such as promises of future employment and leaves of absence.³⁵ The information on income sources, honoraria, and outside positions held during the prior year may be important to assessing for points of view.³⁶ For example, a university professor who is also an official of an environmental advocacy organization may reasonably be viewed by a sponsoring agency and others as representing an environmental rather than an unaligned “academic” perspective. Similarly, a university professor who is also an official of a

³³CVs are most pertinent to assessing expertise, generally providing information on education, employment experience, professional memberships, service on boards or journals, and publications and presentations.

³⁴Typically, members are rotating off committees periodically and thus issues of overall balance need to be revisited whenever membership changes are made. While special government employees serving on advisory committees are required to provide forms 450 at least annually, CVs and résumés may be collected once and not updated over the years that the members serve on the committees.

³⁵Income includes salaries, fees, and honoraria of the individual and his or her spouse and dependent children. Assets producing more than \$200 in income during the prior year also are to be reported, such as rent, interest, dividends, and capital gains. Information is requested on the sources of income and the identification of assets but not on the related dollar amounts.

³⁶Some relevant affiliations would not be identified because the form 450 only requests information covering the immediate prior 12 months.

toxicology institute that receives funding from chemical companies or who provided expert legal testimony for a corporation may reasonably be viewed by a sponsoring agency and others as providing an industry perspective.

Importantly, while the form 450 can provide some pertinent information for assessing points of view, it was neither designed for nor does it provide sufficient information for this purpose. Specifically, as our review of EPA's Science Advisory Board demonstrated,³⁷ the form 450—designed for financial conflict-of-interest reviews—solicits information covering only the prior year and does not request other information relevant to assessing points of view, such as

- previous public statements or positions on the matter being reviewed, including statements in articles, testimony, or speeches;
- positions taken in various legal forums, particularly in providing expert legal testimony, on the matter;
- research conducted on the matter;
- interests of their employers or clients in the matter; and
- sources of funding for research or other activities.

However, such information is helpful to understand the points of view of potential committee members and therefore to assess how an individual member's participation on the committee would affect overall committee balance. For example, it is helpful for agencies to be aware of public pronouncements that candidates have made on matters relevant to their committees so that they can assess how such individuals may be viewed in terms of impartiality. In those instances where an agency selects a member for their expertise who may have a viewpoint that is aligned with an industry or environmental interest, without the information that would reveal the existing viewpoint, the agency would not be aware of whether including a member with a different viewpoint would be beneficial in terms of the public's perception of committee balance.

³⁷GAO-01-536.

In addition, the extent to which a committee member's employment is funded by a grant or grants from the sponsoring agency is a reasonable factor to consider in assessing the member's impartiality in terms of independence from the agency. On this point, the Office of Management and Budget recently highlighted in its proposed rule on peer review procedures that the independence of scientists conducting peer reviews for agencies while at the same time receiving funding from these agencies might be called into question. Similarly, the 2003 report by the National Academies on organizational issues within NIH recommended that a substantial portion of a committee's scientific membership should consist of persons whose primary source of research support is derived from a different NIH center or institute or from outside of NIH in order to achieve sufficient independence from the agency.³⁸ Officials at EPA and FDA told us that they try to avoid appointing to committees members who receive agency grants for work that is related to matters before the committee. In contrast, Energy and NASA officials said it would be difficult for them to find for some committees the scientific and technical experts they need who do not also receive grants from their agencies. We are not suggesting that having grants or contracts with the sponsoring agency should disqualify individuals from serving on federal advisory committees, but rather that agencies should consider the support they provide to potential members since this does present potential issues of independence from the agency.

Agencies generally have even less information to evaluate the viewpoints of their representative members because representatives are not required to complete the form 450. Consequently, agencies generally do not collect information relating to the financial interests of the representative members. Although representatives are not subject to the financial conflict-of-interest rules, their financial interests could affect their viewpoints. An EPA official acknowledged that for some representative committees, it may be important to consider this information, depending on the work of the committees. However, another EPA official expressed a concern that asking representative members—who are not paid for their services—for financial information, such as is obtained from those retained

³⁸National Research Council, Institute of Medicine, the National Academies, *Enhancing the Vitality of the National Institutes of Health: Organizational Change to Meet New Challenges*, 2003.

as special government employees, could have a chilling effect on the willingness of people to serve on advisory committees as representatives.³⁹

Regarding special government employees, we found that although agencies have generally collected forms 450 from these employees, the forms are not always collected in time for them to be of any use in also evaluating the points of view of potential committee members. For example, some agencies, such as NASA and CDC, do not collect the form 450 until the agency has made decisions about appointments. (We recognize that the form 450 was designed to assess for conflicts of interest and that agencies are not required to also use it to assess for points of view; however, as previously discussed, the form nonetheless can provide some valuable information to agencies regarding the viewpoints of an individual.)

Of the nine committees we reviewed, only EPA's Federal Insecticide, Fungicide, and Rodenticide (FIFRA) Scientific Advisory Panel consistently collected information relevant to assessing the points of view of prospective members and considered this information in selecting members for its peer review panels.⁴⁰ Agencies with committees served by special government employees generally collected information from CVs and résumés and on the form 450, which, as discussed above, has limitations in terms of assessing the points of view of committee members. Agencies with representative members either collected only CVs or, in the case of USDA, collected some additional information about sources of income. (See table 1.)

³⁹Special government employees may or may not be paid for their services, depending on the policy of the agency that is sponsoring the committee.

⁴⁰In January 2004, FDA officials said the agency uses a standard form to collect information from potential appointees early in the selection process that provides information similar to what EPA collects. We reviewed the form and its instructions and note that this effort is directed at potential conflicts of interest; it is not clear the extent to which the information is used to balance points of view. Further, FDA officials said they could not provide copies of the forms for the FDA committee we reviewed because the designated federal official had left the agency.

Table 1: Documentation That Agencies Systematically Collected on Potential Members of Selected Committees

Department/Agency	Committee name	Documentation that agencies systematically collected on potential members of selected committees			
		Curriculum vitae or résumé	Conflict-of-interest financial disclosure form		Other data collection instrument
			OGE form 450	Alternative form approved by OGE	
Agriculture/Food Safety and Inspection Service	National Advisory Committee for Microbiological Criteria for Foods ^b	X			USDA form AD-755 ^a
Energy	Biological and Environmental Research Advisory Committee ^b	X			
Environmental Protection Agency	Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel	X		X ^c	Structured telephone interview
Health and Human Services	Secretary's Advisory Committee on Human Research Protection	X	X		
Health and Human Services/Centers for Disease Control and Prevention	Advisory Committee on Childhood Lead Poisoning Prevention	X	X		
Health and Human Services/Food and Drug Administration	Food Advisory Committee	X	X	X ^d	Structured telephone interview ^e
Health and Human Services/National Institutes of Health	Scientific Advisory Committee on Alternative Toxicological Methods	X	X		
Interior/U.S. Geological Survey	Scientific Earthquake Studies Advisory Committee ^b	X			
National Aeronautics and Space Administration	Space Science Advisory Committee	X ^f	X ^f		

Sources: Data collected from agencies' committee management offices, designated federal officials, or other agency officials responsible for nominating members of committees.

^aUSDA requires members of its advisory committees to file a USDA form AD-755. This form requests information on the individual's primary employment, sources of income over \$10,000, and other matters related to the individual's background in agriculture.

^bMembers were appointed as representatives not subject to conflict-of-interest reviews.

^cThe EPA FIFRA Scientific Advisory Panel uses the EPA form 3110-48 in lieu of the OGE form 450. The EPA form requests more detailed information from members about their affiliations and association with the work of the committee.

^dFDA requires members of its Food Advisory Committee to file a form 450 during the appointment process. However, if the Food Advisory Committee, or any other FDA advisory committee, plans to discuss "particular matters" of specific applicability, the agency will require members to file an FDA form 3410 prior to the meeting. The form 3410 requests more specific information about a member's

affiliation with particular companies identified by FDA that might be affected by the committee's deliberations during a specific meeting.

*See footnote 40.

†The designated federal official for the NASA Space Science Advisory Committee requests short biographical sketches from prospective members. Agency officials consider these sketches when deciding whom to appoint. After the agency has decided to appoint an individual, it requests a copy of a curriculum vitae and a completed form 450.

Regarding the EPA FIFRA Scientific Advisory Panel, this advisory committee convenes about six panels annually to address scientific and technical issues. For example, we reviewed one such panel that was (1) evaluating the range of developmental effects associated with the exposure of amphibians to the pesticide atrazine and (2) determining the significance of these effects for risk assessment and the likely threshold exposure value for eliciting these effects. The executive director of this committee said that candidates with known positions or biases generally are not selected for the panels—that is, the agency does not select individuals previously associated with the agency, regulated industries, or stakeholder communities. In addition, the agency generally does not select individuals with a stated position on the particular matter being reviewed. The FIFRA Scientific Advisory Panel defines balanced membership as including the necessary areas of technical expertise, different scientific perspectives within each technical discipline, and the collective breadth of experience needed to address the agency's charge. In order to evaluate potential members, the FIFRA Scientific Advisory Panel uses CVs and the EPA alternative disclosure form that asks committee members to provide information needed to assess impartiality, such as information about compensated expert testimony and sources of research and project funding during the prior 2 years. The form also asks candidates to consider all relevant information over the past 5 years and to identify and describe any reason that they may be unable to provide impartial advice on the matter to be considered by the panel.

The executive secretary of the FIFRA Scientific Advisory Panel told us that EPA's alternative financial disclosure form—developed to address the limitations we identified in our report on EPA's Science Advisory Board—has greatly facilitated their ability to consistently obtain relevant information. The FIFRA Scientific Advisory Panel also asks potential members several standard questions that we identified in our prior report as relevant to assessing impartiality, such as whether they have made any

oral or written public statement on the issue before the panel.⁴¹ As a result of obtaining and reviewing this information in order to select members and ensure appropriate committee balance overall, the FIFRA Scientific Advisory Panel is in a position to make informed choices. By systematically collecting relevant background information on all candidates, the FIFRA Scientific Advisory Panel is in a position to ensure that its panels are balanced in terms of the points of view represented. We also found that FDA often collects similar information on an alternative form that provides some pertinent information for assessing points of view, but the agency does not use this information to assess the overall balance of the committees. That is, FDA generally uses the form 450 in reviewing candidates for appointments to committees and uses the alternative form to review for conflicts of interest for specific meetings that involve particular matters.

In addition, agencies that have collected forms 450 for special government employees for the purpose of conflict-of-interest reviews may not use the information available to them on the forms that—although designed for conflict-of-interest reviews—could also be helpful in evaluating the points of view committee members may have. For example, the Director of the White House Liaison Office at HHS, who developed the committee roster for the Secretary’s Advisory Committee on Human Research Protections that the Secretary of HHS approved, said that she did not review the forms 450 in selecting members.⁴² She viewed the task of reviewing the forms 450 as the purview of the agency ethics officials who would determine whether financial conflicts of interest existed. In response to our questions about whether affiliations with law firms, identified by some members on the forms 450, may be relevant to consider in terms of their points of view, she said that she did not need to know the particulars about the legal work since she did not consider such information relevant to selection decisions. Further, she said that she did not consider particular points of view candidates may have in making selections. For example, we asked her if she considered the point of view of one member who had publicly stated disagreement on religious grounds with certain research that is included in the committee’s charter, and she said she did not. The Director stated that

⁴¹These questions were not added to EPA’s confidential financial disclosure form, the purpose of which is to support reviews for potential financial conflicts of interest.

⁴²This committee replaced a committee established by the prior administration. In this case, HHS did not renew the committee charter when it expired in 2002, instead HHS opted to create a new committee with a revised charter.

she nominated members to the Secretary for his approval primarily on the basis of their expertise and also considering several demographic factors (gender, race, and geographic location) to the extent these additional factors did not impinge on the department's ability to pick qualified members. She noted that these factors reflect the department's written policies and procedures.⁴³

Officials at other agencies said they considered similar factors in balancing the other eight committees we examined. Specifically, officials indicated that they focused on expertise, demographic characteristics, and employment history as factors to assess points of view as it affects balance. (See table 2.) As previously discussed, FACA does not elaborate on how agencies are to ensure that advisory committees are fairly balanced in terms of the expertise and the points of view of the members, nor does it provide criteria for assessing balance.⁴⁴ Thus, agencies have considerable discretion in determining how they will meet the requirement for achieving balanced committees.

⁴³The Director of the White House Liaison at HHS also managed the appointments to another committee we reviewed, the CDC Advisory Committee on Childhood Lead Poisoning Prevention. She recommended 10 new members to the Secretary for appointments made in 2002 and 2003 to replace members with expiring terms.

⁴⁴In its July 19, 2001, final rule on advisory committee management, GSA did provide a list of factors to consider in achieving a balanced advisory committee membership, such as the advisory committee's mission and the geographic, ethnic, social, economic, or scientific impact of the advisory committee's recommendations.

Table 2: Factors Used by Agencies to Balance Selected Committees

Department/Agency	Name of committee	Expertise	Ethnicity	Gender	Geography	Employment sector
Agriculture/Food Safety and Inspection Service	National Advisory Committee on Microbiological Criteria for Foods	X	X	X	X	X
Energy	Biological and Environmental Research Advisory Committee	X	X	X	X	X
Environmental Protection Agency	Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel	X	X	X		
Health and Human Services	Secretary's Advisory Committee on Human Research Protections	X	X	X	X	
Health and Human Services/Centers for Disease Control and Prevention	Advisory Committee on Childhood Lead Poisoning Prevention	X	X	X	X	
Health and Human Services/Food and Drug Administration	Food Advisory Committee	X	X	X	X	X
Health and Human Services/National Institutes of Health	Scientific Advisory Committee on Alternative Toxicological Methods	X	X	X	X	X
Interior/U.S. Geological Survey	Scientific Earthquake Studies Advisory Committee	X		X	X	X
National Aeronautics and Space Administration	Space Science Advisory Committee	X	X	X	X	X

Sources: Information on the criteria considered to balance committees came from designated federal officials, committee management officials, or other agency officials responsible for nominating or appointing members of committees.

In discussing their selection criteria, most officials reported that in selecting members for these science and technical committees, they focused first and foremost on expertise. Some agency officials said that they do not consider a balance of points of view as relevant to science and technical committees, believing that the appropriate focus for such committees is obtaining the appropriate balance of required expertise. We do not disagree that this focus is appropriate, particularly for committees that address scientific and technical issues. While courts have interpreted FACA as giving agencies broad discretion in how to balance their committees, in our view, the integrity of these committees' advice would be better served if agencies were to consider additional information about potential members' points of view. For example, experts in a given field of expertise may have varying scientific perspectives that agencies could consider for balancing the committee. Along these lines, the FIFRA

Scientific Advisory Panel defines balance as including different scientific perspectives within each technical discipline.

Second, the officials most commonly related “points of view” to demographic factors, such as race, gender, or geographic locations—that is, defining a balance of points of view in terms of demographic diversity. While important, these criteria alone do not provide a robust understanding of the points of view and potential biases the members may bring to the committee vis-à-vis the specific matters the committees will address. That is, these approaches may achieve demographic diversity, but they cannot ensure an appropriate balance of viewpoints relative to the matters being considered by the committees. Third, some of the officials also identified the primary employment affiliation as a factor relevant to achieving a balance of points of view. For example, a factor in committee balance for one committee is the breakdown of members employed by universities, private industry, and federal and state agencies. We agree the primary employment affiliation may be an important consideration for a number of committees to ensure a balance of points of view. However, as we illustrated in our work at EPA’s Science Advisory Board, the staff director of the board viewed some academics as aligned either with industry or environmental perspectives and some experts affiliated with industry as representing an environmental perspective on the basis of information about their other affiliations. Additional information about the candidates’ viewpoints and potential biases would better ensure that the committees are, and are perceived as being, fairly balanced in terms of points of view—and that no one interest or viewpoint dominates. Along these lines, NIH officials told us that the information EPA collects to evaluate potential committee members would be very helpful to them in selecting members and ensuring that committees are balanced as a whole.

Finally, we note that other practices agencies use in forming new committees and in selecting replacement members for existing committees can help them better ensure that their committees are appropriately balanced. These include steps agencies take to identify potential candidates and to seek feedback on proposed committee membership. Appendixes III through XI provide information on the nine committees we reviewed, including how the agencies identified candidates and whether they requested public comments on the committee membership. These and other practices are discussed in the next section.

Promising Practices Could Better Ensure Independence and Balance

Some agencies use practices when forming and managing their committees that can better ensure that federal advisory committee members are independent and that committees are balanced. These practices include (1) obtaining nominations for committee members from the public, (2) using clearly defined processes to obtain and review pertinent information on potential members regarding potential conflicts of interest and impartiality, and (3) prescreening prospective members using a structured interview. In our view, these measures constitute promising practices because they reflect the principles of conflict-of-interest provisions and FACA by employing clearly defined procedures to promote systematic, consistent, and transparent efforts to achieve independent and balanced committees. Although these practices for obtaining and reviewing pertinent information to assess for conflicts of interest and impartiality are broadly applicable, some of the practices, such as seeking public comment on proposed committees, are most particularly relevant to those committees addressing sensitive or controversial topics. If more agencies adopted and effectively implemented these practices, we believe they would have greater assurance that their committees are, and are perceived as being, independent and balanced. In addition, we have identified selected measures that could promote greater transparency in the federal advisory committee system.

Obtaining Nominations from the Public

When seeking to appoint members to their federal advisory committees, agencies often use a combination of methods to obtain nominations for potential committee members. Agencies typically rely on relevant program officials in the agency, officials from other agencies, members of professional organizations, and authors of relevant scientific and technical literatures as ways to identify potential committee members. Some agencies also seek nominations from the public by using widely available resources, such as the *Federal Register* and agency Web sites, to broaden the pool of candidates from which committee members may be drawn. The latter approach is a systematic and transparent method of obtaining

nominations and can provide agencies with greater assurance that a range of relevant experts and/or stakeholders capable of creating impartial and balanced committees are identified.⁴⁵

In addition to their other methods of obtaining nominations from colleagues, professional associations, and the like, we believe agencies should also routinely consider obtaining nominations from the public because this practice can both (1) help agencies identify qualified candidates and (2) alleviate any perception that they are choosing from a narrow pool of candidates that may not provide the appropriate expertise and points of view. It may be particularly relevant to solicit nominations from the public for committees that address sensitive or controversial issues. Obtaining nominations from the public may require more time and effort than less formal approaches to identifying committee members and may also involve a publishing cost. However, by actively engaging the public and all interested parties in the process in an open and transparent manner, the agency's credibility may be enhanced.

Using Clearly Defined Processes to Screen for Conflicts of Interest and Points of View

As previously discussed, many agencies do not consistently collect information that could be helpful in determining the viewpoints of potential members and ensuring that committees are, and are perceived as being, balanced. However, the National Academies and EPA have developed clear processes that, if effectively implemented, can provide them with greater assurance that relevant conflicts of interest and biases are identified and addressed, and that committees are appropriately balanced in terms of points of view because they have identified and evaluated the necessary information before committees are finalized.

⁴⁵Some of the committees and agencies that publish *Federal Register* notices seeking nominations include EPA's Science Advisory Board; EPA's FIFRA Scientific Advisory Panel; all committees managed by FDA, such as the Food Advisory Committee; and a number of committees managed by USDA's Food Safety and Inspection Service, such as the National Advisory Committee on Microbiological Criteria for Foods. USDA also sought nominations using an announcement on the agency and advisory committee Web pages and in a weekly newsletter sent to interested organizations and individuals. EPA's Science Advisory Board also uses its Web site as a vehicle for soliciting nominations to its peer review committees.

Specifically, the processes used by the National Academies and EPA's Science Advisory Board clearly and consistently

- identify the information they deem necessary to assess candidates for independence and to balance committees,
- explain to the candidates why the required information is important to protect the integrity of the committee's work,
- request public comment on proposed committee membership, and
- require evaluation of the overall balance of committees before committees are finalized.

Overviews of the processes used by the National Academies and the Science Advisory Board are provided below.

The National Academies

In 2001, we reported that to help balance their committees and safeguard their credibility, the National Academies provide prospective members with a document that offers a succinct, straightforward discussion of what constitutes potential conflicts of interest and biases and explains what information they are required to provide to the National Academies on a standard form.⁴⁶ In 2003, the National Academies updated their procedures covering conflicts of interest and bias, issuing their *Policy on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports*. In explaining the need for obtaining background information about prospective members, the National Academies emphasize that the work of their committees must be, and must be perceived as being, free of any significant conflict of interest⁴⁷ and uncompromised by bias. The National Academies state that allegations of conflict of interest or lack of balance and objectivity can undermine the

⁴⁶GAO-01-536.

⁴⁷Members of committees of the National Academies are not subject to the same conflict-of-interest provisions as are members of FACA committees sponsored by federal agencies. The National Academy of Science is required to make its best effort to ensure that no committee member has a conflict of interest that is relevant to the functions to be performed, unless the conflict is publicly disclosed and the academy determines that it is unavoidable. The academies define a conflict of interest as any financial or other interest that conflicts with the service of an individual because it (1) could impair the individual's objectivity or (2) could create an unfair competitive advantage for any person or organization.

conclusions of fully competent committees. The academies continue to request the following information from potential members on a standard form:⁴⁸

- organizational affiliations,
- financial interests,
- research support,
- government service, and
- public statements and positions.

In addition, prospective committee members are asked to identify and describe any other circumstances in their background or present connections that might reasonably be construed as unduly affecting their judgment or that might be reasonably viewed as creating an actual or potential bias or conflict of interest or the appearance of a bias or conflict of interest. Further, the National Academies post information about panel candidates on a Web site for public comment, allowing the public the opportunity to identify any real or perceived conflicts or biases associated with individual members and the ability to raise issues regarding the balance of viewpoints on the proposed committee. Lastly, the National Academies do not finalize their committee selections until officials have reviewed and evaluated information provided by prospective members and comments received from the public regarding the proposed makeup of the committee. As we previously reported, this process has proven beneficial to the academies in selecting balanced peer review panels.⁴⁹

EPA's Science Advisory Board

EPA's Science Advisory Board staff office has also developed a systematic process to obtain and evaluate the information it needs to assess potential members for potential conflicts of interest and to properly balance the range of expertise and viewpoints on the board. As previously discussed, federal committee members serving as special government employees are

⁴⁸Potential members complete one of three similar forms covering background information and confidential conflict-of-interest disclosure, depending on the type of study involved: program reviews and evaluations, general scientific and technical studies and assistance, and studies related to government regulations.

⁴⁹GAO-01-536.

subject to the criminal financial conflict-of-interest statute. The staff office uses the alternative form that EPA developed, form 3110-48, for special government employees serving on advisory committees to collect information that enables the agency to evaluate potential members for legal conflicts of interest and also helps the agency in assessing for impartiality and points of view. The staff office also contacts prospective panelists and asks them five standard questions to help the office assess the panelists' points of view, such as whether they have made any public statements on the issues that the panels will consider. The staff office uses this information to help ensure that any legal conflicts of interest are identified and appropriately mitigated and to help ensure that committees as a whole are balanced in terms of points of view.

EPA's form 3110-48 explains that the information being requested is needed so that EPA ethics officials can make an informed judgment regarding any conflict of interest or appearance of lack of impartiality. The Science Advisory Board staff office further explains how it uses the information that it collects in its brochure entitled *Overview of the Panel Formation Process at the Environmental Protection Agency Science Advisory Board*. As previously discussed, the information that EPA collects on the form 3110-48 includes sources of income and assets, liabilities, outside positions, consulting activities, sources of research support or project funding, and compensated expert testimony. Further, similar to the National Academies, EPA requests potential members to identify and describe on the form any reason they may be unable to provide impartial advice on matters before the committee and any reason their impartiality in the identified matter might be questioned. The Science Advisory Board staff office also searches independently for background information on prospective members to understand their qualifications and points of view. Also, like the National Academies, EPA uses a public notice process to obtain comments on proposed candidates for its Science Advisory Board. That is, the staff office publishes the names and biographical sketches of candidates for its committees on the board's Web site, requesting the public to provide information, analysis, or documentation that it should consider in evaluating the candidates. The staff office does not finalize their committee selections until officials have reviewed and evaluated the information provided by the candidates, any other information the public may have provided, and information gathered by the staff independently on the background of each prospective member. According to a designated federal official for the board, the public comment period is a last check in the screening process that can identify information about prospective candidates, such as publicly stated positions on matters related to the

committee, that the staff office would want to verify and evaluate prior to making panel selections. He said the staff office has received feedback that the biographical sketches are helpful, and he believes this practice enhances the public's perception of the board's panel formation process.

Prescreening Prospective Members Using a Structured Interview

EPA's FIFRA Scientific Advisory Panel has a committee formation process similar to that of the Science Advisory Board that also identifies the specific information the staff will discuss in interviews with prospective members. Although the purposes of the structured interview include assessing the interest, availability, and expertise of the potential member, a primary focus is on evaluating potential financial conflicts of interest and biases. In addition, the interview provides EPA with the opportunity to explain the ethical obligations of committee members and discuss in detail the information that members would have to provide on the EPA form 3110-48 before they could be appointed to the committee. This process is efficient because it enables the panel to quickly identify those individuals who meet its criteria for independence and impartiality.⁵⁰ Further, prospective members who subsequently complete the form 3110-48 will be better prepared to complete the form accurately. We note that the panel's interview protocol, including the structured interview itself, is available on its Web site. Thus, prospective members and the public are informed of the processes and the issues that will be discussed with all prospective members. The panel's approach to obtaining relevant information from prospective committee members is systematic, consistent, and transparent. Further, we believe it unlikely that agencies formalizing and publicizing their processes for obtaining information from prospective committee members would approve questions that are generally inappropriate in a professional working environment, such as questions about party affiliation or political viewpoints that some committee members at other agencies have reported being asked.

⁵⁰FDA also has a form that agency staff may use to conduct a preliminary interview "to identify obvious conflicts of interest that may preclude appointment." This form is called the Prospective Special Government Employee Personal Data Sheet (Preliminary Informal Interview), form FDA 2725a (July 1992).

Selected Measures Could Promote Greater Transparency in the Federal Advisory Committee System

In light of recent controversies surrounding the perceived politicization of federal advisory committees, we identified several other measures to improve transparency in the federal advisory committee system. Although none of these measures can ensure that committee members are independent and that committees are balanced, we believe each of these alternatives has the potential to increase public understanding of the process of appointing advisory committee members and make more transparent the operations of federal advisory committees.

In the interest of transparency, agencies could make public the following information about each of their advisory committees:

- The committee formation process: how members are identified and screened, and how committees are assessed for balance.
- Whether members are appointed as special government employees and are speaking as independent experts, or whether members are appointed as representatives and speaking as stakeholders.
- Whether committees arrive at decisions through a voting process or by consensus.

There are several contexts in which agencies could make this information available to the public. Specifically, the information could be

- written in the committee's charter;
- posted on the GSA on-line database;
- posted on the agency or committee's Web site;
- announced at committee meetings; or
- identified on committee work products (reports, studies, or recommendations).

It is in the public interest to disclose such basic information about federal advisory committees. Further, we believe that taking such measures to make information about committees available to the public would help educate interested parties about the formation of committees and better enable them to evaluate whether agencies have complied with conflict-of-interest requirements and the FACA requirements for balance. Given

recent well-publicized accusations of biases and conflicts of interest, efforts to improve the transparency of the federal advisory committee system can only serve to inspire greater public trust in the process and enhance the credibility of committees' work.

Along these lines, we have identified two additional measures to promote transparency that may warrant consideration: (1) public disclosure of information concerning conflict-of-interest waivers and (2) internal disclosure of potential conflicts of interest and sources of bias among committee members prior to the initiation of committee work.

Agencies may grant waivers to special government employees who have potential conflicts of interest if the agency determines that either (1) the conflict is insignificant or (2) the need for the member's expertise outweighs the conflict. The financial conflict-of-interest statute requires that agencies provide limited information to the public about waivers upon request; namely, that an agency has granted a waiver and the basis on which it was granted. The statute does not require, however, that agencies proactively notify the public about waivers, either during advisory committee meetings, in meeting minutes, or in committee products. Our review of selected committees found that agencies typically did not disclose this information. In contrast, FDA has had a practice of providing at the beginning of meetings a summary disclosure of any waivers granted to members for that meeting. The disclosure identifies which members have received waivers and whether the waivers were granted on the basis that conflict was insignificant or that the need for the expertise outweighed the potential conflict. Because information about the conflicts pertained to information that members provide to agencies on confidential financial disclosure forms that are protected under the Federal Privacy Act, details about the conflicts were not provided. Thus, the public and others could not evaluate the impact of the conflict on a person's ability to provide impartial advice. In February 2002, as a result of a statutory requirement, FDA issued for public comment a draft guidance document describing its policy of disclosing specific information with respect to waivers granted for particular matters of specific applicability—that is, when members have a direct relationship with the products, interests, and issues under the review of the committee. Under this policy, FDA discloses not only the existence of a waiver but also information on the committee member's

interests that constitute a conflict.⁵¹ To address the constraints imposed by the Federal Privacy Act, FDA requires committee members to sign a consent form giving FDA permission to publicly disclose this information before members receive a waiver. According to FDA officials, committee members have generally been willing to sign the consent forms and to disclose this information. We believe the practice of publicly disclosing the issuance of conflict-of-interest waivers to committee members increases transparency and can also increase the credibility of the committee process by allowing the public to know when a potential conflict exists and why the agency saw fit to grant the member a waiver. Further, the application of this practice could be expanded to include not only particular matters of specific applicability (in which a particular company or individual is likely to be affected by the matter) but also to other particular matters (in which, for example, an industry or group of persons is likely to be affected).

The National Academies have a policy of asking their committees to engage in an internal discussion about members' work experiences, affiliations, and other circumstances that might pose a potential conflict of interest. The academies believe that an internal disclosure of this information promotes transparency and serves to increase the credibility of the committees' work. We agree that a confidential discussion among committee members regarding real or perceived conflicts of interest and biases can provide committee members with important background information that can enable them to better evaluate the perspectives of their fellow committee members. Understandably, extending such a practice to federal advisory committees, and in particular to members appointed as special government employees, raises privacy questions because special government employees are under no obligation to disclose such information to fellow committee members or the public. However, we believe that the possibility of requiring members to disclose background information, affiliations, and other sources of potential conflicts of interest and biases among individual committee members at an internal disclosure session prior to the committee's beginning its work warrants study.

⁵¹According to EPA, the staff office for the Science Advisory Board actively avoids granting waivers, preferring to choose another panelist instead. However, in the event that EPA grants a waiver, the designated federal official discloses that information at the start of meetings. EPA would disclose only the name of the individual and the type of waiver granted—not the details of the conflict.

Conclusions

For federal advisory committees to be successful, the members must be independent and the committees balanced—that is, they must be able to provide, and be perceived as providing, credible and balanced advice. A spectrum of scientists and other experts perceive recent appointments to some science and technical committees as being influenced more by ideology than expertise. Independent of the facts and specific issues involved, this perception alone is problematic. The perception of the federal advisory committee system as politicized can jeopardize the value of an individual committee’s work; discourage the participation of scientists, experts, and other potential members on future advisory committees; and call into question the integrity of the federal advisory committee system itself. Because allegations of conflict of interest and bias can undermine the work of otherwise credible and competent committees and threaten the integrity of the federal advisory committee system, the best interests of the government are served by governmentwide guidance and agency-level policies and procedures for addressing potential conflicts of interest and ensuring that committees are, and are perceived as being, balanced. However, federal guidance in these key areas has limitations that reduce its effectiveness.

First, OGE guidance on representative appointments can be strengthened to better ensure that agencies are appropriately appointing committee members. Unless certain ambiguities in the guidance are clarified, some agencies may continue to appoint members providing advice on behalf of the government as representatives and not conduct reviews of potential conflicts, thereby leaving the specific committees and the federal advisory committee system itself vulnerable to potential criticism if potential conflicts of interest are identified. Clarifications that are needed to ensure that representative appointments are made only when the individuals are, in fact, asked to provide advice representing the positions of the stakeholders they are representing include specifying that representative appointments generally are not appropriate for individuals who are to provide advice on the basis of their expertise. Justifying representative appointments on this basis avoids using the special government employee category, which was specifically created to facilitate the government’s ability to hire various experts for just such a purpose as serving on federal advisory committees. The guidance should also clarify that the use of the term “representative” in a statute or charter may be used in a generic sense and does not necessarily mean the members are to be appointed as representatives who are to provide stakeholder advice. Again, in considering which type of appointment is appropriate, the focus should be

on the nature of the advice to be provided. That is, individuals who are appointed to federal advisory committees to provide advice on behalf of the government (i.e., individuals who are not providing stakeholder advice) should be appointed as special government employees. Finally, one of the first steps agency officials should take in establishing new committees is to determine, in consultations with agency ethics officials, the appropriate appointment category for members. These decisions should be reviewed as committee charters are renewed every 2 years.

Second, GSA could provide guidance that would assist agencies in identifying the kinds of information they should systematically collect in order to determine the viewpoints of prospective committee members for the purpose of ensuring that committees are, and are perceived as being, balanced. Although the type of information relevant to each committee might differ in some respects, more systematic information collection and evaluation can support better, and more informed, committee appointments.

Improving existing federal guidance and agency procedures and incorporating the revised guidance into the FACA management course should enable federal agencies to better ensure that (1) potential conflicts of interest of committee members have been identified and appropriately mitigated upfront and (2) committees are appropriately balanced in terms of points of view and functions to be performed. Along these lines, alternative procedures used to create and manage advisory committees at some federal agencies and the National Academies constitute promising practices that can better ensure independence and balance. Procedures such as obtaining nominations for committee members from the public, reviewing more pertinent information regarding members' points of view, and prescreening prospective members using a structured interview would help agencies establish more systematic and consistent methods of achieving independent and balanced committees. Consistent with FACA's principle of transparency, agencies could also adopt selected measures to make public more information regarding how they form and manage their committees. We believe it is in the best interest of both the public and the government to disclose more information about the formation and operation of the advisory committees—for example, how the members are identified and screened, and whether members are serving as representatives of an identified interest or as special government employees to provide independent advice. In light of recent concerns about biases and conflicts of interest, adopting more clearly defined procedures to screen and appoint committee members and to increase

transparency in the advisory committee process would constitute important steps toward protecting the integrity of the federal advisory committee system and maintaining public confidence in the work of federal advisory committees.

Because this report identifies improvements to guidance and promising management practices that generally apply to all federal agencies that sponsor advisory committees and not just to the nine agencies addressed in this report, we are directing our recommendations to OGE and GSA in their roles as providers of governmentwide guidance on federal ethics and advisory committee management requirements. Our expectation is that all 54 federal agencies that currently sponsor federal advisory committees could benefit from the improved guidance and management practices.

Recommendations for Executive Action

To better ensure that federal agencies correctly and consistently comply with federal requirements when appointing federal advisory committee members, we recommend that the Director of the Office of Government Ethics revise its 1982 guidance to federal agencies defining representative appointments to federal advisory committees. The guidance should

- clarify that classes of expertise generally are not a “recognizable group of persons” for purposes of making representative appointments;
- consistently state that appointments as representatives are limited to circumstances in which the members are speaking as stakeholders for the entities or groups they represent; and
- clarify that the term “representative” in statutes and charters may also be used more generically to identify the appropriate balance of points of view or expertise and may not be specifying that representative appointments be used, and revise the directions on specifying representative appointments to focus on the type of advice representatives are to provide—that is, stakeholder advice.

To ensure that agencies’ appointments to federal advisory committees are appropriate, we further recommend that the Director of the Office of Government Ethics and the GSA Committee Management Secretariat

- direct federal agencies to review their representative appointments to federal advisory committees either as the 2-year charters expire or, for those committees with indefinite charters, within 1 year to determine if

the appointments are appropriate and to reappoint members as special government employees, where appropriate, and

- direct agency committee management officials to consult with agency ethics officials in making decisions about the type of appointments that should be made for each committee.

To better ensure that the agency staff managing federal advisory committees understand when to appoint committee members as representatives and when to appoint them as special government employees, we recommend that GSA and OGE revise the training materials for the FACA management course, incorporating the additional OGE guidance as recommended above, and ensure that the course materials highlight the fact that appointment decisions should be based on the type of advice the committee members are to provide.

To better ensure that federal advisory committee members providing stakeholder advice, and thus serving as representative members exempt from federal financial conflict-of-interest statutes, do not have other unknown points of view or biases, we recommend that OGE and GSA direct agencies to determine, for each relevant committee, the potential for such other biases and to take the appropriate steps to ensure their representative members do not have such biases. At a minimum, representatives should receive ethics training and be asked whether they know of any reason their participation on the committee might reasonably be questioned—for example, because of any personal benefits that could ensue from financial holdings, patents, or other interests.

To better ensure that agencies have robust information to establish committees that are balanced in terms of points of view and the functions to be performed, we recommend that GSA provide guidance to agencies regarding what background information might be relevant in assessing committee members' points of view. Relevant information for these purposes could include previous or ongoing research, public statements or positions on the matter being reviewed, the interest of the employer or clients in the matter, participation in legal proceedings, and work for affected entities. In addition, potential committee members should be asked if there is any reason they might be unable to provide impartial advice on the matter or matters before the committee, or if they know of any reason their impartiality on the matter or matters might be questioned.

To better ensure that the committee members, agency and congressional officials, and the public understand the nature of the advice provided by federal advisory committees, we recommend that GSA issue guidance that agencies should

- identify the committee formation process used for each committee, particularly how members are identified and screened and how committees are assessed for overall balance;
- state in the appointment letters to committee members whether they are appointed as special government employees or representatives; in cases where appointments are as representatives, the letters should further identify the entity or group that they are to represent;
- identify each member's appointment category on the GSA FACA database; for representative members, the entity or group represented should also be identified; and
- state in the committee products the nature of the advice provided—that is, whether the product is based on independent advice or consensus among the various identified interests or stakeholders.

Agency Comments and Our Evaluation

We provided copies of a draft of this report to the two agencies, GSA and OGE, to whom we address our recommendations to provide additional guidance to federal agencies, and to the agencies whose advisory committee management policies and procedures we reviewed: EPA; Energy; HHS (with copies to CDC, FDA, and NIH); Interior; NASA; and USDA.

In commenting on the draft report, GSA agreed with the findings relating to those areas under its purview. Further, GSA generally agreed with our recommendations to OGE and GSA and outlined a proactive approach to addressing those that pertain to GSA, including making changes to its on-line FACA database, and to working with OGE on those that pertain to OGE's responsibilities. GSA stated that it expects to complete all necessary actions directly under its purview and those to be achieved collaboratively with OGE and other agencies during fiscal year 2005. GSA's comments are provided in appendix XII.

In its comments, OGE acknowledged that some agencies may be inappropriately using representative appointments. Further, in responding

to our finding that several agencies believe representatives may be appointed to represent their fields of expertise, OGE agrees with us that such appointments are inappropriate—but does not agree that any limitations in its guidance are a factor in the misuse of representative appointments. Instead, OGE believes some agencies may be purposely designating their committee members as representatives to avoid subjecting them to the financial disclosure statements required for special government employees—that is, agencies understand the guidance and are simply disregarding it. Thus, OGE disagrees with us that its guidance should directly address this apparent misinterpretation of its guidance by clarifying, for example, that classes of expertise are not a “recognizable group of persons” for purposes of making representative appointments. OGE states that its 1982 guidance accurately represents a decades old, executive branch interpretation of the definition of special government employees, and that our report does not provide adequate support for a recommendation that the guidance be modified. We disagree. Unless OGE clarifies the issues our report has identified, progress will likely continue to be slow or nonexistent—remembering that the 1982 guidance itself was developed to address uncertainties regarding the appropriate uses of representative and special government employee appointments. We believe that clearer guidance would make it more difficult for agencies to misapply the guidance. Further, unambiguous guidance would better assist agency staff managing committees and better support oversight by agency ethics officials, OGE, and others, such as inspectors general and GAO. In addition, OGE’s response that clarifications are not needed does not acknowledge the views of other federal agencies, presented in the draft report, that OGE guidance is ambiguous in some respects. For example, EPA and NASA officials stated that having clear criteria for representative appointments would be helpful to agencies. In addition, we note that Interior states in its comments to us on the report that “GAO’s generalization that representation of fields of expertise is not appropriate ignores the importance of such representation to some committees.” On the basis of this statement, we do not believe Interior appreciates that expert advice can be appropriately obtained by the appointment of special government employees. In addition, NASA’s and Energy’s comments on the report also support the appointment of representatives to represent fields of expertise. We believe these statements illustrate the need for clarifications to OGE guidance on representative and special government employee appointments to federal advisory committees. Finally, in our view, if agencies are continuing to make inappropriate appointments decades after criteria and guidance were developed, it is not unreasonable

to take another look at the guidance. OGE's comments and our evaluation of them are discussed in more detail in appendix XIII.

In commenting on the draft, officials from EPA and USDA agreed with the substance of the report, providing only technical comments that we incorporated into the draft as appropriate. USDA indicated that the report is a helpful and comprehensive review of issues that can be used as a resource for agencies that rely on the advice of federal advisory committees.

HHS provided consolidated written comments (including its component agencies CDC, FDA, and NIH). HHS said the report will be useful in evaluating current practices for appointing members to serve on federal advisory committees and also noted that the report provides a number of interesting ideas for determining balance in points of view and ensuring transparency in the committee process. HHS said that it finds the report's recommendations of great value and indicated that NIH has volunteered to work with GSA to assist them in implementing the recommendations. At the same time, HHS expressed its belief that members of scientific advisory committees should be selected because of their expertise, background, and personal experience, rather than through a "process seeking out some indefinable range of personal opinion"—characterizing points of view as both undefinable and open to misinterpretation. However, the draft and final reports do not espouse a "process seeking out some indefinable range of personal opinion" but rather identify processes that include an evaluation of potential members' points of view *relevant to the subject matters advisory committees will consider* while focusing on the relevant expertise needed. The examples of agency processes provided in the report include targeted evaluations of points of view by asking potential members a few questions, such as whether they have made public statements or taken public positions on the issue or matters the committee will consider. They also ask potential members to identify and describe any reason they may be unable to provide impartial advice on matters before the committee and any reason their impartiality in the identified matter might be questioned. In our view, agencies that do not proactively and transparently address the relevant points of view of prospective committee members regarding the matters the committees will consider are more likely to be subject to questions about committee balance from the public and potential users of the committees' products than those agencies that use such processes. We continue to believe that the credibility of advisory committees, in particular those that address sensitive and controversial issues, depends in part upon agencies' ability to

identify and balance points of view held by members and prospective members that are relevant to the work of the committee. HHS's comments and our evaluation of them are discussed in more detail in appendix XIV.

In written comments, Interior agreed with much in the report and indicated that it contains many useful recommendations that can be used to enhance the successful use of advisory committees. Interior identified one overarching concern with the draft report, however. That is, Interior said our report gave the incorrect impression that FACA requires individuals on committees to be free of conflicts of interest, noting that FACA requires that committees, rather than individuals, not be inappropriately influenced by the appointing authority or any special interest. The draft and final reports acknowledge this FACA requirement in the background section. However, the draft and final reports also explicitly state that our focus was on (1) the requirements regarding individual conflicts of interest that are included in federal conflict-of-interest statutes and (2) the FACA requirement for committee balance. Further, in the introduction, we state that "federal advisory committee members who are employees of the federal government must meet federal requirements pertaining to freedom from conflicts of interest—which we refer to in this report as independence—and committees as a whole must meet the requirements pertaining to balance." We further highlight the key provisions of the federal conflict-of-interest statutes that must be complied with unless granted a waiver in one section of the report and the FACA requirements for balance in another. Interior's comments and our evaluation of them are discussed in more detail in appendix XV.

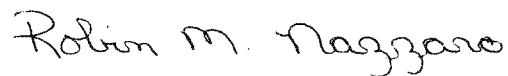

In commenting on the draft report, NASA said that our conclusion that agencies could benefit from additional guidance to better ensure independence, balance, and transparency is sound. However, NASA supports the appointment of federal advisory committee members as representatives of their fields of expertise on the basis that some experts would not be able to serve as special government employees due to financial conflicts of interest. We believe this perspective provides additional support for our view that OGE needs to provide additional guidance on the appropriate use of representative appointments, including clarifying that fields of expertise generally are not a recognizable group of persons for purposes of making representative appointments. NASA's comments and our evaluation of them are discussed in more detail in appendix XVI.

In commenting on the draft report, Energy's Office of Science expressed its concern that we were recommending a "one-size-fits-all" approach that would diminish the effectiveness of the office's advisory committees. In addition, the office said that our interpretation of the term "representative" is unpersuasive and would be an unsound basis of guidance for the department. We do not believe that we are recommending a "one-size-fits-all" approach to advisory committee management. We recognize that there are many types of committees that serve different functions. Nevertheless, we believe that there are certain requirements in FACA and the conflict-of-interest statutes that must be met by all committees. With regard to the suggestions we made for selecting committee members, we note that they were described as "promising practices" that could be useful to agencies. They were not recommendations. As for the term "representative," we continue to believe that our interpretation of the OGE guidance is correct and that our interpretation is supported by OGE's comments on our draft report. In particular, we believe that it is inappropriate for agencies to appoint members as "representatives" of a field of expertise, as Energy's Office of Science indicates it will continue to do. Energy's comments and our evaluation of them are discussed in more detail in appendix XVII.

As agreed with your offices, unless you publicly announce the contents of this report earlier, we will plan no further distribution until 30 days from the report date. At that time, we will send copies of this report to other interested congressional committees; the Secretaries of Agriculture, Energy, Health and Human Services, and the Interior; the Administrators of the U.S. Environmental Protection Agency, the General Services Administration, and the National Aeronautics and Space Administration; and the Director of the Office of Government Ethics. We will make copies

available to others upon request. In addition, the report will be available at no charge on GAO's Web site at <http://www.gao.gov>.

If you or your staff have any questions, please call me at (202) 512-3841. Key contributors to this report are listed in appendix XVIII.

A handwritten signature in black ink that reads "Robin M. Nazzaro". The script is cursive and fluid, with the first letters of each word being capitalized and prominent.

and Environment

Objectives, Scope, and Methodology

This report (1) describes the role of federal advisory committees in the development of national policies; (2) examines the extent to which governmentwide and agency-specific policies and procedures for evaluating committee members for conflicts of interest and points of view ensure independent and balanced federal advisory committees; and (3) identifies practices that could better ensure that committees are, and are perceived as being, independent and balanced.

To describe the role of federal advisory committees in the development of national policies, we reviewed committee charters, reports, and Web pages available through the General Services Administration's (GSA) on-line Federal Advisory Committee Act (FACA) database. We discussed the FACA database with the GSA staff that developed and maintain the database. Our discussion included issues such as data entry access, quality control procedures, and the accuracy and completeness of the data. We determined that the data on the overall universe of advisory committees were reliable for the purposes of this report, including describing the variety of issues the committees address.

To examine the extent to which current policies and procedures for evaluating committee members for conflicts of interest and points of view ensure independent and balanced federal advisory committees, we reviewed the relevant policies and procedures at six federal departments and agencies that make extensive use of federal advisory committees—the Departments of Agriculture (USDA), Energy, Health and Human Services (HHS), and the Interior; the National Aeronautics and Space Administration (NASA); and the Environmental Protection Agency (EPA). These agencies were among the 11 that used the most science and technical committees in 2003.¹ Because HHS entities manage 26 percent of all federal advisory committees and 36 percent of the scientific and technical committees, we also reviewed the policies and procedures at three HHS entities that sponsor many federal advisory committees—the Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), and the National Institutes of Health (NIH). We reviewed the policies and procedures used by these nine departments and agencies to manage federal advisory committees. These policies, in some cases, address appointments of committee members as special government employees or representatives and address how agencies identify, screen,

¹In fiscal year 2003, the six agencies we reviewed sponsored 477 of 948 active federal advisory committees. They sponsored 126 of the 208 scientific and technical committees.

and appoint members so as to ensure that they are free of conflicts of interest and that the committees are balanced. We interviewed committee management officials, designated federal officials, and agency staff on committee management issues.

Further, to better understand how the agencies implement their policies and procedures as well as the Office of Government Ethics's (OGE) and GSA's governmentwide regulations and guidance, we examined the management of one committee at each of the nine departments and agencies. We selected a nonprobability sample² of nine committees that address scientific and technical issues using the following criteria: selected committees had to examine issues that are national in scope and scientifically complex, could have regulatory implications, and/or could be potentially controversial either because of the issues that they address or because the committee had been the subject of allegations regarding membership. For these nine committees, we reviewed the confidential financial disclosure forms of the committee members appointed as special government employees and discussed with staff how the committees used this information with respect to conflict-of-interest and/or balance determinations. To learn more about how agencies screen individuals for membership, we also examined other materials that agencies collected about them, such as their curricula vitae (CV) and résumés. The focus of our review was on the adequacy of federal policies and procedures to ensure independence and balance, and we did not make any judgments on whether conflicts of interest existed or whether the committees we examined were properly balanced. The way in which the agencies managed these particular committees cannot be generalized to represent the way in which the agencies manage all of their committees.

To determine if conflict-of-interest evaluations were performed as required by OGE guidance, we reviewed the relevant guidance and discussed with agency officials their use of representative and special government employee appointments. The purpose of the discussions was to determine whether the representative appointments were appropriately used because representative members are not required to undergo conflict-of-interest reviews. For the three departments that used representative appointments almost exclusively, we identified the committees the agencies categorize as

²Results from nonprobability samples cannot be used to make inferences about a population. This is because, in a nonprobability sample, some elements of the population being studied have no chance or an unknown chance of being selected as part of the sample.

addressing scientific and technical matters for which advice on behalf of the government on the basis of best judgment is often sought, rather than stakeholder advice. For the individual committees selected for review at each agency (described above), we examined the committee statutes and charters and interviewed agency officials to determine whether the representative members were asked to provide stakeholder or nonstakeholder advice.

To determine if agencies collect sufficient information to assess the points of view of its committee members appointed as special government employees, we assessed whether agencies systematically collected background information on committee members in addition to the OGE form 450 used to evaluate for potential financial conflicts of interest and CVs or résumés. We identified other information that is helpful in assessing points of view and thus to ensuring that the committees achieve a proper balance of viewpoints.

Further, in examining the extent to which the regulations and guidance on evaluating committee members for conflicts of interest and impartiality ensure independent and balanced federal advisory committees, we reviewed the OGE regulations and guidance to federal agencies regarding federal conflict-of-interest provisions and GSA regulations and guidance to federal agencies regarding FACA. We interviewed OGE staff who are responsible for auditing agencies' ethics programs and who assist agencies in resolving conflict-of-interest issues. These staff members also address issues related to the appointment of special government employees and representative members to federal advisory committees. We interviewed the director and other officials from GSA's Committee Management Secretariat to learn about FACA requirements, GSA regulations, and other GSA guidance documents designed to assist agencies in managing their committees. We also discussed with GSA officials how agencies use the GSA FACA database to provide information to the public about committee membership and activities.

To identify practices that could better ensure that committees are, and are perceived as being, independent and balanced, we examined the relevant policies and procedures of the National Academies;³ the nine committees and agencies examined in this review; and EPA's Science Advisory Board, which had implemented a number of relevant changes to its policies and procedures in response to our June 2001 report.⁴

We conducted our review from January 2003 through March 2004 in accordance with generally accepted government auditing standards.

³The National Academies consist of four private, nonprofit organizations that advise the federal government on scientific and technical matters: the National Academy of Sciences, the National Academy of Engineering, the Institute of Medicine, and the National Research Council.

Federal Advisory Committees, by Authorizing Mechanism and Type, in Fiscal Year 2003

This appendix provides information on the ways that advisory committees have been authorized, the functional categories of the committees as reported by agencies to GSA, and the number of federal advisory committee members.

Presidents, the Congress, and federal agencies can create federal advisory committees. As shown in table 3, most of the federal advisory committees operating in fiscal year 2003 were required or authorized by the Congress, some were created by the agencies, while the fewest committees were created by presidential directives.

Table 3: Authorizing Mechanism for Active Federal Advisory Committees in Fiscal Year 2003

Authorizing mechanism	Number of committees
Required or authorized by the Congress	
Required by the Congress via statute	421
Specifically authorized by statute but created at the discretion of an agency	213
Subtotal	634
Created by an agency under general statutory authority	271
Presidential directive	43
Total	948

Source: GSA FACA database.

Sponsoring agencies broadly classify their advisory committees according to the types of issues they address, using one of the following seven general categories defined in GSA’s federal advisory committee database: scientific and technical program, nonscientific program, national policy issue, grant review, grant review-special emphasis panel,¹ regulatory negotiation, and “other.” According to GSA’s fiscal year 2003 database (see table 4), 208 of the 948 active committees were categorized as scientific and technical committees. However, in addition to these, committees in other categories also address scientific and technical issues, particularly the grant review committees. There were 131 grant review committees with over 41,000

¹HHS uses the term “special emphasis panel” for some of its grant review panels at NIH. Of the 29 special emphasis panels in fiscal year 2003, NIH sponsored 24 panels.

members in 2003. Further, some committees placed in the national policy, regulatory negotiation, and “other” categories also address scientific and technical issues.

Table 4: Active Federal Advisory Committees, by Type, in Fiscal Year 2003

Type of committee	Number of committees	Number of members
Grant review	102	22,517
Grant review – special emphasis panel ^a	29	19,226
National policy issue advisory board	152	3,834
Nonscientific program advisory board	298	5,470
Other	152	3,323
Regulatory negotiation	7	217
Scientific and technical program advisory board	208	7,910
Total	948	62,497

Source: GSA FACA database.

^aNIH defines a special emphasis panel as a committee that functions both as an initial review group performing the scientific and technical peer review of applications and cooperative agreement applications and as reviewers of contract proposals and concept reviews. The membership is fluid, and individuals are designated to serve for only the meeting they are requested to attend.

The committees in fiscal year 2003 had more than 62,000 members, the majority of whom were members of grant review and special emphasis panels.² Overall, federal advisory committees range in size from under 10 members to over 9,000, with an average of about 48 members.³ The committees classified as scientific and technical had 7,910 members and an

²Although these panels may have several hundred members and may hold dozens or more meetings in a year, the members do not all attend all of the panels’ meetings. Instead, each member might be called upon to attend one meeting per year to review a narrowly focused set of grant proposals. This practice is in contrast to the practice of other categories of committees in which the members are invited to attend each of a generally small number of meetings held each year.

³This average was calculated after subtracting the 6 largest committees, including HHS’s Center for Scientific Review Special Emphasis Panel, which in fiscal year 2003 maintained a roster of 9,080 members and held over 1,100 meetings. Five other advisory committees had over 1,000 members. If those committees are counted, the average size of the committees is about 66 members.

average committee membership size of about 22 members.⁴ Federal advisory committee members come from a wide range of professional backgrounds and include scientists, medical doctors and other health care professionals, academics, lawyers, engineers, corporate executives, state and local government officials, members of nongovernmental organizations, community activists, and representatives from the public at large, among others. Some members are federal employees, often from agencies other than the sponsoring agency.

⁴This average was calculated after subtracting the membership of the 2 largest science committees, both sponsored by the Department of Transportation—RTCA, Inc. (with 2,718 members) and the Intelligent Transportation Society of America (with 570 members).

Information on the Department of Agriculture's National Advisory Committee on Microbiological Criteria for Foods

This appendix contains information about the National Advisory Committee on Microbiological Criteria for Foods. Although this committee is cosponsored by USDA, HHS, and the Departments of Defense and Commerce, USDA is responsible for the overall management of the committee. Within USDA, the Food Safety and Inspection Service (FSIS) manages this committee, and the Secretary of Agriculture appoints the members.

Purpose of the committee: According to its charter, the purpose of the committee is to provide impartial, scientific advice to federal food safety agencies for use in the development of an integrated national food safety systems approach from farm to final consumption to ensure the safety of domestic, imported, and exported foods.

Number of members: 29 (see table 5).

Type of appointment: Representative.

Conflict-of-interest reviews: The members are appointed as representatives and are not required to file OGE financial disclosure forms for USDA review for potential conflicts of interest. USDA does, however, require all committee members to submit a USDA form AD-755, which is to provide information about members' current employment and sources of income greater than \$10,000 in the last calendar year, other than their primary employment.

Conflict-of-interest waivers: Not applicable.

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: According to FSIS officials, the agency solicits nominations through notices in the *Federal Register*, FSIS Constituent Updates (an electronic newsletter sent to over 300 organizations and individuals), the FSIS Web site, and press releases. Officials said these notices serve to reach interested parties and stakeholders—that is, persons from state and federal governments, industry, consumer groups, and academia.

Criteria used to balance the committee: According to FSIS officials, the most important factor used to balance the committee is the expertise identified in the charter: microbiology, risk assessment, epidemiology, public health, food science, and other relevant disciplines. Membership is

Appendix III
Information on the Department of
Agriculture's National Advisory Committee
on Microbiological Criteria for Foods

also balanced in terms of points of view by the approximately equal proportions of members appointed from government, industry, and academia. Committee staff also tries to balance committee membership in terms of demographic indicators, such as ethnicity and gender, as well as in terms of geographical distribution.

External feedback on proposed committee membership: None sought.

Table 5: Roster of the National Advisory Committee on Microbiological Criteria for Foods with the Primary Employers and Areas of Expertise as of December 2003

Committee member	Primary employer	Areas of expertise
Academic institutions		
Dr. Larry Beuchat	University of Georgia, Center for Food Safety and Quality Enhancement	Food science
Dr. Catherine Donnelly	University of Vermont, Department of Nutrition and Food Science	Food microbiology and <i>Listeria</i>
Dr. Stephanie Doores	Pennsylvania State University, Department of Food Science	Food science, especially dairy science
Dr. Lee-Ann Jaykus	North Carolina State University	Microbiology and microbial risk assessment
Dr. Carol Maddox	University of Illinois, College of Veterinary Medicine	Veterinary microbiology
Dr. Eli Perencevich	University of Maryland School of Medicine	Public Health
Dr. John Sofos	Colorado State University, Department of Animal Science	Microbiology and <i>E. coli</i>
Companies or industry-affiliated organizations

Ms. Angela Ruple	U.S. Department of Commerce National Seafood Inspection Laboratory	Food science and microbiology
Dr. Donald Zink	U.S. Department of Health and Human Services, Food and Drug Administration	Food microbiology, food science, food safety, infectious diseases, and epidemiology

Source: USDA.

^aCODEX: Codex Alimentarius Commission. The Codex Alimentarius Commission was created in 1963 by the Food and Agriculture Organization (FAO) and the World Health Organization (WHO) of the United Nations to develop food standards, guidelines, and related texts, such as codes of practice under the Joint FAO/WHO Food Standards Program. The main purposes of this program are protecting the health of consumers and ensuring fair trade practices in the food trade and promoting coordination of all food standards work undertaken by international governmental and nongovernmental organizations.

^bHACCP: Hazard Analysis and Critical Control Point. HACCP is a systematic program for preventing hazards that could cause foodborne illnesses by applying science-based controls from raw material to finished products. The program was first developed for the space program and currently is being adopted by FDA and USDA.

Information on the Department of Energy's Biological and Environmental Research Advisory Committee

This appendix contains information about the Biological and Environmental Research Advisory Committee, which is managed by Energy staff in the Office of Biological and Environmental Research. The members are appointed by the Secretary of Energy.

Purpose of the committee: The advisory committee reviews and makes recommendations on Energy's biological and environmental research program, addressing issues such as genomics, the health effects of low-dose radiation, DNA sequencing, medical sciences, environmental remediation, and climate change research. In addition to reviewing scientific issues, the committee provides advice on long-range plans and priorities and the appropriate levels of funding.

Number of members: 23 (see table 6).

Type of appointment: Representative.

Conflict-of-interest reviews: Because the members are appointed as representatives, they are not required to file OGE financial disclosure forms for Energy review for potential conflicts of interest.

Conflict-of-interest waivers: Not applicable.

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: According to the committee's designated federal official, the department received nominations from agency staff in the Office of Science.

Criteria used to balance the committee: According to the committee's designated federal official, the primary criterion used to balance the committee is expertise. He also considers gender, ethnicity, and geography and tries to achieve a balance of representatives from industry, academia, and the national laboratories.

External feedback on proposed committee membership: None sought.

Information on the Environmental Protection Agency's Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel

This appendix contains information about the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Scientific Advisory Panel. The committee is managed by EPA staff, and the members are appointed by the Deputy Administrator of EPA.

Purpose of the committee: The FIFRA Scientific Advisory Panel provides advice, information, and recommendations on pesticides and pesticide-related issues regarding the impact of regulatory actions on health and the environment of regulatory actions. The objectives include providing advice and recommendations on (1) scientific studies and issues in the form of a peer review, (2) methods to ensure that pesticides do not cause “unreasonable adverse effects on the environment,” and (3) guidelines to improve the effectiveness and quality of scientific testing and of data submitted to EPA.

Number of members: There are 7 permanent members on the standing committee (see table 7). These members are appointed for 4-year terms and serve on a number of individual peer review panels. The FIFRA Scientific Advisory Panel establishes between 5 and 7 peer review panels each year to address a variety of specific topics.¹ These committees are comprised of permanent members and ad hoc expert consultants. Meeting panels typically consist of approximately 15 members.

Type of appointment: Special government employees.

Conflict-of-interest reviews: As special government employees, committee members are required to file financial disclosure forms. As discussed in this report, the EPA form 3110-48, an OGE-approved alternative disclosure form, is used. In addition, as also is discussed in this report, FIFRA staff interview potential candidates using a structured interview format to assess the interest, availability, and appropriateness of candidates to serve on individual committees. The structured interview includes a discussion of financial conflicts of interest (statutory conflicts and appearance problems), impartiality, and a review of the information that is requested on the form 3110-48.

Conflict-of-interest waivers: No waivers have been granted to current members.

¹In this review, we examined the FIFRA Scientific Advisory Panel on atrazine (see table 8).

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: The Federal Insecticide, Fungicide, and Rodenticide Act of 1977 requires the EPA Deputy Administrator to select the 7 members of the standing Scientific Advisory Panel from nominees provided by NIH and the National Science Foundation. The committee's management also routinely solicits nominations for ad hoc expert consultants on the agency's Web site and through notices in the *Federal Register*.

Criteria used to balance the committee: Technical expertise is the primary criterion used to balance the FIFRA Scientific Advisory Panel committees. The FIFRA Scientific Advisory Panel defines balanced membership as including the necessary areas of technical expertise, different scientific perspectives within each technical discipline, and the collective breadth of experience needed to address the agency's charge.

External feedback on proposed committee membership: As required by statute, the advisory committee's management posts the names, professional affiliations, and selected biographical data of nominees proposed for appointment as permanent members in the *Federal Register* and on its Web site for public comment, providing instructions on how to submit comments regarding the nominees. Unlike the standing committee, nominees considered for temporary service at particular meetings are not subject to public comment prior to their appointment.

^a*Xenopus laevis* is a species of frog that, along with the mouse, rat, fruit fly, and other species of animals and plants, serves as a model organism for biomedical research.

Information on the Department of Health and Human Services's Advisory Committee on Human Research Protections

This appendix contains information about the Secretary's Advisory Committee on Human Research Protections. The committee replaced the National Human Research Protections Advisory Committee, established in 2000, whose charter HHS did not renew when it expired in 2002.¹ HHS officials chose to revise the charter of the initial committee primarily by adding populations potentially affected by human research protections, appointing new members to provide advice to the Secretary. The committee is sponsored and generally managed by the Office of Public Health Service, but the members are appointed by the HHS Secretary.² The nominating and selection processes in 2002 and 2003 were managed by the HHS Office of White House Liaison.

Purpose of the committee: According to its charter, the committee is to advise the HHS Secretary and the Assistant Secretary for Health on matters pertaining to the continuance and improvement of functions within the authority of HHS directed toward protections for human subjects in research. Specifically, the committee is to provide advice relating to the responsible conduct of research involving human subjects with particular emphasis on

- special populations, such as neonates and children, prisoners, and the decisionally impaired;
- pregnant women, embryos, and fetuses;
- individuals and populations in international studies;
- populations in which there are individually identifiable samples, data, or information; and
- investigator conflicts of interest.

In addition, the committee is responsible for reviewing selected ongoing work and planned activities of the Office of Human Research Protections

¹As noted in this report, FACA requires that advisory committee charters expire at the end of 2 years unless renewed by the agency.

²HHS and its components, such as CDC, FDA, and NIH, had 247 federal advisory committees in fiscal year 2003. While the heads of the various component agencies generally appoint committee members, according to the Director of the Office of the White House Liaison, the HHS Secretary appoints the members to about 30 percent of the committees.

and other offices/agencies within HHS that are responsible for human subjects protection. These evaluations may include but are not limited to a review of assurance systems, the application of minimal research risk standards, the granting of waivers, education programs sponsored by the Office of Human Research Protections, and the ongoing monitoring and oversight of institutional review boards and the institutions that sponsor research.

Number of members: 11 (see table 9).

Type of appointment: Special government employees.

Conflict-of-interest reviews: As special government employees, committee members are required to file OGE financial disclosure forms for HHS's review for potential conflicts of interest. These forms were reviewed by the cognizant committee management officer who consulted with the designated federal official and the Office of General Counsel ethics division. In June 2003, after the members had been appointed to the committee, the committee management officer identified some potential conflicts of interest stemming from investments that she and the Office of General Counsel believed required mitigation, such as waivers. She also requested that the designated federal official determine whether other potential conflicts required waivers if the appointed members work for institutions involved in research activities/studies/projects that may impact human research protections.

Conflict-of-interest waivers: Waivers were not issued before the committee's first meeting in July 2003. The nine waivers granted were finalized on January 16, 2004.

Disclosure of waivers to the public: HHS policies and procedures do not address the disclosure of waivers to the public. HHS does not proactively disclose the issuance of waivers to the public at committee meetings.

Steps taken to gather nominations for the committee: According to the Director of the Office of White House Liaison, she asked a couple of individuals at the Association of American Medical Colleges for nominations for this committee. The Director said that an Office of Public Health Service staff member familiar with the previous committee also assisted in identifying nominees from the previous slate to serve on the new committee. In addition, she said that HHS received self-nominations

Appendix VI
Information on the Department of Health and
Human Services's Advisory Committee on
Human Research Protections

and also used names from NIH's database, particularly the group that was solicited for the Secretary's Advisory Committee on Genetics, Health, and Society.

Criteria used to balance the committee: According to the agency official responsible for nominating members for the committee, the factors she considered in balancing the committee were expertise along with geographic, gender, and racial diversity. After HHS announced the committee membership in January 2003, the National Organization for Rare Disorders and some members of the predecessor advisory committee expressed concern that the regulated research industry was overrepresented and that there were no consumer or patient advocates on the committee. A week later, HHS added a member with a background in patient advocacy.

External feedback on proposed committee membership: None sought.

Information on the Centers for Disease Control and Prevention's Advisory Committee on Childhood Lead Poisoning Prevention

This appendix contains information about the Advisory Committee on Childhood Lead Poisoning Prevention. The committee is sponsored and generally managed by CDC, but the members are appointed by the HHS Secretary.¹ The nominating and selection processes in 2002 and 2003 were managed by the HHS Office of White House Liaison.

Purpose of the committee: The Advisory Committee on Childhood Lead Poisoning Prevention provides advice and guidance to the Secretary; the Assistant Secretary for Health; and the CDC Director, regarding new scientific knowledge and technological developments and their practical implications for childhood lead poisoning prevention efforts. The committee also reviews and reports on childhood lead poisoning prevention practices and recommends improvements in national childhood lead poisoning prevention efforts.

Number of members: 12 (see table 10).

Type of appointment: Special government employees.

Conflict-of-interest reviews: As special government employees, committee members are required to file OGE financial disclosure forms for HHS and CDC review for potential conflicts of interest. CDC's designated federal official, a conflict-of-interest specialist in the CDC's Committee Management Office, and the director of CDC's Management Analysis and Services Office reviewed the completed forms for the current members of the committee.

Conflict-of-interest waivers: None granted to current members.

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: According to the Director of the Office of White House Liaison and the designated federal official for the committee, nominations were generally solicited informally, such as during conversations. According to the Director, HHS received nominations from the Dean of the St. Francis Hospital in Tulsa, Oklahoma; the Chancellor of Columbia University; Senator Thad Cochran; and the Deputy Secretary's office. They also used the Internet to search for

¹See appendix 6, footnote 2.

Appendix VII
Information on the Centers for Disease
Control and Prevention's Advisory
Committee on Childhood Lead Poisoning
Prevention

candidates associated with successful lead poison reduction programs in large cities.

Criteria used to balance the committee: According to the Office of White House Liaison, the department and agency worked to find potential appointees and balance the committee on the basis of expertise as well as gender, ethnicity, and geography to the extent these additional factors did not impinge on the department's ability to pick qualified members.

External feedback on proposed committee membership: None sought.

Information on the Food and Drug Administration's Food Advisory Committee

This appendix provides information about the Food Advisory Committee. The committee is managed by FDA. The members are appointed by FDA's Associate Commissioner for External Relations.

Purpose of the committee: The committee is to provide advice to the Director, Center for Food Safety and Applied Nutrition, and to the Commissioner of Food and Drugs and other appropriate officials as needed, on emerging food safety, food science, nutrition, and other food-related health issues that FDA considers of primary importance for its food and cosmetics programs. The committee may be charged with reviewing and evaluating available data and making recommendations on matters such as those relating to the following: broad scientific and technical food- or cosmetic-related issues, the safety of new foods and food ingredients, the labeling of foods and cosmetics, nutrient needs and nutritional adequacy, and safe exposure limits for food contaminants. The committee may also be asked to provide advice and make recommendations on ways of communicating to the public the potential risks associated with these issues and on approaches that might be considered for addressing the issues.

Number of members: 25 (see table 11).

Type of appointment: With the exception of nonvoting industry representatives, all committee members are special government employees.

Conflict-of-interest reviews: As special government employees, committee members are required to file the OGE confidential financial disclosure form 450. Members are required to update this form annually. In addition, for meetings that involve particular matters of general or specific applicability, members also complete an FDA form 3410, which requires them to report interests directly related to the topic of discussion. The designated federal official does an initial screening and officials from FDA's Ethics and Integrity Branch clear the members for conflicts of interest.

Conflict-of-interest waivers: During the last year, waivers were granted seven times for members to participate in specific meetings. FDA granted the waivers on the basis that the need for these individuals' expertise outweighed the potential conflicts of interest.

Disclosure of waivers to the public: The type of waiver and the names of members who have received waivers for particular meetings are read into the record by the designated federal officer at the beginning of the public meeting. Public disclosure of the substance of waivers issued is only required in cases where the meetings deal with particular matters of specific applicability. When such waivers are issued, the members who receive them are asked to sign a consent document authorizing FDA to provide a description of the nature and the magnitude of the financial interests being waived for the public record.

Steps taken to gather nominations for the committee: FDA solicits nominations through notices in the *Federal Register*. According to the committee's designated federal official and an agency document identifying the sources of the nominations, the agency obtained nominations from (1) FDA and HHS officials; (2) interest groups and trade associations and other interested parties, including the American Society for Nutritional Services, the Center for Science in the Public Interest, the Association of Food and Drug Officials, and officials at the Center for Health Policy at the University of Oklahoma and the Massachusetts Institute of Technology; and (3) individuals who nominated themselves in response to the *Federal Register* notice.

Criteria used to balance the committee: Committee managers reported the following five criteria used to achieve balance: (1) scientific expertise representing a range of scientific interpretation; (2) demographic characteristics, including geographic distribution, gender, and ethnicity; (3) differing levels of experience on advisory committees; (4) stakeholder representation (e.g., consumers, industry, and academicians); and (5) membership on advisory committees that is used to help ensure that the agency has balance by not repeatedly appointing a limited set of people either for a particular committee or for various committees the agency has on related topics. Temporary voting members may be added to enhance balance.

External feedback on proposed committee membership: None sought.

Information on the National Institutes of Health's Scientific Advisory Committee on Alternative Toxicological Methods

This appendix contains information about the Scientific Advisory Committee on Alternative Toxicological Methods, which is sponsored and managed by NIH. Members are appointed by the Director of the National Institute of Environmental Health Sciences.

Purpose of the committee: The committee provides advice to the Director of the National Institute of Environmental Health Sciences (NIEHS); the Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM); and the National Toxicology Program Center regarding statutorily mandated functions, including

- reviewing and evaluating new; revised; or alternative test methods, including batteries of tests and test screens that may be acceptable for specific regulatory uses;
- facilitating appropriate interagency and international harmonization of acute or chronic toxicological test protocols that encourage the reduction, refinement, or replacement of animal test methods;
- facilitating and providing guidance on the development of validation criteria; validation studies; and processes for new, revised, or alternative test methods and helping to facilitate the acceptance of such scientifically valid test methods and awareness of accepted test methods by federal agencies and other stakeholders; and
- submitting ICCVAM test recommendations for the test methods reviewed by ICCVAM, through expeditious transmittal by the HHS Secretary (or the designee of the Secretary), to each appropriate federal agency, along with the identification of specific agency guidelines; recommendations; or regulations for test methods, including batteries of tests and test screens, for chemicals or a class of chemicals within a regulatory framework that may be appropriate for scientific improvement, while seeking to reduce, refine, or replace animal test methods.

The committee also provides advice to the Director of the NIEHS and the National Toxicology Program Center on activities and directives relating to the National Toxicology Program Center, such as on priorities and opportunities for alternative test methods that may provide improved prediction of adverse health effects compared with currently used methods or advantages in terms of reduced expense and time, reduced animal use, and reduced animal pain and distress.

Number of members: 15 (see table 12).

Type of appointment: Special government employees.

Conflict-of-interest reviews: As special government employees, committee members are required to file OGE financial disclosure forms for review for potential conflicts of interest. The NIH committee management officer performed a first-level review of the financial disclosure forms, followed by a second-level review by the designated federal officer. The NIH's Deputy Ethics Counselor performed the final review.

Conflict-of-interest waivers: Fourteen of 15 members received waivers because NIH determined that the need for their expertise outweighed the potential conflicts. One of the 15 members received a waiver because the conflict was deemed not significant.

Disclosure of waivers to the public: According to the designated federal officer, the issuance of waivers to committee members was not disclosed to the public. For example, the waivers were not discussed at any committee meetings. According to the NIH committee management officer, the agency sends its waivers to the HHS Ethics Counsels assigned to NIH, who then sends them to OGE.

Steps taken to gather nominations for the committee: The Director of the Environmental Toxicology Program, NIEHS, asked the members of the ICCVAM for nominations to the advisory committee and also asked for nominations from former members and ad hoc advisors of the committee. The Director also requested nominations from two stakeholder groups that regularly attend committee meetings, the Doris Day Animal League and the People for the Ethical Treatment of Animals.

Criteria used to balance the committee: According to the committee management officer and the designated federal officer, the legislation that created the committee gives direction regarding membership that focuses on expertise and work affiliations, and NIH uses these factors to achieve committee balance. Specifically, the legislation calls for members to come from an academic institution; a state government agency; an international regulatory body; or any corporation developing or marketing new, revised, or alternative test methodologies, including contract laboratories. The legislation also specifies that there shall be at least one knowledgeable representative having a history of expertise, development, or evaluation of new, revised, or alternative test methods from each of the following

categories: (1) personal care, pharmaceutical, industrial chemicals, or agricultural industry; (2) any other industry that is regulated by one of the federal agencies on ICCVAM; and (3) a national animal protection organization established under section 501(c)(3) of the Internal Revenue Code of 1986. The committee management officer also told us that NIH considered ethnicity, gender, and geography in balancing the committee membership.

External feedback on proposed committee membership: None sought.

Information on the Department of the Interior's U.S. Geological Survey's Scientific Earthquake Studies Advisory Committee

This appendix provides information about the Scientific Earthquake Studies Advisory Committee. The committee is managed by the U.S. Geological Survey (USGS), and members are appointed by the Secretary of the Interior.

Purpose of the committee: The advisory committee was established under the Earthquake Hazards Reduction Authorization Act of 2000 (Pub. L. No. 106-503, Title II) to advise the Director of USGS on matters relating to the USGS's participation in the National Earthquake Hazards Reduction Program, a multiagency strategic program to reduce risks to lives and property resulting from earthquakes. The committee is to provide advice on the USGS Earthquake Hazards Reduction Program's roles, goals, and objectives; capabilities and research needs; guidance on achieving major objectives; and establishing and measuring performance goals.

Number of members: 9 (see table 13).

Type of appointment: Representative.

Conflict-of-interest reviews: In 2001, the committee members were appointed as representatives and were not required to file OGE financial disclosure forms for Interior review for potential conflicts of interest. In January 2004, Interior reevaluated the appointments and determined that the members should be appointed as special government employees. Interior said that the committee would not conduct further meetings until the appointments had been changed.

Conflict-of-interest waivers: Not applicable in 2001.

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: The Earthquake Hazards Reduction Authorization Act of 2000 requires the Director of USGS to obtain nominations from the National Academy of Sciences, professional societies, and other appropriate organizations. The Director obtained nominations from the academy, the Geological Society of America, the Seismological Society of America, the American Society of Civil Engineers, the American Institute of Professional Geologists, the American Geophysical Union, and the Earthquake Engineering Research Institute.

Appendix X
Information on the Department of the
Interior's U.S. Geological Survey's Scientific
Earthquake Studies Advisory Committee

Criteria used to balance the committee: According to the statute that established the advisory committee, the selection of individuals for the committee is to be based solely on established records of distinguished service and the USGS Director is required to ensure that “a reasonable cross-section of views and expertise is represented.” According to the designated federal official, the primary factor for selection was expertise in fields such as geology, seismology, engineering, and public safety. In addition, according to department officials, the agency also considered gender, geography, and employment sector.

External feedback on proposed committee membership: USGS sought feedback from the National Academies on its slate of proposed members.

Table 13: Roster of the Scientific Earthquake Studies Advisory Committee with the Primary Employers and Areas of Expertise as of December 2003

Information on the National Aeronautics and Space Administration's Space Science Advisory Committee

This appendix provides information about the Space Science Advisory Committee. The committee is managed by the Office of Space Science, and members are appointed by NASA's Associate Administrator for Space Science.

Purpose of the committee: The NASA Space Science Advisory Committee is to draw on the expertise of its members and other sources to provide advice and make recommendations to the Administrator of NASA on plans, policies, programs, and other matters pertinent to the agency's space science responsibilities.

Number of members: 17 (see table 14).

Type of appointment: Special government employees.

Conflict-of-interest reviews: NASA uses the OGE form 450 to collect financial information from committee members. The forms are collected and reviewed after the Associate Administrator has concurred with the appointment decisions. The forms 450 are reviewed and approved by the committee's designated federal official and the Office of General Counsel. On the basis of these reviews, the Office of General Counsel sometimes sends cautionary letters to members indicating that they may need to recuse themselves if the committees address matters that relate to their financial interests.

Conflict-of-interest waivers: No current members have waivers.¹

Disclosure of waivers to the public: Not applicable.

Steps taken to gather nominations for the committee: According to the committee's designated federal official, NASA gathered nominations from staff within the agency's Office of Space Science.

Criteria used to balance the committee: The committee's designated federal official told us said that in addition to considering the nominees' areas of expertise relative to the four themes of the Office of Space Science, he also considers their gender, ethnicity, geography, and institutional affiliation.

¹According to an ethics official in NASA's Office of General Counsel, NASA issues very few (five or fewer) waivers each year.

Comments from the General Services Administration

GSA Administrator

March 24, 2004

The Honorable David M. Walker
Comptroller General
United States General
Accounting Office
Washington, DC 20548

Dear Mr. Walker:

Enclosed are comments on the draft report entitled "Federal Advisory Committees: Additional Guidance Could Help Agencies Better Ensure Independence and Balance."

GSA agrees that additional guidance and best practices suggestions relating overall to the Federal advisory committee appointment and membership processes could help agencies to ensure that committees are perceived to be independent and have fairly balanced membership. The General Services Administration (GSA) remains committed to these key policy goals of the Federal Advisory Committee Act (FACA) and believes that they should be implemented consistently across the executive branch. GSA also believes that such guidance should be of sufficient detail and clarity to ensure the utmost compliance with FACA and other related or impacted statutes and regulations. GSA is in general accord with the findings in the draft report relating to those areas directly under the purview of GSA.

We are committed to our strong partnership with the Office of Government Ethics (OGE) to address both those areas under OGE's jurisdiction relating to FACA and the appointment and membership processes that are under the decision making authority of individual agencies. GSA will consult frequently with OGE and executive agencies in developing enhanced guidance that will achieve not only the best solutions, but also reflect the consensus of agencies that sponsor a wide variety of advisory committees.

GSA is taking a proactive approach, to include changes to its shared FACA Database management and reporting system, and some activities already are underway. The enclosed comments indicate our overall plan in the major areas of continuing dialogue with

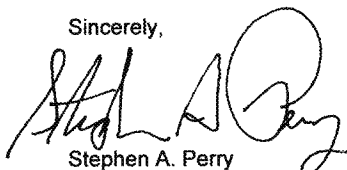

U.S. General Services Administration
1800 F Street, NW
Washington, DC 20405-0002
Telephone: (202) 501-0800
Fax: (202) 219-1243
www.gsa.gov

- 2 -

OGE, incorporating changes to current interagency training, issuing more detailed guidance to enhance data collection, and improving the agency consultation process with GSA in the establishment of new discretionary Federal advisory committees.

Thank you for the opportunity to comment on the draft report.

Sincerely,

Stephen A. Perry
Administrator

Enclosure

Comments of the General Services Administration on
The General Accounting Office's Draft Report, "Federal Advisory Committees:
Additional Guidance Could Help Agencies Better Ensure Independence and Balance"
(GAO-04-328)

Overall GAO Recommendation

GAO is recommending that OGE and GSA provide additional guidance to federal agencies with regards to clarifying the appropriate use of representative appointments; systematically obtaining relevant information to ensure committees are, and are perceived as, balanced; and adopting some promising practices and measures that would better ensure independence and balance and make the formation and operation of advisory committees more transparent.

General GSA Comments

As addressed in the report, because Federal advisory committees are established to advise executive agencies on significant issues and play an important role in the development of Federal policies, their membership should be perceived as being free from conflicts of interest and be fairly balanced in terms of the points of view represented and the functions to be performed. Prior to issuing any new guidance, to include best practices suggestions, GSA intends to consult specifically with the Office of Government Ethics (OGE), and executive branch departments and agencies generally, as substantial parts of these processes reside in the area of OGE's regulatory and interpretive jurisdiction, or are within the purview of each individual agency's decisionmaking authority with respect to membership selection and appointments. GSA's ongoing partnership with OGE extends both to ensuring that GSA's Governmentwide issuances relating to the Federal Advisory Committee Act (FACA) are consistent with all statutes and regulations for which OGE is responsible, and also to the use of OGE staff in the delivery of the ethics and conflicts of interest portions of GSA's interagency FACA management training.

Additional comments are provided below relating to specific actions that already are underway or planned to address the findings upon which the GAO's recommendations are based. Several of these actions were discussed in general with GAO's staff during the course of its review, to include proposed changes to GSA's shared FACA Database management and reporting system. We expect to complete all necessary actions directly under the purview of GSA and those achieved collaboratively with OGE and other agencies during fiscal year 2005.

- 2 -

GAO Finding

Additional government-wide guidance could help agencies better ensure the independence and balance of federal advisory committees.

GSA Comments

GSA generally agrees that additional guidance and best practices suggestions relating overall to the Federal advisory committee appointment and membership processes could help agencies to ensure that committees are perceived to be independent and free from conflicts of interest, and that committee membership, as contemplated by FACA, will be fairly balanced.

GAO Finding

Also, to be effective, advisory committees must be, and be perceived as being, fairly balanced in terms of points of view and functions to be performed. However, GSA's guidance on advisory committee management does not address what types of information could be helpful to agencies in assessing the points of view of potential committee members to make decisions about committee balance.

GSA Comments

GSA proposes to provide additional guidance within the format of a comprehensive template describing the various factors for, and illustrating the various components of what, in GSA's opinion, would comprise a plan for fairly balanced membership consistent with FACA. Secretariat staff work on this template was begun during the course of this GAO review, with baseline information already obtained from selected FACA Committee Management Officers (CMOs) on their agencies' current plans.

GAO Finding

Consequently, many agencies do not identify and systematically collect and evaluate information pertinent to determining the points of view of potential committee members, such as previous public positions or statements on matters being reviewed.

- 3 -

GSA Comments

GSA believes that a collaborative approach, sponsored by the Committee Management Secretariat among CMOs in the form of a focus subgroup under the ambit of GSA's standing Interagency Committee on Federal Advisory Committee Management (IAC), would address this issue best initially. It is the Secretariat's opinion that current practices should be shared first, so that all agencies are aware of what options exist that might improve a given agency's membership selection and appointment process, and what new initiatives are feasible and pertinent to a particular agency, given the existing wide variety of types of advisory committees. This effort is planned for discussion at the next scheduled IAC meeting.

Specific GAO Recommendations for GSA Action Contained in the Draft Report

(The Director of OGE and) the GSA Committee Management Secretariat (should) direct federal agencies to review their representative appointments to federal advisory committees either as the 2-year charters expire or, for those committees with indefinite charters, within one year to determine if the appointments are appropriate, and to reappoint members as special government employees, where appropriate, and direct agency committee management officials to consult with agency ethics officials in making decisions about the type of appointments that should be made for each committee.

GSA Comments

GSA proposes to address this both in consultation with OGE and in the Secretariat's proposed IAC subgroup. We believe this collaboration will best define the specific method and process by which the executive branch may address this procedure most effectively on a Governmentwide basis, consistent with the specific authorities and responsibilities of OGE, GSA, and individual executive agencies. Further, GSA believes, based on its current guidance and from information provided in its interagency training, that a firm basis already exists for enhancing consultations between CMOs and Designated Agency Ethics Officials (DAEOs).

We recommend that GSA (and OGE) revise the training materials for the FACA management course, incorporating the additional OGE guidance as recommended above...

- 4 -

GSA Comments

GSA agrees in principle, but if any revisions are to be made in the ethics and conflicts of interest portions, GSA would do so following consultation with OGE. Any appropriate revisions would reflect the decisions made by OGE.

We recommend that (OGE and) GSA direct agencies to determine, for each relevant committee, the potential for such other biases and take appropriate steps to ensure their representative members do not have such biases.

GSA Comments

GSA believes that addressing this recommendation initially is principally within the purview of OGE, and intends to consult further with OGE accordingly.

We recommend that GSA provide guidance to agencies regarding what background information might be relevant in assessing committee members' points of view.

GSA Comments

GSA intends to provide additional guidance in several ways.

- (1) GSA will coordinate with OGE staff that delivers the ethics and conflicts of interest portions of GSA's interagency FACA management training course. The appropriate content revisions will be made pursuant to OGE's decisions with respect to the recommendations contained in the final version of this GAO report that relate to the subject matter of the course under OGE's regulatory and interpretive jurisdiction. We also expect to obtain with OGE, the necessary input of the affected executive branch agencies under whose purview rests decisionmaking authority for individual membership selection and appointments.
- (2) GSA intends to issue, as an adjunct to its formal guidelines on Federal advisory committee management, at 41 CFR Part 102-3, a suggested best practice guideline in the form of a comprehensive template describing the various factors for, and illustrating the various components of what, in GSA's opinion, would comprise a plan for fairly balanced membership consistent with FACA. Such template likely will include all suggested and recommended factors deriving from the experience of executive agencies, to include agency program needs, the technical qualifications and expertise of individuals, stakeholder, organizational, and interested party viewpoints, congressional and public concerns,

- 5 -

demographic and diversity factors as appropriate, and others. Such template would be used by agencies to address the fair balance requirement in FACA for an advisory committee's membership that is under the discretion of an agency and not otherwise determined by statute or Presidential directive.

- (3) GSA, through its Committee Management Secretariat staff, intends to review and discuss with selected individual CMOs, their respective agency practices in the areas of membership identification, solicitation, nomination, and selection, and how their agencies interact in this process with both specific stakeholders and the public at large. Best practices will be shared within the FACA management community through the IAC, which is comprised of all executive agency CMOs.

We recommend that GSA issue guidance that agencies should identify the committee (membership) formation process for each committee...; state in the appointment letters to committee members whether they are appointed as special government employees (SGEs) or representatives (and the latter's organizations)...; identify each member's appointment category in the GSA FACA Database...; (and) state in the committee products the nature of the advice provided (independent or consensus)...

GSA Comments

GSA believes that addressing these several discreet recommendations initially will require further consultation on its part with OGE and the affected executive agencies, and will so do accordingly. GSA does propose at this time to modify its shared FACA Database management and reporting system by the addition of a single field to the Members Table to identify each member's current appointment category (SGE or Representative Member). Also, the system has the capability of incorporating additional membership specificity and appointment information with certain fields and displays, and additional linkages to information posted by individual agencies on the Internet. Furthermore, the Committee Management Secretariat will review its current on-line consultation process for the establishment of new discretionary Federal advisory committees to determine what enhancements may be made to the ability of CMOs to upload certain information to the FACA Database contemporaneously for public view.

Comments from the Office of Government Ethics

Note: GAO comments supplementing those in the report text appear at the end of this appendix.

March 17, 2004

Robin M. Nazzaro
Director
Natural Resources and Environment
United States General Accounting Office
Washington, DC 20548

Dear Ms. Nazzaro:

Thank you for the opportunity to comment on the General Accounting Office (GAO) proposed report, Federal Advisory Committees: Additional Guidance Could Help Agencies Better Ensure Independence and Balance (GAO-04-328). The Office of Government Ethics (OGE) shares the concern expressed in the report that members of Federal advisory committees follow all applicable ethical requirements under Federal law. We therefore welcome the contribution made by the proposed report to efforts that OGE is making in this area.

As you know, OGE recently undertook its own "single-issue review" of Federal advisory committee management, which was completed in November 2002. Based on information gathered in that review, we agree with the conclusion of the proposed report that officials in some agencies may be misidentifying certain advisory committee members as "representatives," as opposed to special Government employees (SGEs). OGE believes that it is crucial that agencies correctly apply the criteria for distinguishing between SGEs, who are generally subject to financial disclosure and other ethical requirements applicable to Federal employees, and representatives, who are not Federal employees at all and therefore are not subject to Federal ethics requirements. As described in more detail in section B below, OGE has already undertaken a number of measures to address this issue, such as training, legal guidance, and new guidelines for OGE reviews of agency ethics programs. In addition, OGE has and continues to work with the General Services Administration (GSA) in close coordination and partnership on a variety of matters that concern Federal advisory committees.

OGE does not agree, however, with GAO's conclusion that the problems identified in the proposed report are attributable to inadequacies in the legal guidance provided by OGE with respect to the distinction between SGEs and representatives. As we explain in

United States Office of Government Ethics • 1201 New York Avenue, NW., Suite 500, Washington, DC 20005-3917

See comment 1.

Ms. Robin M. Nazzaro
Page 2

See comment 1.

section A below, OGE's guidance accurately represents a longstanding executive branch interpretation of the definition of SGE in 18 U.S.C. § 202. Moreover, with respect to GAO's three specific recommendations, OGE does not believe that the proposed report fully describes OGE's guidance or the reasonable inferences that agency officials can fairly draw from this guidance. Indeed, the proposed report itself contains suggestions that the problems experienced at some agencies may be attributable to factors other than a misunderstanding of OGE's guidance.

A. GAO Recommendations Regarding the Adequacy of OGE Guidance

See comment 2.

At the outset, it is important to emphasize that most of the statements in OGE Informal Advisory Opinion 82 x 22 to which GAO takes exception did not originate in the OGE memorandum itself. Rather, as 82 x 22 makes clear, the basic criteria for distinguishing between SGEs and representatives are reproduced verbatim from a memorandum issued by President Kennedy in 1963, shortly after enactment of the legislation creating the SGE category. This Presidential memorandum, which was drafted by the Office of Legal Counsel at the Department of Justice, has long been accorded great weight "as a contemporaneous interpretation of the conflict of interest laws by the Department charged with construing them." 2 Op. O.L.C. 151, 155 n.3 (1978). For over 40 years, the criteria derived from this memorandum have provided guidance to the executive branch in the interpretation of the definition of SGE, and any recommendation to alter the content of that advice bears a significant burden of persuasion, which we do not think is met by the proposed report.

1. Recognizable Group of Persons

GAO's first objection is that the language of the guidance is "overly broad" in indicating that an individual may be considered a representative, as opposed to an SGE, if the individual speaks for a "recognizable group of persons." The proposed report concludes that this language has led some agency officials to believe that this language permits the appointment of non-SGEs "to represent various technical fields, such as biology and toxicology."

See comment 3.

We do not believe that any reasonable interpretation of the phrase "recognizable group of persons" would include "field of expertise." It is simply not logical to say that a field or area of expertise is a "group of persons." Moreover, any such interpretation would require taking a single phrase out of a larger textual context that makes abundantly clear that the thrust is that

Ms. Robin M. Nazzaro
Page 3

representatives are appointed to speak in a representative capacity for organizations and groups that have a stake in a matter.¹ There is little evidence in the proposed report that any agencies who may have incorrectly appointed experts as representatives did so on the basis of a legitimate interpretation of a particular phrase in 82 x 22. Indeed, the proposed report itself contains evidence that some agencies may not be engaging at all in the analysis described in 82 x 22. The proposed report states that the agencies appointed members as representatives based on longstanding practice and agency culture, without any policies identifying criteria for distinguishing between representatives and SGEs. It is hard therefore to understand how such practices themselves are derived from a misunderstanding or misapplication of the criteria. Furthermore, the report specifically indicated that a recent OGE report on the same subject expressed concern that certain agencies "may be purposely designating their committee members as representatives to avoid subjecting them to the financial disclosure statements required for special government employees." This suggests a possible basis for improper designations other than misunderstanding of the criteria described in 82 x 22.

2. Ambiguity of "Represent" and its Cognate Forms

The proposed report also states that 82 x 22 "implies that when the term 'representative' is used in authorizing legislation, or other such documents, that members should be classified as representatives, despite the fact that this term may be used for more generic purposes, such as to direct the balance of a committee." The proposed report states that, contrary to this purported implication in the OGE guidance, "the use of some form of the terms represent or representative in these documents does not always clearly indicate that the members are to be appointed to serve as representatives."

OGE's guidance does not imply that any use of the word "represent" or its cognate forms in a statute or other document means that the members of the committee are not SGEs. To the contrary, 82 x 22 provides specific examples of documents using such terms and concludes that the given committees nevertheless are comprised of SGEs. The OGE guidance discusses one particular committee document that used the term "represent" in a generic sense to describe the required technical expertise for membership,

¹GAO itself has relied on the same phrase, without apparent misunderstanding. See Decision of the Comptroller General, B-192734 (1978).

Ms. Robin M. Nazzaro
Page 4

and OGE expressly concluded that the members of this committee were to be treated as SGEs, "[w]hatever the degree of contradiction produced by the use of 'represent'" (BRAC committee). Memorandum 82 x 22 also includes an example of legislation referring to points of view "represented" on a particular committee and nevertheless concludes that this committee was comprised of SGEs (FPUPAC committee). Yet another example in 82 x 22 concerns a statute that made the members of a particular committee "representatives of their practicing colleagues," and OGE still concluded that these members were SGEs (NPSRC committee). Finally, 82 x 22 discusses the language of the Federal Advisory Committee Act (FACA) itself and states that the statutory phrase "points of view represented" in FACA "asserts a standard of fairness but is short of being a command that every advisory committee must consist of individuals who represent the interests of persons or entities outside the Government." Far from implying that the use of "represent" or "representative" automatically rules out SGE status, 82 x 22 makes clear that careful attention to all relevant factors is required in order to determine whether the committee members are actually intended to serve as representatives of interest groups.

3. Effect of Recommendation by Outside Organization

The proposed report takes issue with the statement in 82x 22 that "[t]he fact that an individual is appointed by an agency to an advisory committee upon the recommendation of an outside group or organization tends to support the conclusion that he has a representative function." According to GAO, "this guidance does not take into account a common practice that agencies use to identify potential committee members and overemphasizes the weight agencies may give to this factor when determining what constitutes a representative appointment."

OGE does not understand how the statement that outside recommendation "tends to support" the conclusion of representative status can be taken as "overemphasizing" this factor. Indeed, the intentionally moderate phrase "tends to support" would seem to indicate just the opposite. If this factor were intended to be determinative, the guidance would have said so expressly, as it does in the case of two other factors listed. The outside recommendation factor is just one of several enumerated items that must be considered in light of the totality of the circumstances, and we believe nothing in 82 x 22 fairly suggests otherwise.

In sum, while OGE may agree that some agencies are not adequately performing the analysis required by 82 x 22, we do not believe that any such problems reasonably can be attributed to the

See comment 5.

Ms. Robin M. Nazzaro
Page 5

See comment 6.

language used in 82 x 22 and the other official documents that have contained the same criteria ever since the 1962 SGE legislation was first implemented. As discussed below, we agree that measures may be undertaken -- and indeed some already have been undertaken -- to address this matter. We do not believe, however, that the measures should include interference with a set of criteria that represent a contemporaneous construction of a criminal statute that has guided the executive branch for over four decades.

B. OGE Efforts to Address the Issue

See comment 7.

OGE has devoted considerable attention to educating ethics officials and other individuals involved in FACA management on issues related to special Government employees (SGEs) and representatives. While some of OGE's continuing efforts in this area involve collaborative efforts with GSA, OGE has pursued other initiatives to strengthen ethics awareness about this important issue. What follows is a short description of some of OGE's training, awareness, and auditing efforts:

1. Improved OGE Program Audit Guidelines

See comment 8.

As the proposed report notes, OGE formally issued new audit guidelines in 2003 that provided for additional focus and review of advisory committee appointment designations. In particular, these guidelines were immediately implemented and provided for additional focus and inquiry by OGE's agency program reviewers on whether individuals who serve as members of committees, councils, boards, commissions, or other groups were properly being designated as SGEs or representatives. After these guidelines were implemented, at least one of our program reviews in 2003 included a specific recommendation that the agency reassess the status of employees and members serving on one of its advisory committees.

2. Continuing GSA Support and Coordination:

See comment 9.

In September 2003, OGE submitted substantial comments on a proposed GSA template for improving the process of establishing Federal advisory committees in the executive branch. This proposed template, to be provided to executive branch agencies and other offices involved in the formation of advisory committees contained suggested language for legislation creating advisory committees. Some of the comments that OGE made to the template were specifically focused on handling the preliminary determination of whether an advisory committee member will be serving as an employee or non-employee representative. Once completed, the template will better enable executive branch agencies and other persons or

Ms. Robin M. Nazzaro
Page 6

entities involved in establishing Federal advisory committees to appropriately consider member status issues when creating these committees. The template is still in a draft form and OGE will continue to work with GSA on preparing the final template.

3. GSA FACA Training Support

The proposed report states that changes should be made to the training materials used at GSA's FACA Management Training Course to address concerns about the overall adequacy of OGE guidance on the SGE/representative designation issue. The course provides 20 pages of written materials on ethics, including five pages devoted to issues involving the status of members serving on these committees. For the reasons noted above, we believe the suggested changes to the text arise from an unreasonable interpretation of OGE guidance. Much of the guidance for distinguishing between SGE's and representatives comes from a Presidential memorandum that was issued shortly after enactment of the legislation creating the SGE category. Because much of the course material dealing with the SGE/representative distinction comes from that memorandum, we would not support any changes that would be inconsistent with the weight of that contemporaneous interpretation of the SGE category.

Nevertheless, OGE will continue to work with GSA to modify these materials to make clearer for attendees the SGE/representative distinction. In addition, OGE instructors at the course will continue to ensure that the content of these course materials dealing with this issue are fully discussed with course attendees.

4. OGE Ethics Conferences

Almost every year since 1996, OGE has presented a session on FACA issues at its annual ethics conference. For example, a session at the 2003 conference was principally devoted to "designation" issues involving Federal advisory committees. The session discussed recent reviews conducted by both OGE and GAO involving the management of Federal advisory committees at several agencies and some of the issues raised by those reviews. In particular, during the conference panel session, the Department of Veterans Affairs (VA) Committee Management Officer discussed his agency's process for designating advisory committee members within the VA.

See comment 10.

See comment 11.

Ms. Robin M. Nazzaro
Page 7

5. Additional SGE Guidance and Training Materials

See comment 12.

Since publishing OGE informal advisory opinion 82 x 22, OGE has issued other advisory opinions that have discussed SGE and/or representative status (e.g., 87 x 12, 88 x 16, 90 x 5, 90 x 22, 92 x 25, 93 x 14, 93 x 30 & 95 x 8). Most recently, in February 2000 OGE issued a summary regarding "Conflict of Interest and the Special Government Employee," which was subsequently issued as OGE Informal Advisory Opinion 00 x 01. A substantial portion of this summary is dedicated to explaining the concept of what is an SGE, and distinguishing SGE's from non-employees such as representatives and independent contractors. Ethics officials were asked to disseminate the summary to other components within their organizations (such as regional offices) who they thought might encounter questions pertaining to SGEs.

6. Continuing Review

See comment 13.

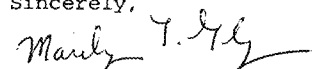

Finally, many of the issues regarding SGE/representative designations can be better addressed when Federal advisory committees are being created. In this regard, OGE monitors and comments on proposals to create advisory committees to ensure that SGE/Representative designation issues are fully considered.

Conclusion

Thank you again for the opportunity to comment on the proposed report. As noted above, OGE recognizes the importance of correctly applying the criteria for distinguishing between advisory committee members who are serving as SGEs and members who are serving as representatives, and has devoted considerable attention to this issue. We therefore welcome your contribution to our continued efforts in this area.

If you need any further assistance regarding any particular item discussed in this letter, please contact OGE Associate General Counsel Vincent Salamone or OGE Associate General Counsel Richard Thomas. Their telephone number is 202-482-9300.

Sincerely,

Marilyn L. Glynn
Acting Director

The following are GAO's comments on the Office of Government Ethics letter dated March 17, 2004.

GAO Comments

1. We continue to believe that OGE's ongoing efforts to encourage agencies to evaluate whether appointments should be made as special government employees or representatives would prove more effective if clear, unambiguous guidance addressing the limitations we identified were available to agency staff.

The draft and final reports present the OGE guidance as a factor in some agencies' inappropriately appointing some members as representatives and acknowledge OGE's concern that some agencies may be doing so to avoid the conflict-of-interest reviews. Unless OGE clarifies the limitations in the guidance identified in our report, we believe progress in moving agencies toward appropriate appointments will likely continue to be slow or nonexistent—remembering that the 1982 guidance was issued because of confusion over the proper use of representative appointments. Unambiguous guidance would help all agencies implement it; would support more effective oversight by ethics officials, including OGE, and by Inspectors General; and would make it more difficult for any agency to misapply the guidance and misidentify certain advisory committee members as “representatives.”

2. The clarifications we identified do not change the criteria but rather amplify them to address areas where continued confusion or misuse has occurred. The 1982 guidance was developed to address uncertainties regarding when agencies should appoint individuals as either special government employees or representatives. In our view, the findings in our report indicate that additional clarifications are warranted. Along these lines, we note that when OGE's staff determined in 2002 that some agencies use only representative appointments, they suggested that additional training materials may be appropriate. The staff suggested a communication to agency ethics officials to assist them in making the determination for their committee members. Our draft and final reports recommend revisions to the guidance and the training materials.
3. Given that agencies are appointing representatives to represent their individual fields of expertise and that OGE agrees this use of representative appointments is not appropriate, we believe OGE should revise its guidance to clarify that such appointments generally are not

appropriate. (We note that an exception would be if a committee were considering an issue that would impact a particular group, for example, physicists or biologists—a case in which a group of experts would be stakeholders in the matter being considered.) Instead, OGE’s response is to state that it is not logical to say that a field or area of expertise is a “group of persons” and to disagree that clarification to its guidance may be warranted to eliminate this practice. It is possible, as OGE suggests, that some agencies understand the guidance and are simply disregarding it. However, we believe ambiguities in the OGE guidance may provide agencies with some “cover” to support their interpretations. In such cases, clear guidance would make it more difficult for them to continue to misapply it. In addition, we direct OGE’s attention to the responses to this report from Interior, NASA, and Energy (see apps. XV, XVI, and XVII), which suggest that clarifications to the guidance regarding the appointment of representatives to represent fields of expertise may be necessary.

4. On the basis of our work at several agencies and our review of the OGE guidance, we continue to believe some clarification is needed vis-à-vis the use of the term “represent” and its cognate forms. As the draft and final reports state, OGE’s direction to agencies in making decisions regarding representative appointments is to use “words to characterize them as the representatives of individuals or entities outside the government who have an interest in the subject matter assigned to the committee.” Notably missing from OGE’s specific direction to agencies is a focus on the nature of the advice they will be giving—that is, that they are to represent stakeholder views. This is in contrast to OGE’s direction to agencies regarding special government employees that does focus on the fact that they are to exercise individual and independent judgment. Although OGE’s guidance does provide helpful examples to agencies in examining statutory language to determine whether committee members are actually intended to serve as representatives of interest groups, we believe that language in the conclusions section of the guidance that directs agencies how to indicate the type of appointment contradicts the examples that OGE cites. We have clarified the final report to indicate that we were specifically discussing the conclusions section of the OGE guidance. We also note that OGE developed these conclusions in 1982—that is, it is not citing the 1962 guidance the agency is hesitant to revise. Overall, we believe that clarifications, but not departures from the criteria regarding appointments, are needed.

We point OGE also to the comments from the Interior (see app. XV) on the matter of the term representative. Interior stated that “GAO agrees that the statute authorizing the National Cooperative Geologic Mapping Advisory Committee’ calls for the committee to include...representatives,’ but then goes on to say that the statute does not “clearly and unambiguously call for these members to be appointed as representatives rather than special government employees.’” Interior then characterized our statements as a contradiction and said that the Secretary of the Interior “reasonably may interpret such a statute by relying on its plain language....”. In our draft and final reports, we indicate that it is not clear what point of view the private sector and academia members could be called upon to provide if appointed as representatives, and the statute did not appear to clearly mandate that they be appointed as representatives—that is, it may be using the term generically. We continue to believe that the statute does not clearly and unambiguously call for representative appointments and that this example underscores the need for OGE clarification as we recommend.

5. Seeking recommendations for advisory committee members from outside groups or organizations does not tend to support either representative or special government employee status. As noted in the draft and final reports, obtaining outside nominations is a common practice for committees appointing special government employees; thus, it is not used only for representative appointments. We think it would be appropriate for the OGE guidance to reflect current practices regarding nominations to federal advisory committees and avoid the potential of agencies’ giving undue weight to this criterion.
6. We are only recommending clarifications to OGE’s guidance, not changes to the fundamental principles or criteria upon which OGE based its guidance. See also comment 2 above.
7. Our draft and final reports highlight the various efforts OGE discusses below. However, we believe the effectiveness of these efforts will continue to be reduced until OGE’s guidance on appointments is clarified.
8. OGE has subsequently clarified this comment. The program review cited in the comment led to a recommendation that an agency reassess the status of employees serving on a federally chartered corporation and not on a federal advisory committee.

9. We have not evaluated the template that was still in draft form during our review.
10. OGE does not explain its view that the clarifications to the GSA FACA management training course that we identified in the report represent an unreasonable interpretation of OGE guidance. We continue to believe the suggestions our draft and final reports highlight would improve the effectiveness of the training sessions. For example, the GSA materials state that representatives *may* (emphasis added) represent the views of a particular industry or group. It is not clear to us why OGE would object to revising the FACA training materials to be consistent with OGE's guidance that representatives *are* expected to "represent a particular bias."
11. The draft and final reports identify the session at the 2003 OGE Ethics Conference cited in OGE's letter.
12. The draft and final reports cite the most significant and comprehensive OGE guidance documents addressing representative appointments, including OGE Informal Advisory Opinion 00 x 01 highlighted by OGE in its comments. (In the report text, we refer to this guidance as OGE's February 2000 guidance, and we have added a legal citation to it in a footnote.) We note that this opinion includes one paragraph addressing representative appointments and states that representatives are described more fully in OGE Informal Advisory Letter 82 x 22, the guidance document cited in our draft and final reports as OGE's principal guidance on the issue of appointment categories for federal advisory committees.
13. We support OGE's commitment to monitor and comment on appointments to newly created committees. However, in light of evidence that some appointments to existing committees are inappropriate, we believe it is appropriate to also review the appointments for approximately 950 advisory committees that are currently active.

Comments from the Department of Health and Human Services

Note: GAO comments supplementing those in the report text appear at the end of this appendix.

DEPARTMENT OF HEALTH & HUMAN SERVICES

Office of Inspector General

Washington, D.C. 20201

MAR 19 2004

Ms. Robin M. Nazzaro
Director
Natural Resources and Environment
United States General
Accounting Office
Washington, D.C. 20548

Dear Ms. Nazzaro:

Enclosed are the Department's comments on your draft report entitled, "Federal Advisory Committees – Additional Guidance Could Help Agencies Better Ensure Independence and Balance." The comments represent the tentative position of the Department and are subject to reevaluation when the final version of this report is received.

The Department provided several technical comments directly to your staff.

The Department appreciates the opportunity to comment on this draft report before its publication.

Sincerely,

A handwritten signature in cursive script, appearing to read "Dara Corrigan".

Dara Corrigan
Acting Principal Deputy Inspector General

Enclosure

The Office of Inspector General (OIG) is transmitting the Department's response to this draft report in our capacity as the Department's designated focal point and coordinator for General Accounting Office reports. OIG has not conducted an independent assessment of these comments and therefore expresses no opinion on them.

**COMMENTS ON THE DEPARTMENT OF HEALTH AND HUMAN SERVICES ON
THE U.S. GENERAL ACCOUNTING OFFICE'S DRAFT REPORT, "FEDERAL
ADVISORY COMMITTEES: ADDITIONAL GUIDANCE COULD HELP AGENCIES
BETTER ENSURE INDEPENDENCE AND BALANCE" (GAO-04-328)**

The Department of Health and Human Services (HHS) appreciates the opportunity to comment on the GAO's draft report. The Department strives to abide by the General Services Administration's (GSA) guidelines and the General Administration Manual that describes the Department's advisory committee policies.

This report will be useful in evaluating current practices for appointing members to serve on Federal advisory committees. In addition, GAO has provided a number of interesting ideas for determining balance in points of view and ensuring transparency in the advisory committee process.

Although we agree in principle that the information the Environmental Protection Agency (EPA) collects on their potential nominees may be useful in the selection process, we also believe that a few of the practices identified may have unintended consequences. We are concerned about the collection of background information on prospective members to understand their points of view.

We believe both the scientific community and the public at large is more comfortable with a process that seeks to achieve balance through a mix of expertise, background, and personal experience, rather than through a process based on seeking out some indefinable range of personal opinion. In many cases, points of view can be misinterpreted based on the frame of reference of the individual reviewing the nominee, either the public, Federal staff, or both. Also, we feel that this type of activity may make Federal agencies more vulnerable to litigation if potential nominees think that they were not selected because of their points of view rather than their expertise. We think this practice might not be acceptable to our nation's scientific community.

We feel that it is more appropriate to base the selection of members on the scientific expertise needed for each committee. For instance, the National Institutes of Health (NIH) has a vast number of scientific and technical advisory committees. NIH first seeks balance in the area of scientific expertise but also considers several other factors: geographic, ethnic, gender, minority status, bias, and orderly rotation, that helps to ensure that committees are balanced in terms of points of view. For example, when NIH seeks to recruit scientists to serve on a committee looking at human genetics issues, they try to recruit a diverse group of individuals with varied backgrounds to bring balance to this committee. Therefore, NIH might look for experts with specialties in human genetics, ethics, law, psychology, molecular biology, public health, social sciences, bio-terrorism, forensics, healthcare, and other relevant fields. We believe that such diversity in the selection process would invariably ensure diverse points of view and balance.

HHS agrees with GAO's recommendation that advisory committee operations and member appointments should be a transparent process. We believe in the public notification process and feel that the public should be privy to advisory committee activities. We also agree that it is in the best interest of both the public and the Government to disclose information about the

See comment 1.

See comment 1.

See comment 2.

formation and operation of advisory committees. Although the public notice process to obtain comments on proposed candidates might be feasible for some HHS committees, it would not be workable for all of them. Unlike EPA with 24 committees, HHS had 234 active committees in 2003 and various subcommittee structures within these committees. Some HHS agencies are limited by legislation in terms of the appointment process. For example, most of NIH's national advisory councils are established under Section 406 [284a] (c) of the Public Health Service Act. This law requires that the Secretary, HHS, fill all national advisory council vacancies within 90 days from the date the vacancy occurs. Soliciting public input could gravely delay each committee's ability to meet the requirements of this law, accomplish its charge and appoint its members. It could also seriously increase administrative costs for staff and contract support to handle this function.

See comment 3.

The Federal Advisory Committee Act (FACA) requires that membership be "fairly balanced in terms of the points of view represented and the functions to be performed by the advisory committee." This is reflected in the Food and Drug Administration's (FDA) advisory committee regulations (see 21 CFR 14.40(f)(2)). The FDA has 31 of the HHS advisory committees, all highly technical. The draft report also states that, for science and technical committees, viewpoint balance is appropriately achieved by obtaining a variety of scientific expertise and perspectives. FDA agrees and its advisory committee regulations have adopted this approach. For technical committees, the agency must ensure that prospective members have expertise in the subject matter with which the committee is concerned and that they have diverse professional education, training, and experience (see 21 CFR 14.80(b)(1)(i)). However, the draft report implies that agencies should also screen for policy views, as a way to ensure impartiality. FDA does not screen for policy views on technical committees; rather, its approach follows the National Academy of Sciences' recommendation that appointments to scientific advisory committees be based solely on a person's scientific or clinical expertise or his or her commitment to and involvement in issues of relevance to the agency's mission. While FDA does not screen for policy views on technical committees, prospective members are subject to conflict of interest restrictions, as established by Congress, and the agency may remove a member who demonstrates a bias that interferes with the ability to render objective advice (see 21 CFR 14.80(f)).

See comment 4.

GAO's draft report cites EPA as the benchmark to which all other agencies should aspire. A previous GAO report criticized the advisory committee practices of EPA. It was the FDA that assisted in the remediation of the EPA advisory committees. The draft report does not recognize this effort on the part of FDA.

See comment 5.

In the interest of transparency, GAO's draft report states that agencies could make more information available on the operations of advisory committees. FDA's selection process is clearly spelled out in its regulation as well as in every Federal Register notice calling for nominations. On a product specific meeting, a disclosure form with a scope and type of conflict is disclosed and signed by the member. For a general matters meeting, it is disclosed that waivers are granted and the impact will be minimized by the fact that large segments of industry will be impacted in the same way. FDA regulations also state that if the discussion turns specific, either additional waivers will be issued or the meeting will cease. FDA may be the only

agency that posts, on the web, a Conflict of Interest algorithmic document that demonstrates exactly how the agency makes decisions relative to the scope and magnitude of a conflict.

FDA stands behind its work to ensure that the advisory committees are balanced, not only demographically, but by scientific point-of-view. In addition, FDA makes every effort to ensure that all its committees have its stakeholders represented i.e., academics, industry, patient advocates and consumer advocacy groups. FDA is secure in the knowledge that it makes every effort to have an open process of member recruitment, of conflict of interest matters and of balance to achieve the recruitment of the best scientists to provide the most cutting edge scientific advice for its regulatory process.

It is departmental policy to avoid excessively long individual service on advisory committees. The 2002 roster for Childhood Lead Prevention and Poisoning Advisory Committee included twelve individuals serving expired terms, some of them serving on terms overdue since 1998. As noted in the report, the Office of the White House Liaison has enforced that all advisory committee members serve no longer than 180 days beyond the expiration of their terms to ensure a proper turnover of committee members, which the Department believes contributes to maintaining independent and balanced advisory committees.

Again, we appreciate the opportunity to be a part of this review and find the report's recommendations of great value. HHS advisory committees play an integral role in developing health and science policy for the nation and the world and determining the scientific merit of future research. We will continue to review and evaluate each of the ideas presented in the report to identify those that may be implemented for our advisory committees. In addition, since the NIH has 145 of the HHS advisory committees, they have volunteered to work with GSA to assist them in implementing the 12 recommendations noted in the report.

The following are GAO's comments on the Department of Health and Human Services's letter dated March 19, 2004.

GAO Comments

1. The draft and final reports identify processes that include an evaluation of potential members' points of view *relevant to the subject matters advisory committees will consider* while focusing on the relevant expertise needed. Thus, it is not accurate to characterize the report as espousing "a process based on seeking out some indefinable range of personal opinion." The examples in the report of agency processes include targeted evaluations of points of view that ask potential members if they have made public statements or taken positions on the issue or matters the committee will consider, including expert legal testimony on the issue or matters. The processes cited also ask the potential members to identify and describe any reason they may be unable to provide impartial advice *on matters before the committee* and any reason their impartiality *in the identified matter* might be questioned. We have added the phrase "regarding the subject matters being considered" in several other places in the final report in which we discuss determining the viewpoints of potential members for further clarity on this point. The report also points out that if agencies use a systematic, consistent, and transparent approach to obtaining relevant information from prospective committee members, it is unlikely they would approve questions that are generally inappropriate in a professional working environment, such as questions about party affiliations or political viewpoints that some committee members have reported being asked. In our view, agencies that do not proactively and transparently address the relevant points of view of prospective committee members regarding the matters the committees will consider are more likely to be subject to questions about committee balance from the public and users of the committees' products than those agencies that use such processes. That is, even if agencies choose to either not identify or acknowledge relevant public positions its committee members have taken on matters the committees will consider, others are often aware of such positions and are likely to raise questions about them. Such circumstances can have a negative impact on the credibility of the specific committees involved and on federal advisory committees overall. We believe this practice has been the case regarding some HHS federal advisory committees about which scientists and others have expressed concerns. Finally, in terms of HHS's concern that obtaining information on relevant points of view might not be acceptable to the nation's scientific community, our report

shows that both the National Academies and EPA routinely obtain such relevant information from its prospective members.

2. The report identifies the practice of soliciting public input on nominations to advisory committees, used by the National Academies and some federal advisory committees, as one that can be helpful in ensuring an appropriate balance of points of view of committees, particularly those that address sensitive and controversial matters. Agencies can determine whether to use this tool on a case-by-case basis. Thus, we do not disagree with HHS's comment that obtaining comments on proposed candidates might be feasible for some HHS committees but not workable for all of them.
3. Although we agree with HHS that FDA should emphasize technical qualifications when selecting advisory committee members, we also believe that it is important for agencies to assess prospective members for viewpoints that they have that are relevant to the work of the committee (see also comment 1). HHS says that FDA follows the National Academy of Sciences' recommendation that the appointment of members to scientific advisory committees be based primarily on expertise and involvement in relevant issues. This report notes that the academies also seek to determine, through a few simple questions, whether there is any reason to believe that the impartiality of members or prospective members might be questioned.
4. EPA made changes in how it manages the Science Advisory Board in response to the specific recommendations in our 2001 report.¹ We did not attempt to determine any role FDA may have had in assisting EPA, but we note that EPA, unlike FDA, revised its processes for achieving overall balance in terms of points of view, expressly integrating it with its reviews for potential conflicts of interest and obtaining relevant information prior to the appointment of committee members.
5. We agree that FDA provides useful information about its selection process, but we continue to believe that FDA and the other agencies could improve their processes for balancing committees. The draft and final reports highlight FDA policies for public notice of waivers. We note that the selection and waiver processes used by FDA are not used by HHS, CDC, and NIH.

Comments from the Department of the Interior

Note: GAO comments supplementing those in the report text appear at the end of this appendix.

United States Department of the Interior

OFFICE OF THE ASSISTANT SECRETARY
POLICY, MANAGEMENT AND BUDGET
Washington, DC 20240

MAR 18 2004

Christine Fishkin
Assistant Director
Natural Resources and Environment
United States General Accounting Office
Washington, D.C. 20548

Re: DOI Comments on GAO Draft Report on Advisory Committees

Dear Ms. Fishkin:

Thank you for the opportunity to review the GAO's draft report entitled, "Federal Advisory Committees: Additional Guidance Could Help Agencies Better Ensure Independence and Balance."

We agree with much in the report; it contains many useful recommendations that can be used to enhance the successful use of advisory committees. However, the Department has a number of general and specific concerns with the GAO analysis.

Enclosed please find DOI's response. If you have any additional questions, please feel free to contact us.

Sincerely,

P. Lynn Scarlett

Department of the Interior Comments on GAO Draft Report on Advisory Committees

Following are the Department's response to the GAO's draft report entitled, "Federal Advisory Committees: Additional Guidance Could Help Agencies Better Ensure Independence and Balance."

We agree with much in the report; it contains many useful recommendations that can be used to enhance the successful use of advisory committees. However, we note that the GAO's focus on scientific advisory committees ignored the wide ranging purposes and programs for which advisory committees are used in many agencies, such as managing public lands and natural resources. As a result, many of the report's recommendations and observations about independence and balance of committees, while useful, have limited applicability in non-science settings. GAO should clearly identify the purpose and scope of this report as focusing on science committees.

The Department strongly disagrees with GAO's basic approach to the concept of balance that is required under the Federal Advisory Committee Act (FACA). The GAO's approach reflects neither actual experience nor practical considerations associated with creating, staffing, and managing advisory committees under the FACA. On page one, and throughout the report, GAO repeats the basic point that "Specifically, individual committee members providing advice to the government must be free from significant conflicts of interest – that is, they must be independent." It is not clear exactly where the report's apparent requirement that *individual* committee members be "independent" originates. In Section 5 of the FACA, Congressional committees are directed to "...assure that the advice and recommendations of the advisory committee will not be inappropriately influenced by the appointing authority or any special interest, but will instead be the result of the advisory committee's independent judgment." Though this statutory requirement, by its terms, is not applicable to discretionary committees established by agency heads, it is repeated verbatim in the GSA regulations at 41 C.F.R. § 102-3.105(g), as a responsibility of agency heads for committees they establish. An "independent" committee member is simply never discussed.

The report's focus on "independence" of individual committee members has several practical and conceptual difficulties. First, it does not accurately reflect the FACA's and the regulations' requirement that the *advisory committee* itself remain free from inappropriate influence and that its recommendations result from its independent judgment. There is no guarantee that a committee made of "independent" members will also be a committee that is not inappropriately influenced by the appointing authority, or that the committee is acting on its independent judgment. The more logical way to implement these provisions would focus on the operation of the committee itself, ensuring that the appointing authority does not mandate any particular results from the committee members and that the committee is not structured in such a way as to give any special interest control over its advice. For example, although consensus is often desired on advisory committees, mandating a unanimous vote in support of committee advice would enable a single member to thwart other members of the committee by refusing to support the other member's preferred advice. This would not only be inappropriate influence, but it would also prevent the committee from giving its independent judgment, as it would make the

committee potentially beholden to a single member.

See comment 2.

The report unnecessarily focuses on a requirement for membership that does not exist, i.e., "independence." The report therefore detracts from addressing the membership requirement that does exist: that the committee be fairly balanced in its membership in the points of view to be represented and the functions to be performed. Once again, this requirement only goes to the balance of the committee as a whole, though the balance may only be addressed by reference to the "points of view" of individual committee members, i.e., there is balance on a committee when a member with a particular "point of view" is on a committee with others with differing or conflicting points of view. The relevant question is how to determine what "point of view" to attribute to a member and how to distinguish one point of view from another, to reasonably assure balance on the committee as a whole. Using "independence" as a criteria for membership at best does not help this analysis, and at worst it confuses the issue and hinders an agency in seeking the requisite balance on its committees.

See comment 2.

The report defines "independence" as freedom from "significant conflicts of interest," a definition that appears to conflate the ethics requirements applicable to Federal employees (including SGEs) and some concern over complaints about certain advisory committee members into an entirely new, inappropriate, and unworkable standard. There is nowhere in the ethics rules that states that even full-time Federal employees must be free from "conflicts of interest," let alone "significant conflicts of interest." The system instead is set up to identify the financial interests that may lead to conflict (primarily via financial disclosure reports), and then instructs employees: 1) to avoid participating personally and substantially in particular matters that may directly and predictably affect their financial interests (18 U.S.C. § 208); and 2) to avoid "participating" in a particular matter involving specific parties in circumstances where a reasonable person may question their impartiality (5 C.F.R. § 2635.502). In each case, the agency may nonetheless authorize participation. Further, "substantial" conflicts (those materially impairing the employee's performance of official duties or requiring disqualification too often) are dealt with by divesting the interest. See 5 C.F.R. § 2635.403(b). The report attempts to short-circuit this system by imposing the vague "independence" standard on advisory committee members, as some sort of appointment requirement.

See comment 3.

The report's emphasis on the "independent" committee member standard ignores the agencies' ability to work with committee members to ensure that they do not violate the ethics rules. As set forth in the system described above, the question of whether or not a member should participate in a particular committee function is properly resolved on a case-by-case basis, evaluating the nature of the committee action and the nature of the financial interest involved. For example, it is not clear when casting one vote out of a number of committee member votes that results in a committee's advice to a Federal agency will be "personally and substantially" participating in a matter sufficient to trigger the conflict of interest statute. The question of whether a particular piece of advice will "directly and predictably" affect a financial interest also should be closely considered. Should an actual conflict exist, the agency should be able to determine whether to authorize participation, as it could with other matters in which employees are involved. Accordingly, the report should focus more on how an agency may effectively address ethics-related issues in terms of participation of members in committee activities and in terms of how to articulate, achieve, and publicly support the fair balance of its committees.

See comments 3 and 4.

See comment 2.

Imposing “independence” as an appointment requirement does not help an agency bring the requisite balance to a committee. It will necessarily be very difficult, and ultimately not worthwhile, to attempt to determine whether a committee member or the committee member’s “point of view” is “independent,” whatever that means. The report recommends that agencies identify and systematically collect and evaluate information pertinent to determining “points of view” of committee members. Scientific advisory committee members are generally chosen for their expertise and objective understanding of the science involved and not on the basis of perceived “points of view.” This is not really the relevant question. The relevant question is whether a committee has balance in terms of the points of view to be represented and the functions to be performed. The report would be more useful if it would focus on suggestions regarding how to help agencies define and achieve such balance in points of view when exercising their discretion in committee appointments.

See comment 5.

See comment 6.

Departmental officials have informed your staff of the many steps we have taken over the past 18 months to improve the way we identify and appoint advisory committee members as special government employees. I understand that this information was shared with you at one of your initial meetings at the Department in June of 2003. The draft report repeatedly states, however, that this information was provided only in January of this year. It is important that GAO properly acknowledge the efforts the Department is undertaking in this area.

Our other specific comments are set forth below.

See comment 7.

P. 4: Last sentence: It is inaccurate to single out three agencies to say they “do not conduct conflict-of-interest reviews for members appointed as representatives.” First, it is unlikely that *any* agency does this for representatives, not just these three. Second, given the differing levels of ethics screening that may be done (such as for BLM Resource Advisory Councils), the more accurate statement is that agencies do not collect and review OGE Form 450s (or other approved form) for representatives. We recommend that this substitution be made throughout the report or else define “conflict-of-interest reviews” as a term of art meaning use of the OGE Form 450 or similar form.

See comment 8.

P. 8: Last paragraph, second sentence: GAO ignores the authority of agency heads to exercise discretion under their organic statutes to create advisory committees that are not expressly authorized by Congress or by a president.

See comment 9.

P. 16: The definitions on this page and on page 17 should be clarified as early as possible in the report to ensure that readers understand the two categories of membership (representatives and special government employees).

See comment 10.

P. 20: Last paragraph: GAO significantly misconstrues DOI’s “agency culture,” not only on this page but throughout the draft report. With the majority of its committees advising the Secretary on the management of public lands, DOI historically has strongly believed that its committees members should represent local stakeholders. Thus the practice of appointing representatives is based on decisions strongly rooted in DOI’s authorities, responsibilities and philosophies. Ignoring the appropriate use of representatives, GAO

repeatedly assumes without factual support that most representatives should have been appointed as SGEs.

See comment 11.

P. 21: GAO's generalization that representation of fields of expertise is not appropriate ignores the importance of such representation to some committees. However, we agree that agencies have proper guidance in how and when to use such expertise.

See comment 12.

P. 24: First paragraph: Reference to DOI's efforts to add ethics language to all FACA charters misleadingly suggests that DOI began this effort in January 2004. GAO is aware that DOI began this effort in 2003 in response to OGE's 2002 study.

See comment 13.

P. 25: First paragraph: In paraphrasing DOI officials regarding the tendency "to err on the side of continuing with representative appointments," GAO omitted important information that was presented in the same discussion. That is, where the purpose of the committee is to advise the Secretary on the management of public lands or other resources, the Department firmly believes the views of local stakeholders are essential to sound and useful advice. In such cases, DOI is likely to continue to appoint representatives. In doing so, it does not "err," especially if an authorizing statute does not restrict the Secretary's discretion to do so. Rather, GAO errs by invoking OGE's guidance without regard to the stated purpose of the advisory committee.

See comment 14.

Second paragraph: GAO agrees that the statute authorizing the National Cooperative Geologic Mapping Advisory Committee "calls for the committee to include ... representatives," but then goes on to say the statute does not "clearly and unambiguously call for these members to be appointed as representatives rather than special government employees." Notwithstanding this apparent contradiction, the Secretary reasonably may interpret such a statute by relying on its plain language, especially where the Secretary desires representative advice to assist a committee's function.

See comment 15.

P. 27 - 35: The report continually confuses the distinctly separate concerns for balance and avoiding financial conflicts of interest. Additionally, GAO's positions regarding a committee's balance and perceived objectivity when compared to points of view of its members are simply unrealistic and impractical, and unrelated to the actual functioning of advisory committees. The kinds of inquiries into the biases and points of view of potential appointees recommended by GAO is intrusive, of little practical utility, and will turn qualified individuals away from government service. GAO apparently has a single concept of how to achieve balance and seems to ignore the FACA's requirement that committees be balanced based on the function they are called upon to perform. Further, representatives are placed on committees precisely because of their stated representative interests; because they are not subject to the ethics rules, it is illogical to assert that their participation is improper on the basis of bias. GAO's view that agencies cannot properly balance their committees without understanding all perceived biases of all members is simply fallacious. Finally, as the report notes on p. 37, courts have interpreted the FACA as giving agencies broad discretion on how to balance their committees.

See comment 16.

Additionally, the report should note that a committee of representatives may obtain "expert

advice” from individuals with scientific or technical expertise. For example, a scientific or technical expert may be invited to a meeting of the committee or its working groups to provide expert guidance to assist the representatives in formulating their advice to the federal government. Describing such options might help organizations and others to understand that representative membership can also be effective in providing useful, technically accurate, and unbiased advice to the federal government.

The following are GAO's comments on the Department of the Interior's letter dated March 18, 2004.

GAO Comments

1. This report states, as did the draft, that while our report focuses primarily on scientific and technical federal advisory committees, the limitations in guidance and the promising practices we identified pertaining to independence and balance are pertinent to federal advisory committees in general. This report and the draft also identified the wide range of issues addressed by federal advisory committees, including managing federal lands and natural resources.
2. The background section of the report and the draft acknowledged the FACA requirement that committees not be inappropriately influenced by the appointing authority or any special interest. However, the draft report also clearly stated that in addressing independence, our focus was on the requirements regarding individual conflicts of interest that are included in federal conflict-of-interest statutes, unless specifically noted otherwise. In our introduction, we state that "federal advisory committee members who are employees of the federal government must meet federal requirements pertaining to freedom from conflicts of interest—which we refer to in this report as independence—and committees as a whole must meet the requirements pertaining to balance." Thus, we use the term "independence" as shorthand for the conflict-of-interest requirements to which individual committee members must adhere. We further highlight the key provisions of the federal conflict-of-interest statutes that must be complied with, including a description of the ability of an individual who has a conflict of interest to nonetheless participate on a committee if granted a waiver. Alternatively, an individual may divest the financial interest.

We note that all federal employees are prohibited not only from holding financial interests that conflict with the conscientious performance of duty, as Interior suggests in its comments, but also from engaging in outside employment or activities that conflict with their official duties and responsibilities. See 18 U.S.C. § 208, 5 C.F.R. §§ 2635.101(b)(2), and 2635.101(a)(10). Further, employees are also required to avoid any action that creates the appearance that they are violating the law or ethics standards. 5 C.F.R. § 2635.101(b)(14). It is precisely because these obligations are imposed only on employees that it is crucial to ensure that FACA committee members are appropriately characterized as "representatives" or special government employees. Both special

government employees and representatives should be evaluated for biases to ensure that the FACA committees as a whole are balanced. Special government employees must also be subject to a conflict-of-interest review, including an analysis of whether their nongovernment activities and employment present a conflict or create “the appearance that they are violating...ethics standards.” 5 C.F.R. § 2635.101(b)(14).

3. We agree that the question of whether a member should participate in a particular committee function (or whether they should be appointed to a particular committee) is properly resolved on a case-by-base basis, evaluating the nature of the committee action or work and the nature of the financial interest involved. Further, the draft and final reports recognize that agencies may grant waivers to members to serve on advisory committees upon determining that either (1) the conflict is insignificant or (2) the need for the member’s expertise outweighs the conflict. The draft and final reports also discuss some promising practices regarding the disclosure of such waivers to the public and among committee members.
4. The draft and final reports discuss in considerable detail information that can help agencies ensure committees are balanced and provide examples of promising practices that would better ensure the balance of advisory committees.
5. We agree that a relevant question for federal advisory committees is whether a committee has balance in terms of points of view to be represented and the functions to be performed. Our report provides examples of promising practices used by other agencies and the National Academies that can help agencies define and achieve an appropriate balance of points of view.
6. Our draft and final reports state that at the start of our review, Interior officials told us that they had begun to review their appointment classifications for the 115 advisory committees as a result of the November 2002 OGE study. The draft and final reports also state that the department has been reviewing the appointments to committees as their charters expire. We do indicate that in January 2004, Interior officials acknowledged that it was appropriate to change the nature of some appointments upon reexamination. This was the first time any results of the reviews were communicated to us. Further, Interior notified us of the decision to change the appointments to the

earthquake studies committee on January 16, 2004, subsequent to our meeting on January 12, 2004.

7. We revised the report to indicate that agencies do not conduct conflict-of-interest reviews for members appointed as representatives because conflict-of-interest reviews are only required for federal or special government employees. Thus, we removed any unintended implication that other agencies do more than the three we are reporting on in this report in terms of representative appointments. In our draft and final reports we indicate that the ethics screening vis-à-vis representatives done by one bureau of the department (Bureau of Land Management) is not sufficient to constitute a conflict-of-interest review for those appointed as special government employees. In this section, we are discussing those members who were appointed as representatives but who would be more appropriately appointed as special government employees.
8. We modified the language in the report to more clearly describe the authorities under which committees may be formed.
9. The draft and final reports define the two categories of appointments on page 1.
10. The draft and final reports state on page 1 that members of federal advisory committees may be appointed as (1) special government employees to provide advice on behalf of the government on the basis of their best judgment or (2) representatives to provide stakeholder advice. We do not take issue with representative appointments when the members are, in fact, appointed to represent a particular interest or view of an entity or group with an interest in the matter before the committees, and they are fully informed as to the point of view or interest they are to represent. Further, the reports state that Interior officials noted that many of their committees addressing federal land management issues are not scientific and technical in content and, in their view, are appropriately staffed with representative members. The reports do indicate that committees classified as scientific and technical, as well as others that address scientific and technical issues, are those for which advice on behalf of the government on the basis of members' best judgment is typically sought, rather than stakeholder advice. Interior has 11 committees with 288 members that are classified by the agency as scientific and technical committees in GSA's

FACA database, and some other committees not so classified also address scientific and technical issues.

11. We are not certain what Interior means in stating that “GAO’s generalization that representation of fields of expertise is not appropriate ignores the importance of such representation to some committees.” However, the comment does suggest that Interior continues to believe that it is appropriate to appoint members to represent their field of expertise as representatives, rather than as special government employees. We and OGE disagree with this interpretation of OGE’s guidance on appointments to advisory committees. Representatives are to espouse a particular point of view of a party with an interest in the matter, whereas experts having specific expertise provide advice on behalf of the government on the basis of their best judgment. Thus, experts in various fields are more appropriately appointed as special government employees. (Subsequent to sending its comment letter, Interior clarified that the second sentence of this comment should read “However, we agree that agencies *should* have proper guidance in how and when to use such expertise.”.)
12. We have removed the reference to January 2004 in this instance, reporting that Interior officials told us that they have begun to insert standard language in the charters regarding the ethics obligations of the members. See also comment 6.
13. On the basis of a January 2004 discussion with Interior officials, we understood the officials to say that in reviewing their appointment designations as committee charters expire, the agency was erring on the side of representative appointments when the information relevant to the committee was ambiguous on the issue of appointments. However, in its comments, Interior officials said they disagreed with our characterization of their previous comments, and we have deleted the statement from the report. In its comments, Interior officials said that the agency was likely to continue to appoint representatives to committees whose purpose is to advise the Secretary on the management of public lands or other resources as they are seeking the views of local stakeholders in these instances. As noted above, we do not take issue with representative appointments when the members are, in fact, appointed to represent a particular interest or view of an entity or group with an interest in the matter before the committees,

and they are fully informed as to the point of view or interest they are to represent.

14. Interior states that “GAO agrees that the statute authorizing the National Cooperative Geologic Mapping Advisory Committee ‘calls for the committee to include...representatives,’ but then goes on to state that the statute does not ‘clearly and unambiguously call for these members to be appointed as representatives rather than special government employees.’” Interior then characterizes our statements as a contradiction and said that the Secretary of the Interior “reasonably may interpret such a statute by relying on its plain language....”. In our draft and final reports, we indicate that the statute did not appear to clearly mandate that the members be appointed as representatives—that is, it may be using the term “representative” generically—and we further noted that is not clear what point of view the private-sector and academia members could be called upon to provide if appointed as representatives. We continue to believe this statute does not clearly and unambiguously call for representative appointments and that this example underscores the need for OGE clarification regarding the use of the term representative, as we recommend.
15. As the draft and final reports state, FACA requires that all committees be balanced overall in terms of both points of view represented and the function to be performed. In our view, in order for advisory committees to be effective, it is important that they are, and are perceived as being, balanced. The draft and final reports identify processes that include an evaluation of potential members’ points of view *relevant to the subject matters advisory committees will consider* while focusing on the relevant expertise needed. The examples in the reports of agency processes that include such targeted evaluations of points of view ask potential members if they have made public statements or taken positions on the issue or matters the committee will consider, including expert legal testimony on the issue or matters. They also ask the potential members to identify and describe any reason they may be unable to provide impartial advice on matters before the committee and any reason their impartiality in the identified matter might be questioned. We disagree with Interior’s view that these inquiries would be intrusive, of little practical utility, and would turn qualified individuals away from government service. We also disagree with Interior’s view that we are saying that agencies need to understand all perceived biases of advisory committee members. As

shown above, the information identified as relevant to members' points of view is targeted and focuses on their points of view relevant to the subject matter to be considered. We disagree that such inquiries will turn qualified individuals away from government service, evidenced by the fact that the National Academies and EPA routinely obtain such relevant information from its prospective members. Finally, we recognize that representatives are placed on committees because of their stated stakeholder interests and do not assert that participation of representatives is improper.

16. We agree that committees, whether composed of representatives or special government employees, may invite outside experts to provide information or guidance. However, that does not affect the obligation agencies have to make appropriate decisions about appointing members as either representatives or special government employees.

Comments from the National Aeronautics and Space Administration

Note: GAO comments supplementing those in the report text appear at the end of this appendix.

National Aeronautics and
Space Administration
Office of the Administrator
Washington, DC 20546-0001

March 26, 2004

Ms. Robin M. Nazzaro
Director
Natural Resources and Environment
United States General Accounting Office
Room 2T23
441 G Street, NW
Washington, DC 20548

Dear Ms. Nazzaro:

NASA has reviewed the draft GAO report, *Federal Advisory Committees: Additional Guidance Could Help Agencies Better Ensure Independence and Balance* (GAO-04-328). Advisory committees serve an important role for NASA and the agency appreciates the effort to strengthen the independence and balance of these committees.

The overall conclusion that agencies could benefit from additional guidance to better ensure independence, balance, and transparency is sound. However, NASA is concerned about the implications of the finding that would limit the use of representative appointments for advisory committees to those persons who represent specific organizations, rather than a community at large (e.g., industry, education, or a particular field of scientific research). It is important that NASA retain the flexibility to use representatives who do not represent specific stakeholders. This is because individual stakeholder organizations would not necessarily be in a position to represent the overall interests of a broader community, and neither would their employees. Finally, since each community at large is itself comprised of individual organizations or stakeholders (for example, particular universities or trade groups, in the case of education), advisory committee members appointed as Special Government Employees rather than representatives would be precluded by the conflict of interest laws from participating in any discussion relating to their own organization, and by extension their community at large. This would effectively eliminate the perspective they were appointed to provide.

In conclusion, in order to permit agencies to receive the views of entire communities, not just individual organizations, the draft recommendation should be modified to request that the Office of Government Ethics' guidance allow for the appointment of representatives of stakeholder communities as well as individual stakeholder organizations. Mr. Andrew Falcon, NASA's

2

Advisory Committee Management Officer, is available to discuss this matter further, and can be reached at (202) 358-2465.

I look forward to receiving a copy of the final report when available.

Cordially,

Frederick D. Gregory
Deputy Administrator

The following are GAO's comments on the National Aeronautics and Space Administration's letter dated March 26, 2004.

GAO Comments

1. NASA's comments support the appointment of federal advisory committee members as representative of their fields of expertise on the basis that some experts would not be able to serve as special government employees due to financial conflicts of interest. First, this view conflicts with OGE's and our view that representatives are not appropriately appointed to represent fields of expertise (see comment 2 below). Second, this view does not recognize that agencies may grant waivers to members to serve on advisory committees upon determining that either (1) the conflict is insignificant or (2) the need for the member's expertise outweighs the conflict.¹ Our draft and final reports discuss waivers and some promising practices regarding the disclosure of such waivers to the public and among committee members.
2. NASA also recommends that the OGE guidance allow for the appointment of representatives of "stakeholder communities" as well as individual stakeholder organizations. NASA identifies those that may represent a community as industry, education, or a particular field of expertise. We note that OGE guidance on representative appointments states that representatives may speak for stakeholders—that is, firms or an industry, labor or agriculture, or for any other recognizable group of persons with an interest in the matter under consideration. Thus, we believe that NASA can appoint experts as representatives to provide the views of, for example, the aerospace industry—if these experts are to provide stakeholder advice on matters in which the aerospace industry has an interest. If, however, NASA wants such experts to provide advice on behalf of the government on the basis of their individual and expert judgment, the appointments would be appropriately made as special government employees. These individuals would then be reviewed for potential financial conflicts of interest; if conflicts were identified, the conflicts would require mitigation. Regarding NASA's support for representatives providing the views of "stakeholder communities," we continue to believe that fields of expertise generally are not appropriately considered to be

¹This view also provides support that OGE clarification on this issue is needed so that agencies can make appropriate decisions regarding representative appointments to federal advisory committees.

stakeholder communities. Specifically, fields of expertise may be defined as a stakeholder community only in instances where the subject matter a committee is addressing would have a particular impact on a field of expertise—for example, biologists, teachers, or doctors—but not in cases where the experts are called upon to provide expert advice on the basis of their individual judgment.

Comments from the Department of Energy

Note: GAO comments supplementing those in the report text appear at the end of this appendix.

Department of Energy
Office of Science
Washington, DC 20585

Office of the Director

APR 01 2004

Dr. Robin M. Nazzaro
Director, Natural Resources
and Environment
General Accounting Office
Washington, D.C. 20548

Dear Dr. Nazzaro:

In response to your letter of March 3, 2004 inviting comment on the proposed report *Federal Advisory Committees Additional Guidance Could Help Agencies Better Ensure Independence and Balance* (the Report), the Department of Energy (DOE) is pleased to submit three general sets of comments:

1. We are concerned about the implications of the "one-size-fits-all" approach that is being advocated in this Report. In particular, the special role that the Office of Science's six standing Advisory Committees play, within the U.S. scientific enterprise is not recognized and their overall effectiveness could be diminished if GAO recommendations are followed.
2. The suggestions made by GAO to change the way that DOE selects Advisory Committee members should be implemented only if they would result in clearly defined benefits for DOE programs. Without that clear articulation of benefits, which we believe is absent in this Report, DOE should continue to select members according to our specific needs and circumstances.
3. GAO's interpretation of the term "representative" is unpersuasive and would be an unsound basis of guidance for the Department.

"One-Size-Fits-All" Approach

The Report correctly notes that DOE views members of its scientific Advisory Committees as representatives, in contrast to persons who provide individually-centered advice on behalf of the government who should become special government employees and concludes that this practice:

"... exposes the relevant committees to potentially serious problems. Because representative members are not subject to reviews for potential conflicts of interest, allegation of conflicts of interest may call into question the integrity of the committee and jeopardize the credibility of the committee's work."

Report at 23.¹

While this critique of government-wide Advisory Committees, generally, may be meritorious, applying it to DOE's Office of Science (SC) Advisory Committees appears to stem from a misunderstanding of SC's unique structure and how its scientific advisory committees assist in accomplishing DOE's vital national missions. This critique also fails to note the many self-regulating mechanisms inherent within the SC Advisory Committee structure that greatly diminish, or even eliminate, the potential for conflicts of interest.

DOE's basic research portfolio, which is managed by SC, is organized according to *scientific disciplines* (physics, chemistry, mathematics, etc.). This organizational structure -- which is manifested through SC's budget categories, office structures, personnel assignments, etc. -- is critical to understanding why SC's Advisory Committee members are inherently representative.

The reason we say this is that SC's Advisory Committees are focused on the health of specific scientific disciplines. It might surprise you to learn that although more than 50% of SC's research dollars go to DOE's national laboratories, only 15% of the total membership of SC's Advisory Committees comes from those laboratories. The majority of representatives come from universities (65%), non-profits and other parts of the U.S. scientific community who have a stronger interest in the overall health of the disciplines that they represent than in the institutions that perform the research. As an example, the Nuclear Science Advisory Committee's charter states:

"Committee members shall be appointed with a view towards achieving balanced representation of the various subfields involved in basic nuclear science research by the Secretary of Energy following nomination by the Director, Office of Science, Department of Energy, with concurrence of the Assistant Director, Mathematical and Physical Sciences Directorate, National Science Foundation."

As a final note on this subject, we would invite you to speak individually with the SC Advisory Committee Chairs and Members and ask them if they believe that a Member's potential conflict of interest would escape the attention of other

See comment 4.

¹ DOE does not uniformly conclude that members of its advisory committees are "representative". When a member is selected for his or her expertise, as contrasted to being a representative, the member is appointed as a special government employee. For example, earlier this year, the Department determined that several individuals who were to be appointed to the Environmental Management Advisory Committee were selected because of their expertise in certain areas. These individuals will be serving on this Committee as special government employees.

See comment 2.

Committee Members or the SC professional program managers for very long. We believe you would find that conflicts of interest are simply not an issue for the reasons cited above.

Selection of Committee Membership

The Report urges agencies to obtain Committee members via a public process such as Federal Register notice. Here too, we believe that a one-size-fits-all approach is inappropriate.

In certain areas pertinent to its Advisory Committees, DOE funds and/or directly conducts all or virtually all United States research. This is particularly true for SC's Advisory Committees in Nuclear Physics, Fusion and High Energy Physics. These Committees provide advice to SC programs that support 90-100% of total Federal R&D in these scientific disciplines.

Their knowledge of their fields is such that the SC program managers and Advisory Committee Members know the research areas and credentials of all of the leading scientists in their field. In addition, the program managers are often aware of the personal biases, work ethic and degree of frankness that key players may bring to the Advisory Committee so that they are especially well qualified to select a balanced committee. A public selection process would not result in the selection of more appropriate members nor a more balanced committee. For this reason alone, DOE's current selection practice should be maintained.

But there is another compelling reason that DOE's processes for selection of Advisory Committees should not be changed – neither GAO nor any other study group has ever provided a rationale for change that would result in higher quality advice from the SC Advisory Committees. SC Advisory Committees, for the most part, have been in existence for decades. They perform their functions admirably and it is deemed a great honor within the U.S. scientific community to serve – without compensation – on these Committees. To our knowledge, no one who understands how they truly function has ever asserted that these Committees are anything less than superb and appropriate for the work that they do and the role that they perform within DOE and the U.S. scientific enterprise. Changing them for change's sake (or to force uniformity upon Federal advisory committees with widely ranging purposes) would be a serious error and could have significant (and adverse) consequences for the way that science is conducted in the United States.

Meaning of the Term "Representative"

The Report, at 21, states that "Office of Government Ethics guidance is overly-broad in that it states representatives may speak for an industry, or for labor or agriculture, or for any other recognizable group of persons including, on occasion, the public at large. We are concerned about the implications of this statement."

See comment 3.

DOE has certain Advisory Committees that it views as clearly representational in that they do speak for industries such as the National Coal Council and the National Petroleum Council, all of whose members are affiliated with energy companies or entities that have an organizational interest in the matters before the Councils. The Environmental Management Site Specific Advisory Board, which has many members who speak for the local public at large, was established to serve as a channel for communicating advice from the communities impacted by DOE activities. DOE is concerned that the report inadvertently and unnecessarily calls into question the use of representatives on these committees.

The Report, at 22, states that "at times the terms 'represent' or 'representative', when included in legislation or executive orders regarding the membership of advisory committees, does not always clearly indicate that the members are to be appointed to serve as representatives; sometimes these terms are used to define committee composition or balance." The Report does not cite the authority for its statement.

DOE is not persuaded of the soundness of this view as a source of guidance for the Department. Congress or the President use words like "expert" or "expertise" where it is intended for the members to be appointed as special government employees. Agencies should not be called on in this area to violate one of the basic rules of statutory construction and thereby to question the plain meaning of words.

Sincerely,

Raymond L. Orbach
Director
Office of Science

The following are GAO's comments on the Department of Energy's letter dated April 1, 2004.

GAO Comments

1. The first issue that Energy identifies as being of concern vis-à-vis its perception of "GAO's advocacy of a 'one-size-fits-all' approach" is, in essence, the governmentwide application of OGE's criteria for representative appointments. That is, while Energy does not disagree that it may be generally inappropriate to appoint advisory committee members to represent various fields of expertise, the department believes it is appropriate for its Office of Science to do so on the basis of the agency's "unique structure." Specifically, Energy says that the Office of Science's advisory committee members are inherently representative because the department's basic research portfolio is managed according to scientific disciplines (physics, chemistry, mathematics) and the related advisory committees are "focused on the health of specific scientific disciplines." In our view, the department's research structure is not unique and does not provide a basis for appointing experts providing advice on the basis of their best judgment as representatives. For example, both the National Science Foundation and NASA manage research portfolios by scientific disciplines, and they generally appoint members to their scientific and technical advisory committees appropriately as special government employees.¹ We believe Energy's comments support our view that OGE needs to clarify its guidance on representative appointments.
2. The second issue that Energy views as our advocacy of a "one-size-fits-all" approach concerns obtaining input on the "selection of committee membership." Energy does not specify whether it is addressing (1) nominations for committee membership from the public, (2) comments on proposed committee membership, or (3) both of these practices. In any event, the draft and final reports identify these as promising practices that are particularly relevant to those committees addressing sensitive or controversial issues, and not as practices that should be applied to all committees.

¹NASA's comments in response to this report indicate that NASA does, at least in some cases, appoint members to represent their expertise. Unlike Energy, NASA cites issues related to conflicts of interest as a basis for doing so.

3. Energy states that our interpretation of the term representative is unpersuasive and would be an unsound basis of guidance for the department. In elaborating on this perspective, the department makes two points. First, the department states that it has certain advisory committees, such as the National Coal Council and the National Petroleum Council, that it views as clearly representational in that the members do speak for energy companies or entities that have an organizational interest in the matter. Energy expresses concern that the report inadvertently and unnecessarily calls into question the use of representatives on these committees. We disagree. The draft and final reports state on page 1 that members of federal advisory committees may be appointed as (1) special government employees to provide advice on behalf of the government on the basis of their best judgment or (2) representatives to provide stakeholder advice. We do not take issue with representative appointments when the members are, in fact, appointed to represent a particular interest or view of an entity or group with an interest in the matter before the committees, and they are fully informed as to the point of view or interest they are to represent. Second, Energy questions our view that use of the terms “represent” or “representative” regarding the membership of advisory committees does not always clearly indicate that the members are to be appointed to serve as representatives. In its comments on the draft report, OGE stated that its guidance does not imply that any use of the word “represent” or its cognate forms in a statute or other document means that the members of the committees are not special government employees. Further, OGE stated that its guidance makes clear that careful attention to all relevant factors is required in order to determine whether the committee members are actually intended to serve as representatives of interest groups. While OGE disagreed with our recommendation that its guidance needed to be clarified to state that the term representative in statutes and charters may be used more generically to identify the appropriate balance of points of view or expertise and may not be specifying that representative appointments be made, we believe Energy’s comments on this point provide additional support for our recommendation.
4. The draft and final reports state that USDA, Energy, and Interior appoint most or all of the members to their federal advisory committees as representatives. We believe this statement accurately describes Energy’s appointments. For example, our draft and final reports state that in April 2003, Energy’s Acting Assistant General Counsel for General Law told us that all but one of the department’s

committees use only representatives members; we indicated that this one committee expired in June 2003. In its comments on the draft report, Energy identifies another committee for which DOE appointed several members in 2004 as special government employees.

GAO's Mission

The General Accounting Office, the audit, evaluation and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through the Internet. GAO's Web site (www.gao.gov) contains abstracts and full-text files of current reports and testimony and an expanding archive of older products. The Web site features a search engine to help you locate documents using key words and phrases. You can print these documents in their entirety, including charts and other graphics.

Each day, GAO issues a list of newly released reports, testimony, and correspondence. GAO posts this list, known as "Today's Reports," on its Web site daily. The list contains links to the full-text document files. To have GAO e-mail this list to you every afternoon, go to www.gao.gov and select "Subscribe to e-mail alerts" under the "Order GAO Products" heading.

Order by Mail or Phone

The first copy of each printed report is free. Additional copies are \$2 each. A check or money order should be made out to the Superintendent of Documents. GAO also accepts VISA and Mastercard. Orders for 100 or more copies mailed to a single address are discounted 25 percent. Orders should be sent to:

U.S. General Accounting Office

BILLING CODE 7590-01-M

OFFICE OF MANAGEMENT AND BUDGET

Final Information Quality Bulletin for Peer Review

AGENCY: Office of Management and Budget, Executive Office of the President.

ACTION: Final bulletin.

SUMMARY: On December 16, 2004, the Office of Management and Budget (OMB), in consultation with the Office of Science and Technology Policy (OSTP), issued its Final Information Quality Bulletin for Peer Review to the heads of departments and agencies (available at <http://www.whitehouse.gov/omb/memoranda/fy2005/m05-03.html>). This new guidance is designed to realize the benefits of meaningful peer review of the most important science disseminated by the Federal Government. It is part of an ongoing effort to improve the quality, objectivity, utility, and integrity of information disseminated by the Federal Government to the public. This final bulletin has benefited from an extensive stakeholder process. OMB originally requested comment on its "Proposed

Bulletin on Peer Review and Information Quality," published in the **Federal Register** on September 15, 2003. OMB received 187 public comments during the comment period (available at http://www.whitehouse.gov/omb/inforg/2003iq/iq_list.html). In addition, to improve the draft Bulletin, OMB encouraged federal agencies to sponsor a public workshop at the National Academy of Sciences (NAS). The NAS workshop (November 18, 2003, at the National Academies in Washington, DC) attracted several hundred participants, including leaders in the scientific community (available at http://www7.nationalacademies.org/stl/STL_Peer_Review_Agenda.html). OMB also participated in outreach activities with major scientific organizations and societies that had expressed specific interest in the draft Bulletin. A formal interagency review of the draft Bulletin, resulting in detailed comments from numerous Federal departments and agencies, was undertaken in collaboration with the White House Office of Science and Technology Policy. In light of the substantial interest in the Bulletin, including a wide range of constructive criticisms of the initial draft, OMB decided to issue a revised draft for further comment. This revised draft was published in the **Federal Register** on April 28, 2004, and solicited a second round of public comment. The revised draft stimulated a much smaller number of comments (57) (available at: http://www.whitehouse.gov/omb/inforg/peer2004/list_peer2004.html). OMB's response to the additional criticisms, suggestions, and refinements offered for consideration is available at: http://www.whitehouse.gov/omb/inforg/peer2004/peer_response.pdf. The final Bulletin includes refinements that strike a balance among the diverse perspectives expressed during the comment period. Part I of the **SUPPLEMENTARY INFORMATION** below provides background. Part II provides the text of the final Bulletin.

DATES: The requirements of this Bulletin, with the exception of those in Section V (Peer Review Planning), apply to information disseminated on or after June 16, 2005. However, they do not apply to information for which an agency has already provided a draft report and an associated charge to peer reviewers. The requirements in Section V regarding "highly influential scientific assessments" are effective June 16, 2005. The requirements in Section V regarding "influential scientific information" are effective December 16, 2005.

FOR FURTHER INFORMATION CONTACT: Dr. Margo Schwab, Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW., New Executive Office Building, Room 10201, Washington, DC 20503. Telephone (202) 395-5647 or email: OMB_peer_review@omb.eop.gov.
SUPPLEMENTARY INFORMATION:

Introduction

This Bulletin establishes that important scientific information shall be peer reviewed by qualified specialists before it is disseminated by the Federal government. We published a proposed Bulletin on September 15, 2003. Based on public comments, we published a revised proposal for additional comment on April 28, 2004. We are now finalizing the April version, with minor revisions responsive to the public's comments.

The purpose of the Bulletin is to enhance the quality and credibility of the government's scientific information. We recognize that different types of peer review are appropriate for different types of information. Under this Bulletin, agencies are granted broad discretion to weigh the benefits and costs of using a particular peer review mechanism for a specific information product. The selection of an appropriate peer review mechanism for scientific information is left to the agency's discretion. Various types of information are exempted from the requirements of this Bulletin, including time-sensitive health and safety determinations, in order to ensure that peer review does not unduly delay the release of urgent findings.

This Bulletin also applies stricter minimum requirements for the peer review of highly influential scientific assessments, which are a subset of influential scientific information. A scientific assessment is an evaluation of a body of scientific or technical knowledge that typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. To ensure that the Bulletin is not too costly or rigid, these requirements for more intensive peer review apply only to the more important scientific assessments disseminated by the Federal government.

Even for these highly influential scientific assessments, the Bulletin leaves significant discretion to the agency formulating the peer review plan. In general, an agency conducting a peer review of a highly influential scientific assessment must ensure that the peer review process is transparent

by making available to the public the written charge to the peer reviewers, the peer reviewers' report(s), and the agency's response to the peer reviewers' report(s). The agency selecting peer reviewers must ensure that the reviewers possess the necessary expertise. In addition, the agency must address reviewers' potential conflicts of interest (including those stemming from ties to regulated businesses and other stakeholders) and independence from the agency. This Bulletin requires agencies to adopt or adapt the committee selection policies employed by the National Academy of Sciences (NAS)¹ when selecting peer reviewers who are not government employees. Those that are government employees are subject to federal ethics requirements. The use of a transparent process, coupled with the selection of qualified and independent peer reviewers, should improve the quality of government science while promoting public confidence in the integrity of the government's scientific products.

Peer Review

Peer review is one of the important procedures used to ensure that the quality of published information meets the standards of the scientific and technical community. It is a form of deliberation involving an exchange of judgments about the appropriateness of methods and the strength of the author's inferences.² Peer review involves the review of a draft product for quality by specialists in the field who were not involved in producing the draft.

The peer reviewer's report is an evaluation or critique that is used by the authors of the draft to improve the product. Peer review typically evaluates the clarity of hypotheses, the validity of the research design, the quality of data collection procedures, the robustness of the methods employed, the appropriateness of the methods for the hypotheses being tested, the extent to which the conclusions follow from the analysis, and the strengths and limitations of the overall product.

Peer review has diverse purposes. Editors of scientific journals use reviewer comments to help determine whether a draft scientific article is of sufficient quality, importance, and interest to a field of study to justify

publication. Research funding organizations often use peer review to evaluate research proposals. In addition, some Federal agencies make use of peer review to obtain evaluations of draft information that contains important scientific determinations.

Peer review should not be confused with public comment and other stakeholder processes. The selection of participants in a peer review is based on expertise, with due consideration of independence and conflict of interest. Furthermore, notice-and-comment procedures for agency rulemaking do not provide an adequate substitute for peer review, as some experts—especially those most knowledgeable in a field—may not file public comments with Federal agencies.

The critique provided by a peer review often suggests ways to clarify assumptions, findings, and conclusions. For instance, peer reviews can filter out biases and identify oversights, omissions, and inconsistencies.³ Peer review also may encourage authors to more fully acknowledge limitations and uncertainties. In some cases, reviewers might recommend major changes to the draft, such as refinement of hypotheses, reconsideration of research design, modifications of data collection or analysis methods, or alternative conclusions. However, peer review does not always lead to specific modifications in the draft product. In some cases, a draft is in excellent shape prior to being submitted for review. In others, the authors do not concur with changes suggested by one or more reviewers.

Peer review may take a variety of forms, depending upon the nature and importance of the product. For example, the reviewers may represent one scientific discipline or a variety of disciplines; the number of reviewers may range from a few to more than a dozen; the names of each reviewer may be disclosed publicly or may remain anonymous (e.g., to encourage candor); the reviewers may be blinded to the authors of the report or the names of the authors may be disclosed to the reviewers; the reviewers may prepare individual reports or a panel of reviewers may be constituted to produce a collaborative report; panels may do their work electronically or they may meet together in person to discuss and prepare their evaluations; and reviewers may be compensated for their work or they may donate their time as a

contribution to science or public service.

For large, complex reports, different reviewers may be assigned to different chapters or topics. Such reports may be reviewed in stages, sometimes with confidential reviews that precede a public process of panel review. As part of government-sponsored peer review, there may be opportunity for written and/or oral public comments on the draft product.

The results of peer review are often only one of the criteria used to make decisions about journal publication, grant funding, and information dissemination. For instance, the editors of scientific journals (rather than the peer reviewers) make final decisions about a manuscript's appropriateness for publication based on a variety of considerations. In research-funding decisions, the reports of peer reviewers often play an important role, but the final decisions about funding are often made by accountable officials based on a variety of considerations. Similarly, when a government agency sponsors peer review of its own draft documents, the peer review reports are an important factor in information dissemination decisions but rarely are the sole consideration. Agencies are not expected to cede their discretion with regard to dissemination or use of information to peer reviewers; accountable agency officials must make the final decisions.

The Need for Stronger Peer Review Policies

There are a multiplicity of science advisory procedures used at Federal agencies and across the wide variety of scientific products prepared by agencies.⁴ In response to congressional inquiry, the U.S. General Accounting Office (now the Government Accountability Office) documented the variability in both the definition and implementation of peer review across agencies.⁵ The Carnegie Commission on Science, Technology and Government⁶ has highlighted the importance of "internal" scientific advice (within the agency) and "external" advice (through scientific advisory boards and other mechanisms).

A wide variety of authorities have argued that peer review practices at

federal agencies need to be strengthened.⁷ Some arguments focus on specific types of scientific products (e.g., assessments of health, safety and environmental hazards).⁸ The Congressional/Presidential Commission on Risk Assessment and Risk Management suggests that "peer review of economic and social science information should have as high a priority as peer review of health, ecological, and engineering information."⁹

Some agencies have formal peer review policies, while others do not. Even agencies that have such policies do not always follow them prior to the release of important scientific products.

Prior to the development of this Bulletin, there were no government-wide standards concerning when peer review is required and, if required, what type of peer review processes are appropriate. No formal interagency mechanism existed to foster cross-agency sharing of experiences with peer review practices and policies. Despite the importance of peer review for the credibility of agency scientific products, the public lacked a consistent way to determine when an important scientific information product is being developed by an agency, the type of peer review planned for that product, or whether there would be an opportunity to provide comments and data to the reviewers.

This Bulletin establishes minimum standards for when peer review is

required for scientific information and the types of peer review that should be considered by agencies in different circumstances. It also establishes a transparent process for public disclosure of peer review planning, including a Web-accessible description of the peer review plan that the agency has developed for each of its forthcoming influential scientific disseminations.

Legal Authority for the Bulletin

This Bulletin is issued under the Information Quality Act and OMB's general authorities to oversee the quality of agency information, analyses, and regulatory actions. In the Information Quality Act, Congress directed OMB to issue guidelines to "provide policy and procedural guidance to Federal agencies for ensuring and maximizing the quality, objectivity, utility and integrity of information" disseminated by Federal agencies. Public Law No. 106-554, § 515(a). The Information Quality Act was developed as a supplement to the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, which requires OMB, among other things, to "develop and oversee the implementation of policies, principles, standards, and guidelines to * * * apply to Federal agency dissemination of public information." In addition, Executive Order 12866, 58 FR 51,735 (Oct. 4, 1993), establishes that OIRA is "the repository of expertise concerning regulatory issues," and it directs OMB to provide guidance to the agencies on regulatory planning. E.O. 12866, § 2(b). The Order also requires that "[e]ach agency shall base its decisions on the best reasonably obtainable scientific, technical, economic, or other information." E.O. 12866, § 1(b)(7). Finally, OMB has authority in certain circumstances to manage the agencies under the purview of the President's Constitutional authority to supervise the unitary Executive Branch. All of these authorities support this Bulletin.

The Requirements of This Bulletin

This Bulletin addresses peer review of scientific information disseminations that contain findings or conclusions that represent the official position of one or more agencies of the Federal government.

Section I: Definitions

Section I provides definitions that are central to this Bulletin. Several terms are identical to or based on those used in OMB's government-wide information quality guidelines, 67 FR 8452 (Feb. 22, 2002), and the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

⁹ Presidential/Congressional Commission on Risk Assessment and Risk Management, *Risk Assessment and Risk Management in Regulatory Decision-Making*, 1997:103.

The term "Administrator" means the Administrator of the Office of Information and Regulatory Affairs in the Office of Management and Budget (OIRA).

The term "agency" has the same meaning as in the Paperwork Reduction Act, 44 U.S.C. 3502(1).

The term "Information Quality Act" means Section 515 of Public Law 106-554 (Pub. L. No. 106-554, § 515, 114 Stat. 2763, 2763A-153-154 (2000)).

The term "dissemination" means agency initiated or sponsored distribution of information to the public. Dissemination does not include distribution limited to government employees or agency contractors or grantees; intra- or inter-agency use or sharing of government information; or responses to requests for agency records under the Freedom of Information Act, the Privacy Act, the Federal Advisory Committee Act, the Government Performance and Results Act, or similar laws. This definition also excludes distribution limited to correspondence with individuals or persons, press releases, archival records, public filings, subpoenas and adjudicative processes. In the context of this Bulletin, the definition of "dissemination" modifies the definition in OMB's government-wide information quality guidelines to address the need for peer review prior to official dissemination of the information product. Accordingly, under this Bulletin, "dissemination" also excludes information distributed for peer review in compliance with this Bulletin or shared confidentially with scientific colleagues, provided that the distributing agency includes an appropriate and clear disclaimer on the information, as explained more fully below. Finally, the Bulletin does not directly cover information supplied to the government by third parties (e.g., studies by private consultants, companies and private, non-profit organizations, or research institutions such as universities). However, if an agency plans to disseminate information supplied by a third party (e.g., using this information as the basis for an agency's factual determination that a particular behavior causes a disease), the requirements of the Bulletin apply, if the dissemination is "influential".

In cases where a draft report or other information is released by an agency solely for purposes of peer review, a question may arise as to whether the draft report constitutes an official "dissemination" under information-quality guidelines. Section I instructs agencies to make this clear by presenting the following disclaimer in the report:

This information is distributed solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. It has not been formally disseminated by [the agency]. It does not represent and should not be construed to represent any agency determination or policy.

In cases where the information is highly relevant to specific policy or regulatory deliberations, this disclaimer shall appear on each page of a draft report. Agencies also shall discourage state, local, international and private organizations from using information in draft reports that are undergoing peer review. Draft influential scientific information presented at scientific meetings or shared confidentially with colleagues for scientific input prior to peer review shall include the disclaimer: "The Findings and Conclusions in This Report (Presentation) Have Not Been Formally Disseminated by [The Agency] and Should Not Be Construed to Represent Any Agency Determination or Policy."

An information product is not covered by the Bulletin unless it represents an official view of one or more departments or agencies of the Federal government. Accordingly, for the purposes of this Bulletin, "dissemination" excludes research produced by government-funded scientists (e.g., those supported extramurally or intramurally by Federal agencies or those working in state or local governments with Federal support) if that information is not represented as the views of a department or agency (i.e., they are not official government disseminations). For influential scientific information that does not have the imprimatur of the Federal government, scientists employed by the Federal government are required to include in their information product a clear disclaimer that "the findings and conclusions in this report are those of the author(s) and do not necessarily represent the views of the funding agency." A similar disclaimer is advised for non-government employees who publish government-funded research.

For the purposes of the peer review Bulletin, the term "scientific information" means factual inputs, data, models, analyses, technical information, or scientific assessments related to such disciplines as the behavioral and social sciences, public health and medical sciences, life and earth sciences, engineering, or physical sciences. This includes any communication or representation of knowledge such as facts or data, in any medium or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual

forms. This definition includes information that an agency disseminates from a Web page, but does not include the provision of hyperlinks on a Web page to information that others disseminate. This definition excludes opinions, where the agency's presentation makes clear that an individual's opinion, rather than a statement of fact or of the agency's findings and conclusions, is being offered.

The term "influential scientific information" means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions. In the term "influential scientific information," the term "influential" should be interpreted consistently with OMB's government-wide information quality guidelines and the information quality guidelines of the agency. Information dissemination can have a significant economic impact even if it is not part of a rulemaking. For instance, the economic viability of a technology can be influenced by the government's characterization of its attributes. Alternatively, the Federal government's assessment of risk can directly or indirectly influence the response actions of state and local agencies or international bodies.

One type of scientific information is a scientific assessment. For the purposes of this Bulletin, the term "scientific assessment" means an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. These assessments include, but are not limited to, state-of-science reports; technology assessments; weight-of-evidence analyses; meta-analyses; health, safety, or ecological risk assessments; toxicological characterizations of substances; integrated assessment models; hazard determinations; or exposure assessments. Such assessments often draw upon knowledge from multiple disciplines. Typically, the data and models used in scientific assessments have already been subject to some form of peer review (e.g., refereed journal peer review or peer review under Section II of this Bulletin).

Section II: Peer Review of Influential Scientific Information

Section II requires each agency to subject "influential" scientific information to peer review prior to dissemination. For dissemination of

influential scientific information, Section II provides agencies broad discretion in determining what type of peer review is appropriate and what procedures should be employed to select appropriate reviewers. Agencies are directed to choose a peer review mechanism that is adequate, giving due consideration to the novelty and complexity of the science to be reviewed, the relevance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review.

The National Academy of Public Administration suggests that the intensity of peer review should be commensurate with the significance of the information being disseminated and the likely implications for policy decisions.¹⁰ Furthermore, agencies need to consider tradeoffs between depth of peer review and timeliness.¹¹ More rigorous peer review is necessary for information that is based on novel methods or presents complex challenges for interpretation. Furthermore, the need for rigorous peer review is greater when the information contains precedent-setting methods or models, presents conclusions that are likely to change prevailing practices, or is likely to affect policy decisions that have a significant impact.

This tradeoff can be considered in a benefit-cost framework. The costs of peer review include both the direct costs of the peer review activity and those stemming from potential delay in government and private actions that can result from peer review. The benefits of peer review are equally clear: the insights offered by peer reviewers may lead to policy with more benefits and/or fewer costs. In addition to contributing to strong science, peer review, if performed fairly and rigorously, can build consensus among stakeholders and reduce the temptation for courts and legislators to second-guess or overturn agency actions.¹² While it will not always be easy for agencies to quantify the benefits and costs of peer review, agencies are

encouraged to approach peer review from a benefit-cost perspective.

Regardless of the peer review mechanism chosen, agencies should strive to ensure that their peer review practices are characterized by both scientific integrity and process integrity. "Scientific integrity," in the context of peer review, refers to such issues as "expertise and balance of the panel members; the identification of the scientific issues and clarity of the charge to the panel; the quality, focus and depth of the discussion of the issues by the panel; the rationale and supportability of the panel's findings; and the accuracy and clarity of the panel report." "Process integrity" includes such issues as "transparency and openness, avoidance of real or perceived conflicts of interest, a workable process for public comment and involvement," and adherence to defined procedures.¹³

When deciding what type of peer review mechanism is appropriate for a specific information product, agencies will need to consider at least the following issues: Individual versus panel review; timing; scope of the review; selection of reviewers; disclosure and attribution; public participation; disposition of reviewer comments; and adequacy of prior peer review.

Individual Versus Panel Review

Letter reviews by several experts generally will be more expeditious than convening a panel of experts. Individual letter reviews are more appropriate when a draft document covers only one discipline or when premature disclosure of a sensitive report to a public panel could cause harm to government or private interests. When time and resources warrant, panels are preferable, as they tend to be more deliberative than individual letter reviews and the reviewers can learn from each other. There are also multi-stage processes in which confidential letter reviews are conducted prior to release of a draft document for public notice and comment, followed by a formal panel review. These more rigorous and expensive processes are particularly valuable for highly complex, multidisciplinary, and more important documents, especially those that are novel or precedent-setting.

Timing of Peer Review

As a general rule, it is most useful to consult with peers early in the process

of producing information. For example, in the context of risk assessments, it is valuable to have the choice of input data and the specification of the model reviewed by peers before the agency invests time and resources in implementing the model and interpreting the results. "Early" peer review occurs in time to "focus attention on data inadequacies in time for corrections."

When an information product is a critical component of rule-making, it is important to obtain peer review before the agency announces its regulatory options so that any technical corrections can be made before the agency becomes invested in a specific approach or the positions of interest groups have hardened. If review occurs too late, it is unlikely to contribute to the course of a rulemaking. Furthermore, investing in a more rigorous peer review early in the process "may provide net benefit by reducing the prospect of challenges to a regulation that later may trigger time consuming and resource-draining litigation."¹⁴

Scope of the Review

The "charge" contains the instructions to the peer reviewers regarding the objective of the peer review and the specific advice sought. The importance of the information, which shapes the goal of the peer review, influences the charge. For instance, the goal of the review might be to determine the utility of a body of literature for drawing certain conclusions about the feasibility of a technology or the safety of a product. In this context, an agency might ask reviewers to determine the relevance of conclusions drawn in one context for other contexts (e.g., different exposure conditions or patient populations).

The charge to the reviewers should be determined in advance of the selection of the reviewers. In drafting the charge, it is important to remember the strengths and limitations of peer review. Peer review is most powerful when the charge is specific and steers the reviewers to specific technical questions while also directing reviewers to offer a broad evaluation of the overall product.

Uncertainty is inherent in science, and in many cases individual studies do not produce conclusive evidence. Thus, when an agency generates a scientific

XI (1): 132.

assessment, it is presenting its scientific judgment about the accumulated evidence rather than scientific fact.¹⁵ Specialists attempt to reach a consensus by weighing the accumulated evidence. Peer reviewers can make an important contribution by distinguishing scientific facts from professional judgments. Furthermore, where appropriate, reviewers should be asked to provide advice on the reasonableness of judgments made from the scientific evidence. However, the charge should make clear that the reviewers are not to provide advice on the policy (e.g., the amount of uncertainty that is acceptable or the amount of precaution that should be embedded in an analysis). Such considerations are the purview of the government.¹⁶

The charge should ask that peer reviewers ensure that scientific uncertainties are clearly identified and characterized. Since not all uncertainties have an equal effect on the conclusions drawn, reviewers should be asked to ensure that the potential implications of the uncertainties for the technical conclusions drawn are clear. In addition, peer reviewers might be asked to consider value-of-information analyses that identify whether more research is likely to decrease key uncertainties.¹⁷ Value-of-information analysis was suggested for this purpose in the report of the Presidential/Congressional Commission on Risk Assessment and Risk Management.¹⁸ A description of additional research that would appreciably influence the conclusions of the assessment can help an agency assess and target subsequent efforts.

Selection of Reviewers

Expertise. The most important factor in selecting reviewers is expertise: ensuring that the selected reviewer has the knowledge, experience, and skills necessary to perform the review. Agencies shall ensure that, in cases where the document being reviewed spans a variety of scientific disciplines or areas of technical expertise, reviewers who represent the necessary spectrum of knowledge are chosen. For instance, expertise in applied mathematics and

statistics is essential in the review of models, thereby allowing an audit of calculations and claims of significance and robustness based on the numeric data.¹⁹ For some reviews, evaluation of biological plausibility is as important as statistical modeling. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.

Balance. While expertise is the primary consideration, reviewers should also be selected to represent a diversity of scientific perspectives relevant to the subject. On most controversial issues, there exists a range of respected scientific viewpoints regarding interpretation of the available literature. Inviting reviewers with competing views on the science may lead to a sharper, more focused peer review. Indeed, as a final layer of review, some organizations (e.g., the National Academy of Sciences) specifically recruit reviewers with strong opinions to test the scientific strength and balance of their reports. The NAS policy on committee composition and balance²⁰ highlights important considerations associated with perspective, bias, and objectivity.

Independence. In its narrowest sense, independence in a reviewer means that the reviewer was not involved in producing the draft document to be reviewed. However, for peer review of some documents, a broader view of independence is necessary to assure credibility of the process. Reviewers are generally not employed by the agency or office producing the document. As the National Academy of Sciences has stated, "external experts often can be more open, frank, and challenging to the status quo than internal reviewers, who may feel constrained by organizational concerns."²¹ The Carnegie Commission on Science, Technology, and Government notes that "external science advisory boards serve a critically important function in providing regulatory agencies with expert advice on a range of issues."²² However, the choice of reviewers requires a case-by-

case analysis. Reviewers employed by other Federal and state agencies may possess unique or indispensable expertise.

A related issue is whether government-funded scientists in universities and consulting firms have sufficient independence from the federal agencies that support their work to be appropriate peer reviewers for those agencies.²³ This concern can be mitigated in situations where the scientist initiates the hypothesis to be tested or the method to be developed, which effectively creates a buffer between the scientist and the agency. When an agency awards grants through a competitive process that includes peer review, the agency's potential to influence the scientist's research is limited. As such, when a scientist is awarded a government research grant through an investigator-initiated, peer-reviewed competition, there generally should be no question as to that scientist's ability to offer independent scientific advice to the agency on other projects. This contrasts, for example, to a situation in which a scientist has a consulting or contractual arrangement with the agency or office sponsoring a peer review. Likewise, when the agency and a researcher work together (e.g., through a cooperative agreement) to design or implement a study, there is less independence from the agency. Furthermore, if a scientist has repeatedly served as a reviewer for the same agency, some may question whether that scientist is sufficiently independent from the agency to be employed as a peer reviewer on agency-sponsored projects.

As the foregoing suggests, independence poses a complex set of questions that must be considered by agencies when peer reviewers are selected. In general, agencies shall make an effort to rotate peer review responsibilities across the available pool of qualified reviewers, recognizing that in some cases repeated service by the same reviewer is needed because of essential expertise.

Some agencies have built entire organizations to provide independent scientific advice while other agencies tend to employ ad hoc scientific panels on specific issues. Respect for the independence of reviewers may be enhanced if an agency collects names of potential reviewers (based on considerations of expertise and reputation for objectivity) from the

public, including scientific or professional societies. The Department of Energy's use of the American Society of Mechanical Engineers to identify potential peer reviewers from a variety of different scientific societies provides an example of how professional societies can assist in the development of an independent peer review panel.²⁴

Conflict of Interest. The National Academy of Sciences defines "conflict of interest" as any financial or other interest that conflicts with the service of an individual on the review panel because it could impair the individual's objectivity or could create an unfair competitive advantage for a person or organization.²⁵ This standard provides a useful benchmark for agencies to consider in selecting peer reviewers. Agencies shall make a special effort to examine prospective reviewers' potential financial conflicts, including significant investments, consulting arrangements, employer affiliations and grants/contracts. Financial ties of potential reviewers to regulated entities (e.g., businesses), other stakeholders, and regulatory agencies shall be scrutinized when the information being reviewed is likely to be relevant to regulatory policy. The inquiry into potential conflicts goes beyond financial investments and business relationships and includes work as an expert witness, consulting arrangements, honoraria and sources of grants and contracts. To evaluate any real or perceived conflicts of interest with potential reviewers and questions regarding the independence of reviewers, agencies are referred to federal ethics requirements, applicable standards issued by the Office of Government Ethics, and the prevailing practices of the National Academy of Sciences. Specifically, peer reviewers who are Federal employees (including special government employees) are subject to Federal requirements governing conflicts of interest. *See, e.g.*, 18 U.S.C. 208; 5 CFR part 2635 (2004). With respect to reviewers who are not Federal employees, agencies shall adopt or adapt the NAS policy for committee selection with respect to evaluating conflicts of interest.²⁶ Both the NAS and the Federal government recognize that under certain circumstances some

conflict may be unavoidable in order to obtain the necessary expertise. *See, e.g.*, 18 U.S.C. 208(b)(3); 5 U.S.C. App. 15 (governing NAS committees). To improve the transparency of the process, when an agency determines that it is necessary to use a reviewer with a real or perceived conflict of interest, the agency should consider publicly disclosing those conflicts. In such situations, the agency shall inform potential reviewers of such disclosure at the time they are recruited.

Disclosure and Attribution: Anonymous Versus Identified

Peer reviewers must have a clear understanding of how their comments will be conveyed to the authors of the document and to the public. When peer review of government reports is considered, the case for transparency is stronger, particularly when the report addresses an issue with significant ramifications for the public and private sectors. The public may not have confidence in the peer review process when the names and affiliations of the peer reviewers are unknown. Without access to the comments of reviewers, the public is incapable of determining whether the government has seriously considered the comments of reviewers and made appropriate revisions. Disclosure of the slate of reviewers and the substance of their comments can strengthen public confidence in the peer review process. It is common at many journals and research funding agencies to disclose annually the slate of reviewers. Moreover, the National Academy of Sciences now discloses the names of its peer reviewers, without disclosing the substance of their comments. The science advisory committees to regulatory agencies typically disclose at least a summary of the comments of reviewers as well as their names and affiliations.

For agency-sponsored peer review conducted under Sections II and III, this Bulletin strikes a compromise by requiring disclosure of the identity of the reviewers, but not public attribution of specific comments to specific reviewers. The agency has considerable discretion in the implementation of this compromise (e.g., summarizing the views of reviewers as a group or disclosing individual reviewer comments without attribution). Whatever approach is employed, the agency must inform reviewers in advance of how it intends to address this issue. Information about a reviewer retrieved from a record filed by the reviewer's name or other identifier may be disclosed only as permitted by the conditions of disclosure enumerated in

the Privacy Act, 5 U.S.C. 552a as amended, and as interpreted in OMB implementing guidance, 40 FR 28,948 (July 9, 1975).

Public Participation

Public comments can be important in shaping expert deliberations. Agencies may decide that peer review should precede an opportunity for public comment to ensure that the public receives the most scientifically strong product (rather than one that may change substantially as a result of peer reviewer suggestions). However, there are situations in which public participation in peer review is an important aspect of obtaining a high-quality product through a credible process. Agencies, however, should avoid open-ended comment periods, which may delay completion of peer reviews and complicate the completion of the final work product.

Public participation can take a variety of forms, including opportunities to provide oral comments before a peer review panel or requests to provide written comments to the peer reviewers. Another option is for agencies to publish a "request for comment" or other notice in which they solicit public comment before a panel of peer reviewers performs its work.

Disposition of Reviewer Comments

A peer review is considered completed once the agency considers and addresses the reviewers' comments. All reviewer comments should be given consideration and be incorporated where relevant and valid. For instance, in the context of risk assessments, the National Academy of Sciences recommends that peer review include a written evaluation made available for public inspection.²⁷ In cases where there is a public panel, the agency should plan publication of the peer review report(s) and the agency's response to peer reviewer comments.

In addition, the credibility of the final scientific report is likely to be enhanced if the public understands how the agency addressed the specific concerns raised by the peer reviewers. Accordingly, agencies should consider preparing a written response to the peer review report explaining: The agency's agreement or disagreement, the actions the agency has undertaken or will undertake in response to the report, and (if applicable) the reasons the agency believes those actions satisfy any key

concerns or recommendations in the report.

Adequacy of Prior Peer Review

In light of the broad range of information covered by Section II, agencies are directed to choose a peer review mechanism that is adequate, giving due consideration to the novelty and complexity of the science to be reviewed, the relevance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review.

Publication in a refereed scientific journal may mean that adequate peer review has been performed. However, the intensity of peer review is highly variable across journals. There will be cases in which an agency determines that a more rigorous or transparent review process is necessary. For instance, an agency may determine a particular journal review process did not address questions (e.g., the extent of uncertainty inherent in a finding) that the agency determines should be addressed before disseminating that information. As such, prior peer review and publication is not by itself sufficient grounds for determining that no further review is necessary.

Section III: Peer Review of Highly Influential Scientific Assessments

Whereas Section II leaves most of the considerations regarding the form of the peer review to the agency's discretion, Section III requires a more rigorous form of peer review for highly influential scientific assessments. The requirements of Section II of this Bulletin apply to Section III, but Section III has some additional requirements, which are discussed below. In planning a peer review under Section III, agencies typically will have to devote greater resources and attention to the issues discussed in Section II, i.e., individual versus panel review; timing; scope of the review; selection of reviewers; disclosure and attribution; public participation; and disposition of reviewer comments.

A scientific assessment is considered "highly influential" if the agency or the OIRA Administrator determines that the dissemination could have a potential impact of more than \$500 million in any one year on either the public or private sector or that the dissemination is novel, controversial, or precedent-setting, or has significant interagency interest. One of the ways information can exert economic impact is through the costs or benefits of a regulation based on the disseminated information. The qualitative aspect of this definition may

be most useful in cases where it is difficult for an agency to predict the potential economic effect of dissemination. In the context of this Bulletin, it may be either the approach used in the assessment or the interpretation of the information itself that is novel or precedent-setting. Peer review can be valuable in establishing the bounds of the scientific debate when methods or interpretations are a source of controversy among interested parties. If information is covered by Section III, an agency is required to adhere to the peer review procedures specified in Section III.

Section III(2) clarifies that the principal findings, conclusions and recommendations in official reports of the National Academy of Sciences that fall under this Section are generally presumed not to require additional peer review. All other highly influential scientific assessments require a review that meets the requirements of Section III of this Bulletin.

With regard to the selection of reviewers, Section III(3)(a) emphasizes consideration of expertise and balance. As discussed in Section II, expertise refers to the required knowledge, experience and skills required to perform the review whereas balance refers to the need for diversity in scientific perspective and disciplines. We emphasize that the term "balance" here refers not to balancing of stakeholder or political interests but rather to a broad and diverse representation of respected perspectives and intellectual traditions within the scientific community, as discussed in the NAS policy on committee composition and balance.²⁸

Section III(3)(b) instructs agencies to consider barring participation by scientists with a conflict of interest. The conflict of interest standards for Sections II and III of the Bulletin are identical. As discussed under Section II, those peer reviewers who are Federal employees, including Special Government Employees, are subject to applicable statutory and regulatory standards for Federal employees. For non-government employees, agencies shall adopt or adapt the NAS policy for committee member selection with respect to evaluating conflicts of interest.

Section III(3)(c) instructs agencies to ensure that reviewers are independent of the agency sponsoring the review. Scientists employed by the sponsoring

agency are not permitted to serve as reviewers for highly influential scientific assessments. This does not preclude Special Government Employees, such as academics appointed to advisory committees, from serving as peer reviewers. The only exception to this ban would be the rare situation in which a scientist from a different agency of a Cabinet-level department than the agency that is disseminating the scientific assessment has expertise, experience and skills that are essential but cannot be obtained elsewhere. In evaluating the need for this exception, agencies shall use the NAS criteria for assessing the appropriateness of using employees of sponsors (e.g., the government scientist must not have had any part in the development or prior review of the scientific information and must not hold a position of managerial or policy responsibility).

We also considered whether a reviewer can be independent of the agency if that reviewer receives a substantial amount of research funding from the agency sponsoring the review. Research grants that were awarded to the scientist based on investigator-initiated, competitive, peer-reviewed proposals do not generally raise issues of independence. However, significant consulting and contractual relationships with the agency may raise issues of independence or conflict, depending upon the situation.

Section III(3)(d) addresses concerns regarding repeated use of the same reviewer in multiple assessments. Such repeated use should be avoided unless a particular reviewer's expertise is essential. Agencies should rotate membership across the available pool of qualified reviewers. Similarly, when using standing panels of scientific advisors, it is suggested that the agency rotate membership among qualified scientists in order to obtain fresh perspectives and reinforce the reality and perception of independence from the agency.

Section III(4) requires agencies to provide reviewers with sufficient background information, including access to key studies, data and models, to perform their role as peer reviewers. In this respect, the peer review envisioned in Section III is more rigorous than some forms of journal peer review, where the reviewer is often not provided access to underlying data or models. Reviewers shall be informed of applicable access, objectivity, reproducibility and other quality standards under Federal information quality laws.

²⁸ National Academy of Sciences, "Policy and Procedures on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports," May 2003; Available at: <http://www.nationalacademies.org/cci/index.html>.

Section III(5) addresses opportunity for public participation in peer review, and provides that the agency shall, wherever possible, provide for public participation. In some cases, an assessment may be so sensitive that it is critical that the agency's assessment achieve a high level of quality before it is publicized. In those situations, a rigorous yet confidential peer review process may be appropriate, prior to public release of the assessment. If an agency decides to make a draft assessment publicly available at the onset of a peer review process, the agency shall, whenever possible, provide a vehicle for the public to provide written comments, make an oral presentation before the peer reviewers, or both. When written public comments are received, the agency shall ensure that peer reviewers receive copies of comments that address significant scientific issues with ample time to consider them in their review. To avoid undue delay of agency activities, the agency shall specify time limits for public participation throughout the peer review process.

Section III(6) requires that agencies instruct reviewers to prepare a peer review report that describes the nature and scope of their review and their findings and conclusions. The report shall disclose the name of each peer reviewer and a brief description of his or her organizational affiliation, credentials and relevant experiences. The peer review report should either summarize the views of the group as a whole (including any dissenting views) or include a verbatim copy of the comments of the individual reviewers (with or without attribution of specific views to specific names). The agency shall also prepare a written response to the peer review report, indicating whether the agency agrees with the reviewers and what actions the agency has taken or plans to take to address the points made by reviewers. The agency is required to disseminate the peer review report and the agency's response to the report on the agency's Web site, including all the materials related to the peer review such as the charge statement, peer review report, and agency response to the review. If the scientific information is used to support a final rule then, where practicable, the peer review report shall be made available to the public with enough time for the public to consider the implications of the peer review report for the rule being considered.

Section III(7) authorizes but does not require an agency to commission an entity independent of the agency to select peer reviewers and/or manage the

peer review process in accordance with this Bulletin. The entity may be a scientific or professional society, a firm specializing in peer review, or a non-profit organization with experience in peer review.

Section IV: Alternative Procedures

Peer review as described in this Bulletin is only one of many procedures that agencies can employ to ensure an appropriate degree of pre-dissemination quality of influential scientific information. For example, Congress has assigned the NAS a special role in advising the Federal government on scientific and technical issues. The procedures of the NAS are generally quite rigorous, and thus agencies should presume that major findings, conclusions, and recommendations of NAS reports meet the performance standards of this Bulletin.

As an alternative to complying with Sections II and III of this Bulletin, an agency may instead (1) rely on scientific information produced by the National Academy of Sciences, (2) commission the National Academy of Sciences to peer review an agency draft scientific information product, or (3) employ an alternative procedure or set of procedures, specifically approved by the OIRA Administrator in consultation with the Office of Science and Technology Policy (OSTP), that ensures that the scientific information product meets applicable information-quality standards.

An example of an alternative procedure is to commission a respected third party other than the NAS (*e.g.*, the Health Effects Institute or the National Commission on Radiation Protection and Measurement) to conduct an assessment or series of related assessments. Another example of an alternative set of procedures is the three-part process used by the National Institutes of Health (NIH) to generate scientific guidance. Under that process, a scientific proposal or white paper is generated by a working group composed of external, independent scientific experts; that paper is then forwarded to a separate external scientific council, which then makes recommendations to the agency. The agency, in turn, decides whether to adopt and/or modify the proposal. For large science agencies that have diverse research portfolios and do not have significant regulatory responsibilities, such as NIH, an acceptable alternative would be to allow scientists from one part of the agency (for example, an NIH institute) to participate in the review of documents prepared by another part of the agency, as long as the head of the agency

confirms in writing that each of the reviewers meets the NAS criteria relating to the appropriateness of using employees of sponsors (*e.g.*, the government scientist must not have had any part in the development or prior review of the scientific information and must not hold a position of managerial or policy responsibility). The purpose of Section IV is to encourage these types of innovation in the methods used to ensure pre-dissemination quality control of influential scientific information.

The mere existence of a public comment process (*e.g.*, notice-and-comment procedures under the Administrative Procedure Act) does not constitute adequate peer review or an "alternative process," because it does not assure that qualified, impartial specialists in relevant fields have performed a critical evaluation of the agency's draft product.²⁹

Section V: Peer Review Planning

Section V requires agencies to begin a systematic process of peer review planning for influential scientific information (including highly influential scientific assessments) that the agency plans to disseminate in the foreseeable future. A key feature of this planning process is a Web-accessible listing of forthcoming influential scientific disseminations (*i.e.*, an agenda) that is regularly updated by the agency. By making these plans publicly available, agencies will be able to gauge the extent of public interest in the peer review process for influential scientific information, including highly influential scientific assessments. These Web-accessible agendas can also be used by the public to monitor agency compliance with this Bulletin.

Each entry on the agenda shall include a preliminary title of the planned report, a short paragraph describing the subject and purpose of the planned report, and an agency contact person. The agency shall provide its prediction regarding whether the dissemination will be "influential scientific information" or a "highly influential scientific assessment," as the designation can influence the type of peer review to be undertaken. The agency shall discuss the timing of the peer review, as well as the use of any deferrals. Agencies shall include entries in the agenda for influential scientific information, including highly influential scientific assessments, for which the Bulletin's requirements have

²⁹William W. Lowrance, *Modern Science and Human Values*, Oxford University Press, New York, NY 1985: 86.

been deferred or waived. If the agency, in consultation with the OIRA Administrator, has determined that it is appropriate to use a Section IV "alternative procedure" for a specific dissemination, a description of that alternative procedure shall be included in the agenda.

Furthermore, for each entry on the agenda, the agency shall describe the peer review plan. Each peer review plan shall include: (i) A paragraph including the title, subject and purpose of the planned report, as well as an agency contact to whom inquiries may be directed to learn the specifics of the plan; (ii) whether the dissemination is likely to be influential scientific information or a highly influential scientific assessment; (iii) the timing of the review (including deferrals); (iv) whether the review will be conducted through a panel or individual letters (or whether an alternative procedure will be exercised); (v) whether there will be opportunities for the public to comment on the work product to be peer reviewed, and if so, how and when these opportunities will be provided; (vi) whether the agency will provide significant and relevant public comments to the peer reviewers before they conduct their review; (vii) the anticipated number of reviewers (3 or fewer; 4–10; or more than 10); (viii) a succinct description of the primary disciplines or expertise needed in the review; (ix) whether reviewers will be selected by the agency or by a designated outside organization; and (x) whether the public, including scientific or professional societies, will be asked to nominate potential peer reviewers. The agency shall provide a link from the agenda to each document made public pursuant to this Bulletin. Agencies shall link their peer review agendas to the U.S. Government's official Web portal: [firstgov at http://www.FirstGov.gov](http://www.FirstGov.gov).

Agencies should update their peer review agendas at least every six months. However, in some cases—particularly for highly influential scientific assessments and other particularly important information—more frequent updates of existing entries on the agenda, or the addition of new entries to the agenda, may be warranted. When new entries are added to the agenda of forthcoming reports and other information, the public should be provided with sufficient time to comment on the agency's peer review plan for that report or product. Agencies shall consider public comments on the peer review plan. Agencies are encouraged to offer a listserve or similar mechanism for members of the public who would like to be notified by email

each time an agency's peer review agenda has been updated.

The peer review planning requirements of this Bulletin are designed to be implemented in phases. Specifically, the planning requirements of the Bulletin will go into effect for documents subject to Section III of the Bulletin (highly influential scientific assessments) six months after publication. However, the planning requirements for documents subject to Section II of the Bulletin do not go into effect until one year after publication. It is expected that agency experience with the planning requirements of the Bulletin for the smaller scope of documents encompassed in Section III will be used to inform implementation of these planning requirements for the larger scope of documents covered under Section II.

Section VI: Annual Report

Each agency shall prepare an annual report that summarizes key decisions made pursuant to this Bulletin. In particular, each agency should provide to OIRA the following: (1) The number of peer reviews conducted subject to the Bulletin (i.e., for influential scientific information and highly influential scientific assessments); (2) the number of times alternative procedures were invoked; (3) the number of times waivers or deferrals were invoked (and in the case of deferrals, the length of time elapsed between the deferral and the peer review); (4) any decision to appoint a reviewer pursuant to any exception to the applicable independence or conflict of interest standards of the Bulletin, including determinations by the Secretary or Deputy Secretary pursuant to Section III(3)(c); (5) the number of peer review panels that were conducted in public and the number that allowed public comment; (6) the number of public comments provided on the agency's peer review plans; and (7) the number of peer reviewers that the agency used that were recommended by professional societies.

Section VII: Certification in the Administrative Record

If an agency relies on influential scientific information or a highly influential scientific assessment subject to the requirements of this Bulletin in support of a regulatory action, the agency shall include in the administrative record for that action a certification that explains how the agency has complied with the requirements of this Bulletin and the Information Quality Act. Relevant

materials are to be placed in the administrative record.

Section VIII: Safeguards, Deferrals, and Waivers

Section VIII recognizes that individuals serving as peer reviewers have a privacy interest in information about themselves that the government maintains and retrieves by name or identifier from a system of records. To the extent information about a reviewer (name, credential, affiliation) will be disclosed along with his/her comments or analysis, the agency must comply with the requirements of the Privacy Act, 5 U.S.C. 552a, as amended, and OMB Circular A–130, Appendix I, 61 FR 6428 (February 20, 1996) to establish appropriate routine uses in a published System of Records Notice. Furthermore, the peer review must be conducted in a manner that respects confidential business information as well as intellectual property.

Section VIII also allows for a deferral or waiver of the requirements of the Bulletin where necessary. Specifically, the agency head may waive or defer some or all of the peer review requirements of Sections II or III of this Bulletin if there is a compelling rationale for waiver or deferral. Waivers will seldom be warranted under this provision because the Bulletin already provides significant safety valves, such as: The exemptions provided in Section IX, including the exemption for time-sensitive health and safety information; the authorization for alternative procedures in Section IV; and the overall flexibility provided for peer reviews of influential scientific information under Section II. Nonetheless, we have included this waiver and deferral provision to ensure needed flexibility in unusual and compelling situations not otherwise covered by the exemptions to the Bulletin, such as situations where unavoidable legal deadlines prevent full compliance with the Bulletin before information is disseminated. Deadlines found in consent decrees agreed to by agencies after the Bulletin is issued will not ordinarily warrant waiver of the Bulletin's requirements because those deadlines should be negotiated to permit time for all required procedures, including peer review. In addition, when an agency is unavoidably up against a deadline, deferral of some or all requirements of the Bulletin (as opposed to outright waiver of all of them) is the most appropriate accommodation between the need to satisfy immovable deadlines and the need to undertake proper peer review. If the agency head defers any of the peer

review requirements prior to dissemination, peer review should be conducted as soon as practicable thereafter.

Section IX: Exemptions

There are a variety of situations where agencies need not conduct peer review under this Bulletin. These include, for example, disseminations of sensitive information related to certain national security, foreign affairs, or negotiations involving international treaties and trade where compliance with this Bulletin would interfere with the need for secrecy or promptness.

This Bulletin does not cover official disseminations that arise in adjudications and permit proceedings, unless the agency determines that peer review is practical and appropriate and that the influential dissemination is scientifically or technically novel (i.e., a major change in accepted practice) or likely to have precedent-setting influence on future adjudications or permit proceedings. This exclusion is intended to cover, among other things, licensing, approval and registration processes for specific product development activities as well as site-specific activities. The determination as to whether peer review is practical and appropriate is left to the discretion of the agency. While this Bulletin is not broadly applicable to adjudications, agencies are encouraged to hold peer reviews of scientific assessments supporting adjudications to the same technical standards as peer reviews covered by the Bulletin, including transparency and disclosure of the data and models underlying the assessments. Protections apply to confidential business information.

The Bulletin does not cover time-sensitive health and safety disseminations, for example, a dissemination based primarily on data from a recent clinical trial that was adequately peer reviewed before the trial began. For this purpose, "health" includes public health, or plant or animal infectious diseases.

This Bulletin covers original data and formal analytic models used by agencies in Regulatory Impact Analyses (RIAs). However, the RIA documents themselves are already reviewed through an interagency review process under E.O. 12866 that involves application of the principles and methods defined in OMB Circular A-4. In that respect, RIAs are excluded from coverage by this Bulletin, although agencies are encouraged to have RIAs reviewed by peers within the government for adequacy and completeness.

The Bulletin does not cover accounting, budget, actuarial, and financial information including that which is generated or used by agencies that focus on interest rates, banking, currency, securities, commodities, futures, or taxes.

Routine statistical information released by Federal statistical agencies (e.g., periodic demographic and economic statistics) and analyses of these data to compute standard indicators and trends (e.g., unemployment and poverty rates) is excluded from this Bulletin.

The Bulletin does not cover information disseminated in connection with routine rules that materially alter entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof.

If information is disseminated pursuant to an exemption to this Bulletin, subsequent disseminations are not automatically exempted. For example, if influential scientific information is first disseminated in the course of an exempt agency adjudication, but is later disseminated in the context of a non-exempt rulemaking, the subsequent dissemination will be subject to the requirements of this Bulletin even though the first dissemination was not.

Section X: OIRA and OSTP Responsibilities

OIRA, in consultation with OSTP, is responsible for overseeing agency implementation of this Bulletin. In order to foster learning about peer review practices across agencies, OIRA and OSTP shall form an interagency workgroup on peer review that meets regularly, discusses progress and challenges, and recommends improvements to peer review practices.

Section XI: Effective Date and Existing Law

The requirements of this Bulletin, with the exception of Section V, apply to information disseminated on or after six months after publication of this Bulletin. However, the Bulletin does not apply to information that is already being addressed by an agency-initiated peer review process (e.g., a draft is already being reviewed by a formal scientific advisory committee established by the agency). An existing peer review mechanism mandated by law should be implemented by the agency in a manner as consistent as possible with the practices and procedures outlined in this Bulletin. The requirements of Section V apply to "highly influential scientific assessments," as designated in Section

III of the Bulletin, within six months of publication of the final Bulletin. The requirements in Section V apply to documents subject to Section II of the Bulletin one year after publication of the final Bulletin.

Section XII: Judicial Review

This Bulletin is intended to improve the internal management of the Executive Branch and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, against the United States, its agencies or other entities, its officers or employees, or any other person.

Bulletin for Peer Review

I. Definitions

For purposes of this Bulletin—

1. The term "Administrator" means the Administrator of the Office of Information and Regulatory Affairs in the Office of Management and Budget (OIRA);

2. The term "agency" has the same meaning as in the Paperwork Reduction Act, 44 U.S.C. 3502(1);

3. The term "dissemination" means agency initiated or sponsored distribution of information to the public (see 5 CFR 1320.3(d) (definition of "Conduct or Sponsor")). Dissemination does not include distribution limited to government employees or agency contractors or grantees; intra- or inter-agency use or sharing of government information; or responses to requests for agency records under the Freedom of Information Act, the Privacy Act, the Federal Advisory Committee Act, the Government Performance and Results Act or similar law. This definition also excludes distribution limited to correspondence with individuals or persons, press releases, archival records, public filings, subpoenas and adjudicative processes. The term "dissemination" also excludes information distributed for peer review in compliance with this Bulletin, provided that the distributing agency includes a clear disclaimer on the information as follows: "This information is distributed solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. It has not been formally disseminated by [the agency]. It does not represent and should not be construed to represent any agency determination or policy." For the purposes of this Bulletin, "dissemination" excludes research produced by government-funded scientists (e.g., those supported extramurally or intramurally by Federal

agencies or those working in state or local governments with Federal support) if that information does not represent the views of an agency. To qualify for this exemption, the information should display a clear disclaimer that “the findings and conclusions in this report are those of the author(s) and do not necessarily represent the views of the funding agency”;

4. The term “Information Quality Act” means Section 515 of Public Law 106–554 (Pub. L. No. 106–554, § 515, 114 Stat. 2763, 2763A–153–154 (2000));

5. The term “scientific information” means factual inputs, data, models, analyses, technical information, or scientific assessments based on the behavioral and social sciences, public health and medical sciences, life and earth sciences, engineering, or physical sciences. This includes any communication or representation of knowledge such as facts or data, in any medium or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual forms. This definition includes information that an agency disseminates from a Web page, but does not include the provision of hyperlinks to information that others disseminate. This definition does not include opinions, where the agency’s presentation makes clear that what is being offered is someone’s opinion rather than fact or the agency’s views;

6. The term “influential scientific information” means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions; and

7. The term “scientific assessment” means an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. These assessments include, but are not limited to, state-of-science reports; technology assessments; weight-of-evidence analyses; meta-analyses; health, safety, or ecological risk assessments; toxicological characterizations of substances; integrated assessment models; hazard determinations; or exposure assessments.

II. Peer Review of Influential Scientific Information

1. *In General:* To the extent permitted by law, each agency shall conduct a peer review on all influential scientific information that the agency intends to disseminate. Peer reviewers shall be charged with reviewing scientific and

technical matters, leaving policy determinations for the agency. Reviewers shall be informed of applicable access, objectivity, reproducibility and other quality standards under the Federal laws governing information access and quality.

2. *Adequacy of Prior Peer Review:* For information subject to this section of the Bulletin, agencies need not have further peer review conducted on information that has already been subjected to adequate peer review. In determining whether prior peer review is adequate, agencies shall give due consideration to the novelty and complexity of the science to be reviewed, the importance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review. Principal findings, conclusions and recommendations in official reports of the National Academy of Sciences are generally presumed to have been adequately peer reviewed.

3. *Selection of Reviewers:* a. *Expertise and Balance:* Peer reviewers shall be selected based on expertise, experience and skills, including specialists from multiple disciplines, as necessary. The group of reviewers shall be sufficiently broad and diverse to fairly represent the relevant scientific and technical perspectives and fields of knowledge. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.

b. *Conflicts:* The agency—or the entity selecting the peer reviewers—shall (i) ensure that those reviewers serving as federal employees (including special government employees) comply with applicable Federal ethics requirements; (ii) in selecting peer reviewers who are not government employees, adopt or adapt the National Academy of Sciences policy for committee selection with respect to evaluating the potential for conflicts (e.g., those arising from investments; agency, employer, and business affiliations; grants, contracts and consulting income). For scientific information relevant to specific regulations, the agency shall examine a reviewer’s financial ties to regulated entities (e.g., businesses), other stakeholders, and the agency.

c. *Independence:* Peer reviewers shall not have participated in development of the work product. Agencies are encouraged to rotate membership on standing panels across the pool of qualified reviewers. Research grants that were awarded to scientists based on investigator-initiated, competitive, peer-reviewed proposals generally do not

raise issues as to independence or conflicts.

4. *Choice of Peer Review Mechanism:* The choice of a peer review mechanism (for example, letter reviews or ad hoc panels) for influential scientific information shall be based on the novelty and complexity of the information to be reviewed, the importance of the information to decision making, the extent of prior peer review, and the expected benefits and costs of review, as well as the factors regarding transparency described in II(5).

5. *Transparency:* The agency—or entity managing the peer review—shall instruct peer reviewers to prepare a report that describes the nature of their review and their findings and conclusions. The peer review report shall either (a) include a verbatim copy of each reviewer’s comments (either with or without specific attributions) or (b) represent the views of the group as a whole, including any disparate and dissenting views. The agency shall disclose the names of the reviewers and their organizational affiliations in the report. Reviewers shall be notified in advance regarding the extent of disclosure and attribution planned by the agency. The agency shall disseminate the final peer review report on the agency’s Web site along with all materials related to the peer review (any charge statement, the peer review report, and any agency response). The peer review report shall be discussed in the preamble to any related rulemaking and included in the administrative record for any related agency action.

6. *Management of Peer Review Process and Reviewer Selection:* The agency may commission independent entities to manage the peer review process, including the selection of peer reviewers, in accordance with this Bulletin.

III. Additional Peer Review Requirements for Highly Influential Scientific Assessments

1. *Applicability:* This section applies to influential scientific information that the agency or the Administrator determines to be a scientific assessment that:

(i) Could have a potential impact of more than \$500 million in any year, or

(ii) Is novel, controversial, or precedent-setting or has significant interagency interest.

2. *In General:* To the extent permitted by law, each agency shall conduct peer reviews on all information subject to this Section. The peer reviews shall satisfy the requirements of Section II of this Bulletin, as well as the additional

requirements found in this Section. Principal findings, conclusions and recommendations in official reports of the National Academy of Sciences that fall under this Section are generally presumed not to require additional peer review.

3. *Selection of Reviewers: a. Expertise and Balance:* Peer reviewers shall be selected based on expertise, experience and skills, including specialists from multiple disciplines, as necessary. The group of reviewers shall be sufficiently broad and diverse to fairly represent the relevant scientific and technical perspectives and fields of knowledge. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.

b. *Conflicts:* The agency—or the entity selecting the peer reviewers—shall (i) ensure that those reviewers serving as Federal employees (including special government employees) comply with applicable Federal ethics requirements; (ii) in selecting peer reviewers who are not government employees, adopt or adapt the National Academy of Sciences' policy for committee selection with respect to evaluating the potential for conflicts (e.g., those arising from investments; agency, employer, and business affiliations; grants, contracts and consulting income). For scientific assessments relevant to specific regulations, a reviewer's financial ties to regulated entities (e.g., businesses), other stakeholders, and the agency shall be examined.

c. *Independence:* In addition to the requirements of Section II (3)(c), which shall apply to all reviews conducted under Section III, the agency—or entity selecting the reviewers—shall bar participation of scientists employed by the sponsoring agency unless the reviewer is employed only for the purpose of conducting the peer review (i.e., special government employees). The only exception to this bar would be the rare case where the agency determines, using the criteria developed by NAS for evaluating use of "employees of sponsors," that a premier government scientist is (a) not in a position of management or policy responsibility and (b) possesses essential expertise that cannot be obtained elsewhere. Furthermore, to be eligible for this exception, the scientist must be employed by a different agency of the Cabinet-level department than the agency that is disseminating the scientific information. The agency's determination shall be documented in writing and approved, on a non-delegable basis, by the Secretary or

Deputy Secretary of the department prior to the scientist's appointment.

d. *Rotation:* Agencies shall avoid repeated use of the same reviewer on multiple assessments unless his or her participation is essential and cannot be obtained elsewhere.

4. *Information Access:* The agency—or entity managing the peer review—shall provide the reviewers with sufficient information—including background information about key studies or models—to enable them to understand the data, analytic procedures, and assumptions used to support the key findings or conclusions of the draft assessment.

5. *Opportunity for Public Participation:* Whenever feasible and appropriate, the agency shall make the draft scientific assessment available to the public for comment at the same time it is submitted for peer review (or during the peer review process) and sponsor a public meeting where oral presentations on scientific issues can be made to the peer reviewers by interested members of the public. When employing a public comment process as part of the peer review, the agency shall, whenever practical, provide peer reviewers with access to public comments that address significant scientific or technical issues. To ensure that public participation does not unduly delay agency activities, the agency shall clearly specify time limits for public participation throughout the peer review process.

6. *Transparency:* In addition to the requirements specified in II(5), which shall apply to all reviews conducted under Section III, the peer review report shall include the charge to the reviewers and a short paragraph on both the credentials and relevant experiences of each peer reviewer. The agency shall prepare a written response to the peer review report explaining (a) the agency's agreement or disagreement with the views expressed in the report, (b) the actions the agency has undertaken or will undertake in response to the report, and (c) the reasons the agency believes those actions satisfy the key concerns stated in the report (if applicable). The agency shall disseminate its response to the peer review report on the agency's Web site with the related material specified in Section II(5).

7. *Management of Peer Review Process and Reviewer Selection:* The agency may commission independent entities to manage the peer review process, including the selection of peer reviewers, in accordance with this Bulletin.

IV. Alternative Procedures

As an alternative to complying with Sections II and III of this Bulletin, an agency may instead: (i) Rely on the principal findings, conclusions and recommendations of a report produced by the National Academy of Sciences; (ii) commission the National Academy of Sciences to peer review an agency's draft scientific information; or (iii) employ an alternative scientific procedure or process, specifically approved by the Administrator in consultation with the Office of Science and Technology Policy (OSTP), that ensures the agency's scientific information satisfies applicable information quality standards. The alternative procedure(s) may be applied to a designated report or group of reports.

V. Peer Review Planning

1. *Peer Review Agenda:* Each agency shall post on its Web site, and update at least every six months, an agenda of peer review plans. The agenda shall describe all planned and ongoing influential scientific information subject to this Bulletin. The agency shall provide a link from the agenda to each document that has been made public pursuant to this Bulletin. Agencies are encouraged to offer a listserve or similar mechanism to alert interested members of the public when entries are added or updated.

2. *Peer Review Plans:* For each entry on the agenda the agency shall describe the peer review plan. Each peer review plan shall include: (i) A paragraph including the title, subject and purpose of the planned report, as well as an agency contact to whom inquiries may be directed to learn the specifics of the plan; (ii) whether the dissemination is likely to be influential scientific information or a highly influential scientific assessment; (iii) the timing of the review (including deferrals); (iv) whether the review will be conducted through a panel or individual letters (or whether an alternative procedure will be employed); (v) whether there will be opportunities for the public to comment on the work product to be peer reviewed, and if so, how and when these opportunities will be provided; (vi) whether the agency will provide significant and relevant public comments to the peer reviewers before they conduct their review; (vii) the anticipated number of reviewers (3 or fewer; 4–10; or more than 10); (viii) a succinct description of the primary disciplines or expertise needed in the review; (ix) whether reviewers will be selected by the agency or by a

designated outside organization; and (x) whether the public, including scientific or professional societies, will be asked to nominate potential peer reviewers.

3. *Public Comment:* Agencies shall establish a mechanism for allowing the public to comment on the adequacy of the peer review plans. Agencies shall consider public comments on peer review plans.

VI. Annual Reports

Each agency shall provide to OIRA, by December 15 of each year, a summary of the peer reviews conducted by the agency during the fiscal year. The report should include the following: (1) The number of peer reviews conducted subject to the Bulletin (*i.e.*, for influential scientific information and highly influential scientific assessments); (2) the number of times alternative procedures were invoked; (3) the number of times waivers or deferrals were invoked (and in the case of deferrals, the length of time elapsed between the deferral and the peer review); (4) any decision to appoint a reviewer pursuant to any exception to the applicable independence or conflict of interest standards of the Bulletin, including determinations by the Secretary pursuant to Section III(3)(c); (5) the number of peer review panels that were conducted in public and the number that allowed public comment; (6) the number of public comments provided on the agency's peer review plans; and (7) the number of peer reviewers that the agency used that were recommended by professional societies.

VII. Certification in the Administrative Record

If an agency relies on influential scientific information or a highly influential scientific assessment subject to this Bulletin to support a regulatory action, it shall include in the administrative record for that action a certification explaining how the agency has complied with the requirements of this Bulletin and the applicable information quality guidelines. Relevant materials shall be placed in the administrative record.

VIII. Safeguards, Deferrals, and Waivers

1. *Privacy:* To the extent information about a reviewer (name, credentials, affiliation) will be disclosed along with his/her comments or analysis, the agency shall comply with the requirements of the Privacy Act, 5 U.S.C. 522a as amended, and OMB Circular A-130, Appendix I, 61 FR 6428 (February 20, 1996) to establish appropriate routine uses in a published System of Records Notice.

2. *Confidentiality:* Peer review shall be conducted in a manner that respects (i) confidential business information and (ii) intellectual property.

3. *Deferral and Waiver:* The agency head may waive or defer some or all of the peer review requirements of Sections II and III of this Bulletin where warranted by a compelling rationale. If the agency head defers the peer review requirements prior to dissemination, peer review shall be conducted as soon as practicable.

IX. Exemptions

Agencies need not have peer review conducted on information that is:

1. Related to certain national security, foreign affairs, or negotiations involving international trade or treaties where compliance with this Bulletin would interfere with the need for secrecy or promptness;

2. Disseminated in the course of an individual agency adjudication or permit proceeding (including a registration, approval, licensing, site-specific determination), unless the agency determines that peer review is practical and appropriate and that the influential dissemination is scientifically or technically novel or likely to have precedent-setting influence on future adjudications and/or permit proceedings;

3. A health or safety dissemination where the agency determines that the dissemination is time-sensitive (*e.g.*, findings based primarily on data from a recent clinical trial that was adequately peer reviewed before the trial began);

4. An agency regulatory impact analysis or regulatory flexibility analysis subject to interagency review under Executive Order 12866, except for underlying data and analytical models used;

5. Routine statistical information released by federal statistical agencies (*e.g.*, periodic demographic and economic statistics) and analyses of these data to compute standard indicators and trends (*e.g.*, unemployment and poverty rates);

6. Accounting, budget, actuarial, and financial information, including that which is generated or used by agencies that focus on interest rates, banking, currency, securities, commodities, futures, or taxes; or

7. Information disseminated in connection with routine rules that materially alter entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof.

X. Responsibilities of OIRA and OSTP

OIRA, in consultation with OSTP, shall be responsible for overseeing

implementation of this Bulletin. An interagency group, chaired by OSTP and OIRA, shall meet periodically to foster better understanding about peer review practices and to assess progress in implementing this Bulletin.

XI. Effective Date and Existing Law

The requirements of this Bulletin, with the exception of those in Section V (Peer Review Planning), apply to information disseminated on or after six months following publication of this Bulletin, except that they do not apply to information for which an agency has already provided a draft report and an associated charge to peer reviewers. Any existing peer review mechanisms mandated by law shall be employed in a manner as consistent as possible with the practices and procedures laid out herein. The requirements in Section V apply to "highly influential scientific assessments," as designated in Section III of this Bulletin, within six months of publication of this Bulletin. The requirements in Section V apply to documents subject to Section II of this Bulletin one year after publication of this Bulletin.

XII. Judicial Review

This Bulletin is intended to improve the internal management of the executive branch, and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, against the United States, its agencies or other entities, its officers or employees, or any other person.

John D. Graham,

Administrator, Office of Information and Regulatory Affairs.

[FR Doc. 05-769 Filed 1-13-05; 8:45 am]

BILLING CODE 3110-01-P

OVERSEAS PRIVATE INVESTMENT CORPORATION

Sunshine Act Meeting; Board of Directors

TIME AND DATE: Thursday, January 27, 2005, 9:30 a.m. (open portion); 9:45 a.m. (closed portion).

PLACE: Offices of the Corporation, Twelfth Floor Board Room, 1100 New York Avenue, NW., Washington, DC.

STATUS: Meeting open to the public from 9:30 a.m. to 9:45 a.m.; closed portion will commence at 9:45 a.m. (approx.).

MATTERS TO BE CONSIDERED:

1. President's Report.
2. Approval of November 10, 2004 Minutes (open portion).

Science and Technology Policy Council

PEER REVIEW HANDBOOK

4th Edition

U.S. Environmental Protection Agency

Peer Review Handbook

4th Edition

October 2015

Prepared for the U.S. Environmental Protection Agency
under the direction of the EPA Peer Review Advisory Group

**Science and Technology Policy Council
U.S. Environmental Protection Agency
Washington, D.C. 20460**

DISCLAIMER

This 4th edition of the *Peer Review Handbook* was developed by the U.S. Environmental Protection Agency (hereafter EPA or the Agency) to provide guidance to EPA staff and managers who are planning and conducting peer reviews. It is intended to improve the internal management of EPA peer review by providing recommended procedures and approaches for EPA staff and managers. This 4th edition is a guidance manual and not a rule or regulation. Some topics in the Handbook refer to laws or EPA policies. In such cases, this Handbook provides recommendations for how those provisions can be implemented. The *Peer Review Handbook* does not replace existing laws or regulations, does not change or substitute for any legal requirement, and is not legally enforceable. This 4th edition does not create or confer legal rights or impose any legally binding requirements on EPA or any party. The use of non-mandatory language such as “may,” “can” or “should” in this *Peer Review Handbook* does not connote a requirement but does indicate EPA’s strongly preferred approach to ensure the quality of peer reviews conducted or initiated by EPA. Mention of trade names or commercial products does not constitute endorsement or recommendation for use.

Peer Review Guidance.....	19
1. PEER REVIEW AT EPA: GENERAL CONCEPTS AND CONTEXT.....	20
1.1. Overview.....	20
1.2. Peer Review	20
1.2.1. What Is Peer Review?.....	20
1.2.2. Why Use Peer Review?	21
1.2.3. When and How Often Should Peer Review Occur?	21
1.2.4. What Factors Are Considered in Setting the Timeframe for Peer Review?	21
1.2.5. What Budgetary Factors Should Be Considered in Planning a Peer Review?	22
1.2.6. Who Are the Peer Reviewers?	22
1.2.7. What Is the Difference Between Internal and External Peer Review?	22
1.2.8. What Is the Difference Between Internal Peer Review and Internal Management Review?	23
1.2.9. What Is a Letter Peer Review?	23
1.2.10. What Is a Peer Review Panel?	23
1.2.11. What Is Peer Input, and How Does It Differ From Peer Review?	24
1.2.12. What Is Stakeholder Involvement, and How Does It Differ From Peer Review?	24
1.2.13. How Does Public Comment Differ From Peer Review?	24
1.3. Policies and Guidance That Relate to Peer Review	25
1.3.1. What Is the EPA’s Peer Review Policy?	25
1.3.2. What Are the Legal Ramifications of the Peer Review Policy?	25
1.3.3. What Is the Office of Management and Budget’s Peer Review Bulletin, and How Does It Relate to Peer Review at EPA?.....	26
1.3.4. What Is the EPA’s Quality System, and How Does It Relate to Peer Review?	26
1.3.5. What Are the EPA’s Information Quality Guidelines (IQG), and How Do They Relate to Peer Review?	27
1.3.6. What Are the General Assessment Factors, and How Do They Relate to Peer Review?	28
1.3.7. What Is the EPA’s Scientific Integrity Policy, and How Does It Relate to Peer Review?	28

1.4. Peer Review and Regulatory Development	28
1.4.1. What Role Does Peer Review Have in Regulatory Development?	28
1.4.2. What Is the EPA's Action Development Process (ADP), and How Does It Relate to Peer Review?	29
1.4.3. How Does the Rulemaking Tier Affect Peer Review?	29
1.4.4. Should Peer Review Be Discussed in the Analytic Blueprint for a Regulation?	29
1.4.5. What Role Does Peer Review Have in Regulatory Negotiations?	29
1.4.6. Should the Peer Review Be Discussed in the Preamble of a Regulation?	30
1.4.7. How Is Peer Review Documented in the Action Memorandum for Regulations?	30
2. PEER REVIEW ROLES AND RESPONSIBILITIES	31
2.1. Overview	31
2.2. Oversight Responsibilities for the EPA's Peer Review Policy	31
2.2.1. What Is the Role of the Deputy Administrator?	31
2.2.2. What Is the Role of the Science and Technology Policy Council?	31
2.2.3. What Is the Role of the Peer Review Advisory Group?	32
2.2.4. What Is the Role of the Office of the Science Advisor?	32
2.2.5. What Is the Role of the Office of Research and Development?	32
2.3. Peer Review Roles and Responsibilities within EPA Offices	32
2.3.1. What Is the Role of the Assistant and Regional Administrators?	33
2.3.2. What Is the Role of the Decision Maker?	33
2.3.3. What Is the Role of the Peer Review Coordinator?	34
2.3.4. What Is the Role of the Peer Review Leader for EPA-Managed Peer Reviews?	34
2.3.5. What Are the Roles of the Peer Review Leader and Contractor in the Case of Contractor-Managed Peer Reviews?	36
2.3.6. What Is the Role of the Designated Federal Officer (DFO) in the Case of Federal Advisory Committee (FAC)-Conducted Peer Reviews?	36
2.3.7. What Are the Roles and Responsibilities of EPA When Peer Reviews Are Conducted by the National Academy of Sciences?	37
2.3.8. What Are the Roles and Responsibilities of EPA Authors and Managers Associated With Journal Peer Review?	37
2.4. Other Agency Personnel Involved With Peer Review	37
2.4.1. What Are the Roles of the Offices of General and Regional Counsel?	37
2.4.2. What Are the Roles of the Quality Assurance Manager (QAM), Director of Quality Assurance (DQA) and Quality Assurance (QA) Staff?	38
2.4.3. What Is the Role of the Information Quality Guidelines (IQG) Officer?	38
2.4.4. What Is the Role of the Principal Investigator (PI), Project Leader (PL) or Project Manager (PM)?	38
2.4.5. What Is the Role of the Contracting Officer's Representative (COR)?	38
3. CATEGORIZE THE WORK PRODUCT AND DETERMINING THE NEED FOR PEER REVIEW	40
3.1. Overview	40
3.1.1. What Are Scientific and Technical Work Products?	40

3.1.2.	Who Develops Scientific and Technical Work Products?	41
3.1.3.	What Scientific and Technical Work Products Need Peer Review?	42
3.2.	Assignment of Categories	42
3.2.1.	What Is Influential Scientific Information (ISI)?	42
3.2.2.	How Are ISI Determinations Made and Documented?	43
3.2.3.	What Is a Highly Influential Scientific Assessment (HISA)?	43
3.2.4.	How Are HISA Determinations Made and Documented?	43
3.2.5.	What Work Products Are Categorized as “Other”?	44
3.2.6.	Are Work Products Categorized as “Other” Candidates for Peer Review?	44
3.2.7.	Can the Categorization of a Work Product Be Revised After the Peer Review Planning Phase?	44
3.3.	Influential Work Products That Are Not Peer Reviewed	44
3.3.1.	Under What Circumstances Are Influential Work Products Exempt From the Provisions of the OMB Peer Review Bulletin?	44
3.3.2.	Are There Other Circumstances When Peer Review of Influential Products Is Not Necessary?	45
3.3.3.	For Influential Information That Is Not Exempt, Can the Peer Review Provisions of the OMB Peer Review Bulletin Be Waived or Deferred?	45
3.4.	Work Products from Contracts, Grants and Agreements That May Require Peer Review	46
3.4.1.	How Does the EPA’s Peer Review Process Apply to Products Generated through EPA Contracts?	46
3.4.2.	How Does the EPA’s Peer Review Process Apply to Products Generated through EPA Assistance Agreements (e.g., Grants or Cooperative Agreements)?	46
3.4.3.	Can the Recipient of a Grant or Cooperative Agreement Use Agreement Funds to Pay Peer Reviewers of Their Work Products?	47
3.4.4.	How Should Peer Review Be Handled for Products Developed Under an Interagency Agreement?	47
3.5.	Other Types of Work Products That May Require Peer Review	47
3.5.1.	Should Another Organization’s Work Products That Have Been Submitted to the EPA for Use in Decision Making Be Peer Reviewed?	47
3.5.2.	Is Additional Peer Review Necessary If a Paper Is Published in a Refereed Scientific Journal?	48
3.5.3.	Does an Agency Work Product Become a Candidate for Peer Review When Peer-Reviewed Journal Articles Are Used in Support of That Work Product?	48
3.5.4.	Should Site-Specific Decisions Be Subject to Peer Review?	48
3.5.5.	Should National Environmental Policy Act (NEPA) Products Be Subject to Peer Review?	49
3.5.6.	Do Voluntary Consensus Standards Undergo Peer Review?	49
3.5.7.	What Economic Work Products Need Peer Review?	49
3.5.8.	Should Economic Analyses Prepared in Support of “Major” or “Economically Significant” Regulations Be Peer Reviewed?	51
3.5.9.	What Other Social Science Work Products Need Peer Review?	51
3.5.10.	Are Regulations Subject to Peer Review?	52
3.5.11.	Should Environmental Regulatory Models Be Peer Reviewed?	52

4.	PEER REVIEW TYPES AND MECHANISMS	53
4.1.	Overview.....	53
4.2.	Choosing a Peer Review Mechanism	53
4.2.1.	How Is the Appropriate Peer Review Mechanism Determined?	54
4.2.2.	What Are Some Examples of Internal Peer Review Mechanisms?	55
4.2.3.	What Are Some Examples of External Peer Review Mechanisms?	56
4.3.	Mechanism: Journal Peer Review.....	56
4.4.	Mechanism: Letter Reviews	57
4.5.	Mechanism: Panel Reviews.....	57
4.6.	Peer Review by Contractors.....	57
4.6.1.	Can the Agency Use a Contractor to Obtain Peer Review Services?	57
4.6.2.	How Does the Peer Review Leader Write a Statement of Work (SOW) for Peer Review Contracts?	58
4.6.3.	Can the Agency Select Peer Reviewers When Using a Contractor-Managed Peer Review?	59
4.6.4.	How Is the Panel Formed When a Contractor Manages a Panel Peer Review for ISI or HISAs?	59
4.6.5.	What Are Some Management Controls for Peer Review Contracts?	60
4.6.5.1.	What Are Inherently Governmental Activities and What Management Controls Prevent Contractors from Performing Them?	60
4.6.5.2.	What Are Management Controls for Conflict of Interest?	60
4.6.5.3.	What Management Controls Protect Confidential Business Information/Privacy Act- Protected Information and Other Privileged/Sensitive Information?	63
4.6.5.4.	What Management Controls Prevent Improper Personal Services?	63
4.6.6.	How Is Peer Reviewer Travel Handled With Contracts or Purchase Orders?	63
4.6.7.	What Are Gratuitous Services Agreements for Peer Review (GSAPR)?	64
4.7.	Peer Review by Federal Advisory Committees	65
4.7.1.	What Is the Role of Federal Advisory Committees in Peer Review?	65
4.7.2.	When Is It Appropriate to Seek Peer Review from EPA’s Science Advisory Board?	65
4.7.3.	What Other Federal Advisory Committees Can Provide Peer Review?	66
4.7.4.	How Is Travel Handled for Advisory Committee Members?	66
4.7.5.	When Does the Federal Advisory Committee Act Apply to Other Peer Review Mechanisms?	66
4.7.6.	When Are EPA-Run Peer Reviews Not Subject to FACA Requirements?	67
4.7.7.	How Does the Agency Ensure That Contractor-Managed Peer Reviews Do Not Inadvertently Invoke FACA Requirements?	67
4.8.	Peer Review by the National Academy of Sciences	68
5.	PEER REVIEWER QUALIFICATIONS AND SELECTION.....	69
5.1.	Overview.....	69
5.2.	Finding Peer Reviewers	70
5.2.1.	What Are the Important Qualifications for Peer Reviewers?	70
5.2.2.	How Are Potential Peer Reviewers Identified?	70
5.2.3.	When Are External Peer Reviewers Preferred?	71
5.2.4.	What Should be Considered When Compiling a List of Peer Reviewers?	72

5.2.5.	Can a Foreign National Be a Peer Reviewer?.....	72
5.2.6.	Are There Other Constraints to Selecting Peer Reviewers?	72
5.2.6.1.	Timing	72
5.2.6.2.	Confidential Business Information (CBI)	72
5.2.6.3.	Lobbyists	73
5.2.7.	Can Someone Who Provided Peer Input Become an Independent Peer Reviewer for the Same Work Product Later in the Process?	73
5.2.8.	Can a Peer Reviewer Be Used to Review the Same Product More Than Once or to Review Multiple Products?	73
5.2.9.	If State or Tribal Employees Are Used as Peer Reviewers, Can EPA Pay Them for This Service?	74
5.2.10.	Can the Identity of Peer Reviewers Be Kept Anonymous by EPA?	74
5.3.	Ensuring a Credible Peer Review Process – Ethics Considerations	75
5.3.1.	What Are the Relevant Ethical Standards for Different Categories of Peer Reviewers?	75
5.3.2.	How Are Ethics Issues Evaluated for Peer Reviewers Under Contractor-Managed Peer Reviews?.....	76
5.3.3.	How Are Ethics Issues Evaluated for Peer Reviewers Who Are Government Employees?	76
5.3.4.	What Constitutes a Conflict of Interest for a Special Government Employee on a Federal Advisory Committee?	76
5.3.5.	Can a Recipient of EPA Contracts or Grants Be a Peer Reviewer?	77
5.3.6.	Are There Any Exemptions or Remedies from a Conflict of Interest for Regular and Special Government Employees?	78
5.3.6.1.	Conflict of Interest Exemptions for Special Government Employees	78
5.3.6.2.	Conflict of Interest Remedies	78
5.3.7.	What Is an Appearance of a Loss of Impartiality for Regular and Special Government Employees?.....	79
5.3.8.	How Should Peer Review Leaders Address Ethics Issues for Regular and Special Government Employees during Peer Reviewer Selection?	79
5.3.9.	What Other Ethics Issues Might Arise for Regular and Special Government Employees During or After a Peer Review?	80
6.	CONDUCTING AND COMPLETING THE PEER REVIEW	82
6.1.	Overview	82
6.2.	The Peer Review Charge and Instructions to Peer Reviewers	82
6.2.1.	What Is a Charge?.....	82
6.2.2.	What Are the Essential Elements of a Charge?	83
6.2.3.	Can the Public, Including Stakeholders, Provide Input to the Charge to the Peer Reviewers?	83
6.2.4.	Who Writes the Charge When the Agency Hires a Contractor to Conduct the Peer Review?	84
6.2.5.	What Additional Instructions and Information Does the Agency Give Peer Reviewers, including Preparation of a Peer Review Report?	84
6.2.5.1.	General Instructions	84
6.2.5.2.	Further Instructions to Peer Reviewers of ISI and HISAs	85
6.2.6.	How May EPA Interact With External Peer Reviewers During the Review?	86

6.2.6.1. When EPA Conducts an External Peer Review	86
6.2.6.2. When a Contractor Conducts an External Peer Review	86
6.2.7. When May the Public Provide Comment During the Peer Review?	86
6.3. Responding to Peer Review Comments	86
6.3.1. How Does the Agency Evaluate and Incorporate Peer Reviewers' Comments?	86
6.3.2. How Does the Agency Address Comments from Peer Review Reports?	87
6.3.3. How Might Peer Review Comments Impact the Work Product?	87
6.3.4. What Should the Final Work Product Say About the Peer Review Process?	88
6.4. Finalizing the Work Product: When Is the Peer Review of a Work Product Complete?	88
6.5. The Peer Review Record	89
6.5.1. What Is the Peer Review Record?	89
6.5.2. What Should Be in the Peer Review Record?	89
6.5.3. When Should the Peer Review Record-Building Process Begin?	90
6.5.4. What Types of Documentation Should Be Maintained When Categorizing Work Products and Determining the Peer Review Mechanism?	90
6.5.5. How Can the Peer Review Record Improve the Peer Review Process?	91
6.5.6. What Happens to a Peer Review Record That Pertains to a Rulemaking Action?	91
6.5.7. Are there Differences in Record-Keeping between a Review by Individuals and One by a Panel?	91
6.5.8. Are Internal Peer Review Comments Included in the Peer Review Record?	91
6.5.9. Where Should the Peer Review Record Be Kept and for How Long?	91
7. TRANSPARENCY IN PEER REVIEW: PUBLIC PARTICIPATION AND REPORTING	93
7.1. Overview	93
7.2. Opportunities for Public Participation	93
7.2.1. What Are the Opportunities for Public Participation in Peer Review?	93
7.2.2. What Are the Opportunities for Public Participation for Peer Reviews Conducted by Federal Advisory Committees (FACs)?	94
7.2.3. Is Information Regarding a Peer Review Subject to Release Under the Freedom of Information Act (FOIA)?	94
7.3. Reporting on Peer Reviews	94
7.3.1. What Are the EPA's Reporting Practices?	94
7.3.2. What Information Should Be Provided in the Science Inventory Peer Review Plan Regarding ISI and HISAs?	95
7.3.3. Which Products Generated Under EPA Grants or Cooperative Agreements Should Be Reported in the Science Inventory?	96
7.3.4. Does the Agency Report on Peer Review of Scientific and Technical Work Products That Are Not ISI or HISAs?	96

FOREWORD

Science is the foundation that supports all of our work at EPA. The quality and integrity of the science that underlies our regulations are vital to the credibility of EPA's decisions and, ultimately, the Agency's effectiveness in pursuing its mission to protect human health and the environment. One important element in ensuring that decisions are based on sound and defensible science is to have an open and transparent peer review process.

EPA has a long-standing history of peer review. The Agency has been a leader across the federal government in developing guidance and support for the peer review process. Even before issuing its Agency-wide Peer Review Policy in 1993, EPA was committed to peer review of its scientific and technical products. Over the years, EPA has repeatedly reaffirmed and updated both its Peer Review Policy and the processes for implementing peer review to ensure that EPA decisions rest on credible science and data.

The Agency's *Peer Review Handbook* was first released in 1998 and has been updated several times since. Each update has emphasized greater transparency and accountability for peer review. The last edition of the Handbook (2006) incorporated the provisions of the Office of Management and Budget's (OMB) *Final Information Quality Bulletin for Peer Review*. An EPA Addendum to the Handbook in 2009 provided guidance on preventing ethics concerns related to the appearance of a loss of impartiality for peer reviewers.

This newly revised 4th edition of the *Peer Review Handbook*, commissioned by the EPA Science and Technology Policy Council (STPC), supersedes all previous editions. Although the basic peer review procedures in the 2006 *Peer Review Handbook* remain current and our overall approach to peer review is not changing, this revision enhances and reinforces the practice of peer review at the Agency.

This *Peer Review Handbook* should be used as guidance by EPA staff and managers to ensure that the Agency's Peer Review Policy is implemented effectively and that the integrity of our peer review activities can be demonstrated transparently to the American public.

Thomas A. Burke, PhD, MPH
EPA Science Advisor

PREFACE

The first edition of the EPA *Peer Review Handbook* was issued in 1998 and was intended to serve as a single, centralized source of implementation guidance on peer review for EPA staff and managers. Subsequent revisions of the Handbook have added necessary clarifications, incorporated insights and experiences gained through its use, and integrated changes to reflect updated government-wide guidance or policy related to peer review. These revisions have increased the transparency and accountability of peer review and helped ensure that Agency decisions are based on sound and defensible science.

For the 4th edition, the EPA's STPC determined that revisions were needed to incorporate several recent EPA policy and process changes related to peer review. Although the 4th edition draws heavily from the 3rd edition, it has been reorganized to emphasize the elements and tools needed to implement a systematic peer review. It retains, however, the "question and answer" format throughout. New flowcharts and checklists have been added, and several substantial updates are included, such as the additional guidance on appearance of a loss of impartiality in external peer reviews, new information on organizational changes and oversight responsibilities, and changes related to the issuance of recent policies and procedures associated with the EPA's Information Quality Guidelines (IQG). The 4th edition also describes process changes for contractor-managed panel peer reviews of scientific and technical documents designated as Influential Scientific Information (ISI), including Highly Influential Scientific Assessments (HISAs), which are a subset of ISI. The process is intended to reduce the potential for organizational or personal conflict-of-interest (COI) concerns. Early public participation in the nomination and selection of peer reviewers and increased internal oversight are features of the process.

As in previous editions of the Handbook, not every peer review scenario can be anticipated or discussed. Through the use of examples, tools (e.g., flow diagrams, checklists) and process descriptions, however, this 4th edition illustrates practices from across the Agency that demonstrate effective implementation of peer review policy. The use of the recommended procedures and approaches in this Handbook should reinforce the open, transparent and objective peer review of Agency products.

ROD	Record of Decision
SAB	Science Advisory Board
SAP	Scientific Advisory Panel
SGE	Special Government Employee
SI	Science Inventory
SOW	Statement of Work
STPC	Science and Technology Policy Council

ROADMAP TO PEER REVIEW AT EPA

ROADMAP TO PEER REVIEW AT EPA

R.1. Overview

The goal of this roadmap is to assist the user in understanding how to apply the material in the Handbook and determining where important decisions should be made and documented. Figure 1 summarizes the Agency's overall peer review process, whereas Figures 2 and 3 provide additional details of the key steps, decisions and milestones. This roadmap is not meant to be a stand-alone document but is to be used as a quick reference to users already familiar with the systematic process of planning, conducting and completing peer reviews. Roadmap users will find flowcharts summarizing major decision points in the process and times where documentation is needed, with references to specific sections in the Handbook containing more detailed information. Although the roadmap assumes familiarity with general Agency terminology, Section 1.2 of the Handbook discusses key terms associated with this guidance.

This roadmap also includes example tools for (1) documenting peer review decisions; (2) developing regulatory action; and (3) planning, conducting and completing the peer review. Because these tools vary depending on both the intended use of the work product and the decisions to be made, more than one tool generally is needed.

R.2. Relationship between the Roadmap and Chapters 1 Through 7

The roadmap figures show the peer review process from start to finish. The Handbook Chapters 1 through 7 have been organized to describe essential elements and concepts (the "what") needed for successful implementation of the peer review process. General concepts included are:

- providing terms and context (see Chapter 1);
- identifying relevant peer review roles, responsibilities and resource considerations of Agency personnel and organizations (see Chapter 2);
- categorizing work products (see Chapter 3);
- determining the appropriate peer review approach (see Chapter 4);
- selecting reviewers and considering associated ethics issues such as potential conflicts of interest (COIs) or an appearance of a loss of impartiality (see Chapter 5);
- conducting and completing the review, including developing the peer review charge (see Chapter 6); and
- ensuring transparency during various steps in the peer review process (see Chapter 7).

For some, the process may be described more effectively visually, using diagrams or graphics to make relationships more apparent and provide easy navigation through the entire process. Figures 1 through 3 are the main processes described in this Handbook, provided in graphic form.

Figure 1, the diagram of the peer review process, illustrates the Agency's overall peer review process for scientific or technical (including economic and social science) work products. The Agency process emphasizes early categorization of the work product—preferably at the conceptual stage—into one of three categories: Influential Scientific Information (ISI); Highly Influential Scientific Assessment (HISA), which is a subset of ISI; or other. The ISI and HISA categories have been identified and defined by the Office of Management and Budget (OMB) in its *Final Information Quality Bulletin for Peer Review* (OMB Peer Review Bulletin) (Appendix B). Management approval and documentation of key decisions throughout the peer review process are emphasized. The EPA also demonstrates its commitment to transparency in the peer review process by providing opportunities for public participation.

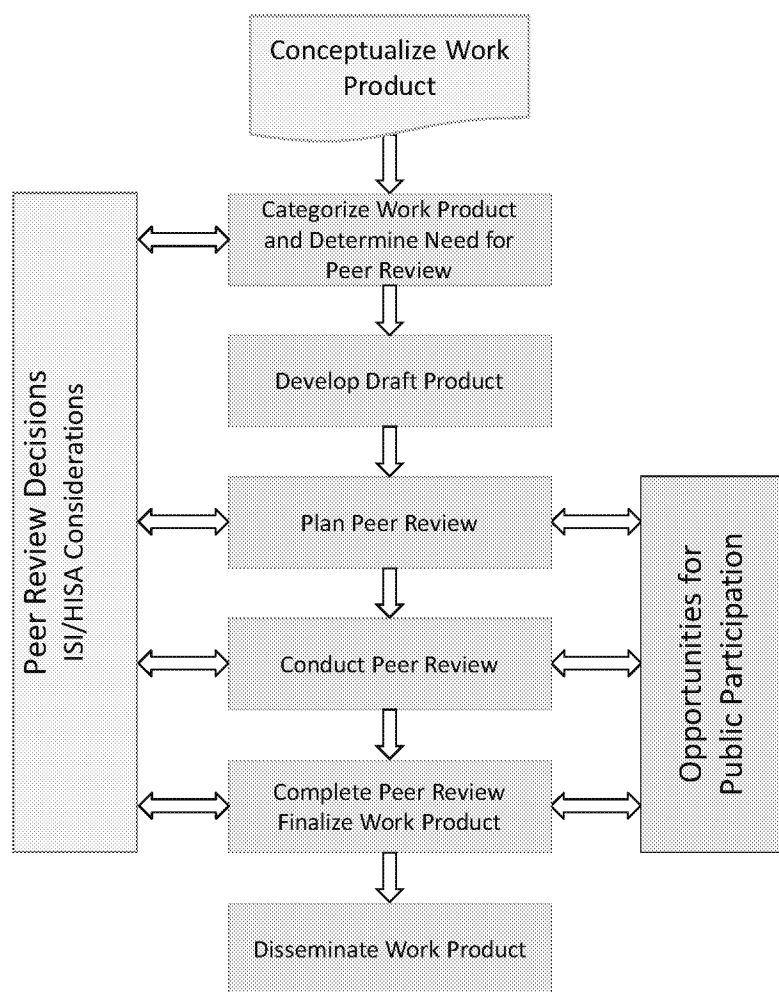

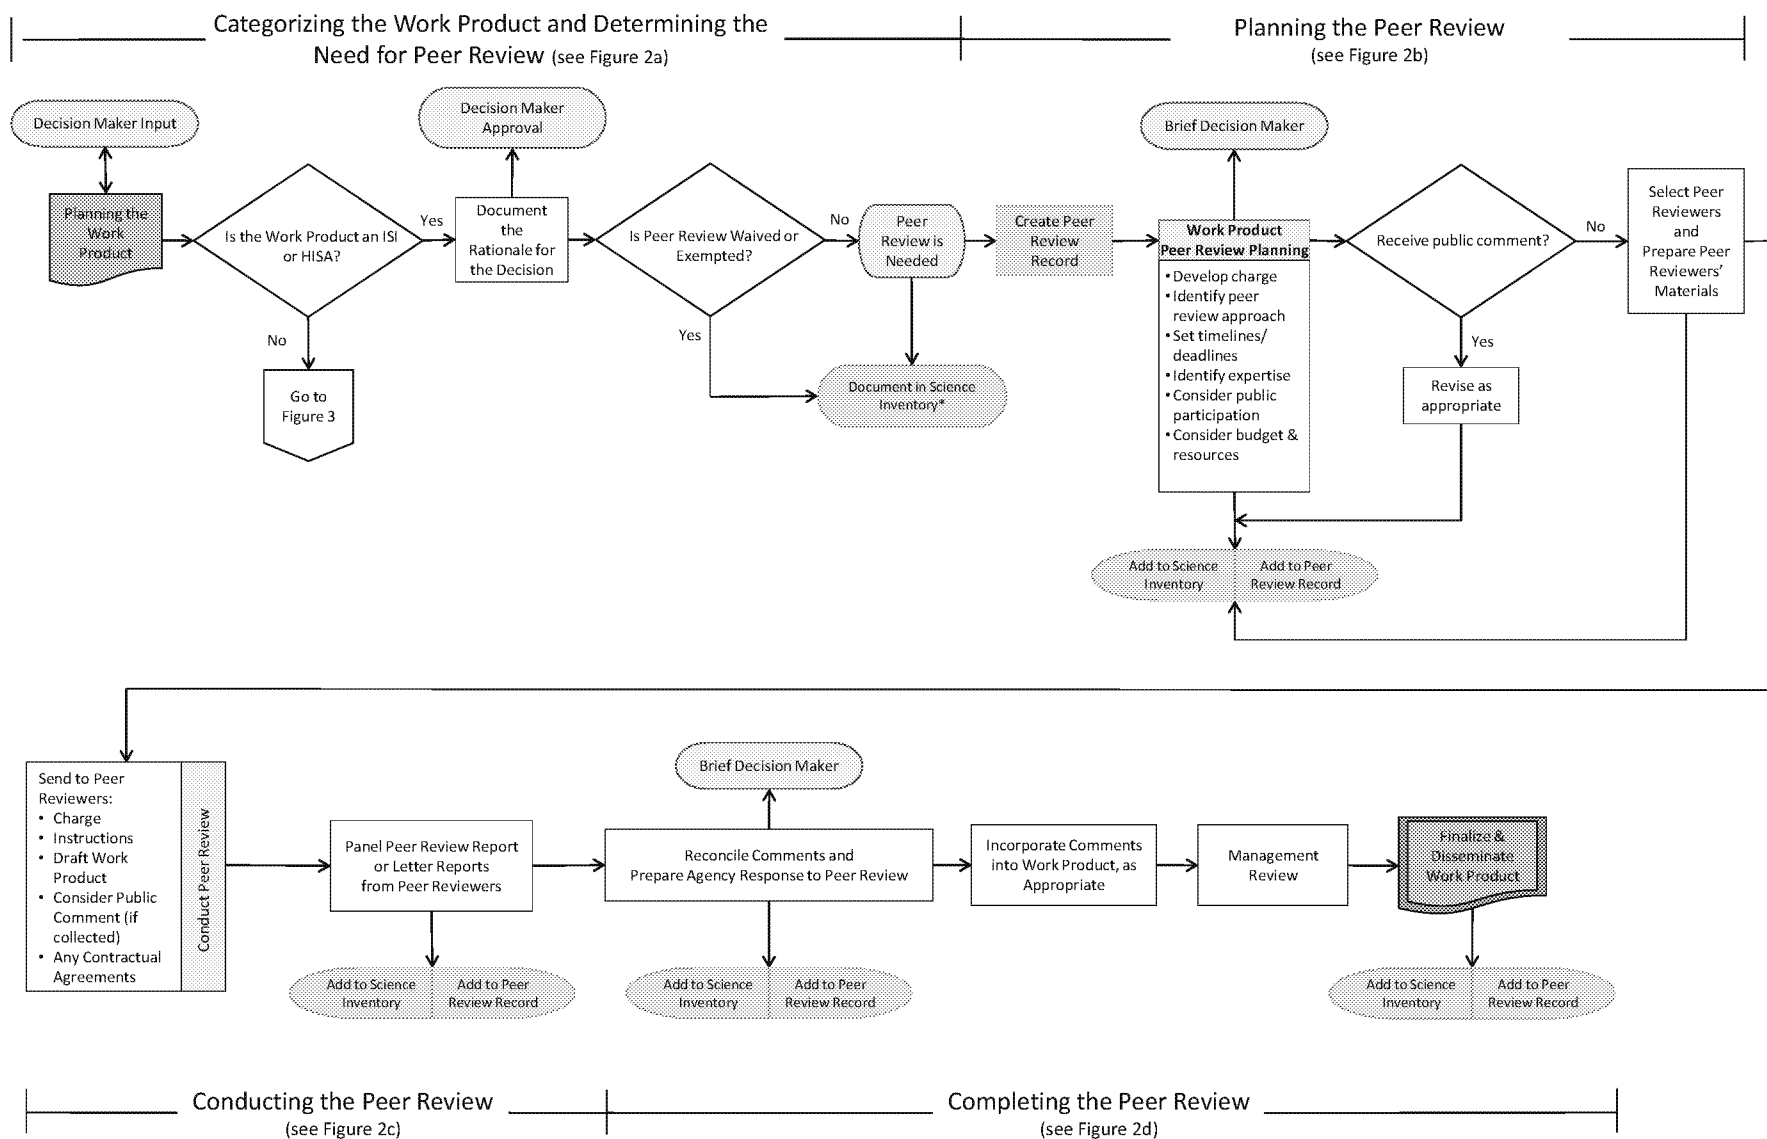

Figure 1. The Peer Review Process

Figure 2, the peer review flowchart for influential work products, illustrates details associated with the general process. Each of the four phases in this flowchart is presented subsequently in Figures 2a through 2d and references to relevant Handbook sections are provided. The figures also include steps at which the Decision Maker (DM) should be involved, and points at which the peer review record, as well as the EPA's searchable database for influential products, the Science Inventory (SI),¹ should be updated. Although updating the SI provides public access to the information about the peer review, the figures indicate various points in the peer review process where the public may also be provided opportunities to comment on materials in the SI.

Figure 3 illustrates the comparable flow for scientific or technical work products not categorized as ISI or a HISA. It includes a specific process for work products that will be submitted to peer-reviewed journals; in that case, work products are subject to management review (following the procedures of the program or regional office) prior to submission to a journal, and authors work with the journal editors/reviewers to resolve any comments. For more information on peer review of work products not categorized as ISI or a HISA, see Sections 3.2.5 and 3.2.6.

¹ EPA. 2015. *EPA Science Inventory*. <http://cfpub.epa.gov/si/>.

It should be noted that the peer review flow charts show the general steps that are followed for the peer review of work products at EPA. The specific steps taken by individual EPA offices will depend on many factors, including the type of work product, timeframe available for peer review and resource considerations. It should be noted that the term “EPA offices” in this Handbook refers to all headquarters, regional and program offices.

*Agency's Peer Review Agenda is created from information entered in the Science Inventory

Figure 2. Detailed Peer Review Flowchart for Influential Work Products (Including HISAs)*

* For work products categorized as "other," see Figure 3.

*Agency's Peer Review Agenda is created from information entered in the Science Inventory

Figure 2a. Categorizing the Work Product and Determining the Need for Peer Review

1. Determine if the work product:

- Is a scientific, engineering, economic, social science or statistical document (§ 3.1.1, 3.1.3)
- Is ISI/HISA (§§ 3.2.1, 3.2.3, 3.2.4)
- Other work product (see Figure 3)

2. Obtain categorization of work product from the DM:

- Document decision and rationale for decision
- Continue with peer review unless determined not to be needed

3. Peer review typically not needed if:

- ISI/HISA consists only of science previously peer reviewed and the previous peer review is deemed adequate under the Agency's policy (§ 3.3.2)
- ISI/HISA consists only of principal findings, conclusions and recommendations from National Academy of Sciences (NAS) official reports (Appendix B, Section III.2)
- Work product meets criteria for exemption (§§ 3.3.1, 3.3.2)
- Work product receives waiver (§ 3.3.3)
- Peer review otherwise determined not to be warranted

4. Add document with waiver/exemption to the SI²

² EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/sj_public_pr_agenda.cfm.

Figure 2b. Planning the Peer Review for Influential Scientific Information (Including HISAs)

1. If a work product is subject to peer review:

- Identify key staff (§ 2.3)
- Create a peer review record (§ 6.5)
- Identify criteria/basis for the charge (§ 6.2)
- Consider options for public participation (§ 7.2)

2. Develop the draft charge (§ 6.2):

- Determine which key issues to address
- Add to the SI and peer review record

3. Ensure adequate resources for the peer review (§ 1.2.5)

4. Identify a peer review approach (§ 4.2):

- Internal (§ 4.2.2), external (§ 4.2.3) or both, as appropriate
- Letter review (§ 4.4):
 - Managed by Agency or contractor (§ 4.6)
- Panel review (§ 4.5):
 - Managed by contractor or federal advisory committee (FAC) (§§ 4.6, 4.7)
 - One-time or multiple meetings (§§ 1.2.3, 4.2.1)
- Add to the SI and peer review record

5. Set timelines/deadlines:

- When will the review be started?
- What are the intermediate checkpoints?
- What is the deadline for completion?
- Add to the SI and peer review record

6. Identify expertise (§ 5):

- Determine the expertise needed (§§ 5.2.1, 5.2.4)
- Determine sources of peer reviewers (§ 5.2.2)
- Consider asking the public to nominate peer reviewers (§ 5.2.2)
- Consider and address the balance of the panel (§ 5.2.4)
- Consider COIs (§§ 4.6.4, 5.3)
- Particularly for a HISA, evaluate rotation (§ 5.2.8)
- If a contractor-managed panel peer review, note special considerations (§ 4.6.4)
- Formalize arrangement with peer reviewers
- Add to the SI and peer review record

7. Determine whether, on what and when public may provide comment (e.g., work product, charge, peer reviewers) (§ 7.2):

- Revise peer review plan accordingly
- Document in the SI and peer review record
- If a HISA, include a public comment process as part of the peer review whenever feasible and appropriate

8. Prepare materials for the peer review (§ 6.2.5):

- Obtain materials from the Project Manager
- Prepare instructions for peer reviewer (§ 6.2.5)
- Include a copy of materials in the peer review record (§ 6.5.2)

Note: Some of these steps may occur concurrently.

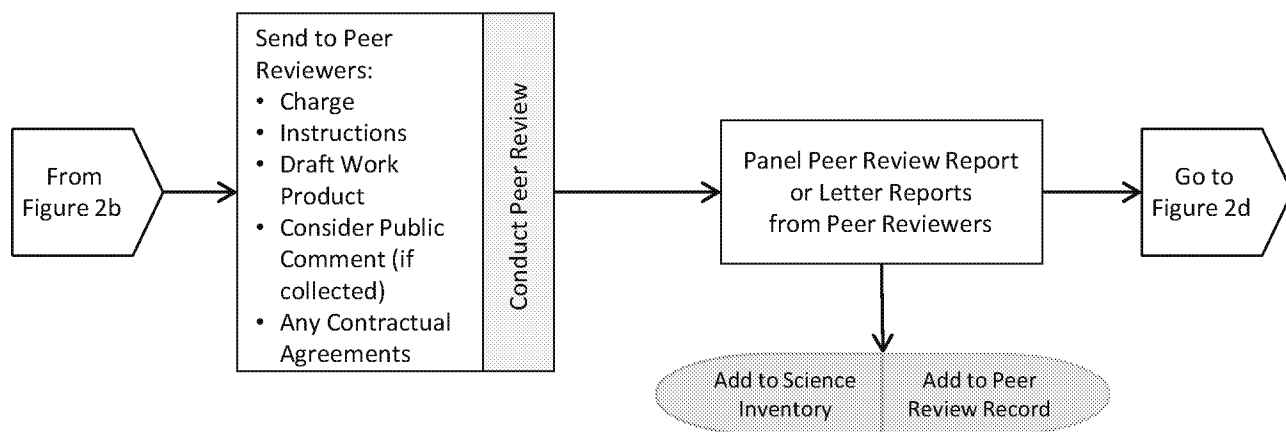

Figure 2c. Conducting the Peer Review of Influential Scientific Information (Including HISAs)

1. Provide materials to the peer reviewers (§ 6.2.5):

- Charge
- Instructions
- Draft work product
- Public comments if plan provided for public comment on work product
- Any contractual agreements associated with the review
- Particularly for HISAs, supporting materials for key decisions and findings

2. Conduct the peer review:

- Particularly if a HISA, public may present comments to peer reviewers at a panel meeting (should be part of peer review plan)

3. Ask reviewers to prepare peer review comments (§ 6.2.5)

4. Prepare Peer Review Report (collective comments from peer reviewers) (§ 6.2.5)

- If conducted by a panel, receive panel peer review report
- If conducted by letter, receive individual letter reviews and prepare consolidated peer review report

5. Add peer review report to the SI and peer review record

Figure 2d. Completing the Peer Review of Influential Scientific Information (Including HISAs)

1. Evaluate comments from peer reviewers:

- Consider comments
- Obtain clarification, if needed
- Include comments in peer review record

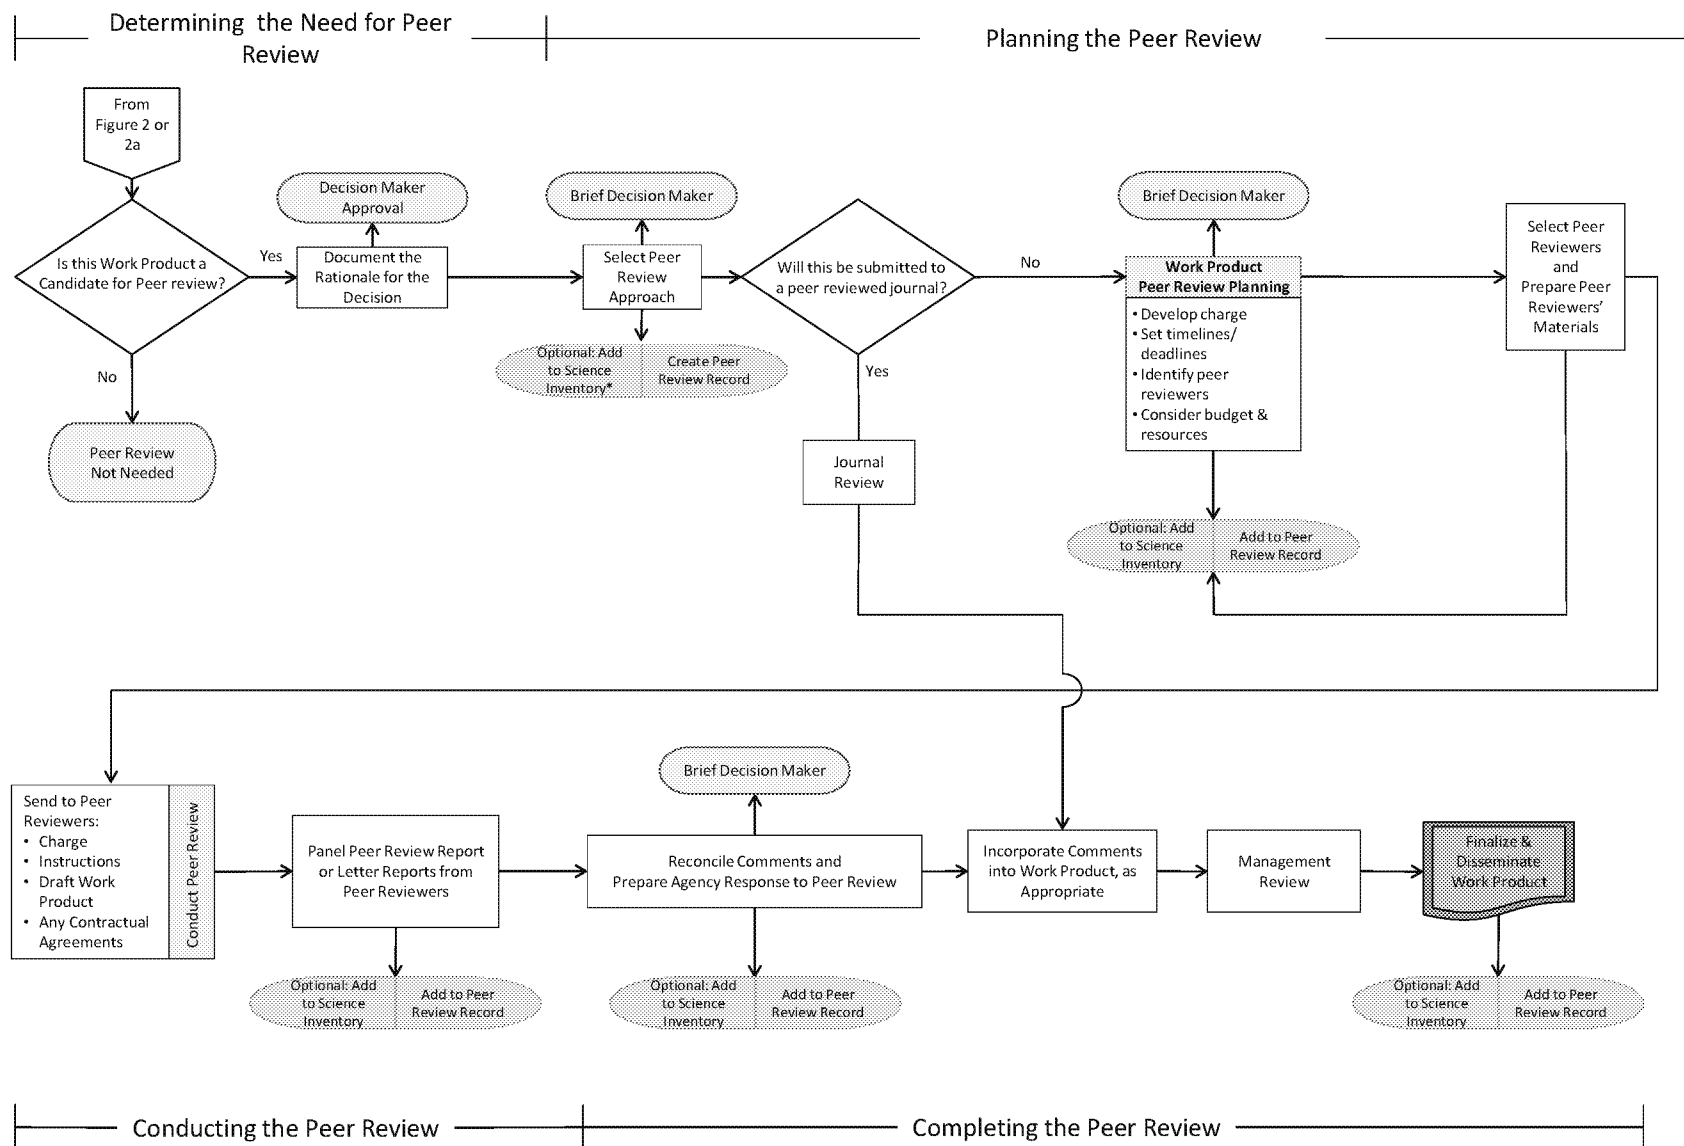

2. Brief the DM on proposed reconciliation of comments

3. Reconcile comments:

- Revise the work product by incorporating comments, as appropriate
- For a HISA, prepare a written Agency response and document why any comments were not used
- Include documentation in peer review record

4. Finalize work product:

- Include in peer review record
- Post peer review report and related materials (e.g., charge, Agency response) on the Internet through the SI:
 - For an ISI, post written Agency response to the peer review report, if prepared
 - For a HISA, post written Agency response to the peer review report
- For all ISI/HISAs that support rulemaking:
 - Include peer review discussion and certification in preamble of the rule

*Although other Work Products (non-Influential) may be added to the Science Inventory, they will not be on the EPA Peer Review Agenda

Figure 3. Detailed Flowchart for Other Work Products

R.3. Organizing the Peer Review Process

R.3.1. Planning the Peer Review

Planning a peer review is a critical first step to ensuring a successful peer review of a work product. The initial step is to determine whether the work product (either at the conceptual stage or while under development) should be peer reviewed. Once it has been determined that a peer review will be conducted, the DM and Peer Review Leader (PRL) need to plan an appropriate review. This includes:

- categorizing the work product and documenting the decision for influential work products;
- determining resources (budget and personnel);
- scheduling for completion of the peer review;
- creating the peer review record;
- making decisions about an appropriate peer review approach, which considers the forum (i.e., internal and/or external), type (i.e., letter or panel) and mechanism for conducting the review (i.e., Agency-managed, contractor-managed, Federal Advisory Committee [FAC], National Academy of Sciences [NAS]);
- planning for opportunities for public participation;
- developing the charge;
- selecting peer reviewers; and
- preparing materials for the reviewers.

Conceptualizing the Peer Review, which includes defining roles, responsibilities and resources, should take place at the very earliest stages of a product's development. Resources, including personnel, time and funding, should be considered. Based on individual EPA office procedures, other considerations might include the need for briefings, quality assurance (QA) components and reviews and pre-dissemination review planning and approvals.

Categorizing the Work Product (Figure 2a) is based on objective criteria associated with whether the work product is considered influential (i.e., is categorized as ISI), and if influential, whether it is a HISA.

Planning the Peer Review for Influential Scientific Information (Including HISAs) (Figure 2b) takes into account the work product categorization in determining the forum, type and mechanism of peer review. Evaluation and selection of peer reviewers are also documented in the plan, as well as decisions about public participation, preparation of the charge, instructions to reviewers and other information that may be useful to reviewers. For HISAs, in particular, it is important to include sufficient information, including background information about key studies or models, to enable reviewers to understand how significant findings or conclusions in the draft assessment were made.

The charge should be drafted before selection of the peer reviewers to ensure that they have the appropriate expertise to address the questions raised. Developing and maintaining a peer review record should begin at the planning stage of the peer review process (see Section 6.5.3).

R.3.2. Conducting the Peer Review

The success and usefulness of any peer review depends on the quality of the draft work product submitted for peer review, the care given to the statement of the issues or “charge,” the match between the peer review draft product and the form of peer review, the match between the peer review draft product and the scientific/technical expertise of the reviewers, and Agency use of peer review comments in the final product. In conducting a peer review, each of the foregoing elements requires serious attention.

Figure 2c shows the order of activities for conducting a peer review of a work product categorized as ISI or a HISA. The peer reviewers are expected to prepare and submit peer review reports at the conclusion of their review. For letter reviews, individual reports are submitted; a single report generally is expected from a peer review panel.

R.3.3. Completing the Peer Review and Finalizing the Work Product

Conducting the peer review of the work product is not the final stage of the peer review process. Rather, the peer review process closes with the following major activities: evaluating peer review comments and recommendations, using the peer review comments for completing the final document, completing the peer review record, and including relevant information in the SI (Figure 2d). The final product represents the true end of the peer review process.

R.3.4. Tools for Managing the Peer Review Process

The following Exhibits may be used by EPA offices to plan, track and document decisions associated with peer review. Note that more than one of the following may be needed for a given draft work product:

- The *Regulatory Action Development Checklist for Workgroups* (Exhibit 1) is an aid for those involved in the development of regulatory actions.
- The list of *Recommended Steps for Planning, Conducting and Completing a Peer Review* (Exhibit 2) is to assist the Project Manager (PM) and PRL in tracking the overall peer review process.
- The *Example EPA Peer Review Decision Summary Documentation* (Exhibit 3) is for the DM, Peer Review Coordinator (PRC) and PRL to document decisions, including the work product categorization, mechanism of peer review and public participation.

Tools and products to enhance the transparency and reporting of peer reviews are summarized in Table 1.

Exhibit 1. Regulatory Action Development Checklist for Workgroups

This checklist will help workgroups plan for peer review in the larger context of regulatory development. Each numbered section corresponds to a time period in the regulatory development process.

1. Peer Review Prior to Proposal

Tier 1 or Tier 2 Rule*

- ☐ Is the peer review schedule incorporated into the analytic blueprint?
- ☐ Does this rule rely upon influential scientific information (ISI/HISA)?
- ☐ Will the work product be reviewed using external peer review?

Tier 3 Rule

- ☐ Is the peer review schedule incorporated into the plans for producing the action?
- ☐ Does this rule rely upon ISI or a HISA?
- ☐ If an internal mechanism will be used for peer review, is it acceptable according to the *Peer Review Handbook*?

2. Sending a Proposed Rule Forward for the Administrator's Signature

- ☐ Has peer review been completed?
- ☐ Does the action memorandum indicate whether the rule relies upon ISI or a HISA?
- ☐ If the proposed rule relies on ISI or a HISA, is there a discussion of the peer review in the preamble of the rule?

3. Before the Proposed Rule Publishes

- ☐ Were the peer review report and any relevant materials included in the docket for this rulemaking?

4. Peer Review Prior to Finalization

- ☐ Is a new peer review plan necessary as a result of new regulatory options?

5. Sending a Final Rule Forward for the Administrator's Signature

- ☐ Has any new peer review of the work product been completed?
- ☐ Does the action memorandum indicate whether the rule relies on ISI or a HISA?
- ☐ If the final rule relies on ISI or a HISA, is there a discussion of the peer review in the preamble of the rule?

6. Before the Final Rule Publishes

- ☐ Were the peer review report and any relevant materials included in the docket for this rulemaking?

Note: For ISI and HISAs, the administrative record for the action should include a certification explaining that the action is consistent with provisions of the Office of Management and Budget (OMB) Peer Review Bulletin (see Appendix C).

*For further information on tiering and criteria used to determine the appropriate tier for an action, see <http://intranet.epa.gov/actiondp/adp-milestones/tiering.htm>.

Exhibit 2. Recommended Steps for Planning, Conducting and Completing a Peer Review

Recommended Steps	Comments
I. Categorize the work product and document your rationale (requires Decision Maker [DM] approval) (see <i>Example EPA Peer Review Decision Summary Documentation</i> form and Chapter 3) <input type="checkbox"/> Influential scientific information (ISI) <input type="checkbox"/> Highly influential scientific assessment (HISA) <input type="checkbox"/> Other	
II. Plan the peer review and brief the DM (Chapters 4 and 5) <input type="checkbox"/> Begin creating a peer review record <input type="checkbox"/> Select the peer review approach <ul style="list-style-type: none"> • Internal, external or both • Letter or panel • EPA- or contractor-managed <input type="checkbox"/> Set timelines/deadlines <input type="checkbox"/> Consider budget and resources <input type="checkbox"/> Develop charge questions <input type="checkbox"/> Identify areas of expertise needed <input type="checkbox"/> Consider public participation, stakeholder involvement <input type="checkbox"/> Identify and evaluate potential peer reviewers (expertise and ethics issues) <input type="checkbox"/> For HISAs and ISI, create public peer review plan and add other relevant information in the EPA Science Inventory * (see Chapter 7) <input type="checkbox"/> Formalize arrangements with the selected peer reviewers	
III. Conduct the peer review (Chapter 6) <input type="checkbox"/> Send peer review materials (e.g., charge and instructions, draft work product and supporting materials, contractual agreements, public comments) to peer reviewers <input type="checkbox"/> Convene panel or conduct letter review <input type="checkbox"/> Obtain reviewers' comments (peer review report)	
IV. Complete the peer review and brief the DM (Chapters 6 and 7) <input type="checkbox"/> Reconcile reviewers' comments and document how comments were addressed <input type="checkbox"/> Finalize work product <input type="checkbox"/> Update peer review record <input type="checkbox"/> For HISAs and ISI, post the peer review report, any Agency response (necessary for a HISA), and the final work product

Documentation/Approval of Decision for an ISI or HISA Work Product

Peer Review Leader (Recommendation) _____	Date _____
Peer Review Coordinator (Concurrence) _____	Date _____
Decision Maker (Approval) _____	Date _____

The DM must approve the categorization decision for work products designated as ISI or HISA. Work products designated as ISI or HISA should be peer reviewed; for HISA, external peer review is the approach of choice. For work products not designated as ISI or a HISA, peer review should be conducted if the DM determines it is appropriate.

If the ISI/HISA work product is exempted or deferred from peer review, state the reason(s) why:

Note: Exemption or deferral from peer review of an ISI or HISA requires Administrator approval.

Exhibit 3. Example EPA Peer Review Decision Summary Documentation: Explanation

Yes/ No	Item/Instructions	Handbook Section
Designate the Work Product Category*— DM and Peer Review Coordinator (PRC)		
	Is Work Product Scientific or Technical (includes economic and social science work products)?	<u>3.1.1</u>
If scientific or technical, which designation does the work product best fit:		
	ISI: [†] Will have or does have a clear and substantial impact on important public policies or private sector decisions. Decision Makers should consider the following factors when determining whether a product is likely to be influential: <ul style="list-style-type: none"> • Establishes a significant precedent, model or methodology. • Is likely to have an annual effect on the economy of \$100 million or more. • Is likely to adversely affect in a material way the economy; a sector of the economy; productivity; competition; jobs; the environment; public health or safety; or state, tribal or local governments or communities. • Addresses significant controversial issues. • Focuses on significant emerging issues. • Has significant cross-Agency/interagency implications. • Involves a significant investment of Agency resources. • Considers an innovative approach for a previously defined problem/process/methodology. • Satisfies a statutory or other legal mandate for peer review. 	<u>3.2.1</u>
	HISA: A scientific assessment (i.e., an evaluation of a body of scientific/technical knowledge that typically synthesizes multiple inputs, data, models and assumptions and/or applies best professional judgment to bridge uncertainties in available information) that meets the following: <ul style="list-style-type: none"> • In addition to meeting the criteria for ISI, could have a potential impact of more than \$500 million in any year; or • Is novel, controversial or precedent-setting or has significant interagency interest. 	<u>3.2.3</u>
	Other (includes journal articles): <ul style="list-style-type: none"> • Define in comments. 	<u>3.2.5</u>

* Designation of a work product's category could change during the course of development. Any changes in designation also should be documented and approved (see Section 3.2.7).

[†] For examples of Agency work products designated as ISI and HISAs, see the Peer Review Agenda website (http://cfpub.epa.gov/si/si_public_pr_agenda.cfm).

Table 1. Agency Tools and Products for Peer Review Transparency and Reporting

Tool (T)/Product (P)	Description	Handbook Section
(T) Roadmap Flowcharts	Graphically describe the Agency's peer review process.	Roadmap
(T) Example Decision Summary Documentation	Individual product documentation is used in each EPA office to start a record of management decision and approval to categorize a product and the type of peer review it will undergo. This document is used at the EPA office level.	Roadmap Exhibit 2
(T) Conducting a Peer Review	A planning and implementation tool for anyone managing the peer review process of a work product.	Roadmap Exhibit 1
(P) Public Peer Review Plan (automatically generated in the SI when information on ISI or a HISA is entered). The SI is a tool to help generate the public peer review plan.	<p>Begin a systematic process of peer review planning for ISI and HISAs that an Agency plans to disseminate in the foreseeable future. Each peer review plan includes:</p> <ul style="list-style-type: none"> • A paragraph including the title, subject and purpose of the planned report, as well as an Agency contact to whom inquiries may be directed to learn the specifics of the plan. • Whether the dissemination is likely to be ISI or a HISA. • The timing of the review (including deferrals). • Whether the review is conducted through a panel or individual letters (or whether an alternative procedure is exercised). • Whether there are opportunities for the public to comment on the work product to be peer reviewed, and if so, how and when these opportunities are provided. • Whether the Agency provides significant and relevant public comments to the peer reviewers before they conduct their review. • The anticipated number of reviewers (3 or fewer, 4–10 or more than 10). • A succinct description of the primary disciplines or expertise needed in the review. • Whether reviewers are selected by the Agency or by a designated outside organization. • Whether the public, including scientific or professional societies, are asked to nominate potential peer reviewers. 	7.3.4
(P) Peer Review Charge	As part of each peer review, the PRL formulates a clear, focused charge that identifies the technical and scientific issues on which the Agency would like feedback and invites suggestions for improving the document as a whole. This request signals the Agency's receptivity to expert recommendations. The charge to peer reviewers usually makes two general requests. First, it focuses the review by presenting specific questions and concerns surrounding such issues as the comprehensiveness of the literature reviewed, the soundness of the method used, the scientific support for the assumptions employed, and the sensitivity analysis (i.e., the sensitivity of the results to alternative assumptions). Secondly, it invites general comments on the work product as a whole.	6.2
(P) The Peer Review Report(collective comments from peer reviewers)	The collective comments on the scientific or technical work product undergoing peer review provided by the peer reviewers in response to the peer review charge is called the Peer Review Report. The EPA makes the reports for ISI and HISAs available on the SI website, which links directly to the Peer Review Agenda entry for that item.	6.2.5

Table 1. Agency Tools and Products for Peer Review Transparency and Reporting

Tool (T)/Product (P)	Description	Handbook Section
(P) Agency's Response to Peer Review Report	The PRL should evaluate and analyze all peer review comments and recommendations carefully. The peer review of a work product is not complete until the peer review comments are incorporated into the final version or reasons are stated why such comments are not incorporated. The peer review record is complete only when it contains a copy of the final work product (when there is one) that addresses the peer review comments and a copy of the response-to-comments document. The PRL should brief the DM on how to address the peer review comments. Per the OMB Peer Review Bulletin, the Agency's response to the peer review report for HISAs should be posted on the SI.	<u>6.3</u>
(P) Peer Review Record	The peer review record is the formal record (file) of decision on the conduct of the peer review, including the type of peer review performed and an explanation of how the peer review comments are addressed. It includes sufficient documentation for an uninvolved individual to understand what happened and why. The peer review record is separate from the entry in the SI. Although some information from the peer review record appears in the SI, the paper peer review record is the official record of the peer review. The PRL (with the Project Manager [PM], if there is one) creates a separate, clearly marked peer review file within the overall file for development of the work. Once the peer review is completed, it is the responsibility of the PRL to ensure that the peer review record is filed and maintained in accordance with the organization's document retention procedures.	<u>6.5</u>
(T) Science Inventory	The SI (www.epa.gov/si) is a searchable database that contains information on EPA publications and presentations. The SI is used to track the Agency's work products that are categorized as ISI and HISAs, including their status and peer review plans. EPA offices are expected to keep this information current by updating SI entries for ISI and HISAs at least every 6 months.	<u>7.3.1</u> , <u>7.3.2</u> , <u>7.3.3</u>
(P) Peer Review Agenda	The Peer Review Agenda (PRA) is a component of the EPA SI. ISI and HISA work product metadata, including peer review information and related documents, are entered into the SI and then published to the Agency PRA, which informs EPA website visitors about EPA's planned and ongoing peer review activities. The website for the EPA's Peer Review Agenda is http://cfpub.epa.gov/si/si_public_pr_agenda.cfm .	<u>7.3.3</u>
(P) Annual Report on Peer Review to OMB	Consistent with the OMB's Peer Review Bulletin, the EPA expects to submit a report to OMB each year. This report includes information concerning the peer reviews conducted on ISI and HISAs during the previous fiscal year. The EPA generates this report from the information in the SI.	<u>7.4</u>

PEER REVIEW GUIDANCE

1. Peer Review at EPA: General Concepts and Context

1.1. Overview

Peer review of all scientific and technical information that is intended to inform or support Agency decisions is encouraged and expected. Influential scientific information, including highly influential scientific assessments, should be peer reviewed in accordance with the Agency's *Peer Review Handbook*. All Agency managers are accountable for ensuring that Agency policy and guidance are appropriately applied in determining if their work products are influential or highly influential, and for deciding the nature, scope, and timing of their peer review. For highly influential scientific assessments, external peer review is the expected procedure. For influential scientific information intended to support important decisions, or for work products that have special importance in their own right, external peer review is the approach of choice. Peer review is not restricted to the nearly final version of work products; in fact, peer review at the planning stage can often be extremely beneficial.

—EPA Peer Review Policy Statement, 2006

To implement the EPA's Peer Review Policy (Appendix A) effectively, individuals involved in peer review activities need to understand what peer review is and why the Agency conducts peer reviews. Those individuals also need to understand how peer review differs from activities such as peer input, stakeholder input and public comment. Familiarity with federal and EPA guidelines related to peer review is essential. This chapter discusses each of these topics and also addresses the role of peer review in regulatory development.

1.2. Peer Review

1.2.1. What Is Peer Review?

Peer review is a documented process for enhancing a scientific or technical work product so that the decision or position taken by the Agency, based on that product, has a sound, credible basis. (For a discussion of what constitutes a scientific or technical work product, see Section 3.1.1.) It is conducted by qualified individuals (or organizations) who are independent of those who performed the work and who are collectively equivalent in technical expertise to those who performed the original work (i.e., peers). Peer review is conducted to ensure that activities are technically defensible, competently performed, properly documented and consistent with established quality criteria. Peer review is an in-depth assessment of the assumptions, calculations, extrapolations, alternate interpretations, methodology, acceptance criteria and conclusions pertaining to the scientific or technical work product, and of the documentation that supports them. Peer review also may provide an evaluation of a topic where quantitative methods of analysis or measures of success are unavailable or undefined. Peer review usually is characterized by a one-time or limited number of interactions by independent peer reviewers who provide responses to a series of questions included in a "charge" developed by EPA (see Section 6.2.1). Peer review is

The goal of peer review is to obtain an independent review of the product from experts who have not contributed to its development.

encouraged during the development of a project or method, and/or as part of the culmination of the work product, as appropriate. Regardless of the timing of peer review, the goal is to ensure that the final product is scientifically and technically sound.

1.2.2. Why Use Peer Review?

Peer review is intended to identify any technical problems or unresolved issues in a preliminary (or draft) work product through the use of independent experts. This information then is used to revise the draft product so that the final work product will reflect sound scientific and technical information and analyses. To be most effective, peer review of a scientific or technical work product should be incorporated into the up-front planning of any action based on the work product; this includes obtaining the proper resource commitments (personnel and money) and establishing realistic schedules.

Although conducting a peer review requires an up-front commitment of time and resources, the benefits usually justify these added resources. Peer review enhances the credibility and acceptance of the decision based on the work product. Also, by ensuring a sound basis for decisions, cost savings are likely to be realized because decisions are less likely to be challenged.

Peer review is not free; however, not doing peer review can be costly.

1.2.3. When and How Often Should Peer Review Occur?

The Agency has significant discretion in deciding on the timing and the frequency of peer review. Options abound, each with merits depending on the context and specified peer review objectives. In many situations, a single peer review event, beginning when the final draft work product becomes available, is the approach taken. It is increasingly apparent, however, that peer review performed earlier in the work product development stages can provide a superior approach for some work products. There may be substantial incremental benefit to conducting more than one peer review during work product development, particularly when development involves complex tasks, has decision branching points, or could be expected to produce controversial findings. Sometimes additional peer reviews are conducted if the product changes significantly after the initial peer review, or if the Agency would like to know whether the peer reviewers' comments were adequately addressed in the revised product. In addition, early review could be beneficial at the stage of research design or data collection planning when the product involves extensive primary data collection. The Decision Maker (DM) should determine when the peer review(s) should occur, considering the type of work product under development and at what point a peer review would be most beneficial (see Sections 2.3.2 and 3.1.3).

Other types of work products that could benefit from early, up-front peer review in their development include scientific and technical planning products. Examples of such products are research proposals, plans and strategies. Although more than one peer review can be beneficial, the distinction between peer input and peer review should be kept in mind. Experts providing input during the development or planning stages of the work product generally do not become peer reviewers of that product. For more on this distinction, see Sections 1.2.11 and 5.2.7.

1.2.4. What Factors Are Considered in Setting the Timeframe for Peer Review?

The peer review schedule is a critical feature of the process. The schedule should take into account the availability of a quality draft work product; deadlines for the completion of a project, research program or rulemaking; funding availability; availability of qualified peer reviewers; the complexity and length

of the product; the possible need to seek public comment on the peer review product; statutory and/or court-ordered deadlines; and logistical aspects of the peer review (e.g., contracting procedures).

The time required to complete an external peer review will depend greatly on the peer review mechanism selected, ranging from several months for individual letter reviews to 10 to 12 months for a review by a federal advisory committee (FAC) *ad hoc* panel or more than a year for a review by a National Academy of Sciences (NAS) panel. Federal Advisory Committee Act (FACA) requirements for advanced notification of committee meetings and opportunities for public participation add to the time required to complete the review but enhance the transparency of the peer review process. Regardless of the peer review mechanism selected, the schedule must include adequate time to evaluate prospective peer reviewers for ethics issues such as potential conflicts of interest (COIs) or an appearance of a loss of impartiality (see Section 5.3).

1.2.5. What Budgetary Factors Should Be Considered in Planning a Peer Review?

Resources necessary to perform peer review should be requested as part of the costs of projects, rules or guidance. For purposes of budget planning, the costs of peer review would include the allocation of staff resources (full-time equivalents, or FTE), the contract or other costs associated with the use of outside peer reviewers and the administrative costs of conducting a review (e.g., copying, travel expenses). For peer reviews conducted by the Science Advisory Board (SAB) or Clean Air Scientific Advisory Committee (CASAC), the SAB Staff Office budgets for the peer review, including peer reviewer travel expenses, contract costs for meeting support and FTEs to support the advisory committee's work.

Peer review is part of the normal cost of doing business.

Senior management in EPA offices should ensure that budget requests include anticipated resources for peer review. (It should be noted that the term “EPA offices” in this Handbook refers to all headquarters, regional and program offices.) Peer review should be considered as a normal part of doing business. Peer review resource considerations also should be addressed in the analytic blueprint for Agency rulemaking actions.

1.2.6. Who Are the Peer Reviewers?

Peer reviewers are individuals who have technical expertise in the subject matter of the work product undergoing peer review. For this reason, they may be referred to as “subject matter experts.” Peer reviewers should not be associated with generating the work product undergoing review; they should be able to offer independent scientific advice. Peer reviewers need to be willing participants in the peer review process; they should agree to read all materials, participate fully and act ethically. Peer reviewers should maintain the confidentiality of the product and information contained in the product (when necessary), perform the review within the agreed-upon timeframe and be unbiased and objective. Peer reviewers should disclose any activities or circumstances that could pose a conflict of interest or create an appearance of a loss of impartiality that could interfere with an objective review. See Chapter 5 for a thorough discussion of peer reviewer qualifications and ethical considerations.

1.2.7. What Is the Difference Between Internal and External Peer Review?

An internal peer review is a technical or scientific review by individuals from within the Agency who have the appropriate expertise and are independent from the development of the work product. Internal

peer reviewers should come from a different organizational unit than the one in which the work originates. Examples of internal peer review mechanisms may be found in Section 4.2.2.

An external peer review is a review by non-EPA experts with appropriate knowledge and skills who are independent from the development of the work product. External reviewers may come from other federal agencies, state and local government agencies, academia, industry, nongovernmental organizations or other outside organizations. Examples of external peer review mechanisms may be found in Section 4.2.3.

For work products that are intended to support important public policy or private sector decisions, external peer review is the approach of choice. Note that an internal peer review or technical review often precedes an external peer review. Refer to Section 4.2.1 for guidance on when to use internal and external peer reviews.

1.2.8. What Is the Difference Between Internal Peer Review and Internal Management Review?

An internal peer review is an assessment of the scientific and technical quality of a work product by independent Agency experts prior to the publication or release of the work product outside the Agency. An internal management review (sometimes referred to as “clearance”) is a process for obtaining line management approvals prior to the work product’s release or publication. While an internal peer review may be included as part of the internal management review (as in the case of a technical review conducted prior to the submission of a manuscript to a journal), the internal management review does not substitute for an internal peer review.

1.2.9. What Is a Letter Peer Review?

A letter review takes place when EPA seeks individual written peer review comments from independent experts, typically in the form of correspondence to EPA from the peer reviewer. The number of reviewers selected depends largely on the scientific and technical expertise required to address the issues presented in the peer review charge. Each reviewer evaluates the draft technical work product independently without consultation with other reviewers. No collaborative or consensus peer review report is developed. For letter reviews managed by a contractor, the contractor may compile all peer review comments into a single report but should not edit the comments in any way, transmitting comments unaltered to EPA. For more information on letter peer reviews, see Section 4.4.

1.2.10. What Is a Peer Review Panel?

A peer review panel is a group of experts who share and discuss their peer review comments with one another, regardless of whether the sharing takes place in a face-to-face meeting or via email or teleconference. The number of panel members selected for a peer review will depend on the issue being investigated, the time available and resources. Individuals should have appropriate scientific and technical expertise such that the review panel as a whole covers the broad spectrum of expertise necessary to address the issues and questions presented in the peer review charge. For some panels, members may be asked to prepare individual comments for submission to the Agency; for others, the panel members may be asked to collaborate and provide consensus advice in a single report to EPA. If panels provide collective or consensus (rather than individual) advice, they may be subject to the requirements of the FACA, which imposes certain open meeting, balanced membership and committee chartering requirements. For more information on peer review panels, including FACs, see Chapter 4.

1.2.11. What Is Peer Input, and How Does It Differ From Peer Review?

Peer input, sometimes referred to as peer consultation, is a form of peer involvement that generally connotes an interaction during the development of an evolving Agency work product, providing an open exchange of data, insights and ideas. Such input may be continued and iterative, and it often involves scientific and technical experts from both inside and outside the Agency. A common example is the input received from workgroup members during the development of a product.

Peer input is not a substitute for peer review.

The key distinctions between peer input and formal peer review are the independence of the peer reviewers and their level of involvement. Generally, someone who provided peer input on a work product no longer is considered independent and should not become a peer reviewer for that same work product.

Peer input provides valuable contributions to the development of the work product. Peer input does not substitute, however, for peer review. In other words, one cannot argue that a peer review is not necessary simply because a work product has received “enough” peer input.

1.2.12. What Is Stakeholder Involvement, and How Does It Differ From Peer Review?

Stakeholder involvement occurs when the Agency engages a select set of individuals, groups or representatives from organizations or interest groups that have a stake in the outcome of the EPA’s work and policies or that seek to influence the Agency’s future direction to work directly on specific issues.

Stakeholder involvement is not a peer review mechanism.

The Agency often seeks stakeholder involvement to ensure that all relevant facts and viewpoints related to the issue are considered. This is an interactive process that usually involves other agencies, industry groups, regulated-community experts, environmental groups and other interest groups that represent a broad spectrum of the regulated community, among others. The process of stakeholder involvement usually strives for general agreement among the involved groups and may be subject to the FACA. Stakeholders should not be involved in the peer review process if there has been prior engagement with the Agency on the development of the product or the issue. If stakeholders are involved in the peer review process, they must meet all applicable ethics laws and regulations.

Although stakeholder involvement is an outreach activity that contributes greatly to the development of a work product, it is not considered a peer review mechanism.

1.2.13. How Does Public Comment Differ From Peer Review?

The critical distinction between public comment and peer review is that public comment does not necessarily draw the kind of independent, expert information and in-depth analyses expected from the peer review process. Public comment frequently is open to all issues, and may be solicited for policy purposes or as part of the regulatory process, whereas the peer review process focuses on scientific and technical issues specified in the peer review charge.

Public comment solicited from the general public through the *Federal Register* or by other means may be required by the Administrative Procedure Act or other statutes. Public commenters usually include a

broad array of individuals; some may be scientific experts (and may provide peer input), some may be experts in other areas, and some are interested non-experts.

In terms of peer review, public comments can provide important input to the identification and selection of peer reviewers, the refinement of charge questions to be addressed in peer review, and identification of technical issues to be considered by the peer reviewers. Generally, public comment enhances the transparency of the peer review process. Although it may be an important component of the EPA's decision-making process, public comment does not substitute for peer review. See Section 7.2 for more information on public participation in the peer review process.

1.3. Policies and Guidance That Relate to Peer Review

To provide the framework for ensuring the credibility and utility of the Agency's science, EPA relies on its Peer Review Policy and peer review procedures and guidelines in this *Peer Review Handbook*; guidance from the Office of Management and Budget (OMB) Peer Review Bulletin; and the EPA's Quality System, *Information Quality Guidelines* and Scientific Integrity Policy. Each is briefly discussed below.

1.3.1. What Is the EPA's Peer Review Policy?

The EPA's Peer Review Policy³ was first issued in 1993 and was updated in 2006 (see Appendix A). It emphasizes the critical role of peer review in ensuring that the EPA's decisions rest on sound science and data.

1.3.2. What Are the Legal Ramifications of the Peer Review Policy?

The Peer Review Policy does not establish or affect legal rights or obligations. Rather, it confirms the importance of peer review where appropriate, outlines relevant principles and identifies factors that Agency staff should consider in implementing the policy. Except where provided otherwise by law, peer review is not a formal part of, or substitute for notice-and-comment rulemaking or adjudicative procedures. The EPA's decision to conduct peer review in any particular case is wholly within the Agency's discretion. Similarly, nothing in the Peer Review Policy creates a legal requirement that EPA respond to peer review comments. To the extent that EPA decisions rely on scientific and technical work products that have been subjected to peer review, however, the remarks of peer reviewers should be included in the record for those decisions.

EPA staff and management should consult with attorney(s) in the Office of General Counsel (OGC) and/or Office of Regional Counsel (ORC), to obtain legal advice related to peer review. OGC has attorneys who are specialists in specific areas (e.g., FACA considerations, contractual responsibilities, ethics issues), and they should be consulted as needed, following consultations with local resources.

³ EPA. 2006. *Peer Review and Peer Involvement at the U.S. Environmental Protection Agency*.
<http://epa.gov/peerreview/pdfs/peer%20review%20policy%202006.pdf>.

1.3.3. What Is the Office of Management and Budget’s Peer Review Bulletin, and How Does It Relate to Peer Review at EPA?

OMB’s *Final Information Quality Bulletin for Peer Review*⁴ (see Handbook Appendix B), hereafter the OMB Peer Review Bulletin, provides guidance to federal agencies for enhancing the peer review of government science documents and establishes minimum standards for when to conduct peer review. EPA conducts peer review of its products in accordance with the guidance in the OMB Peer Review Bulletin.

OMB’s Peer Review Bulletin provides two important definitions:

- **Influential Scientific Information (ISI):** Scientific information that the Agency “reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions.”
- **Highly Influential Scientific Assessment (HISA):** A subset of ISI that is a scientific assessment (i.e., an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions and/or applies best professional judgment to bridge uncertainties in the available information) that “could have a potential impact of more than \$500 million in any year on either the public or private sector” or “is novel, controversial, or precedent-setting, or has significant interagency interest.”

Per the OMB Peer Review Bulletin, all of the Agency’s ISI/HISA should be peer reviewed unless they meet specified exemption criteria (see Handbook Section 3.3). Decisions regarding categorization of products as HISA or ISI should be made early in the stages of product development; relevant guidance may be found in Section 4.2.1. The OMB Peer Review Bulletin instructs federal agencies to establish a process for public disclosure of peer review planning, including a Web-accessible description of the plan that each agency has developed for reviewing its ISI and HISAs. An agenda of the Agency’s plans for reviewing these products may be found on the EPA Peer Review Agenda (http://cfpub.epa.gov/si/si_public_pr_agenda.cfm) (see Section 7.3).

1.3.4. What Is the EPA’s Quality System, and How Does It Relate to Peer Review?

The Quality System framework consists of policies, procedures and oversight processes that assure the Agency’s environmental data are of sufficient quantity and quality to support the data’s intended use. All EPA programs generating environmental data and information, or using data and information from non-EPA sources, are to conform to the Agency’s Quality Policy, CIO 2105.0 (May 5, 2000)⁵, which is based on international quality standards and practices. The EPA Quality System specifies systematic planning for quality and documentation of the data quality requirements for the scientific or technical work product being developed. The Office of Environmental Information has Agency-wide oversight of the mandatory quality system, and the program and regional offices are responsible for developing a Quality Management Plan for implementing their organization-specific Quality Assurance (QA)

⁴ OMB. 2004. Memorandum for Heads of Departments and Agencies, *Final Information Quality Bulletin for Peer Review*. <http://www.whitehouse.gov/sites/default/files/omb/memoranda/iv2005/m05-03.pdf>.

⁵ EPA. 2000. *Policy and Program Requirements for the Mandatory Agency-Wide Quality System*. EPA Order Classification No. CIO 2105.0. <http://intranet.epa.gov/quality/documents/21050.pdf>.

program. Each organization has a designated Director of Quality Assurance (DQA) or Quality Assurance Manager (QAM) responsible for quality.

QA and peer review are complementary activities and ensure that EPA uses scientifically sound data and information in making programmatic and regulatory decisions. Peer review does not replace the Agency's mandatory requirements to collect and use data of appropriate quality for the intended use in decision making. QA promotes the application of quality requirements at the project level such as determining precision, accuracy, representativeness, comparability, completeness and sensitivity of the data. Peer review primarily focuses on the scientific soundness of the results and conclusions presented in the work product. It is recognized as a valuable process that provides an objective and transparent assessment of the utility and credibility of the science. QA requirements and activities should be documented during the planning and development of the product prior to peer review. The Handbook encourages the Peer Review Leader (PRL) to contact the organization's quality assurance individual about applicable QA requirements for the product being peer reviewed. QA specifications are usually documented in a Quality Assurance Project Plan.

1.3.5. What Are the EPA's Information Quality Guidelines (IQG), and How Do They Relate to Peer Review?

The EPA's *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*,⁶ better known as the EPA's Information Quality Guidelines (IQG), contain procedural guidance for ensuring that the information the Agency disseminates to the public is reliable and accurate, appropriate for its intended use, and protected from compromise (i.e., its objectivity, reliability and integrity are maintained). The EPA's IQG allows persons affected by EPA's publicly disseminated information to seek and obtain corrections from EPA (through its Office of Environmental Information). Peer review is a key step in ensuring the quality, objectivity, utility and integrity of the information that EPA disseminates.

Products undergoing peer review (pre-disseminated products) need a disclaimer.

Agency products undergoing peer review are not considered "disseminated" under the EPA's IQG because they are dynamic documents and are subject to change and, therefore, they do not represent the EPA's final decision or position. These "pre-dissemination" products should contain the following disclaimer:

This information is distributed solely for the purpose of pre-dissemination peer review under applicable information quality guidelines. It has not been formally disseminated by EPA. It does not represent and should not be construed to represent any Agency determination or policy.

In cases where the information is highly relevant to specific policy or regulatory deliberations, the disclaimer should appear on each page of the work product. Agency work products that are disseminated after the peer review process is completed are subject to the EPA's IQG.

⁶ EPA. 2002. *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency*. EPA/260R-02-008.
http://www.epa.gov/quality/informationguidelines/documents/EPA_InfoQualityGuidelines.pdf.

1.3.6. What Are the General Assessment Factors, and How Do They Relate to Peer Review?

The guidance titled *General Assessment Factors for Evaluating the Quality of Scientific and Technical Information*⁷ (see Appendix C) and its addendum⁸ complement the EPA's IQG and Quality System and are an additional resource for EPA staff involved in the peer review process. The guidance establishes the EPA's expectations for scientific and technical information that is voluntarily submitted to or gathered by the Agency. Regardless of source, this information must be evaluated for quality and relevance prior to being used in support of EPA actions. The Agency takes into account five general assessment factors to determine whether the information meets its quality requirements: (1) soundness, (2) applicability and utility, (3) clarity and completeness, (4) uncertainty and variability, and (5) evaluation and review. The "evaluation and review" factor refers to the extent of independent verification, validation and peer review of the information. For a previous peer review to be considered adequate by the Agency, it should meet the intent of the EPA's Peer Review Policy, and the rigor of the review should be commensurate with the proposed use of the information by the Agency.

1.3.7. What Is the EPA's Scientific Integrity Policy, and How Does It Relate to Peer Review?

The EPA's *Scientific Integrity Policy*⁹ facilitates scientific integrity Agency-wide through: (1) the promotion of scientific and ethical standards; (2) communications with the public; (3) the use of peer review and advisory committees; and (4) professional development. The policy promotes the culture of scientific integrity and enhances transparency within scientific processes.

The policy emphasizes the importance of ensuring that scientific studies used to support regulatory and other policy decisions undergo appropriate levels of independent peer review, and it recognizes the role of FACs (see Section 2.3.6.) in providing transparent, external peer review.

1.4. Peer Review and Regulatory Development

1.4.1. What Role Does Peer Review Have in Regulatory Development?

Peer review of scientific and technical work products that support regulations is an important, fundamental step in policy setting and regulatory development processes. A regulation itself is not subject to the Peer Review Policy. If a regulation is supported by a scientific and technical work product(s), however, that underlying work product(s) should be peer reviewed if it does not meet exemption criteria outlined in Section 3.3.

Sometimes peer review leads to recommendations for new information and analyses that would alter the work product and thus modify the scientific/technical basis for the action or rule it supports. For this reason, a completed peer review is desirable before issuing any regulatory proposal for public comment. If that is not possible logistically because of court or statutory deadlines, or other appropriate reasons,

⁷ EPA. 2003. *A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information*. EPA/100/B-03/001. <http://www2.epa.gov/sites/production/files/2015-01/documents/assess2.pdf>.

⁸ EPA. 2012. *Guidance for Evaluating and Documenting the Quality of Existing Scientific and Technical Information. Addendum to A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information*. <http://www2.epa.gov/sites/production/files/2015-01/documents/assess3.pdf>.

⁹ EPA. 2010. *Scientific Integrity Policy*. http://www.epa.gov/osa/pdfs/epa_scientific_integrity_policy_20120115.pdf.

every effort should be made to complete the peer review before the close of the comment period. Because peer review comments on such work products could be of sufficient magnitude to warrant a revision to the proposed action or rule, every effort should be made to complete the peer review prior to the proposal stage.

1.4.2. What Is the EPA's Action Development Process (ADP), and How Does It Relate to Peer Review?

The EPA's ADP is a process designed to ensure that the Agency develops and issues high-quality rules, policy statements, guidance documents, reports to Congress and other regulatory and non-regulatory actions. It assists the Agency in achieving objectivity and transparency of information. It consists of steps for planning sound scientific and economic analyses to support the action, including peer review of any major scientific or technical work product that supports an Agency action.

1.4.3. How Does the Rulemaking Tier Affect Peer Review?

Tier 1 and Tier 2 rulemakings are, by definition, important Agency rulemakings. Therefore, work products supporting Tier 1 and Tier 2 rules should be scrutinized carefully to determine whether they should undergo peer review. In most cases, scientific and technical work products categorized as ISI or a HISA and supporting a Tier 1 or Tier 2 rulemaking should be externally peer reviewed if they do not meet exemption criteria outlined in Section 3.3.

Work products supporting Tier 3 rulemakings also may benefit from peer review. For work products supporting a Tier 3 rule, both internal and external peer review may be appropriate, depending on the nature of the product and other factors. For more information on the tiering process, see <http://intranet.epa.gov/actiondp/documents/adp03-00-11.pdf>. For more information on the differences between internal and external peer review, see Section 4.2.

1.4.4. Should Peer Review Be Discussed in the Analytic Blueprint for a Regulation?

Analytic blueprints are a critical part of the EPA's ADP (see Section 1.4.2). A blueprint, which is required for all Tier 1 and Tier 2 actions, spells out a workgroup's plans for the data collection and analyses that will support development of a specific action. The blueprint sets forth how this information will be collected, peer reviewed and used to craft the action within a specific budget and timeframe.

Workgroups should address peer review specifically in each analytic blueprint. For peer review purposes, development of the analytic blueprint is the process whereby the workgroup identifies supporting scientific and technical work products and recommends what kind of peer review is needed. The analytic blueprint should show the schedule of the peer review in the context of the schedule for the overall rulemaking. For more information, see <http://intranet.epa.gov/actiondp/documents/adp03-00-11.pdf>.

1.4.5. What Role Does Peer Review Have in Regulatory Negotiations?

As with other rules, a negotiated rulemaking itself is not subject to the Peer Review Policy. If the regulatory negotiation is supported by scientific and technical work product(s), however, that underlying work product(s) should be peer reviewed if it does not meet exemption criteria outlined in Section 3.3. This peer review should occur before the negotiation takes place, when possible.

1.4.6. Should the Peer Review Be Discussed in the Preamble of a Regulation?

For proposed and final regulations that rely on ISI and HISAs, the peer review report should be discussed in the preamble, as described in the OMB Peer Review Bulletin. The PRL should take steps to ensure that the rule writer and the regulatory workgroup are aware of this provision of the OMB Peer Review Bulletin. For peer review template language, see Appendix D, Sound Science and Peer Review in Rulemaking.

1.4.7. How Is Peer Review Documented in the Action Memorandum for Regulations?

For all rules requiring the Administrator's signature (proposed and final), the action memorandum should indicate the kind of peer review that took place. The current format for action memoranda accompanying regulatory packages is available at <http://intranet.epa.gov/actiondp/adp-templates/index.htm#adp>.

2. Peer Review Roles and Responsibilities

2.1. Overview

The roles defined in this chapter provide descriptions of responsibilities of key personnel involved in or conducting peer review at the Agency. These personnel are responsible for ensuring the scientific quality of work products that inform decisions.

The EPA Deputy Administrator (DA) is the senior Agency official for peer review. The DA is ultimately responsible for the performance of peer review for scientific and technical information that is intended to inform and support the EPA's environmental decisions.

The Science and Technology Policy Council (STPC), the Peer Review Advisory Group (PRAG) and the Office of the Science Advisor (OSA) oversee implementation of the Agency's Peer Review Policy. The Office of Research and Development (ORD) is responsible for maintaining the Agency's Peer Review Agenda.¹⁰ EPA Assistant Administrators (AAs) and Regional Administrators (RAs) are responsible for making peer review decisions that are specific to their EPA offices; they may delegate some responsibilities, however, to other Decision Makers (DMs) within their organizations for planning and managing the peer review process in accordance with the Handbook guidelines. The Office of General Counsel (OGC) and Office of Regional Counsel (ORC) provide legal advice to assist Agency personnel in carrying out their peer review-related responsibilities.

Specific roles and responsibilities of agency organizations and personnel associated with peer review are discussed below. EPA employees with assigned peer review responsibilities should be familiar with the Agency's Peer Review policy and receive the appropriate peer review training.

The PRAG develops and provides training on the Handbook for all employees with designated peer review responsibilities. See Section 1.2.6 for the roles and responsibilities of the peer reviewer.

Employees should be familiar with their roles and responsibilities for peer review.

2.2. Oversight Responsibilities for the EPA's Peer Review Policy

2.2.1. What Is the Role of the Deputy Administrator?

The DA has the authority to establish Agency-wide peer review policies and guidelines that enhance the credibility of EPA as a scientific agency. The DA is the final arbiter of conflicts and concerns about peer reviews conducted by the Agency.

2.2.2. What Is the Role of the Science and Technology Policy Council?

The STPC (formerly known as the Science Policy Council) is a senior Agency council chaired by the EPA Science Advisor. The STPC identifies critical science and technology policy issues and develops approaches that help advance the Administrator's environmental and public health priorities. The STPC is responsible for overseeing the implementation of the Agency's Peer Review Policy. The STPC meets its peer review responsibilities through oversight of the PRAG.

¹⁰ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

2.2.3. What Is the Role of the Peer Review Advisory Group?

The PRAG assists the STPC in overseeing implementation of the Agency's Peer Review Policy and serves as a technical resource for the Agency. It is a workgroup of representatives from EPA program and regional offices that was established to develop and interpret peer review guidelines, address peer review issues and promote effective peer review practices across EPA. It also serves as a cross-Agency coordination workgroup to increase the quality and consistency of peer reviews at the Agency. The PRAG is charged to perform the following duties:

- Ensure that the *Peer Review Handbook* is updated periodically.
- Develop peer review training for the agency.
- Provide expert advice to the STPC regarding peer review issues.
- Develop products for internal and external release that advance peer review in the Agency.
- Serve as a forum for discussing issues or questions relating to peer review.

2.2.4. What Is the Role of the Office of the Science Advisor?

OSA, with assistance and cooperation from all EPA program and regional offices, is responsible for producing the Agency's annual report to Office of Management and Budget (OMB) that summarizes the peer reviews that were conducted during the previous fiscal year for Influential Scientific Information (ISI), including Highly Influential Scientific Assessments (HISAs). OSA also provides support to the STPC and PRAG on peer review activities.

2.2.5. What Is the Role of the Office of Research and Development?

ORD is responsible for maintaining the EPA Science Inventory (SI) database. In addition, ORD maintains the EPA Peer Review Agenda website¹¹ that meets the OMB Peer Review Bulletin guidelines for a publicly available, "web-accessible listing of forthcoming influential scientific disseminations ... that is regularly updated by the agency" (see Appendix B). For information on the SI and Peer Review Agenda, see Section 7.3.

2.3. Peer Review Roles and Responsibilities within EPA Offices

EPA program and regional offices are responsible for carrying out all aspects of peer review appropriate for their work products. This includes categorizing their work products as ISI, HISAs or "other," as well as determining the nature, scope and timing of the peer review and following the procedures outlined in this Handbook. For ensuring greater independence and transparency of peer reviews, it is important to separate the responsibilities for developing work products from conducting the peer review (see Figure 2), whenever possible. The roles of individuals with specific responsibilities for peer review within their organization are addressed in the following subsections.

¹¹ EPA. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

2.3.1. What Is the Role of the Assistant and Regional Administrators?

The EPA's AAs and RAs are responsible for all peer review actions in their organizations. In many cases, the AA or RA may delegate these responsibilities to a DM (e.g., DAA, DRA, and Office/Division Director) within their organization. When more than one EPA office or other agencies are involved in the development of a work product, responsibility for conducting the peer review can be negotiated; often, the degree of involvement by any of the organizations and agencies and their ability to fund peer review will determine who assumes the lead for the peer review.

As part of the annual review process, AAs and RAs ensure that the peer review of influential scientific and technical work products in their program or regional office has been conducted and documented appropriately.

2.3.2. What Is the Role of the Decision Maker?

The DM should ensure that there are processes in place to determine—early in the planning stage of the product—whether the product is (or is likely to be) influential, and if influential, whether it is (or is likely to be) a HISA, and determine how the peer review is to be conducted. As noted in Section 2.3.1, the AA/RA may delegate these responsibilities to a manager within the organization, such as the ORD Laboratory or Center Director, Program Office Director, or Regional Division Director.

Specific responsibilities of the DM are the following:

- Determine which type of work products need to be peer reviewed and the nature of the peer review to be conducted for each type, and ensuring compliance with all applicable guidance (including the OMB Peer Review Bulletin).
- Identify the stages of product development for which peer review is appropriate and decide how the peer review is to be conducted.
- Document the categorization determination and other peer review planning decisions (see Roadmap Exhibit 3, Example EPA Peer Review Decision Summary Documentation), especially if the product is (or is likely to be) influential, and if influential, whether it is (or is likely to be) a HISA.
- Designate a Peer Review Coordinator (PRC) within the organization.
- Designate a Peer Review Leader (PRL) to plan, conduct and complete the peer review. The person in charge of producing the work product (Principal Investigator, Project Leader, or Project Manager (PM) – see Section 2.4.4) may serve as the PRL; however, for ISI and HISAs, the DM should consider the advantage of designating a different individual to serve as the PRL to enhance the independence of the peer review process.
- Ensure that sufficient funds are designated in the EPA office's budget to conduct the peer review and allocate adequate resources throughout the peer review process (e.g., contractor support for peer review).
- For HISAs, decide whether it is feasible and appropriate to make the draft scientific assessment available to the public for comment before or at the same time it is submitted for peer review,

and whether it is feasible and appropriate to sponsor a public meeting at which oral presentations on scientific issues can be made to the peer reviewers by interested members of the public.

- Ensure that all relevant issues and comments raised by the peer reviewer(s) are adequately addressed and documented for the record and, when appropriate, incorporated into the final work product.

2.3.3. What Is the Role of the Peer Review Coordinator?

The PRC is designated by the DM to coordinate and monitor all peer review activities related to EPA scientific and technical work products in an organization. This individual has access to senior management and all staff across the organization involved with peer review, and is the main contact with the PRAG, OSA and ORD for information about peer review activities and submissions to the SI.

Although some of the following functions might be performed by other personnel, specific responsibilities of the PRC are the following:

- Work closely with the DM and PRL to plan the peer review of the work product and ensure that peer review guidelines and procedures are appropriately applied.
- Provide advice, guidance and support to the PRL and, as determined by management, serve as the PRL for certain work products.
- Establish procedures to ensure that the peer review process is adequately documented in a peer review record (see Section 6.5) and that the record is filed and maintained in a manner consistent with Agency retention policies.
- For ISI and HISAs, ensure that information in the peer review record is consistent with OMB reporting guidelines by making key pieces publicly available on the Agency's Peer Review Agenda¹² via the SI.
- Deliver peer review training to management and staff.
- Function as the liaison with the PRAG, OSA and ORD by participating in PRAG workgroups as needed.
- Ensure that the list of work products and their associated peer review mechanisms are accurate and updated during the annual reporting (and, when necessary, at other times).
- Post or link other relevant peer review documents to the PRA from the SI.

2.3.4. What Is the Role of the Peer Review Leader for EPA-Managed Peer Reviews?

The PRL plans, conducts and completes the peer review for specific work products within an organization. The PRL is selected by the DM. To enhance the independence of the peer review process, the DM should consider the advantage of having separate individuals produce the work product and manage the peer review (see Section 2.3.2). The PRL should follow the Agency's peer review

¹² EPA. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

procedures and guidelines and should receive training on the Handbook and other policies and guidelines applicable to peer review. For peer reviews conducted by outside organizations such as the National Academy of Sciences (NAS), the PRL should be thoroughly familiar with the ethics policies and requirements of the organization conducting the review (see Section 5.3.1).

Specific responsibilities of the PRL include:

- **Plan the peer review:** After considering the type of work product under development, the PRL (in consultation with the DM and PRC) should do the following:
 - Determine and document the categorization of the product (ISI, HISA or other) and when and how the peer review should occur.
 - Establish a plan for the peer review, including the peer review approach (e.g., letter, panel, journal, EPA- or contractor-managed peer review); the scope and timing of the peer review; and the approach to responding to peer review comments.
 - Obtain management approval of the plan, and ensure proper documentation of decisions as part of the peer review record.
 - Develop the charge for the peer reviewers, soliciting input from the project team developing the work product and the public, as appropriate. When the timing of panel selection does not allow for prior finalization of the charge, develop a preliminary version of the charge that provides enough detail about anticipated peer review scope and issue areas that requisite areas of peer review panel expertise can be identified.
 - Select peer reviewers with expertise appropriate for the charge after considering and resolving any ethics issues, including potential conflicts of interest (COIs).
 - Ensure that appropriate internal review, including clearance procedures, is completed before releasing the product for external peer review.
- **Conduct the peer review:** The PRL should:
 - Provide opportunities for public comment on the review materials, when applicable (usually for ISI or a HISA).
 - Provide the peer reviewers with materials relevant to the work product, including instructions; the charge questions; and significant scientific and technical comments, if public comment was sought. Particularly for HISA, include information about key studies or models used to support key findings or conclusions of the work product.
 - Advise peer reviewers of their responsibility to prepare their response to the charge, usually in the form of a report documenting the results of the peer review.
 - Document any changes to the charge, profile of peer reviewers or ethical conflicts that may develop, and keep the PRC informed throughout the process.

- **Complete the Peer Review:** To complete the peer review, the PRL should:
 - Ensure that peer review comments are incorporated, as appropriate, into the final work product.
 - Document the resolution in a “response to comments” or a “reconciliation memorandum,” clearly identifying comments that have not been addressed.
 - Obtain the DM’s approval on the resolution of peer review comments.
 - For ISI and HISAs, make the peer review report (see Table 1) and any Agency response to comments publicly available on the Agency’s Peer Review Agenda.¹³
 - For ISI and HISAs, inform the PRC when the peer review is completed and available for inclusion in the annual report to OMB (see note in Section 6.4).
 - Archive the peer review record in a manner consistent with the organization’s records management procedures.

2.3.5. What Are the Roles of the Peer Review Leader and Contractor in the Case of Contractor-Managed Peer Reviews?

Several responsibilities of the PRL will shift to a contractor when a contractor is managing the peer review, but the PRL still ensures the peer review is conducted and completed for a specific work product following Agency procedures. For example, consistent with the contract terms, the contractor is responsible for selecting peer reviewers with due consideration of ethics issues (such as potential COIs or an appearance of a loss of impartiality [see Section 4.6]) and the balance of expertise, providing review materials and instructions to the peer reviewers and compiling the peer reviewer comments. The PRL provides materials associated with the peer review to the Contracting Officer’s Representative (COR), who is the technical point of contact for the contract. In some cases, the PRL and the COR may be the same individual. The COR then provides the materials to the contractor, who distributes them to the peer reviewers. After the peer review, the contractor ensures that the reviewers have fulfilled their responsibilities under their agreement with the contractor. EPA should not alter the contractor’s peer review report. The contractor may have additional responsibilities, depending on the complexity of the peer review and public participation in the process. For more information on contractor-managed peer reviews, see Section 4.6.

2.3.6. What Is the Role of the Designated Federal Officer (DFO) in the Case of Federal Advisory Committee (FAC)-Conducted Peer Reviews?

When peer reviews are conducted through a FAC, some of the PRL responsibilities are assumed by the DFO. The DFO is an EPA employee who is responsible for managing the FAC and ensuring that the provisions of the Federal Advisory Committee Act (FACA) are met (see Section 4.7). Details of the duties and responsibilities of DFOs are available in the Agency’s *Federal Advisory Committee Handbook*.¹⁴ For example, when external peer review is conducted under the auspices of the Science Advisory Board (SAB) or the Clean Air Scientific Advisory Committee (CASAC), the SAB Staff Office

¹³ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

¹⁴ EPA. 2013. *Federal Advisory Committee Handbook*. BiblioGov.

in the Office of the Administrator is responsible for selecting and vetting independent experts; planning, budgeting for and conducting peer review meetings; and maintaining peer review committee records.

The SAB Staff Office selects peer reviewers after a public nomination and comment process and after evaluating candidates for potential COIs or appearance of a loss of impartiality. The SAB Staff Office also announces committee meetings in the *Federal Register* and on the committee website, prepares detailed meeting minutes, transmits EPA charge and review materials to the committee and provides support to the committee in preparation of the advisory report to the EPA Administrator. To maintain the independence of the peer review process, the SAB Staff Office does not draft the EPA charge or prepare the Agency response to the peer review. The SAB Staff Office also does not enter data into the SI.

2.3.7. What Are the Roles and Responsibilities of EPA When Peer Reviews Are Conducted by the National Academy of Sciences?

The NAS is a private, nonprofit society of distinguished scientists established by Congress to provide independent, objective advice to the nation on science and technology matters. When agencies request an NAS peer review or sponsor an NAS study, a contract mechanism is used. The Agency works with NAS staff to develop a set of charge questions called a “statement of task” and also helps to define the timing and cost of the review. NAS reviews usually are conducted through the National Research Council (NRC). Once the statement of task and budget are approved by the NRC Governing Board, responsibilities for the peer review and products lie with the NAS and not EPA. The EPA contact with the NAS is a COR, and there can be more than one COR associated with an EPA-sponsored NAS review.

2.3.8. What Are the Roles and Responsibilities of EPA Authors and Managers Associated With Journal Peer Review?

The EPA considers peer review by a refereed scientific journal to be a satisfactory form of peer review to determine the scientific credibility and validity of the scientific and technical information presented in the article. Because journal peer review is an example of external review, the DM and PRL (typically one of the authors) have responsibilities for this type of peer review. The EPA authors of the article are responsible for complying with relevant organizational procedures associated with publications, such as internal review and clearance prior to submission to a journal; complying with pre-dissemination requirements, such as the use of an appropriate disclaimer; addressing peer review comments and responding to the editor; and maintaining a record of the peer review process. Peer-reviewed journal articles should be submitted to the SI as appropriate.

2.4. Other Agency Personnel Involved With Peer Review

2.4.1. What Are the Roles of the Offices of General and Regional Counsel?

OGC and ORC attorneys have specific areas of expertise, such as contracts and procurement, ethics and the FACA. They are consulted as needed to assist EPA staff with their oversight responsibilities. OGC/ORC attorney review and involvement helps ensure that Agency peer reviews meet legal standards, including those for integrity, transparency and openness.

2.4.2. What Are the Roles of the Quality Assurance Manager (QAM), Director of Quality Assurance (DQA) and Quality Assurance (QA) Staff?

The QAM, DQA and QA staff oversee implementation of the organization's Quality System pursuant to the EPA's Quality Policy for environmental data collection and use (see Section 1.3.4). QA processes and procedures are essential for developing scientifically sound, transparent and credible information supporting EPA's products and decisions. Typically, the QA staff conducts technical review of data quality and review of scientific and technical products for consistency, correctness, coherence, clarity and conformance. In planning the peer review, the PRL is encouraged to consult with the organization QA contact to determine documentation of QA requirements. If applicable, the PRL should ask the QAM to review the QA statement or QA section included in the draft or final work product.

2.4.3. What Is the Role of the Information Quality Guidelines (IQG) Officer?

The IQG Officer (or Coordinator) assists the organization in establishing pre-dissemination review procedures for the quality, objectivity, utility and integrity of the EPA's information products disseminated to the public. The PRL, PRC, QAM and DQA can collaborate with the IQG Officer to ensure compliance with the organization's established pre-dissemination procedures for the specific work products disseminated by EPA.

2.4.4. What Is the Role of the Principal Investigator (PI), Project Leader (PL) or Project Manager (PM)?

The PI, PL or PM is responsible for producing work products based on sound scientific principles and practices, and is responsible for working with the PRL to get their work products peer reviewed. The Agency's peer review procedures and guidelines, Quality Policy requirements for use of defensible data, the General Assessment Factors guidance and the Scientific Integrity Policy provide the framework for assuring the integrity and utility of the EPA's science. The PIs, PLs and PMs are expected to be familiar with these policies. The PI, PL and PM should work collaboratively with the PRC and PRL throughout the peer review process and should help develop charge questions specific to the work product. To enhance the independence of the peer review process for ISI/HISAs, a separate PRL, rather than the PI, PL or PM, should be considered to manage the peer review.

2.4.5. What Is the Role of the Contracting Officer's Representative (COR)?

For some peer reviews, a contractor takes on some of the roles of the PRL. The Contracting Officer (CO) can delegate some responsibilities to the COR. The COR is sometimes called the Project Officer, Task Order Project Officer or Work Assignment Manager. The COR provides oversight of the peer review process. In some instances, the PI, PL or PM can serve as the COR. When a contractor-managed peer review approach is used, the PRL works with and through the COR for some activities. The COR, together with the CO, is responsible for ensuring compliance with contracting requirements, developing a Statement of Work (SOW), coordinating with the contractor regarding COI and other administrative matters and overseeing contractor activities to ensure that the schedule and other contract requirements are met. Unless they also are the COR, the PI, PL or PM cannot supply materials directly to the contractor. Responsibilities of the CO also are described in Section 4.6, especially as they relate to the inclusion of COI solicitation provisions and contract clauses. In accordance with the EPA's peer review process for contractor-managed panels of ISI and HISAs, when consultation about COI is needed between the EPA Science Advisor and contractors, the CO and COR should participate in the consultation.

In some cases, the Agency may opt to obtain peer review services directly from individual peer reviewers, rather than through a contractor-managed peer review process. In such cases, the Agency generally would use a Purchase Order to compensate external peer reviewers, and the Agency contact would be the Purchasing Agent or the COR, if one is designated.

3. Categorize the Work Product and Determining the Need for Peer Review

3.1. Overview

The EPA produces or uses a variety of scientific and technical work products. Before a peer review approach can be selected, a determination first must be made and documented about whether the scientific or technical work product is influential scientific information (ISI) as defined by the Office of Management and Budget's (OMB) Peer Review Bulletin.¹⁵ Although other scientific work products may benefit from peer review, peer review should be conducted for those that are categorized as influential. Influential scientific and technical work products generally receive internal peer review, followed by external peer review. Other work products that do not meet the OMB definition of influential products may undergo internal peer review, external peer review or both.

This chapter of the Handbook describes products that might be subject to peer review, how EPA determines whether a scientific and technical work product is influential—including whether it is a Highly Influential Scientific Assessment (HISA), which is a subset of ISI—and the critical role of senior managers in that decision (Figure 4). The distinction between ISI and HISAs is important because there are additional peer review considerations for HISAs.

3.1.1. What Are Scientific and Technical Work Products?

The first step in determining which work products should be peer reviewed is to identify those that are scientific or technical in nature. The term “scientific and technical work products” is generally consistent with the term “scientific information” in the OMB Peer Review Bulletin. Scientific and technical work products are used to support a research agenda,

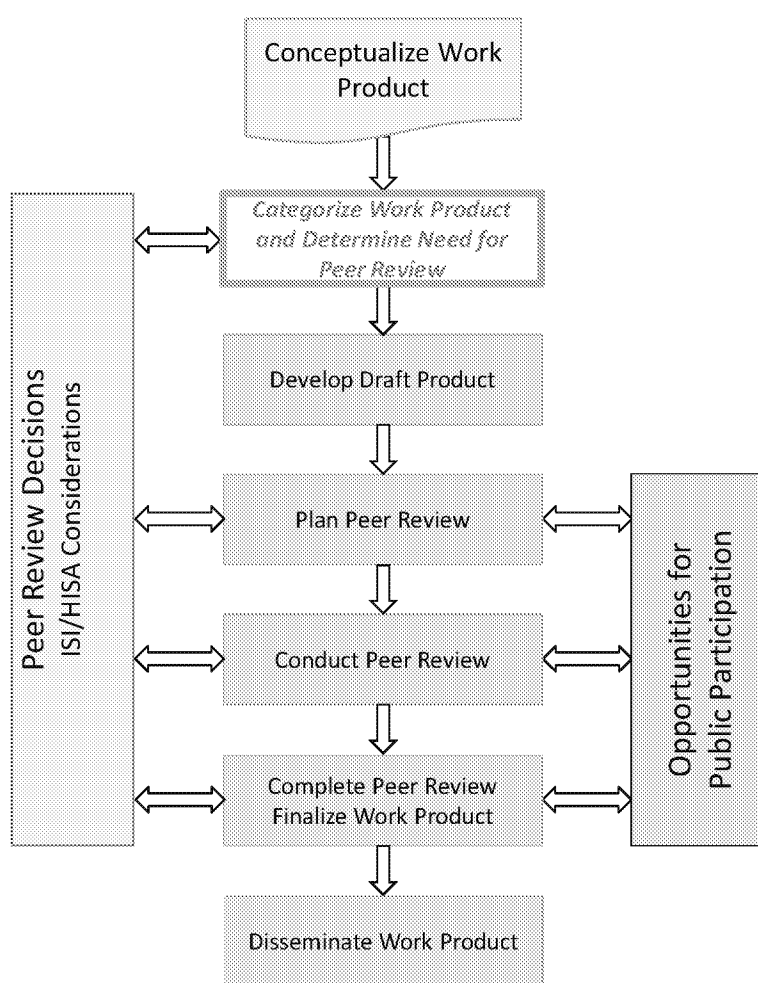

Figure 4. The Peer Review Process: Develop and Categorize Work Product/ Plan Peer Review

¹⁵ OMB defines “scientific information” as “factual inputs, data, models, analyses, technical information, or scientific assessments based on the behavioral and social sciences, public health and medical sciences, life and earth sciences, engineering, or physical sciences.” (OMB Peer Review Bulletin, Section I.5).

regulatory program, policy position, or other EPA position or action. Scientific and technical work products include economic and social science work products. Categories of work products include, for example, risk assessments, technical studies and guidance, analytical methods, scientific database designs, technical models, technical protocols, statistical surveys/studies, technical background materials, technical guidance (except for guidance providing policy decisions), research plans and research strategies.

Products that would not be considered scientific or technical work products can include the following:

- Products that address procedural matters (e.g., planning, reporting, coordination, notification).
- Primarily policy statements (e.g., relocation policy).
- Conference proceedings (unless the proceedings are used as the scientific basis for an Agency action or decision).
- Decision documents, such as an Environmental Impact Statement (EIS), Record of Decision (ROD), or an Economic Analysis reviewed through an interagency review process under E.O. 12866.
- Products that summarize a scientific and technical work product, including public affairs and communication materials (e.g., press releases, press kits, brochures, fact sheets); scientific abstracts, including posters and presentations at scientific meetings; or other summaries (e.g., summaries on Web pages).
- Strategic plans, Agency annual plans and budget documents, performance reports, analytical blueprints, and goals documents.

For any of these examples, the document itself is not subject to the Peer Review Policy, but the underlying scientific or technical models, data and/or work products upon which these documents are based are candidates for peer review. Scientific and technical work products that are referenced to provide context, history, or general background information and that do not materially influence or educe an agency policy or action generally need not undergo peer review.

3.1.2. Who Develops Scientific and Technical Work Products?

Scientific and technical work products may be generated by one or more EPA offices or in collaboration with external partners.¹⁶ Scientific and technical products also may be generated by third-party organizations and used by EPA. In general, third-party scientific and technical products should be evaluated for peer review if they will be used to support Agency decisions or actions.

¹⁶ Please note that generation of scientific or technical work products in collaboration with external partners may be subject to the Federal Advisory Committee Act (FACA).

3.1.3. What Scientific and Technical Work Products Need Peer Review?

According to the EPA's Peer Review Policy, "[p]eer review of all scientific and technical information that is intended to inform or support agency decisions is encouraged and expected." The OMB Peer Review Bulletin stipulates that all of the agency's ISI and HISAs should be peer reviewed unless they meet exemption criteria (see Section 3.3). Other scientific work products that do not rise to the level of influential also may be peer reviewed. These work products will have greater standing in the scientific community if an independent peer review is completed.

When in doubt about whether a work product merits peer review, decide to peer review it.

New applications or modifications of existing, adequately peer-reviewed methodologies or models that significantly depart from the situations for which they were originally designed may require additional peer review.

3.2. Assignment of Categories

3.2.1. What Is Influential Scientific Information (ISI)?

As defined by the OMB Peer Review Bulletin, the term "influential scientific information" means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private-sector decisions. The interpretation of the term "influential" is consistent with OMB's government-wide information quality guidelines (IQG)¹⁷ and the IQG of the Agency. (The Agency has linked its use of the term "influential" to the term "major" in its IQG).

At EPA, scientific and technical work products that will have or do have a clear and substantial impact on important public policies or private-sector decisions would be considered influential. Decision Makers (DMs) should consider the following factors when determining whether a product is likely to be influential:

- Establishes a significant precedent, model or methodology.
- Is likely to have an annual effect on the economy of \$100 million or more, or adversely affect in a material way the economy; a sector of the economy; productivity; competition; jobs; the environment; public health or safety; or state, tribal or local governments or communities.
- Addresses significant controversial issues.
- Focuses on significant emerging issues.
- Has significant cross-agency and/or interagency implications.
- Involves a significant investment of agency resources.

¹⁷ OMB. 2002. *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies; Republication*. Federal Register 6: 8,452. February 22.

- Considers an innovative approach for a previously defined problem, process, or methodology.
- Satisfies a statutory or other legal mandate for peer review.

3.2.2. How Are ISI Determinations Made and Documented?

The DM, in consultation with the Peer Review Leader (PRL), should make the judgment as to whether a work product is ISI and document the decision. Generally, determination of whether a scientific and technical work product is influential will occur on a case-by-case basis. The EPA's work products should be evaluated and assessed with respect to the factors defined in Section 3.2.1. The categorization determination and other peer review planning decisions should be documented (see Roadmap Exhibit 3: *Example EPA Peer Review Decision Summary Documentation*).

3.2.3. What Is a Highly Influential Scientific Assessment (HISA)?

HISAs are a subset of ISI for which the OMB Peer Review Bulletin specifies additional peer review considerations, including that peer reviewers be external, non-EPA experts. OMB has defined a HISA as ISI that “the agency or the Administrator determines to be a scientific assessment that:

- (i) could have a potential impact of more than \$500 million in any year, or
- (ii) is novel, controversial, or precedent-setting or has significant interagency interest.”

OMB defines a scientific assessment as “an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information.”¹⁸ Examples given by OMB of assessments that may be considered HISAs include: state-of-science reports; technology assessments; weight-of-evidence analyses; meta-analyses; health, safety or ecological risk assessments;¹⁹ toxicological characterizations of substances; integrated assessment models; hazard determinations; or exposure assessments.

The more far-reaching or significant the impacts of a scientific assessment, the more appropriate it is to categorize the product as a HISA. If a work product is a scientific assessment that involves significant issues that truly are “cutting-edge,” it might be appropriate to designate it as a HISA. For examples of HISA products, see the Science Inventory or the Peer Review Agenda (http://cfpub.epa.gov/si/si_public_pr_agenda.cfm).

3.2.4. How Are HISA Determinations Made and Documented?

Once a scientific or technical assessment has been determined to be influential, the DM should determine whether the product meets OMB's definition of a HISA. As with the categorization of a work product as influential, the decision whether or not to elevate a scientific assessment to the highly influential category occurs on a case-by-case basis after considering the criteria discussed in Section 3.2.3. The DM should make the judgment as to whether an assessment is a HISA and the

¹⁸ OMB Peer Review Bulletin, Section I.7.

¹⁹ Influential scientific information regarding human health, safety or environmental risk assessments may be subject to quality principles articulated in Section 6.4 of the *Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by the Environmental Protection Agency* (2002, EPA/260R-02-008).

decision should be documented (see Roadmap Exhibit 3, Example EPA Peer Review Decision Summary Documentation).

3.2.5. What Work Products Are Categorized as “Other”?

Any scientific and technical work product that does not meet the OMB guidelines’ criteria for influential information is categorized as an “other” work product. Examples may include, but are not limited to, journal articles and some reports. The OMB Peer Review Bulletin does not apply to journal articles because such publications do not contain findings or conclusions that represent the official position of the Agency.

3.2.6. Are Work Products Categorized as “Other” Candidates for Peer Review?

Yes, the Agency may decide to use peer review for work products categorized as “other” because of a particular EPA office’s needs and goals. Peer review also may be warranted because it adds substantial value to the work product or if the work product will be used in an Agency decision-making process. Research papers submitted to peer-reviewed scientific journals are categorized as “other” yet still undergo peer review by the journal.

3.2.7. Can the Categorization of a Work Product Be Revised After the Peer Review Planning Phase?

Yes, the categorization can be revised after the peer review planning phase but before the product undergoes peer review. The nature of the work product—or its intended use—may change, so re-evaluation may be necessary to ensure an appropriate peer review is conducted.

Furthermore, the impact and interest in a peer-reviewed scientific product may change or may not be anticipated fully by the PRL or the DM. Under such circumstances, additional peer review may be necessary, including a change in the review mechanism. Any decision to modify the categorization of a work product should be documented in the peer review record (see Section 6.5.2).

3.3. Influential Work Products That Are Not Peer Reviewed

3.3.1. Under What Circumstances Are Influential Work Products Exempt From the Provisions of the OMB Peer Review Bulletin?

Per the OMB Peer Review Bulletin, the following information does not need to be peer reviewed, even if it might be considered ISI or a HISA:

- Information related to certain national security, foreign affairs or negotiations involving international trade or treaties for which peer review would interfere with the need for secrecy or promptness.
- Information disseminated in the course of an individual adjudication or permit proceeding (including a registration, approval, licensing or site-specific determination), unless the Agency determines that peer review is practical and appropriate and the influential information is scientifically or technically novel or likely to have precedent-setting influence on future adjudications and/or permit proceedings.

- Information involving a health or safety issue where the Agency determines that the dissemination is time-sensitive.
- A regulatory impact analysis or regulatory flexibility analysis subject to interagency review under Executive Order 12866, *Regulatory Planning and Review*,²⁰ except for underlying data and analytical models used.
- Routine statistical information (e.g., periodic demographic and economic statistics) and analyses of these data to compute standard indicators and trends.
- Accounting, budget, actuarial and financial information.
- Information disseminated in connection with routine rules that materially alter entitlements, grants, user fees or loan programs, or the rights and obligations of recipients thereof.

3.3.2. Are There Other Circumstances When Peer Review of Influential Products Is Not Necessary?

Yes, there are other circumstances when peer review of influential products may not be necessary. For example, peer review generally is not conducted:

- For work that has been reviewed previously in a manner consistent with the OMB Peer Review Bulletin and this Handbook (e.g., a cancer risk assessment methodology or an exposure modeling technique that was the subject of earlier peer review of appropriate technical merit would not generally undergo additional peer review even if the product supported a significant Agency decision).
- If an application of an adequately peer-reviewed work product does not depart significantly from its scientific or technical approach.
- When the scientific or technical methodologies or information being used are commonly accepted in the field of expertise and have the appropriate documentation to support the commonly held view (e.g., many products supporting Control Techniques Guidelines and Effluent Limitation Guidelines).
- When the product was developed by the National Academy of Sciences (NAS).

3.3.3. For Influential Information That Is Not Exempt, Can the Peer Review Provisions of the OMB Peer Review Bulletin Be Waived or Deferred?

The Administrator may waive or defer the peer review provisions of the OMB Peer Review Bulletin for ISI (including HISAs) if there is a compelling rationale for the waiver or deferral. The use of waivers is expected to be limited to unusual and compelling situations not otherwise covered by the exemptions, such as situations in which unavoidable legal deadlines prevent full implementation of the OMB Peer Review Bulletin's peer review provisions. According to the Bulletin, deadlines found in consent decrees ordinarily will not warrant waiver of the provisions because those deadlines should be negotiated to

²⁰ Executive Order No. 12866. October 4, 1993. *Federal Register*, 51:735. <http://www.archives.gov/federal-register/executive-orders/pdf/12866.pdf>.

permit time for conducting a peer review. Deferral of some or all of the peer review provisions may be an appropriate way to accommodate immovable deadlines. If any of the OMB Peer Review Bulletin provisions are deferred, peer review should be conducted as soon as practicable thereafter. Deferrals of peer review of ISI and HISAs should be approved by the Administrator.

If peer review of an influential work product is not planned, an explanation should be included in the product documentation and record for that work product in the Science Inventory (SI).

3.4. Work Products from Contracts, Grants and Agreements That May Require Peer Review

The Agency should not use scientific and technical work products from contracts, grants or cooperative agreements to support decision making unless the work products have undergone a peer review both for scientific and technical rigor and for applicability to the specific use to be made of the product. Products generated by contractors under the direct supervision of EPA and incorporated by the Agency in the development of EPA scientific and technical work products are not necessarily peer reviewed separately but as part of the final Agency product.

Contracts differ from grants and cooperative agreements and require special considerations when considering peer review of these work products (see Section 3.4.2). There are important legal restrictions on the direct use of work products developed under grants and cooperative agreements in the agency's decision-making process. See the EPA's Grants and Debarment Web page (<http://www.epa.gov/ogd/> or <http://intranet.epa.gov/OGD/policy/7.0-GPI-GPI-94-04.htm>) for additional information.

3.4.1. How Does the EPA's Peer Review Process Apply to Products Generated through EPA Contracts?

A work product generated through an EPA contract should undergo the same degree of peer review as if the work product was developed by an EPA employee. The peer review should be conducted independently from the contractor who developed the work product. EPA is responsible for arranging the peer review (see Section 4.6.1).

3.4.2. How Does the EPA's Peer Review Process Apply to Products Generated through EPA Assistance Agreements (e.g., Grants or Cooperative Agreements)?

Special considerations apply to the peer review of scientific and technical work products generated through EPA grants or cooperative agreements.

EPA provides financial assistance for research that is intended to stimulate or support development of scientific knowledge that is not primarily for EPA's direct use or benefit. The resulting work products might be widely disseminated either through publication in scientific journals or through other means, as opposed to a report tailored to the EPA's specific needs and requirements. EPA can consider these work products just as it does other published scientific works when formulating its programs and policies. EPA may determine that the recipient's work product is influential because (1) it will be used to support an EPA program or policy position; and (2) it meets the criteria for influential information. EPA should evaluate whether the peer review process undertaken by the assistance agreement recipient was acceptable for the purposes for which EPA plans to use the work product. EPA may accept the peer review if it determines that it is of appropriate quality and as defensible as if it were conducted by EPA.

itself. The work product may require additional peer review, however, in the context of its use or modification by the Agency.

The following are options for peer reviewing the product:

- EPA can have the product peer reviewed with the participation of the assistance agreement recipient/author(s). In this case, EPA could arrange for an independent peer review of the product within the context of the way(s) in which the Agency plans to use it. EPA may ask the recipient/author(s) to provide additional information or to revise the product in response to the peer review.
- EPA can have the product peer reviewed without the participation of the recipient/author. EPA could arrange for the peer review of the product within the context of the Agency's intended use. EPA then would receive the comments and prepare a statement that documents the EPA's own response to the comments.

3.4.3. Can the Recipient of a Grant or Cooperative Agreement Use Agreement Funds to Pay Peer Reviewers of Their Work Products?

Provided that EPA agrees that a peer review would further the public purpose of the assistance agreement, EPA may include funds for the peer review in the agreement. This is generally in the form of journal publication fees. If a work product is ISI or a HISA, the peer review of that product should follow the guidelines set out in the *Peer Review Handbook*, consistent with Agency use and review of the product.

3.4.4. How Should Peer Review Be Handled for Products Developed Under an Interagency Agreement?

Under an Interagency Agreement, EPA provides funds to another agency to be used for a specific purpose. The receiving agency's guidance for peer review is likely to be different from the EPA's Peer Review Policy, although the OMB Peer Review Bulletin establishes some minimum common guidance for the federal government. Regardless, if EPA plans to use any work products from that agreement, a determination should be made as to whether the work products are ISI, including whether they are HISAs, or do not qualify as influential (i.e., "other"). The EPA then should decide whether those documents need review under the EPA's Peer Review Policy and pursue the appropriate mechanism.

3.5. Other Types of Work Products That May Require Peer Review

3.5.1. Should Another Organization's Work Products That Have Been Submitted to the EPA for Use in Decision Making Be Peer Reviewed?

Any scientific or technical work product that is used in agency decision making and is considered influential becomes a candidate for peer review, regardless of whether the work product is developed by EPA or another organization. Therefore, all work products important to EPA decision making that are independently generated by other organizations (e.g., other federal agencies, interagency groups, state and tribal bodies, environmental groups, industry, educational institutions, international bodies) should be considered as candidates for peer review. The DM in the EPA office planning to use the product is responsible for the categorization and decision regarding peer review.

If possible, when EPA knows that a work product being generated by another organization may be of interest to EPA for future use, the appropriate EPA office(s) should work with that organization and others, as appropriate (e.g., state agencies, international organizations), to promote the use of peer review. Furthermore, when another agency's product is being considered for EPA use, the EPA office(s) planning to use the product should ascertain—in collaboration with other EPA offices as appropriate—the characteristics and sufficiency of any peer review process already conducted or planned for the candidate product.

Reports produced by certain outside organizations—such as the NAS, the EPA's Science Advisory Board (SAB) and the International Agency for Research on Cancer—are products of independent peer review by their nature. The OMB Peer Review Bulletin specifically notes that official NAS reports are generally presumed not to require additional peer review. The Agency's scientific work products which use and interpret those products' findings or results may be subject to peer review. Peer reviews conducted by stakeholders of their own products may be considered peer input but not independent peer review, unless principles and policies articulated in the EPA's *Peer Review Handbook* can be applied.

3.5.2. Is Additional Peer Review Necessary If a Paper Is Published in a Refereed Scientific Journal?

The extent to which additional peer review is needed for an article that has been peer reviewed by a credible refereed scientific journal depends upon EPA's use of the article. For example, EPA may determine that an additional and more rigorous or transparent review process is needed if a particular journal review process did not address questions that EPA determines should be addressed before using or disseminating the information.

3.5.3. Does an Agency Work Product Become a Candidate for Peer Review When Peer-Reviewed Journal Articles Are Used in Support of That Work Product?

Agency work products are candidates for peer review even when supported by peer-reviewed journal article(s). Although the use of articles that have been peer reviewed by a credible journal strengthens the scientific and technical credibility of any work product in which the article(s) appears or is referenced, it does not eliminate the need to consider whether the work product itself should be peer reviewed. In most cases, journal peer review may not cover issues and concerns that the Agency may want peer reviewed to support an EPA action. Under these circumstances, the scientific or technical work product in which the article(s) appears or is referenced becomes a candidate for peer review. A journal article authored by EPA employees should be used in the same manner as an article published by non-EPA authors in a credible, well-recognized journal.

Decisions to peer review a work product should be documented in the peer review record (see Section 6.5.2).

3.5.4. Should Site-Specific Decisions Be Subject to Peer Review?

A site-specific decision (e.g., for a permit or hazardous waste cleanup) itself is not subject to peer review under the EPA's Peer Review Policy. However, if a site-specific decision is supported by ISI or a HISA generated for that site-specific decision, then that work product should be peer reviewed. Generally speaking, the PRL should examine closely the ways in which the underlying scientific or technical work product is adapted to the site-specific circumstances.

3.5.5. Should National Environmental Policy Act (NEPA) Products Be Subject to Peer Review?

Although an EIS prepared under the requirements of the NEPA receives extensive review through the “scoping” and interagency and public review processes that are part of the NEPA, this usually is not considered peer review. If the underlying scientific or technical data, models, analyses or work products are categorized as ISI or a HISA, then these should be peer reviewed.

If EPA is developing the NEPA document as part of an EPA action/decision (i.e., EPA is the lead agency under NEPA), and supporting documents are ISI or HISAs, then the supporting documents should receive independent peer review. If the document is not categorized as influential, then peer input might be appropriate.

If EPA is reviewing an EIS from another agency (i.e., EPA is not the lead agency under NEPA), it is likely that it is being reviewed for conflicts with EPA policy and general environmental concerns. In such a case, EPA should ask whether the underlying scientific or technical work product that supports the EIS has been peer reviewed to avoid concerns about the full credibility and soundness of the EIS based on the science and technical support. The EPA should work with the other organization/agency to ensure that scientific and technical work products receive peer review adequate for EPA purposes.

3.5.6. Do Voluntary Consensus Standards Undergo Peer Review?

In general, the answer is no. The National Technology Transfer and Advancement Act of 1995 (NTTAA) directs EPA to use available voluntary consensus standards in its regulatory activities, unless to do so would be inconsistent with applicable laws or otherwise impractical. For purposes of the NTTAA, voluntary consensus standards are defined as technical standards (e.g., materials specifications, test methods, sampling procedures, business practices) that are developed or adopted by voluntary consensus bodies (e.g., ASTM International). The general purpose of the NTTAA is to reduce private and governmental costs by avoiding having the government “reinvent the wheel” in the development of technical standards. Voluntary consensus standards normally would not undergo peer review because the underlying process used by issuing organizations to develop and approve these standards generally is considered adequate for purposes of the Agency’s Peer Review Policy.

3.5.7. What Economic Work Products Need Peer Review?

Economic work products are considered scientific and technical work products. As such, it may be appropriate to peer review them, and an ISI/HISA/other determination should be made. If an economic work product is determined to be influential, then it should be peer reviewed if it has not been subjected already to adequate peer review according to the relevant sections of this Handbook or is otherwise exempt (see Section 3.3).

Data and analytical models underlying an economic analysis, particularly those supporting economically significant rules, are candidates for peer review if the models and corresponding use of the data have not been subjected previously to adequate peer review. This also is true for work products that will serve as a principal method or protocol used to conduct economic analyses within a program.

The following economic work products generally should be peer reviewed:

- Internal Agency guidance for conducting economic and financial analysis that meets the definition of influential.
- Economic and financial methodologies that will serve as a principal method or protocol used to conduct economic analyses within a program.
- Unique or novel applications of existing economic and financial methodologies, particularly those that are recognized to be outside of mainstream economic practices.
- Broad-scale economic analyses of regulatory programs, such as those required by Congressional mandates (e.g., the Clean Air Act reports to Congress on benefits and costs).
- Stated preference (e.g., contingent valuation) and revealed preference surveys (e.g., recreational travel cost surveys) developed to assist in the economic analysis of a regulation or program.
- National surveys of costs and expenditures for environmental protection (e.g., financial needs surveys, pollution abatement expenditures surveys).
- Economic multiyear research plans developed to assess and advance the state-of-science in economic theory, methodologies or modeling (in particular, the technical feasibility of the plan's components).
- Meta-analyses (i.e., re-analyses of existing published literature and supporting data on the measurement of economic benefits, costs and impacts) developed to assist in the economic analysis of a regulation or program.

Other economic work products also might benefit from peer review, even though they do not exhibit a high degree of complexity or establish an innovative approach. For these, factors such as the potential significance of the analysis for cross-agency or interagency practices or the significance of the issue addressed may make peer review desirable. Examples include:

- Analyses measuring the economic impacts and effectiveness of adopting market-based or economic incentives as regulatory management instruments.
- Technical analyses supporting economic policies established under other government organizations (e.g., economic models used to study transportation, economic development and international trade policies).

External peer reviews can be provided by the SAB's Environmental Economics Advisory Committee, other appropriate outside organizations, or individual, non-EPA reviewers who have expertise in the technical economic issues raised in the economic work product.

3.5.8. Should Economic Analyses Prepared in Support of “Major” or “Economically Significant” Regulations Be Peer Reviewed?

If an Economic Analysis or Regulatory Impact Analysis²¹ uses accepted, previously peer-reviewed methods in a straightforward manner, it would not undergo additional peer review. The OMB Peer Review Bulletin specifically exempts Economic Analyses already reviewed through an interagency review process that involves application of the principles and methods defined in OMB Circular A-4.²² Furthermore, Economic Analyses prepared to support “major” or “economically significant” regulations²³ typically do not utilize innovative or untried economic methods. It is unnecessary to conduct peer reviews of straightforward applications or transfers of accepted, previously peer-reviewed economic methods or analyses (including those published in peer-reviewed journals). Therefore, Economic Analyses that are developed using these procedures do not normally undergo an additional peer review, even those Economic Analyses prepared in support of “major” and “economically significant” rules.

Even when peer review is not required, additional peer input can be beneficial in the development of economic work products for “major” and “economically significant” rules, and this input is encouraged by the OMB Peer Review Bulletin. At present, some peer input of these analyses already is likely to be included as part of the regulatory development process, including input received from other EPA offices represented on the workgroup for the rule, from the Agency’s Regulatory Steering Committee, and from the public as part of the public comment process for the rule. There may be, however, added benefit to employing additional peer input procedures, such as actively soliciting input from economists elsewhere in the Agency (through the Economics Forum Steering Committee or the National Center for Environmental Economics), as well as economists from other federal agencies, on the quality and completeness of the Economic Analysis. It is unnecessary to conduct peer reviews of straightforward applications or transfers of accepted, previously peer-reviewed economic methods or analyses, (including those published in peer-reviewed journals).

3.5.9. What Other Social Science Work Products Need Peer Review?

Typically, a social science work product is one that includes empirical, logic-based approaches to answer technical questions about human motivation, human behavior, social interactions and social processes that are relevant to the environmental issues being addressed. The term “behavior” includes overt actions; underlying psychological processes, such as cognition, emotion, temperament and motivation; and bio-behavioral interactions. The term “social” includes socio-cultural, socio-economic and socio-demographic status; bio-social interactions; and the various levels of social context, from small groups to complex cultural systems. Examples of social science work products include analyses

²¹ The OMB Peer Review Bulletin refers to Economic Analyses as Regulatory Impact Analyses.

²² OMB. 2003. *Circular A-4, Regulatory Analysis*. <http://www.whitehouse.gov/sites/default/files/omb/assets/omb/circulars/a004/a-4.pdf>. September 17.

²³ Under Section 3(f)(1) of Executive Order 12866 (58 *Fed. Reg.* 51,735 [Oct. 4, 1993]), “significant regulatory actions” rules are those that may have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy; a sector of the economy; productivity; competition; jobs; the environment; public health or safety; or state, local or tribal governments or communities. The term “major,” as defined in the Congressional Review Act (5 U.S.C. § 804(2)), means a rule that has resulted in or is likely to result in: an annual effect on the economy of \$100 million or more; a major increase in costs or prices for consumers, individual industries, federal, state or local government agencies, or geographic regions; or significant adverse effects on competition, employment, investment, productivity, innovation or on the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic and export markets.

and/or evaluations related to such topics as pollution prevention, risk communication, environmental information, environmental justice, quality of life, decision making and public participation.

The following social science work products normally should undergo external peer review:

- Internal Agency guidance for conducting social impact assessments and other community cultural assessments related to different environmental protection approaches, such as community-based watershed protection (heretofore referred to as social assessments).
- New social science methodologies that will serve as a principal method or protocol to conduct social assessments.
- Unique or novel applications of existing social science methods, such as surveys, focus groups, interviews, network analyses, comparative analyses and content analyses.
- New national surveys of values, perceptions and preferences related to environmental protection.
- Innovative research or analyses that address the human dimensions of environmental protection or environmental change in terms of social trends, future predictions and/or behavioral generalizations.
- Social science multiyear research plans developed to assess and advance the state-of-science in social science theory, methodologies or modeling (in particular, the technical feasibility of the plan's components).

3.5.10. Are Regulations Subject to Peer Review?

A regulation itself is not subject to the Peer Review Policy. However, all ISI and HISAs that support a regulatory action should be peer reviewed. The administrative record for the action should include a statement certifying how the peer review provisions have been met (see Appendix D). For discussion of the role of peer review in regulatory development, see Section 1.4.

3.5.11. Should Environmental Regulatory Models Be Peer Reviewed?

In general, the answer is yes. Guidelines for the peer review of environmental regulatory models have been published by the Agency. These can be found on the EPA website under <http://nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P1003E4R.PDF>.

4. Peer Review Types and Mechanisms

4.1. Overview

After a planned work product has been categorized as Influential Scientific Information (ISI); a Highly Influential Scientific Assessment (HISA), which is a subset of ISI; or “other,” the selection of a peer review approach is needed and involves consideration of many aspects. This chapter outlines the steps for a range of peer review options and discusses the processes and considerations relevant to each (Figure 5). The EPA develops various scientific work products that may be used to support its analyses and decisions. These products vary widely in their complexity and levels of influence. Although much attention is given in this Handbook to influential information, selecting the appropriate type of review mechanism also is important for work products categorized as “other.” This chapter, therefore, applies to all products that warrant peer review, not only work products categorized as ISI or a HISA. In addition, although the peer review principles in this Handbook apply to both internal and external peer reviews, the emphasis of this chapter is on options for obtaining external reviews.

4.2. Choosing a Peer Review Mechanism

The preamble to the Office of Management and Budget’s (OMB) Peer Review Bulletin²⁴ notes that

“... different types of peer review are appropriate for different types of

information. Under this Bulletin, agencies are granted broad discretion to weigh the benefits and costs of using a particular peer review mechanism for a specific information product. The selection of an appropriate peer review mechanism for scientific information is left to the agency’s discretion.”

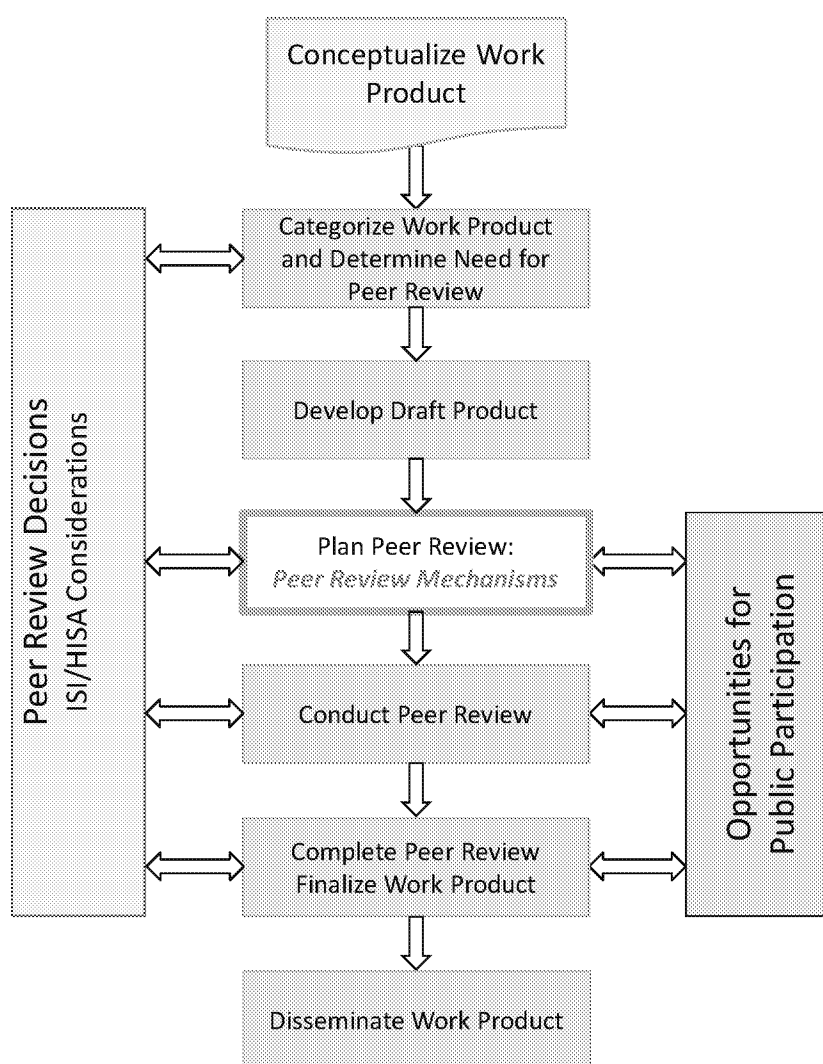

Figure 5. The Peer Review Process: Peer Review Mechanisms

²⁴ OMB. Dec. 16, 2004. Memorandum for Heads of Departments and Agencies, *Final Information Quality Bulletin for Peer Review*. <http://www.whitehouse.gov/sites/default/files/omb/memoranda/fy2005/m05-03.pdf>.

4.2.1. How Is the Appropriate Peer Review Mechanism Determined?

During the planning of a peer review, the Decision Maker (DM), the Peer Review Coordinator (PRC) and the Peer Review Leader (PRL) may consider several mechanisms for the peer review of a scientific or technical work product. Options range from formal review by EPA colleagues not involved in developing the product (internal peer review or Agency review) to a large and formal panel of subject matter experts from outside EPA (external panel of independent peer reviewers) to a combination of internal and external peer reviews. The peer review effort might be a focused one-time evaluation, or it might encompass several examinations over the course of a product development. Peer review provides the greatest credibility for the EPA's scientific and technical work products when it involves qualified, external independent reviewers; is intensive in its examination; and operates through a formal and transparent process. Per the EPA's Peer Review Policy, external peer review is the approach of choice for all ISI and is the expected procedure for a HISA. Time and resource considerations, however, may impose limitations on the type of peer review performed. If only an internal peer review is planned for scientific and technical work product(s) categorized as ISI or HISAs, the rationale for doing this should be documented and approved by the DM.

Arranging for the most appropriate and feasible peer review will involve a judgment regarding the extent to which the peer review will improve the credibility of the product, as well as consideration of substance, time, resources, priorities and capacity of peer review mechanisms. The PRL should develop a peer review plan for early consideration by the DM (and PRC). For influential work products, including HISAs, public comments on the peer review plan posted on the Science Inventory (SI) (see Section 7.3.4) may lead the Agency to modify the peer review approach, for example, to employ a public panel review process rather than letter reviews.

The approach best suited to a specific work product will depend on the nature of the topic and the intended use of the final product. Generally, the more novel or complex the science or technology, the greater the cost implications of the impending decision or public policy, and the more

The mechanism of the peer review should match the importance and complexity of the work product.

controversial the issue, the stronger the indication is for a more extensive and involved peer review and for an external peer review in particular. Certain work products may lend themselves clearly to extensive external peer review; generally, these will be products with large impacts. Other work products may not need a large-scale external peer review and may utilize a less involved, less resource-intensive review.

It is important to make the choice of peer review mechanism at the time that the work is planned (for products supporting rulemakings, at the analytic blueprint stage) so that peer review costs and time can be budgeted into the work plan. Essentially, the level of peer review should match the impact and complexity of the work product. For example, a Tier 1 or Tier 2 rule under development carries considerable weight and deserves careful handling and attention; therefore, in cases where the Agency has determined that a supporting work product should be peer reviewed, that peer review deserves a commensurate level of care and attention.

Factors that should be considered in selecting a peer review approach include the categorization of the work product (ISI, HISA or other), the availability of internal or external qualified reviewers with the required expertise, whether individual or group advice is desired, and the provision for opportunities for the appropriate level of public participation. Timing and budgetary considerations also may be factors. No single peer review mechanism is likely to work best in all situations; the DM, PRC and PRL should consider, however, the following general guidance:

- For ISI and HISAs intended to support the most important decisions, or for work products that have special importance in their own right, the recommended approach is an internal review followed by an external peer review. Generally, the more complex, novel and/or controversial the product, or the higher impact it is likely to have, the more the DM should consider implementing a peer review involving external experts and providing opportunities for public participation.
- HISAs (a subset of ISI) are expected to undergo rigorous external peer review with opportunities for public participation. When time and resources allow, panels are preferable. External panels usually will be managed by a contractor or conducted by a federal advisory committee (FAC).
- Work products that are less complex, novel or controversial, or that have a lower impact, may be subject to less extensive, less resource-intensive review processes.
- Group discussion among peer reviewers (i.e., panel reviews) can be very helpful in the peer review process because it allows interaction among peer reviewers with different perspectives and expertise. Peer review panels to which the public is invited are more transparent than closed discussions.
- In general, more reviewers are necessary for complex projects (to ensure that expertise from more disciplines is represented) and for controversial topics (to represent differences in scientific perspective within a discipline).
- Strict time constraints, such as a court-ordered deadline, can make a less involved or less formal peer review mechanism imperative. DMs and PRLs should make maximum efforts to ensure that such a process is systematic and objective.
- Reviews of products from remediation and other programs may be tied to litigation; the Office of General Counsel (OGC) or the Office of Regional Counsel (ORC) should be consulted regarding any restrictions to be aware of before deciding what peer review mechanism to use.

4.2.2. What Are Some Examples of Internal Peer Review Mechanisms?

The following are examples of internal peer review mechanisms:

- Individual letter review by independent EPA experts (e.g., a review by Office of Research and Development [ORD] experts of a draft article on benchmark dose completed by a program office).
- *Ad hoc* panel of independent EPA experts (e.g., an independent internal workgroup convened to review the science supporting the possible classification of a chemical as a carcinogen).
- Technical review by scientists in an EPA laboratory, typically conducted by letter (e.g., an initial review of the risk assessment for a regional incinerator by agency scientists), prior to submission to a journal.

4.2.3. What Are Some Examples of External Peer Review Mechanisms?

Examples of external peer review mechanisms include the following:

- Review of a journal manuscript by a refereed scientific journal.
- Letter review by individual independent experts from outside the Agency.
- *Ad hoc* panel of independent non-EPA experts convened for review and discussion, with each panelist submitting his/her comments separately.
- Review by an established FAC (e.g., a review of an Integrated Scientific Assessment document for a criteria air pollutant by the Clean Air Scientific Advisory Committee [CASAC]).
- Agency-appointed special board or commission (e.g., a review of the risk assessment methodology prepared by the Clean Air Act Commission on Risk Assessment). OGC should be consulted to determine whether the Agency has specific statutory authority to establish and finance the activities of a board or commission that would perform governmental functions and whether the Federal Advisory Committee Act (FACA) would apply to the board or commission.
- Review by the National Academy of Sciences (NAS) under a contract with EPA.

There are other bodies that may provide external commentary on Agency work products but are not considered peer review mechanisms, such as the following:

- Interagency committees (e.g., a review of prospective research plans by the Committee on the Environment, Natural Resources, and Sustainability, coordinated by the White House).
- Committees convened by another federal agency or government organization (e.g., a review of the Dioxin Reassessment by the Health and Human Services Committee to Coordinate Environmentally Related Programs).
- Reviews initiated by nongovernmental groups (e.g., a Society for Risk Analysis review of cancer guidelines).

4.3. Mechanism: Journal Peer Review

Peer review of journal articles performed by a credible, refereed scientific journal contributes to the scientific and technical credibility of the reviewed product. Generally, EPA considers peer review by such journals as adequate for reviewing the scientific credibility and validity of the findings (or data) in that article and, therefore, a satisfactory form of peer review.

Prior to submitting an article to a journal for peer review, EPA employees are encouraged to have the article internally peer reviewed. Articles also may need examination in accordance with any organizational clearance procedures, especially when the author includes EPA as their affiliation. For EPA employees, Conflict of Interest (COI) law and policy also will apply.

The OMB Peer Review Bulletin does not apply to journal articles because such publications do not contain findings or conclusions that represent the official position of the Agency (i.e., they are categorized by the Agency as “other”). Therefore journal articles must have the appropriate disclaimer

that the work represents the views of the author(s) and not those of the Agency (e.g., “The views expressed in this paper are those of the authors and do not necessarily reflect the views or policies of the U.S. Environmental Protection Agency”).

4.4. Mechanism: Letter Reviews

Generally, letter reviews by several experts will be more expeditious and less expensive than convening a panel. Letter reviews by individual experts are more appropriate when a work product is not controversial, covers only a few disciplines, or when premature disclosure of a sensitive report to a public panel could cause harm to government or private interests. The letter review process may include a public comment period on the draft Agency document, with comments received from the public being shared with the peer reviewers. There also are multistage processes in which letter reviews may be conducted prior to the release of a work product for public notice and comment, followed by a formal panel review. These multistage processes are particularly valuable for highly complex and multidisciplinary products, especially those that are novel or precedent-setting.

Letter peer reviewers are selected primarily according to their areas of expertise, knowledge, skills and experience. They are evaluated for independence, potential COI and appearance of a loss of impartiality (see Chapter 5) before being selected for a letter review. If letter peer reviewers will be compensated using a purchase order or contract mechanism, the PRL should work with the Contracting Officer (CO) to develop an appropriate task statement or scope of work. Guidance is provided in Section 4.6. If letter peer reviewers are not to be compensated, they will need to sign a Gratuitous Services Agreement for Peer Review, as discussed in Section 4.6.7.

4.5. Mechanism: Panel Reviews

When time and resources permit, panels are preferable for influential products because they tend to be more deliberative than individual letter reviews and the reviewers can help inform one another. Panels are valuable when the work product is complex and multidisciplinary. Panel peer review meetings may be open to the public, with opportunities for public comment. Peer review panels that include EPA experts do not constitute external peer review.

The Agency may organize internal peer review panels composed of independent EPA experts or a mix of EPA experts and experts from other federal agencies. If Agency-organized panels include nonfederal experts, the provisions of the FACA may apply (see Section 4.7.5).

External peer review panels, in most cases, will be managed under a peer review contract (see Section 4.6) or conducted by a chartered FAC (see Section 4.7). Another option for obtaining external panel peer review is for the Agency to contract with the NAS (see Section 4.8).

4.6. Peer Review by Contractors

4.6.1. Can the Agency Use a Contractor to Obtain Peer Review Services?

Yes, the Agency can use a contractor to obtain peer review services.²⁵ Peer review services are “advisory and assistance services,” as defined in Federal Acquisition Regulation (FAR) 2.101. It should be noted that these types of services require special approvals and management oversight. Approval

²⁵ If EPA manages or controls a group convened by a contractor, the FACA may apply.

levels for advisory and assistance services are located in the in Subsection 1.6.1 of the EPA Acquisition Guide (EPAAG) available at <http://oamintra.epa.gov/node/521>.

Typically, peer review services would be available under a “mission contract,” that is, a contract with a broad scope covering a variety of services. It also is possible to have a contract or purchase order solely for peer reviews (see Section 3.4). A contractor assisting the Agency in the development of a work product, however, should not be used to provide peer review services for that same work product.

The Agency may obtain peer review services through a contract or purchase order. Contracts or purchase orders may be used to obtain both letter and panel review services, and this guidance applies to both. A contract is awarded if the cost is more than the simplified acquisition threshold (\$150,000 in fiscal year 2015). If the cost is \$150,000 or lower, then a purchase order typically is issued. For assistance in preparing the necessary pre-award contract documents, Chapter 7 of the EPAAG and the appropriate contracting office should be consulted.

For assistance in preparing simplified acquisition packages for purchase orders, the Office of Acquisition Management has a guide called *SAME: Simplified Acquisition Made Easy*, which is available on the intranet at <http://oamintra.epa.gov/files/OAM/sapsEasy.pdf>.

4.6.2. How Does the Peer Review Leader Write a Statement of Work (SOW) for Peer Review Contracts?

The SOW should specify clearly that the contractor is responsible for preparing peer review evaluations and should set forth guidelines for the peer review of scientific or technical documents. The contractor may perform the peer review with appropriate contractor staff, subcontractors or consultants. Any guidelines needed to ensure the soundness and defensibility of peer reviews should be developed by the EPA office and made part of the contract. The contractor then would ensure that the peer reviews adhere to the guidelines.

Contracts may be used to obtain both letter and panel review services.

If the charge questions are known prior to the issuance of a solicitation for a contract, or prior to the issuance of a tasking document under an awarded contract, the CO can incorporate the charge questions directly into the SOW for the contract or tasking document. Otherwise, the charge questions would be provided to the contractor in a separate tasking document or technical directive.

The SOW must specify the full range of desired services. Unless the prime contractor is clearly tasked with responsibility for performing peer reviews and delivering peer review comments or a peer review report, individual peer reviewers’ fees and associated travel expenses are not payable under the contract. If the SOW calls for the preparation and delivery of comments or an evaluation, as well as specifying a meeting with the Agency and other peer reviewers as part of the peer review, payment is appropriate. The peer reviewer’s attendance at the meeting then would be part of contract performance. The prime contractor, rather than EPA, must select the peer reviewers, although the terms of the contract may specify qualifications for peer reviewers and EPA may review the qualifications of peer reviewers the contractor proposes to hire to ensure they meet the established qualifications. Example SOWs are presented in Appendix E.

4.6.3. Can the Agency Select Peer Reviewers When Using a Contractor-Managed Peer Review?

When using a contractor-managed peer review, the Agency cannot select peer reviewers.²⁶ When a contractor is managing a peer review (either by panel or letter) for the Agency, the prime contractor is responsible for selecting who will perform the peer review. Interfering in this process may be a violation of federal and Agency acquisition regulations. Specifically, it may constitute directed subcontracting.

The EPA can establish qualifications for peer reviewers. The Agency should not be involved, however, in the selection of individual peer reviewers and should avoid commenting on the contractor's selection of peer reviewers other than to determine whether the reviewers, once selected, meet the qualifications established, including compliance with contract requirements pertaining to COI. The EPA may identify, however, a pool of qualified peer reviewers for the prime contractor to consider. The candidates should be listed in alphabetical order and, to avoid directed subcontracting issues, the list generally should include more individuals than the number required for the review.

If a list is provided, it should be noted on the list that it is a suggested list and other qualified candidates may exist who are not on the list. This is to prevent the impression that the prime contractor can choose only someone on the list. The prime contractor is required to include several COI clauses substantially similar to the COI clauses included in the primary contract in its subcontracts with the peer reviewers.

4.6.4. How Is the Panel Formed When a Contractor Manages a Panel Peer Review for ISI or HISAs?

In March 2013, the Science and Technology Policy Council (STPC) approved a process to enhance the transparency and the EPA's oversight of panel peer reviews of ISI and HISAs when the reviews are managed by contractors (see the EPA's *Conflicts of Interest Review Process for Contractor-Managed Peer Reviews of EPA HISA and ISI Documents*, <http://www2.epa.gov/osa/conflicts-interest-review-process-contractor-managed-peer-reviews-epa-highly-influential>). Under this process, EPA will publish a "Call for Experts" in the *Federal Register* to identify the types of expertise needed, announce the availability of the document to be reviewed or provide a brief synopsis of the document, direct the public and stakeholders to submit nominations of potential peer reviewers to the contractor, and allow a minimum of 3 weeks for the public to nominate expert candidates. At the same time, the contractor will use traditional techniques to identify additional qualified candidates in the disciplines identified by EPA. The contractor will screen all nominees (including those submitted by the Agency and the public) for expertise and potential COI. Based on the information collected by the contractor, the contractor will develop a list of potential peer reviewers. This list of potential peer reviewers will be published for public review and comment.

The process for contractor-managed panels also provides for more direct interaction between EPA and the contractor in addressing actual or potential COIs. All prospective reviewers for contractor-managed panel reviews are evaluated for independence, COI and an appearance of a loss of impartiality and are required to complete COI disclosure forms. Among other things, these forms require prospective reviewers to disclose to the contractor certain financial interests and answer questions regarding connections to the work product being reviewed. An example COI Statement form is included in Appendix J. In addition, the CO and the Contracting Officer's Representative (COR), in consultation

²⁶ If EPA were to select the reviewers for a contractor peer review involving group advice of the peer review panel, FACA may apply because EPA would be exerting control over the panel.

with the EPA Science Advisor (or his or her designee), will discuss with the contractor the process used by the contractor to identify and address COI, ensure that the contractor and prospective reviewers are in compliance with COI requirements in the contract, and provide input on any issues concerning potential conflicts.

4.6.5. What Are Some Management Controls for Peer Review Contracts?

Contract management controls are designed to ensure the following:

- (1) The contractor does not perform inherently governmental activities (IGA).
- (2) The contractor and the contractor's work is free from COIs or conflicts can be appropriately avoided, neutralized or mitigated.
- (3) If provided to the contractor, confidential business information (CBI) or other confidential/sensitive information is appropriately safeguarded.
- (4) Improper relationships with contractor employees and subcontractors are avoided.

Each of these concepts is discussed in the sections that follow.

4.6.5.1. What Are Inherently Governmental Activities and What Management Controls Prevent Contractors from Performing Them?

Agency regulations and FAR prohibit contractors from performing IGA. OMB Policy Letter 11-01 (76 *Fed. Reg.* 56,227, Sept. 12, 2011) defines "inherently governmental activities" as activities that are so intimately related to the public interest as to mandate performance by government personnel. These activities require the exercise of substantial official discretion in the application of government authority and/or in making decisions for the government.

With contracts for peer review services, the Agency is seeking only a contractor's recommendations, advice or analysis of a document, not a determination of whether the document is acceptable for the EPA's purposes or what the policy that the document supports should be. Determining Agency policy is an IGA. EPA officials make the official Agency decision regarding acceptability and/or quality of the document. To ensure that Agency officials are not influenced improperly by the recommendations in the peer review, the contract should include management controls. One possible control would be to direct the peer reviewers to submit with their evaluations or comments a description of the procedures used to arrive at their recommendations, a summary of their findings, a list of sources relied upon and clear and substantiated identification of the methods and considerations upon which their recommendations are based. To the extent possible, the contract should set forth any guidelines or criteria for performance of the peer review. Agency officials should document their evaluations of the quality and validity of the peer review, including a clear record of their review of the contractor's work and documentation that Agency personnel made the final decisions. Such records of review could include notes from reviews of draft and final documents by EPA personnel and minutes from progress meetings with contractors.

4.6.5.2. What Are Management Controls for Conflict of Interest?

To identify and avoid, neutralize or mitigate actual or potential COI, the contract should include controls. Inclusion of Agency-developed personal and organizational COI clauses in the contract or purchase order is critical when procuring peer review services. Usually, the CO will include COI

solicitation provisions and contract clauses as a matter of course without involvement by the EPA Project Officer. As a safeguard, the COR should:

- Section 9.5 of the EPAAG, which provides guidance and procedures for addressing and documenting organizational COI. Project Officers also should review the Office of Acquisition Management's News Flash Notice titled "Evaluating Conflict of Interest Issues Pre-Award" (August 11, 2006) (available at <http://oamintra.epa.gov/node/47?q=node/80>).
- Highlight the COI requirements in the SOW for the procurement of the peer review services. In particular, the COR should ensure that the peer review "COI Evaluation for Task Orders/Work Assignments" clause is included in the contract (see Appendix J for the text of the clause). Responses to the questions included in the clause are considered confidential in accordance with applicable laws and regulations, and they are used to identify any potential COI.
- Review the solicitation/contract to ensure that other appropriate COI clauses have been included, particularly EPA Acquisition Regulation clauses 1552.209-70, Organizational Conflict of Interest Notification; 1552.209-71, Organizational Conflict of Interest; 1552.209-72, Organizational Conflict of Interest Certification; and 1552.209-73, Notification of Conflicts of Interest Regarding Personnel.
- Work with the CO to develop contract-specific language regarding the peer review to assist the contractor in identifying actual or potential COI that might impair the objectivity of peer reviewers. For example, the peer review COI Evaluation clause advises contractors to consider the questions and issues listed in Exhibit 4 when determining if a proposed peer reviewer may have an actual or potential COI or bias.

Peer reviewers appointed through a contract mechanism, either by contracting directly with EPA or by being selected by a peer review contractor, are not government employees. Accordingly, the COI statutes and ethics regulations that apply to Regular Government Employees (RGEs) and Special Government Employees (SGEs) do not apply to them. "Appearance" issues with respect to experts hired through a contract mechanism, however, are addressed under the FAR definition of "organizational conflict of interest" (FAR 2.101). Among other things, the definition includes situations in which "because of other activities or relationships with other persons, a person is unable or potentially unable to render impartial assistance or advice to the Government" (FAR 2.101).

In addition, FAR 3.101 advises that COs should strictly avoid even the appearance of a COI in government-contractor relationships. When evaluating "appearance" issues with respect to experts hired under a contract mechanism, the CO may consider facts and circumstances similar to those that a PRL might consider when evaluating "appearance" issues for SGEs and RGEs. These include: the nature of the relationships involved, financial considerations, prior statements, testimony, work related to the subject matter of the peer review and other factors bearing on an expert's impartiality (see Section 5.3.7).

Exhibit 4. Questions and Issues Contractors Should Consider When Determining if a Proposed Peer Reviewer May Have an Actual or Potential COI or Bias

- The sources and nature of any compensated and uncompensated employment of the panel member and their spouse (obtained from a brief description of the work), including any government service, for the preceding 2 years.
- The sources of research support and project funding, including from any government source, for which the panel member served as the Principal Investigator (PI), Significant Collaborator, Project Manager (PM) or Director during the preceding 2 years. For the panel member's spouse, a general description of research and project activities in the preceding 2 years.
- The compensated consulting activities of the panel member during the preceding 2 years, including the names of clients if the compensation provided 15 percent or more of the member's annual compensation. For the panel member's spouse, a general description of consulting activities for the preceding 2 years.
- The sources of compensated expert witness activities of the panel member and a brief description of the issue and testimony during the preceding 2 years. For the panel member's spouse, a general description of expert testimony provided in the preceding 2 years.
- The assets—including stocks, bonds, real estate, business, patents, trademarks and royalties—of the panel member, their spouse and dependent children. Specifically, the financial holdings that collectively had a fair market value greater than \$15,000 at any time during the preceding 2-year period (excluding, for example, well-diversified mutual funds, money market funds, treasury bonds and personal residences).
- The liabilities more than \$10,000 owed by the panel member, their spouse and dependent children at any time in the preceding 1 year (excluding, for example, a mortgage on a personal residence, home equity loans and automobile and consumer loans).
- A brief description of any public statements and/or positions of the panel member on, or closely related to, the matter under review.
- A brief description of any previous involvement of the panel member with the development of the document (or review materials) that the individual has been asked to review (including previous peer reviews).
- A brief description of any other information that might reasonably raise a question about an actual or potential personal COI or bias, including any financial benefit that might be gained by the panel member (or anyone whose interests are imputed to the panel member) as a result of the outcome of the review.

The CO, not the contractor, has the authority under the FAR and EPA Acquisition Regulations to determine whether “appearance” or other COI issues exist. When evaluating “appearance” and other COI issues, however, the CO may seek the advice or expertise of others, such as the Project Officer, CORs, Agency technical and subject matter experts, the EPA Science Advisor or his/her designee and

OGC. The CO also has the authority to determine whether “appearance” and other COI issues can be appropriately avoided, neutralized or mitigated.

4.6.5.3. What Management Controls Protect Confidential Business Information/Privacy Act-Protected Information and Other Privileged/Sensitive Information?

When peer reviewers are not employees or contractors/subcontractors of the U.S. Government, it is unlikely that EPA will have authority to give reviewers access to CBI or other protected or sensitive information in the absence of consent for such disclosure by the CBI submitter or other interested parties. Therefore, all documents provided to nonfederal reviewers must be screened for information claimed as CBI or other protected information.

Even where business information has not been explicitly claimed as CBI, if it is of a kind that the submitter might be expected to object to its release, prior to release the submitter must be asked whether it wants to assert a claim, unless the submitter previously has been informed that failure to assert a CBI claim may result in disclosure without notice, as consistent with 40 C.F.R. § 2.203. If the contractor should have access to CBI for the peer review, the CO must be notified so that the appropriate clauses can be included in the contract or purchase order. These clauses will identify clearly any required procedures or processes prior to release of any protected information, including any requirements for confidentiality agreements, as well as limits on use and disclosure of the data by contractor personnel.

In general, materials provided by EPA to the contractor, or generated by the contractor or subcontractors during performance of the contract, should be protected from release until EPA determines the information is not entitled to confidential treatment. Appropriate contract clauses (e.g., EPA Acquisition Regulation §1552.227-76, “Project Employee Confidentiality Agreement”; FAR 52.227-17, “Rights in Data—Special Works”) should be included in the contract and subcontracts with individual reviewers to ensure that such materials are not copied, shared or otherwise distributed or forwarded to others, except as provided for in the contract or as authorized in writing by the CO. The contractor is free to consult with colleagues (unless otherwise directed) on technical issues raised in the draft report but not to share the draft report itself (see Section 6.2.5).

4.6.5.4. What Management Controls Prevent Improper Personal Services?

Contractor employees must not be treated as EPA employees unless statutory authority exists to engage the contractor employee in personal services contracts. For additional information, program officials should consult EPA Order 1901.1A, *Use of Contractor Services to Avoid Improper Contracting Relationships* (<http://intranet.epa.gov/ohr/rmpolicy/ads/orders/1900-1achg2.pdf>).

To avoid these improper relationships, the SOW should be well-defined and should set forth a detailed description of the work to be performed independently, including the manner in which it will be evaluated. The SOW should state what work is to be performed, not how the work is to be performed. Technical direction may be used to clarify ambiguous provisions to ensure efficient and effective contractor performance and is not considered supervision or assignment of tasks.

4.6.6. How Is Peer Reviewer Travel Handled With Contracts or Purchase Orders?

Funds obligated on a contract or purchase order are available to pay for the costs of producing the peer review, including the travel costs and fees of the peer reviewer, provided that the SOW contains language that ensures that the agreement is for providing a service or product rather than simply paying for peer reviews’ travel.

The EPA may acquire peer review services through purchase orders issued directly to peer reviewers or through contracts with companies that manage and provide the peer review services. By issuing a purchase order or awarding a contract for peer review services, EPA may pay not only for the peer review services/comments, but also for travel necessary for the peer reviewer's participation in a meeting with the Agency and other reviewers to discuss comments. The scope of work of the contract, however, must require the contractor or individual peer reviewer, as appropriate, to perform the peer reviews and produce peer review comments or a peer review report, and to discuss a specific peer review work product with the Agency and/or with other peer reviewers in person. Participation in a meeting to discuss a peer review work product then would be part of the contractor's performance. While EPA may use GSA's per diem and meals and incidental allowances as a basis for negotiating travel costs, the terms of the contract or purchase order should not imply that peer reviewers receive travel reimbursement under the federal travel regulations. Under these circumstances, the contract may serve as the mechanism to pay for peer review services and associated travel expenses to provide comments to EPA.

4.6.7. What Are Gratuitous Services Agreements for Peer Review (GSAPR)?

A Gratuitous Services Agreement for Peer Review (GSAPR) is a written agreement between an authorized EPA official (PRL) and a nonfederal peer reviewer under which the peer reviewer agrees to provide EPA with a report, analysis or similar work product without charge to the Agency. GSAPRs are used when EPA has not appointed a peer reviewer as an unpaid expert or consultant under 5 U.S.C. § 3109 and EPA Order 3110.4A4 "Employment of Experts and Consultants."

The Antideficiency Act (31 U.S.C. § 1342) prohibits the Agency from accepting uncompensated "voluntary" services unless specifically authorized by law.

Generally, improper voluntary services are those provided "for free" to the EPA either for work that must be performed by a federal employee or another individual entitled to statutory compensation or without a written agreement in advance that protects the EPA from future claims for compensation for services rendered. In contrast, under appropriate circumstances, the Agency may accept "gratuitous" services. Gratuitous services are services rendered without compensation under a formal written agreement in which the service provider explicitly agrees that the services will be provided free of charge to the government and that no future claim related to the services will be made. Such agreements must be signed by the service provider before the services are performed. For situations concerning state employees, see Section 5.2.9.

A proper GSAPR must be signed and include a compensation/claim waiver and appropriate terms and conditions that address deliverables, schedules, COI, CBI and other issues relevant to the peer review services provided. It must also include a statement that the peer reviewer understands that he or she will not be considered an employee of the Government for any purpose. The PRL should consult OGC for appropriate compensation/claim waiver language and to ensure that appropriate provisions are included in the agreement to protect the agency's interests.

GSAPRs also are subject to competition requirements, although if EPA's estimate of the value of the services is less than the prevailing micro purchase limit (e.g., \$3,000 for Fiscal Year 2014), the competition requirements are relaxed substantially. The PRL should consult a CO when the use of GSAPRs is being considered.

4.7. Peer Review by Federal Advisory Committees

4.7.1. What Is the Role of Federal Advisory Committees in Peer Review?

EPA has a number of scientific and technical advisory committees composed of non-EPA experts who provide advice and peer review to the Agency. The FACA (5 U.S.C. § App. 2) requires that these groups of advisors be fairly balanced in terms of points of view represented for the function to be performed by the committee. Meetings are announced in advance and are open to the public except under limited circumstances (i.e., if the meeting falls within exceptions under the Government in the Sunshine Act, 5 U.S.C. § 552b). All materials presented to and prepared for or by the committees are available to the public, usually on committee Web pages on EPA website. In addition, the FACA requires that the public have an opportunity to provide written comments, and in most cases, advisory committees schedule time at meetings to hear oral public comments on the technical work at hand.

The EPA has more than 20 formally established FACs, but not all are set up to conduct scientific peer review (e.g., some committees are established to provide policy advice to the Agency, rather than scientific and technical review). The scope of work of each advisory committee is set out in its charter, a formal document filed with Congress when the committee is established and renewed every 2 years. Scientific and technical advisory committees are composed of members who are appointed because of their expertise, rather than as a representative of an organization or interest group. Committee members on scientific and technical FACs serve as SGEs or non-EPA RGEs and are subject to ethics laws and regulations that apply to employees of the Executive Branch (see Section 5.3). If no existing FAC has the appropriate expertise, a new FAC could be established to conduct the peer review.

Because of FACA requirements for open meetings, transparent deliberations, formal opportunities for public participation and publicly available records, scientific FACs provide an external peer review mechanism that meets the provisions in the OMB Peer Review Bulletin for peer review of HISAs.

The Science Advisory Board (SAB) Staff Office, in the Office of the Administrator, provides administrative and technical support to two scientific advisory committees: the EPA SAB and the CASAC. When either of these committees is the mechanism for obtaining external peer review, the SAB Staff Office budgets for, plans and manages the peer review meetings. The SAB Staff Office selects peer

When external peer review is conducted by the SAB or the CASAC, the SAB Staff Office performs many—but not all—of the functions of the Peer Review Leader.

reviewers after a public nomination and comment process and after screening for ethics issues such as potential COI or an appearance of a loss of impartiality. The SAB Staff Office also announces committee meetings in the *Federal Register* and on EPA committee websites, prepares detailed meeting minutes, transmits the EPA's charge and review materials to the committee and provides support to the committee in preparation of the advisory report to the EPA Administrator. To maintain the independence of the peer review process, the SAB Staff Office does not draft the EPA charge or prepare the Agency response to the peer review. The SAB Staff Office also does not enter data into the SI.

4.7.2. When Is It Appropriate to Seek Peer Review from EPA's Science Advisory Board?

The EPA's SAB is a statutorily established committee with a broad mandate to provide advice and recommendations to the Agency on scientific and technical matters. The SAB considers requests for advice and peer review from across the Agency as part of an annual process, initiated by a request from the Deputy Administrator (DA) to the EPA's senior leadership to identify requests for review by EPA

FACs in the coming year. In a complementary semiannual process coordinated by the EPA Office of Policy, the SAB also considers review of science supporting major planned Agency actions (Tier 1 and Tier 2 actions) that are in the pre-proposal stage.

HISAs or other scientific work products associated with highly visible or controversial environmental issues, or products that include novel scientific methods or approaches, are most suited to review by the SAB.

Much of the SAB's peer review work is done using *ad hoc* panels formed to review specific EPA draft technical products. All SAB panels provide advice through the chartered SAB, which is composed of approximately 50 nationally renowned scientists, engineers and economists. The SAB reports directly to the EPA Administrator. For more information on the SAB, see <http://www.epa.gov/sab>. Information on the process to request peer review and advice from the SAB is provided in Appendix F.

4.7.3. What Other Federal Advisory Committees Can Provide Peer Review?

In addition to the SAB, EPA has other scientific advisory committees that provide advice and peer review for specific EPA offices. For example, the Board of Scientific Counselors advises ORD on the operation and management of its research programs; the CASAC provides advice on the scientific and technical aspects of air quality criteria and standards; and the Federal Insecticide, Fungicide and Rodenticide Act Scientific Advisory Panel (SAP) provides advice on science issues associated with the EPA's pesticide-related regulatory actions. For a full list of EPA scientific and technical advisory committees, see Appendix G.

4.7.4. How Is Travel Handled for Advisory Committee Members?

Members of the SAB, SAP and other scientific or technical FACs usually are appointed as SGEs. The term "Special Government Employee" is defined in 18 U.S.C. § 202(a) as an officer or employee of an agency who performs temporary duties, with or without compensation, for not more than 130 days in a period of 365 days, either on a full-time or intermittent basis.

Travel and per diem expenses of experts hired as SGEs for peer review may be paid only through the issuance of invitational travel orders (5 U.S.C. § 5703). These invitational travel and per diem expenses should be charged to an appropriate EPA travel account. The Federal Travel Regulations govern the invited traveler's reimbursement. It is not appropriate to reimburse travel or per diem expenses of advisory committee members (SGEs) through a contract.

4.7.5. When Does the Federal Advisory Committee Act Apply to Other Peer Review Mechanisms?

In addition to formally established (chartered) FACs, other groups of peer reviewers may become subject to FACA requirements if they meet all the following criteria:

- Are established, controlled or managed by EPA;
- Include one or more individuals who are not full-time or permanent part-time federal employees; and
- Are intended to, or do, provide group or collective, rather than individual, advice.

EPA-run peer reviews that were not intended originally to be subject to FACA requirements may become subject to them if they exhibit all of the above characteristics. Similarly, if EPA personnel begin to manage or control a contractor-managed peer review, the process may become subject to FACA (see Section 4.7.7). Questions concerning the applicability of the FACA to peer review meetings should be addressed to FACA experts in the Cross-Cutting Issues Law Office of OGC or the appropriate ORC.

4.7.6. When Are EPA-Run Peer Reviews Not Subject to FACA Requirements?

If EPA conducts a peer review by obtaining advice from individual peer reviewers and not for the purpose of obtaining a peer review product from the group as a collective or consensus body, the peer review, in most cases, would not be subject to FACA requirements. When peer review participants provide only their own views or

As a general matter, letter reviews that seek individual views or comments are not subject to the requirements of the FACA.

recommendations and do not vote, develop consensus recommendations to EPA, or use any other means of developing group advice, the FACA does not apply. When referring to the recommendations of the individual reviewers, EPA should **not** characterize these recommendations using such phrases as “the peer reviewers all agreed” or such terms as “collective” or “consensus.” As a general matter, letter reviews that seek individual views or comments are not subject to FACA requirements.

In addition to ensuring that peer reviewers only provide comments as individuals, EPA officials can lessen the potential for a challenge under the FACA by conducting the peer review in an open transparent manner (e.g., by seeking a balance of points of view among the peer review participants, allowing interested members of the public to attend peer review meetings, allowing public comment, and ensuring that the public has access to all the peer review materials).

Non-FACA peer review meetings may be advertised publicly through the *Federal Register* and/or other avenues (e.g., the Web, local newspapers and mailing lists). These notifications should provide the public with useful information and a point of contact concerning the peer review. Notice of such meetings, however, should make clear that the meeting is not subject to FACA requirements.

4.7.7. How Does the Agency Ensure That Contractor-Managed Peer Reviews Do Not Inadvertently Invoke FACA Requirements?

Under the current case law, committees (or other peer review groups) established, controlled and managed by an outside organization (such as by an EPA contractor) to provide that outside organization with advice and recommendations (that will be submitted eventually to EPA as a contractor report) are not subject to FACA requirements. Although the FACA should not apply to contractor-managed peer reviews, EPA personnel can do things that might invoke the FACA inadvertently.

The following are considerations that EPA personnel should be aware of when a contractor manages a peer review (e.g., letter review or panel) for EPA:

- The outside party’s peer review may be subject to FACA requirements if EPA establishes, manages or controls the peer review group (e.g., EPA selects or rejects peer reviewers, sets the agenda, runs the meeting, or provides funds directly to the peer reviewers). The EPA can make suggestions to the contractor but to avoid triggering the FACA, the contractor must be free to accept or reject these suggestions.

- EPA should not provide contractors with a draft agenda or suggested format for meetings. EPA contractors should manage and control the process, including running any meetings.
- At the request of the EPA contractor, EPA may provide a briefing to the peer reviewers (e.g., in a conference call with the contractor on the line) on the history or background of the development of the document. EPA should provide only technical or background information and not use the call to manage the contractor's peer review group. Not only should the contractor be on the line, but it should be very clear to all participants that the contractor is in charge of the call. The contractor, not EPA, should invite individuals to participate, make all administrative arrangements, conduct the meeting and control the agenda.
- EPA employees may attend the peer review panel meetings, but they may not control the meeting. The contractor may call on them to speak when appropriate, but EPA personnel should limit their participation to answering questions to provide technical and/or background information.
- Because the FACA does not apply when a contractor establishes, controls and manages a peer review, the contractor does not need to avoid terms such as "collective" or "consensus" when reporting agreement among its peer reviewers.
- EPA may provide comments to the contractor on the contractor's peer review report only to the extent that the Agency is verifying that the contractor has satisfactorily completed the report in accordance with the work assignment. EPA should not attempt to make changes in the contractor's conclusions; this would compromise the independence of the peer review conducted by the contractor.

4.8. Peer Review by the National Academy of Sciences

The NAS is a private, nonprofit society of distinguished scientists established by Congress to provide independent, objective advice to the Nation on science and technology matters. NAS review of an Agency work product may be most suitable for significantly controversial or high-visibility products or when required by legislation.

When EPA wishes to obtain peer review services from the NAS, usually through the National Research Council (NRC), the Agency works with NAS staff to develop a set of charge questions (the "statement of task") and to define the duration and cost of the study. Once the statement of task and budget are approved by the NRC Governing Board, the Agency has no control over the conduct of the peer review. Members of the peer review committee are selected by the NAS to provide the appropriate range of expertise and a balance of perspectives. All members are screened for COI in keeping with the NAS Policy on Committee Composition and Balance and COIs.²⁷

Like FACs, NAS/NRC committees seek public nominations and comment on peer reviewers and seek to ensure that committees are fairly balanced for the functions to be performed. Unlike FACs, however, NAS/NRC committees conduct fact-finding in public, but deliberate in private.

Official reports from the NAS are generally presumed not to require additional peer review.

²⁷ National Academy of Sciences. 2003. *Policy on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports*. Washington, D.C.: The National Academies Press. http://www.nationalacademies.org/coi/bi-coi_form-0.pdf.

5. Peer Reviewer Qualifications and Selection

5.1. Overview

As part of the peer review process, the Agency (or the contractor managing the peer review) must select peer reviewers who have technical expertise in the subject matter that is needed to answer specific charge questions (Figure 6). For this reason, it is important to have a draft or final charge before selecting peer reviewers. These reviewers must not only be subject matter experts, but also must be independent and free from ethics issues such as potential conflicts of interest (COIs) or an appearance of a loss of impartiality (see Sections 5.3.4 and 5.3.7) so that the integrity of the peer review is not brought into question. The rules for evaluating ethics issues of peer reviewers vary depending on the peer review mechanism, but in all cases, adherence to ethical standards is important to ensure that the Agency receives objective, informed and relevant advice through peer review of its work products. Depending on the peer review mechanism chosen, the peer reviewers may be contractors, subcontractors or permanent or intermittent federal employees.

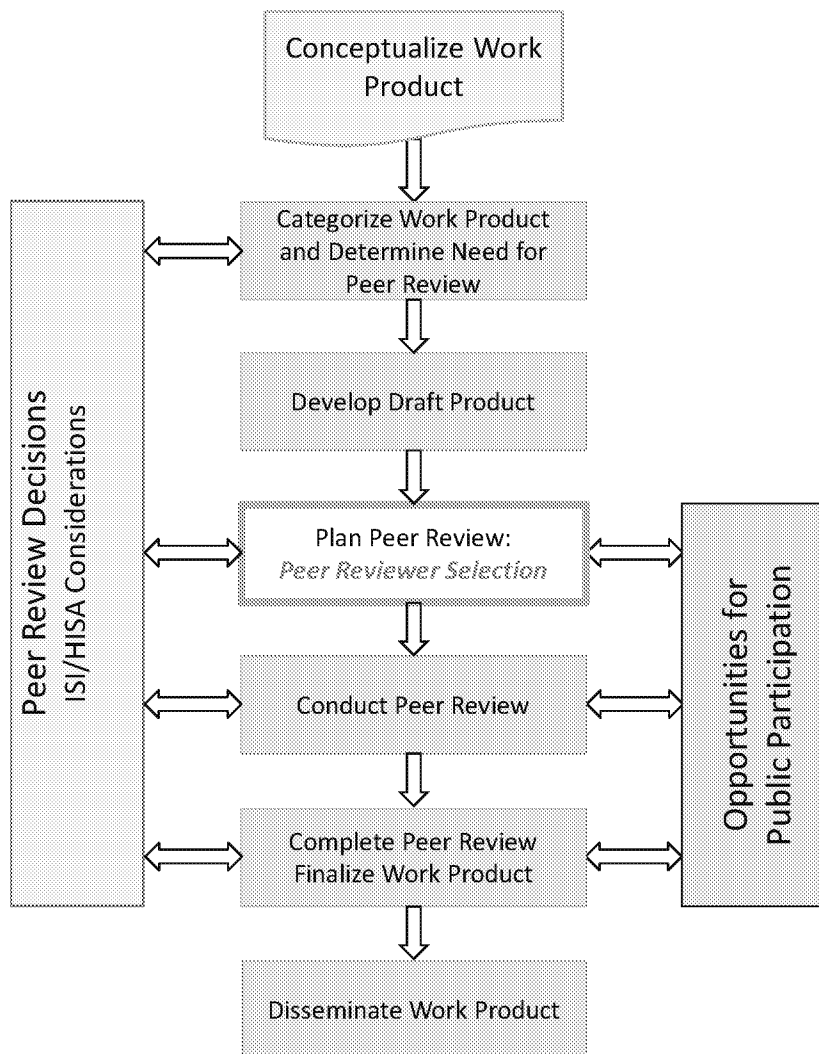

Figure 6. The Peer Review Process: Peer Reviewer Selection

Internal peer reviews can be conducted by independent experts from within EPA, either individually or as *ad hoc* peer review panels.

External peer reviews can be conducted by individual experts or panels of experts who are Regular Government Employees (RGEs) at Executive Branch departments or agencies other than EPA, experts appointed to EPA as Special Government Employees (SGEs) pursuant to 18 U.S.C. § 202(a), or experts hired through a contract mechanism. External peer review panels can be convened through a contract mechanism under which EPA uses a contractor who selects the peer reviewers or by a federal advisory committee (FAC) organized pursuant to the Federal Advisory Committee Act (FACA). Lastly, peer reviews may be conducted by outside organizations such as the National Academy of Sciences (NAS).

5.2. Finding Peer Reviewers

5.2.1. What Are the Important Qualifications for Peer Reviewers?

The first consideration in selecting peer reviewers is expertise (i.e., whether the candidates have the knowledge, skills and experience necessary to perform the review). Peer reviewers should be independent, which is necessary for an objective and impartial evaluation of the work product. To be independent, the peer reviewer should not be associated with the generation of the specific work product, either directly by substantial contribution to its development or indirectly by significant consultation during the development of the product. In addition to being independent, peer reviewers should be impartial and free from financial COIs or other ethics issues. Disclosure of potential COIs or other ethics issues such as an appearance of a loss of impartiality—and appropriate resolution of these issues—is necessary to ensure a credible peer review.

Finally, the group of peer reviewers—whether serving on a panel or as a set of individual reviewers—should be sufficiently broad and diverse to represent fairly the scientific and technical perspectives and fields of knowledge relevant to the peer review charge. Naturally, experts whose understanding of the specific technical area(s) being evaluated are necessary; nevertheless, it also is important to include a broad enough spectrum of other related experts to consider wider dimensions of the issue(s). Although individuals who are familiar with and have a substantial reputation in the field often are called upon repeatedly to be reviewers, it is important to keep a balance by considering new individuals who bring fresh perspectives to the review of a work product. The principle is to avoid the repeated use of the same reviewer on multiple assessments unless his/her participation is essential and the expertise cannot be obtained elsewhere.

5.2.2. How Are Potential Peer Reviewers Identified?

How potential reviewers are identified depends primarily upon the peer review mechanism. Recommendations for potential peer reviewers for letter reviews or panels can be identified by a number of organizations. These include external groups, such as affected parties, special interest groups, public interest groups, environmental groups, professional societies, trade or business associations, state organizations or agencies, Native American tribes, colleges and universities, the National Research Council (NRC) and other federal agencies with an involvement in or familiarity with the issue. Recommendations for peer reviewers also may come from Agency staff, including Designated Federal Officers (DFOs) for scientific FACs—such as the Science Advisory Board (SAB), Scientific Advisory Panel (SAP) or Board of Scientific Counselors—and relevant scientific and technical experts from EPA offices.

Another method that might be used to find peer reviewers is public solicitation. The peer review plans found on the EPA Peer Review Agenda website,²⁸ for example, can indicate opportunities for the public to nominate peer reviewers.

If the peer review will be conducted by a contractor-managed panel, the process for identifying peer reviewers for Influential Scientific Information (ISI), including Highly Influential Scientific Assessments (HISAs), includes opportunities for the public to nominate experts and to comment on the list of candidates (See Section 4.6). In addition, the contractor may have its own pool of scientific and

²⁸ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

technical experts for peer review. EPA may provide contractors with information on potential peer reviewers for conducting a peer review, including names if such a listing is prepared in alphabetical order. EPA should not require that the contractor select from a prepared list, nor require that the contractor receive EPA approval before selecting any given peer reviewer (sometimes known as a “subcontractor”). EPA should review the list of peer reviewers, however, for conformance to work assignment specifications (including balance of expertise) and adherence to ethics requirements before the peer reviewers are subcontracted (see Section 4.6.3). When the NAS is used to conduct a peer review, additional procedures may need to be followed (see Section 4.8).

If the peer review will be conducted using an existing EPA FAC, the DFO for the committee will take the lead for identifying peer reviewers, using a process that usually includes opportunities for public nomination and comment on candidates. An EPA office that decides to use a FAC should coordinate directly with the DFO for the FAC. For example, the SAB Staff Office publishes *Federal Register* notices to solicit names for both *ad hoc* panels and standing advisory committees. Recommendations from the EPA office requesting the peer review are considered along with public nominations and experts individually identified by the DFO. The names of candidates, along with short biographical sketches, also are posted so that the public may not only nominate, but also comment on potential advisory committee members. More information is available in the report titled *Advisory Committee Meetings and Report Development: Process for Public Involvement*, which is available from the SAB’s website²⁹ and in Appendix F, *Guidance on Requesting a Review by the Science Advisory Board*.

In rare instances, a member of the scientific community will offer his/her services for peer review during an ongoing peer review. These offers may be at no cost or based on an expectation that reimbursement will be made. Disposition of these unsolicited offers should be handled on a case-by-case basis by the Peer Review Leader (PRL) and, as necessary, in consultation with the Peer Review Coordinator (PRC), the Office of General Counsel (OGC), Office of Regional Counsel (ORC) and appropriate Decision Makers (DMs).

For an internal peer review, the PRL will have a lead role in identifying potential EPA reviewers who have the appropriate expertise and are independent from the development of the work product. Internal reviewers should come from a different organizational unit than the one in which the work originates.

5.2.3. When Are External Peer Reviewers Preferred?

External peer reviewers are preferred for all ISI and are expected for HISAs. For some work products, such as those reviewed at various stages of product development, both internal and external peer review may be appropriate. Peer reviewers, whether external or internal, should have appropriate technical expertise, available time, and should not have been involved in the development of the work product. It should be noted that for work products categorized as HISAs, the use of internal peer reviewers is inconsistent with the guidance provided by the Office of Management and Budget’s (OMB) Peer Review Bulletin. External peer reviewers could include individuals from other federal and state agencies, academic institutions and private research organizations, who possess unique or indispensable expertise.

²⁹ EPA. 2004. *Advisory Committee Meetings and Report Development: Process for Public Involvement*. http://www.epa.gov/sab/pdf/sabso_04_001.pdf. September.

5.2.4. What Should be Considered When Compiling a List of Peer Reviewers?

Usually, there is a continuum of scientific views on any issue. To the extent practicable, selected experts should include a range of technically legitimate points of view that fall along the continuum. The list of peer reviewers should include experts who are considered “mainstream” (nearer the center of the continuum), as well as those further to either side of the continuum. This will help ensure that a broad range of views will be expressed and discussed on the specific work product being reviewed, whether the objective of the peer review is to reach consensus or to provide a spectrum of views for the Agency to evaluate.

Scientific FACs are required to be balanced in terms of scientific points of view for the charge to be addressed. For example, the SAB Staff Office considers a balanced list of peer reviewers to be one characterized by inclusion of candidates who possess the necessary domains of knowledge, the relevant scientific perspectives (which, among other factors, can be influenced by work history and affiliation) and the collective breadth of experience to adequately address the charge to the peer reviewers.

For peer reviews conducted by nonfederal experts (e.g., contractors), the OMB Peer Review Bulletin directs that the evaluation of peer reviewer composition and balance be guided by NAS policies.³⁰

5.2.5. Can a Foreign National Be a Peer Reviewer?

In some cases, the foremost expert in a subject area may be a citizen of another country, and the Agency may wish to obtain his or her peer review comments.

However, there are complicated legal restrictions on using foreign nationals as peer reviewers depending on whether the peer reviewer will be compensated as a Special Government Employee or an expert or consultant under 5 U.S.C. 3109, an uncompensated consultant or expert under that statute who only receives invitational travel orders, a direct contractor under a purchase order or letter contract, or a subcontractor to a prime contractor. If this issue comes up, EPA’s PRL should consult with OGC and the Office of Human Resources (OHR).

5.2.6. Are There Other Constraints to Selecting Peer Reviewers?

5.2.6.1. Timing

Sometimes the schedule for a peer review is accelerated because of a court-ordered deadline or other time-sensitive requirement. In these cases, there may be constraints in selecting peer reviewers and conducting a peer review in a timely manner. Processes should be developed for identifying and using a small number of peer reviewers to ensure that quick, effective peer review can be included for even the most rapidly moving products.

5.2.6.2. Confidential Business Information (CBI)

Another possible constraint involves CBI. There are different definitions and types of CBI, depending on the statute that governs the action. To evaluate certain Agency-generated studies properly, some peer reviewers may need access to CBI. If the reviewers are federal employees or contractors/subcontractors with CBI clearance, the Agency does release CBI to them. Therefore, whenever contemplating the use

³⁰ National Academy of Sciences. 2003. *Policy on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports*. Washington, D.C.: The National Academies Press. http://www.nationalacademies.org/doi/bi-coi_form-0.pdf

of outside peer reviewers, Agency staff should determine whether the reviewers will need access to CBI. If they do not have CBI clearance, OGC should be consulted on whether it is practical to obtain the consent of affected CBI submitters to disclose the information to peer reviewers.

5.2.6.3. Lobbyists

In accordance with a 2010 Presidential Memorandum and OMB revised guidance to implement the policy (79 FR 47482, August 13, 2014), no RGE or SGE member of a FAC appointed to serve in an individual, expert capacity may be a federally registered lobbyist. This prohibition does not apply to FAC members who are appointed to serve in a representative capacity on behalf of an interest group or constituency.

5.2.7. Can Someone Who Provided Peer Input Become an Independent Peer Reviewer for the Same Work Product Later in the Process?

Generally, the answer is no, because that expert is no longer independent but rather is a contributor to the work product. There may be special circumstances under which the expertise is so narrow that another peer reviewer is not available. The PRL normally will be responsible for making this determination and documenting the decision in the peer review record.

5.2.8. Can a Peer Reviewer Be Used to Review the Same Product More Than Once or to Review Multiple Products?

There is no prohibition against using the same peer reviewer more than once on the same product or for multiple products of the same EPA office. It is preferable, however, to use different individuals each time the product is sent back for peer review to provide a broader perspective. It is particularly important to rotate peer reviewers across the pool of qualified reviewers in the case of multiple HISAs. In the case of sequential reviews of one product, it can be beneficial to seek review from the same individuals where the review is focused on revisions made to address the peer reviewers' comments. Even in such cases, it may be helpful to include reviewers who were not involved in the previous review of the product to ensure that the product gets a fresh look.

When using a contractor to provide peer review services, it should be considered that contractors may have a "pool" of reviewers that they use regularly. If the same peer reviewers are used repeatedly, they may lose their impartiality (or the appearance of impartiality) relative to the work product(s). In addition, there may be competition or directed subcontracting issues when seeking subsequent reviews of a work product by the same peer reviewers if they were appointed under a contract mechanism. If there is a possibility that the same peer reviewers may be needed to conduct subsequent peer reviews of work products, the Contracting Officer (CO) must be informed when the contract for the initial review is being planned. In most cases, competition or other contracting issues that might complicate or preclude the use of the same peer reviewers for subsequent reviews of the same work product can be addressed with a properly drafted Statement of Work (SOW) and appropriate contract clauses.

When seeking the same peer reviewers for additional rounds of peer review, the peer reviewers should be reevaluated for independence, COI and appearance of a loss of impartiality before they serve as a repeat panel member. The appropriate peer review COI form should be used to identify any potential COI that may have arisen since completion of the previous round of peer review (see Appendix J).

5.2.9. If State or Tribal Employees Are Used as Peer Reviewers, Can EPA Pay Them for This Service?

In some cases, this may be possible. However, the PRL should ensure that the state or tribal employee has received the necessary approvals since providing a state or tribal employee with compensation as an expert or consultant under 5 U.S.C. 3109 or as a direct EPA contractor may conflict with the state or tribe's ethics or personnel laws or policies. Similarly, the PRL should ensure that peer review prime contractors verify that state and tribal employees may work as subcontracted consultants before hiring them.

EPA would be able to pay travel expenses under a 5 U.S.C. 5703 invitational travel order since the "consult with or otherwise provide a direct service to EPA" requirement would be met and most states and tribes allow their employees to accept invitational travel orders. If the state or tribal employee will not be paid for their peer review services, the letter or email inviting them to the peer review meeting should make it clear that EPA is only providing travel support; the letter or email must also clearly indicate that the state or tribal employee will provide peer review services to EPA without compensation and that the state or tribal employee will make no future claim for compensation for the peer review services.

Please note that because peer reviewers provide services for EPA's direct use or benefit, states and tribes may not charge federal grants/cooperative agreements for their employees' time or travel while working on a peer review due to the Federal Grant and Cooperative Agreement Act.

If the state or tribal expert is not being paid for his/her peer review services, or reimbursed for travel expenses, he/she must sign an agreement stating that he/she does not expect payment. See Section 4.6.7 for information on gratuitous services agreements.

5.2.10. Can the Identity of Peer Reviewers Be Kept Anonymous by EPA?

No, the identity of peer reviewers cannot be kept anonymous by EPA. However, the attribution of specific comments to any given peer reviewer is not necessary. Peer reviewers should be informed in advance of EPA plans for releasing their names and credentials, as well as the extent of attribution of comments to specific reviewers. If a peer reviewer requests anonymity at the outset of the peer review, the PRL should inform the peer reviewer that there is no guarantee of anonymity. Although this may be a deterrent to possible peer reviewers, EPA is committed to working with the fullest possible transparency to the public (except where statutorily constrained, such as with CBI).

The reviewers' names and affiliations may be made available to the public before the review begins depending on the peer review process used. For all ISI and HISAs, the names and affiliations of peer reviewers should be listed in the peer review reports. Release of any reviewer information retrieved by a personal identifier must be performed in accordance with the Privacy Act of 1974 (5 U.S.C. § 552(a), as amended), as interpreted in OMB implementing guidance, 40 *Fed. Reg.* 28,948 (Jul. 9, 1975).

For other types of peer reviews that do not qualify as ISI or HISA, such as the peer review of extramural grant applications, reviewer names can be held in anonymity to the public, unless, in some circumstances, they are requested under the Freedom of Information Act (FOIA). If a request for peer review documents is received under the FOIA, the requestor may be able to view any comments attributed to specific reviewers.

5.3. Ensuring a Credible Peer Review Process – Ethics Considerations

5.3.1. What Are the Relevant Ethical Standards for Different Categories of Peer Reviewers?

To ensure a credible peer review process, PRLs must ensure that the appropriate and relevant ethical standards are applied to each of the peer review mechanisms. When a peer review panel is used, ethical standards must be adhered to not only during the panel formation process, but also during and after the peer review itself has been completed. These ethical standards are embodied in the various laws, implementing regulations and other requirements that apply to peer reviewers who are RGEs, SGEs, contractors and those who are selected by outside organizations (e.g., the NAS) (see Table 2). For peer reviews conducted by outside organizations, the PRL should be thoroughly familiar with the ethics

Table 2. The Applicable Rules for Conflict of Interest and Impartiality of Peer Reviewers Depends on the Status of the Peer Reviewers

Peer Review Approach	Status of Peer Reviewer	Applicable Conflict of Interest/Ethics Rules and Policies	Handbook Section
Internal	RGE	18 U.S.C. § 201, 203, 205, 207, 208 and 209; Standards of Ethical Conduct in the Executive Branch	<u>5.3.3</u> , <u>5.3.6–5.3.9</u>

policies and requirements of the organization conducting the review. For example, if a peer review is to be conducted by the NAS, the PRL would need to be familiar with the NAS *Policy on Committee*

³¹ National Academy of Sciences. 2003. *Policy on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports*. Washington, D.C.: The National Academies Press, 2003. http://www.nationalacademies.org/doi/bi-coi_form-0.pdf.

*Composition and Balance and Conflicts of Interest.*³² For work products that are peer reviewed through publication as journal articles, the ethics standards and processes are set by the specific journal.

Specific regulations have set forth ethics considerations for contractor personnel and government employees. An overview of these requirements as they relate to peer review is provided in the sections that follow. This chapter focuses primarily on ethics issues such as potential COIs or an appearance of a loss of impartiality for government employees, including SGEs. See Chapter 4 for a discussion of COI for peer reviews obtained by contract.

5.3.2. How Are Ethics Issues Evaluated for Peer Reviewers Under Contractor-Managed Peer Reviews?

As noted in Section 4.6, contracts to obtain peer review services should include COI clauses, and COI requirements should be included in the SOW. Information necessary to ensure that peer reviewers are free from ethics issues such as potential COIs or an appearance of a loss of impartiality is collected by the contractor managing the peer review using a confidential peer review COI questionnaire pursuant to the peer review “Conflict of Interest Evaluation for Task Orders/Work Assignments” clause and other COI requirements included in the contract. The PRL should work with the CO to assist the contractor with identifying actual or potential COI that might impair the objectivity of peer reviewers. In the case of a contractor-managed panel review of ISI or HISAs, oversight by the CO of the contractor’s identification and proposed resolution of COI issues should include consultation with the EPA Science Advisor or his or her designee.

5.3.3. How Are Ethics Issues Evaluated for Peer Reviewers Who Are Government Employees?

The PRL (and appropriate EPA ethics officials) will typically consider five COI statutes: 18 U.S.C. §§ 203, 205, 207, 208 and 209. In addition to these COI statutes, all government employees, including SGEs, must adhere to the Standards of Ethical Conduct for Employees of the Executive Branch (5 C.F.R. 2635). Although responsibility for compliance rests with the individual government employee, PRLs and appropriate ethics officials must work together to ensure that all applicable ethics laws and implementing regulations are followed when government employees are peer reviewers (e.g., internal peer review by EPA experts, external peer review by SGE or non-EPA RGEs).

5.3.4. What Constitutes a Conflict of Interest for a Special Government Employee on a Federal Advisory Committee?

SGEs typically have outside (i.e., non-EPA) employment as well as other financial interests, which may potentially present COI issues under 18 U.S.C. § 208 (a criminal COI statute). According to this law, government employees (including SGEs) are prohibited from participating personally and substantially in any particular matter that has a direct and predictable effect on their own financial interests or the financial interests of others whose interests are imputed to them. For a COI to be present, all of these elements must be present. If an element is missing, there is no COI.

³² National Academy of Sciences. 2003. *Policy on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports*. Washington, D.C.: The National Academies Press. http://www.nationalacademies.org/coi/bi-coi_form-0.pdf.

For example, ownership of stock is not a COI absent personal and substantial participation by an SGE in a particular matter that will have a direct and predictable effect on this interest.

To apply ethics regulations to FAC members properly, it is important to know whether the charge to a committee is a “matter,” a “particular matter of general applicability” or a “particular matter concerning specific parties.” A matter is something that is directed to the interests of a large and diverse group of persons. A particular matter of general applicability is focused on the interests of a discrete and identifiable class of persons (e.g., a certain industrial sector). A particular matter concerning specific parties is focused on the legal rights of parties or transactions (e.g., grants, contracts, investigations, litigation). When a charge is not a particular matter, then 18 U.S.C. § 208 does not apply, and a COI cannot arise. Furthermore, particular matters of general applicability and particular matters concerning specific parties are treated somewhat differently in the ethics regulations, as explained in Section 5.3.7.

5.3.5. Can a Recipient of EPA Contracts or Grants Be a Peer Reviewer?

EPA frequently issues contracts to develop scientific and technical work products for the direct benefit of or use by the Agency. Contractors who help develop those work products are not independent of the work product and cannot serve as peer reviewers of the same work product. Even if a contractor is not involved in the development of a work product being reviewed, the nature and extent of his or her contractual relationships with the Agency or with the EPA office sponsoring a peer review should be considered when selecting reviewers to ensure that the contractor is sufficiently independent from the Agency or EPA office as a general matter.

EPA also provides grant money through competitive processes to further the investigation of science matters it believes would benefit its mission. As noted in the OMB Bulletin, when a scientist is awarded an EPA research grant through an investigator-initiated, peer-reviewed competition, there generally should be no question as to that scientist’s ability to offer independent scientific advice to the Agency on other projects. Those grantees are independent of Agency direction, and can serve as peer reviewers for scientific or technical work products (or portions thereof) that are not solely a product of their own research conducted under the Agency grant. For example, a grantee may review a work product that synthesizes a body of literature, such as an integrated science assessment, that happens to incorporate agency funded work conducted by the grantee. The grantee must, however, still be free from financial COI or the appearance of a loss of impartiality (see Sections 5.3.4 and 5.3.7).

PRLs may question whether experts who currently receive funding from EPA (e.g., grants, contracts, assistance agreements) have, by definition, an inherent financial COI and therefore cannot be peer reviewers. If an expert previously received funding, but does not currently, then there is no financial COI. If an expert is currently receiving funding through an EPA grant, the PRL should examine how the grant was awarded. If EPA awarded the grant through a competitive, peer-reviewed process, then the Agency’s ability or potential to influence the expert’s research is limited. Consequently, there is little likelihood that the expert’s ability to offer scientific advice is subject to any financial COI.

Alternately, if an expert has an existing consulting or contractual arrangement with the Agency, then the expert is beholden directly to EPA on closely-related matters. Consequently, this situation presents a greater concern about appearance of a financial COI.

5.3.6. Are There Any Exemptions or Remedies from a Conflict of Interest for Regular and Special Government Employees?

5.3.6.1. Conflict of Interest Exemptions for Special Government Employees

SGEs serving on FACs specifically are exempted by regulation from certain provisions of the financial COI statute (18 U.S.C. § 208). An exemption (5 C.F.R. 2640.203(g)) permits SGEs serving on FACs to participate in particular matters of general applicability when the disqualifying interest arises from the SGE's nonfederal employment or prospective employment. Whenever there are questions about COIs, the PRL should contact the appropriate Deputy Ethics Official (DEO) and/or OGC/Ethics, who in turn may consult with the U.S. Office of Government Ethics (OGE) for assistance (<http://intranet.epa.gov/ogc/ethics/deos.htm>).

It is important to note that the exemption does not extend to the SGE's financial holdings or consultancies. Furthermore, this exemption is subject to several limitations:

- The matter cannot have a “special or distinct” effect on either the SGE or the SGE's nonfederal employer, other than as part of a class;
- The exemption does not cover interest arising from ownership of stock in the employer; and
- The nonfederal employment must involve an actual employer-employee relationship, as opposed to an independent contractor relationship.

5.3.6.2. Conflict of Interest Remedies

COI may be remedied through nonparticipation in the matter (also known as “recusal” or “disqualification”), divestiture from the disqualifying interest, or the granting of a waiver pursuant to provisions under 18 U.S.C. § 208(b). Whenever there are questions about COIs, the PRL should contact the appropriate DEO and/or OGC, who in turn may consult with the OGE for assistance (<http://intranet.epa.gov/ogc/ethics/deos.htm>).

- **Nonparticipation.** COI may be remedied by nonparticipation in a particular matter. Nonparticipation means that the employee does not participate personally and substantially in the particular matter. When a panel considers more than one particular matter, it is possible for an employee to recuse himself/herself from only those particular matters for which he or she has a COI.
- **Divestiture.** COIs may be remedied by divestiture from the disqualifying interest to below certain *de minimis* exemption levels. These exemption levels vary depending upon the type of particular matter being considered (see 5 C.F.R. § 2640.201 for more information on exemptions available for RGEs and SGEs). When divestiture from a disqualifying interest is sought as a remedy for a potential COI, it should be noted that SGEs (as opposed to RGEs) are not eligible for a “certificate of divestiture” that allows for deferral of capital gains in the divested asset.
- **Statutory Waivers from COI.** An SGE who serves on a FAC may seek a waiver from OGC to participate under the provisions of 18 U.S.C. § 208(b)(3). Only the EPA's Designated Agency Ethics Official (DAEO) can grant such a waiver, and only if he/she certifies in writing (in consultation with OGE) that the need for the SGE's services outweighs the potential for a COI posed by the financial interest involved. SGEs not serving on FAC (and all RGEs) may be

considered for waivers only in accordance with the more restrictive standard under 18 U.S.C. § 208(b)(1), which requires a determination by the DAEO that the financial interest is not so substantial as to be deemed likely to affect the integrity of the employee's services. Further guidance on waivers may be found in OGE DO-07-006 ("Waivers under 18 U.S.C. § 208").³³

5.3.7. What Is an Appearance of a Loss of Impartiality for Regular and Special Government Employees?

When forming peer review panels with RGEs/SGEs, another common ethics issue that may arise is an "appearance of a loss of impartiality" as defined by 5 C.F.R. Part 2635, Subpart E. PRLs must be alert not only to COI issues (which tend to be easier to recognize), but also to "appearance" issues, which can be more subtle. Unlike COI issues, appearance issues do not violate any criminal statute. An appearance of a loss of impartiality may occur when an employee's participation in a particular matter involving specific parties (e.g., a contract, an enforcement action) might cause a reasonable individual with knowledge of the relevant facts to question that employee's impartiality. Appearance issues arise if the peer review activity is likely to have a direct and predictable effect on the financial interests of a member of a peer reviewer's household, or if the peer reviewer has a "covered relationship" (as defined in 5 C.F.R. 2635.502(b)) with someone who is (or represents) a specific party or parties involved in the matter.

For example, if a member of an employee's household (e.g., a relative with whom the employee has a close personal relationship) has a contract with a company to conduct all of the marketing for a pesticide that has a pending registration before the Agency, and the Agency is convening a peer review panel to evaluate a study that will be pivotal in determining whether to grant the registration (a specific party matter), then a reasonable individual would question the employee's ability to participate impartially in the peer review.

If an employee's participation in a peer review would cause a reasonable individual to question the employee's impartiality, the appropriate DEO in the organization conducting the peer review may authorize the employee to participate in the review based on a determination, made in light of all relevant circumstances, that the interest of the government in the employee's participation outweighs the concern that a reasonable individual might question the integrity of the Agency's programs and operations. For discussion of factors that should be considered when deciding whether to authorize participation, see 5 C.F.R. 2635.502(d). After considering these factors, the appropriate DEO may decide to authorize the employee's participation or, conversely, to prohibit it. Regardless of the outcome, OGC strongly recommends that the DEO issue a written determination that documents the final decision.

5.3.8. How Should Peer Review Leaders Address Ethics Issues for Regular and Special Government Employees during Peer Reviewer Selection?

The peer reviewer selection process is the step in the peer review process when the PRL is most likely to initially encounter ethics issues such as potential COIs or an appearance of a loss of impartiality. To evaluate potential issues, financial disclosure forms are obtained and evaluated by the appropriate ethics

³³ Cusick, Robert I., Director, Office of Government Ethics, 2007. Memorandum to Designated Agency Ethics Officials. *Waivers Under 18 U.S.C. § 208*. DO-07-006. [http://www.oge.gov/OGA-Advisories/Legal-Advisories/DO-07-006---Waivers-under-18-U-S-C---%C2%A7%C2%A7-208\(b\)\(1\)-and-\(b\)\(3\)](http://www.oge.gov/OGA-Advisories/Legal-Advisories/DO-07-006---Waivers-under-18-U-S-C---%C2%A7%C2%A7-208(b)(1)-and-(b)(3).). February 23.

official (usually the responsible DEO in the EPA office where the peer review takes place). For RGEs, either OGE Form 450 (Confidential Financial Disclosure Form) or OGE Form 278 (Public Financial Disclosure Form) is collected and evaluated. For SGEs, EPA Form 3110-48 (Confidential Financial Disclosure Form for Special Government Employees Serving on Federal Advisory Committees at the U.S. Environmental Protection Agency) is typically filed with the DFO's own DEO. In rare instances, however, an SGE or an RGE may be required to file the OGE-278 (Public Financial Disclosure Report). This report is filed with OGC, along with any necessary OGE-278T (Periodic Financial Transaction) forms. In all instances, financial disclosure forms are filed and reviewed, both annually (with some exceptions) and prior to any new matter.

Before finalizing the selection of reviewers, the PRL should ascertain whether each potential peer reviewer's involvement in certain activities could pose an ethics issue such as potential COIs or an appearance of a loss of impartiality. Each matter should be treated on a case-by-case basis and can involve a number of factors. Employment and professional affiliations of the participants, as well as their financial interests, should be considered. Some actions that should be taken in evaluating ethics issues include, but are not limited to, the following:

- Discussing ethics issues with each participant before the review process takes place.
- Disclosing publicly at the beginning of meetings any previous involvement with the matter.
- Obtaining appropriate and up-to-date financial disclosure forms.
- Collecting additional information through public comment and other appropriate means.

5.3.9. What Other Ethics Issues Might Arise for Regular and Special Government Employees During or After a Peer Review?

Peer reviewers who are government employees, including SGEs, are subject to ethics requirements in addition to those regarding COI under 18 U.S.C. § 208 or an appearance of a loss of impartiality during panel operation and even after a panel has completed its work. Therefore, it is prudent to inform SGEs both prior to and during their service that ethics requirements such as postemployment restrictions may apply to them, dependent on the type of particular matter they worked on as well as the level of compensation they received during the time of service. These issues are discussed in-depth in EPA Ethics Advisory 08-02; some of the more typical restrictions are summarized below:

- **Representational Activities Directed Toward the United States.** Two companion ethics laws (18 U.S.C. §§ 203, 205) prohibit an employee from representing outside organizations and individuals on any particular matter in which the United States is a party or has a direct and substantial interest, before any department, Agency or other specified entity, whether for compensation or not. For SGEs, these statutes apply only with respect to particular matters involving specific parties (e.g., contracts, grants, enforcement actions), and their application depends on the number of days that the SGE worked for the federal government in the preceding 365-day period.
- **Compensation for Teaching, Speaking or Writing on Matters Related to Official Duties.** In certain cases, SGEs are prohibited from receiving outside compensation for teaching, speaking or writing when the activity is undertaken as part of their official EPA duties. SGEs also are subject

to the criminal bribery and illegal gratuity statute, which prohibits, under certain circumstances, the receipt of anything of value in connection with official acts.

- **Hatch Act Political Activity Restrictions (5 U.S.C. §§ 7321 – 7328).** The Hatch Act places some restrictions on federal government employees, including SGEs, when they engage in partisan political activity. During the time that SGEs are actually performing government business, they are prohibited from any fundraising for any partisan political group, candidate or campaign. They cannot engage in partisan political activity while on duty or while using a government vehicle, or in any room or building used for government business, and cannot use their SGA affiliation in connection with such political activity.
- **Seeking Other Employment (5 C.F.R. Part 2635, Subpart F).** SGEs may be interested in seeking other nonfederal employment while serving as government employees. SGEs may not participate in any particular matter that directly and predictably affects the financial interest of any individual or organization with whom/which they are seeking future employment, contracts or consultancies unless authorized by the appropriate DEO (who is required to consult with OGC) or, if the COI restriction at 18 U.S.C. § 208(a) applies, they have been granted a waiver under 18 U.S.C. § 208(b)(1). Such waivers are rarely, if ever, granted by OGC. It also is noted that under a provision of the Stop Trading on Congressional Knowledge Act, SGEs filing a public financial disclosure form (OGE-278) must report any postemployment negotiations to OGC within 3 business days. More information on Stop Trading on Congressional Knowledge Act requirements (including periodic financial transaction reporting) is available from OGC.
- **Service as an Expert Witness (5 C.F.R. § 2635.805).** On occasion, the PRL may find that an SGE wants to serve as an expert witness for an outside organization. Government employees cannot serve (other than on behalf of the United States) as an expert witness before a court or agency of the United States in which the United States is a party or has a direct and substantial interest, unless authorized by the agency's DAEO. For SGEs, the number of days of service affects the ban on serving as an expert witness.
- **Postemployment Restrictions.** Former employees (including SGEs) are prohibited by federal law (18 U.S.C. § 207) from making representations on behalf of another back to the federal government with the intent to influence a federal official with respect to any particular matter involving specific parties in which the United States is a party or has a direct and substantial interest. Thus, for example, a former SGE who served on a FAC cannot represent an outside individual or organization back to the federal government (not just this Agency) concerning the same specific party matter that was the subject of the FAC. SGEs working more than 60 days in any 365-day period who file an OGE-278 public financial disclosure report are subject to a 1-year “cooling off” period and cannot make representations on behalf of another back to EPA with the intent to influence any official action regardless of whether the SGE participated in it personally and substantially and regardless of whether the matter involves specific parties or not.

6. Conducting and Completing the Peer Review

6.1. Overview

For a peer review to be successful, peer reviewers should receive several documents at the beginning of the process (Figure 7). The specific documentation to be provided is based on the type and mechanism of peer review to be conducted, as discussed in Chapter 4. In each case, peer reviewers should be given what is necessary to complete their task; however, they should not be overburdened, with excess material. Needed documentation includes, but is not limited to, the work product to be reviewed, a clear charge and logistical details.

6.2. The Peer Review Charge and Instructions to Peer Reviewers

6.2.1. What Is a Charge?

A charge is a set of focused questions that identifies the scientific and technical issues on which the Agency would like feedback and invites suggestions for improving the document as a whole. The charge should be developed prior to the selection of the peer reviewers to ensure availability of appropriate scientific and technical expertise and skills for reviewing the specific work product. Preparing a good charge is time well-spent, as the charge is crucial for an effective peer review. A good charge will direct the reviewers to give advice on issues relevant to the Agency and will lead to a greater understanding of the reviewer's reasoning, which is pivotal to the Agency's ability to address the reviewers' concerns and to craft specific improvements to the work product (see Appendix H).

Generally, the charge to peer reviewers includes two types of questions. The first type identifies specific technical and scientific issues about which the Agency would like feedback. These focused charge questions should be explicit enough to encourage constructive comments, but not so narrow that they

Figure 7. The Peer Review Process: Conduct and Complete Peer Review

preclude or limit informative responses that the reviewer may consider important to provide. The second type of question typically invites a broad evaluation of the overall work product. It is important to remember, however, that the peer review is not conducted for the purpose of evaluating a potential Agency action, decision or policy. Reviewers should not be asked to advise the Agency on policy.

Time is well-spent preparing a good charge, as the charge is crucial for an effective peer review.

6.2.2. What Are the Essential Elements of a Charge?

A well-prepared charge includes:

- A concise overview or introduction describing the work product, its development and its intended use.
- Issues to be addressed and areas of concern or specific advice sought (in the form of charge questions), such as:
 - The soundness of the method(s) used or proposed.
 - The scientific support for the assumptions employed.
 - The identification of scientific uncertainties and the potential implications of those uncertainties for the stated conclusions and for influential scientific information (ISI) and highly influential scientific assessments (HISAs), that scientific uncertainties are clearly identified and characterized.
 - Recommendations for research that would reduce key uncertainties.
 - The sensitivity of the results to alternative assumptions (i.e., sensitivity analysis).
 - The comprehensiveness and utility of the literature reviewed.

In addition, a request may be made for the reviewers to raise issues that might not have been considered by the authors in their charge questions. Examples of peer review charges that have been used successfully by the Agency and cover a variety of issues are provided in Appendix H.

6.2.3. Can the Public, Including Stakeholders, Provide Input to the Charge to the Peer Reviewers?

Yes, depending on the type of peer review (e.g., letter review versus panel review), availability of a public version of the draft work product, resources and other factors (e.g., timing), EPA may obtain public input regarding the charge to the peer reviewers. (Note that this would require releasing the draft work product.) The Agency makes the final determination, however, on what elements to include in the charge to ensure that it meets the EPA's needs for the peer review. The following considerations should be taken into account:

- The Agency can obtain public input regarding the charge via a notice on the EPA Web page or through a *Federal Register* notice.

- If stakeholder input is sought, interested parties should be included to the extent feasible given statutory, regulatory, budgetary and/or time constraints. Input should not be limited to a single stakeholder or to one side of a controversial issue (e.g., a responsible party or environmental group).
- If a group is formed to help develop the charge, care should be taken to ensure that the group does not become subject to the requirements of the Federal Advisory Committee Act (FACA).
- If an annotated outline or draft of the work product can be shared with the public, this will facilitate public input on the charge.

6.2.4. Who Writes the Charge When the Agency Hires a Contractor to Conduct the Peer Review?

In general, if EPA uses a contractor to manage the peer review, EPA should allow the contractor independence in conducting it. However, to ensure that the peer review meets the EPA's needs, EPA personnel are responsible for providing the list of charge questions to the contractor managing the peer review for distribution to the peer reviewers. If the charge questions are known prior to the issuance of a solicitation for a contract, or prior to the issuance of a tasking document under an awarded contract, the Contracting Officer's Representative (COR) can incorporate the charge questions directly into the Statement of Work (SOW).

EPA may task the contractor with providing advice and assistance in developing some elements of the charge, such as the overview or introduction. In such cases, however, EPA personnel are still responsible for providing the contractor with the list of questions to be included. Whenever the contractor assists EPA in developing the charge, EPA must review and comment on a draft of the charge and approve any revisions to it.

The EPA cannot submit the charge or the charge questions directly to the peer reviewers when the review is being managed by a contractor. Rather, the contractor is responsible for submitting the charge to the reviewers along with other review materials.

For details on peer reviews conducted by the National Academy of Sciences (NAS), see Section 2.3.7.

6.2.5. What Additional Instructions and Information Does the Agency Give Peer Reviewers, including Preparation of a Peer Review Report?

6.2.5.1. General Instructions

The Peer Review Leader (PRL), or contractor (in the case of a contractor-managed peer review), provides the peer reviewers with a peer review package that includes the draft work product, charge and other pertinent material. For HISAs, the peer reviewers should be given background information about studies or models that support the key findings and conclusions of the Agency's draft assessment.

The Agency (or the contractor managing the peer review) should instruct peer reviewers as follows:

- Peer reviewers are to advise the Agency or contractor (in the case of a contractor-managed peer review) of ethics issues, including actual or potential organizational or personal conflicts of interest (COI) or other matters that would create the appearance of a loss of impartiality, guidance on which is provided in Section 5.3.

- Peer reviewers are to provide written comments (if a letter review) or a peer review report (if a panel review) (see Table 1) responsive to the charge in a specified format by a specified deadline.
- Peer reviewers are to comply with requests for confidentiality, if any, regarding the release of draft Agency products, positions or other materials provided to the reviewer. Unless the peer review is being conducted by a federal advisory committee (FAC), material provided as part of the review should be kept confidential and should not be discussed outside the designated panel discussion times or shared outside the panel.
- From the time they accept the invitation to review the work product, peer reviewers should avoid interactions—including with Agency representatives or members of the interested public—that might create a perception of COI regarding the work product under review.
- Members of peer review panels, either Agency-led or contractor-managed, should immediately inform the PRL or contractor if they are contacted regarding the peer review or work product by anyone other than another panel member. The contractor will immediately inform the COR of any reports by panel members of pre-meeting contacts to guard against inappropriate influence from outside the panel.

Finally, peer reviewers should receive logistical details regarding the review, such as:

- The due date for comments (for a letter review) or peer review report (for a panel review).
- Times and locations of meetings, if applicable.
- The planned extent of disclosure of reviewers' names and attribution of comments.
- The point of contact. When reviewers are selected by a peer review contractor, the point of contact should be an employee of the contractor, not an employee of the Agency.
- Type of peer review report and mode of delivery.

6.2.5.2. Further Instructions to Peer Reviewers of ISI and HISAs

For work products categorized as ISI or a HISA, peer reviewers should be instructed to prepare comments or a peer review report that describes the nature of their review, findings and conclusions. The peer review report either should: (1) include a verbatim copy of the individual reviewers' comments (with or without specific attributions); or (2) represent the views of the group as a whole, including any disparate and dissenting views, for contractor-managed panel peer reviews or FACs (although attribution of comments to names is not necessary). The peer review report should include the names of the reviewers and their organizational affiliations. For HISAs, the peer review report also should include a copy of the charge to the reviewers and a short paragraph on the credentials and relevant experience of each reviewer. The format and level of detail should be consistent across reviewers. Peer reviewers' written comments may be made publicly available via the EPA website, and peer reviewers should be informed of this possibility.

6.2.6. How May EPA Interact With External Peer Reviewers During the Review?

6.2.6.1. When EPA Conducts an External Peer Review

The PRL normally has administrative contacts with the reviewers during the development and conduct of the peer review. In some cases (e.g., a Science Advisory Board [SAB] peer review), peer reviewers also may receive a briefing from Agency personnel on the product to be peer reviewed. For external peer reviews conducted by FAC panels, the Designated Federal Officer (DFO) serves as the liaison between the peer reviewers and the EPA office requesting the review, as well as between the peer reviewers and members of the public. Otherwise, the PRL and other EPA office staff should not contact the reviewers during the course of the review. Such contact can lead to perceived inappropriate direction that could compromise the independence of the review.

6.2.6.2. When a Contractor Conducts an External Peer Review

If peer review is conducted via a contract under which the contractor manages the peer review(s), EPA should limit direct contact to the prime contractor's designated representative and should not have general contact with, or provide direction to, the contractor's staff or peer reviewers (subcontractors). Contact with the contractor should only be through the Contracting Officer (CO) or COR.

6.2.7. When May the Public Provide Comment During the Peer Review?

Whenever feasible, EPA offices should make drafts of work products categorized as ISI and HISAs available to the public for comment, as well as a draft peer review charge, at the same time they are submitted for peer review. For work products that are not influential, a public comment period still may be beneficial. Accepting public comments before peer review has two benefits: (1) the Agency can consider public comments on the scope of the charge before the selection of peer reviewers so that appropriate expertise is included to address all charge questions; and (2) the Agency's public comment process is kept distinct from the peer review panel's comment process. When employing a public comment process prior to the peer review, EPA offices should provide peer reviewers with access to public comments that address significant scientific or technical issues whenever practical.

When peer review of a HISA is conducted by a panel (either contractor-managed or by a FAC), the process should include a public meeting, whenever feasible and appropriate. During this public meeting, interested members of the public can make oral presentations on scientific issues relevant to the topic under review. To ensure that public participation does not delay activities unduly, EPA offices should specify time limits for public participation throughout the peer review process. It is recommended that the EPA Docket (available at <http://www.regulations.gov>) be used as the repository for public comments. To establish a docket, see <http://intranet.epa.gov/fdmsinfo>.

6.3. Responding to Peer Review Comments

6.3.1. How Does the Agency Evaluate and Incorporate Peer Reviewers' Comments?

Although the Agency is not obligated to take all recommendations provided by peer reviewers, all reviewer comments should be considered and incorporated where relevant and appropriate. For letter and panel peer reviews, the Agency evaluates the comments and prepares the response. The PRL and/or Project Manager (PM) should evaluate and analyze all peer review comments and recommendations carefully. As discussed earlier, a carefully crafted charge to the peer reviewers simplifies the

organization and analysis of comments. The appropriateness and objectivity of the comments should be evaluated. Analyses may include consultation with other personnel within EPA.

The PRL and/or PM should brief the Decision Maker (DM), as appropriate, as well as all appropriate managers in their chain of command, on the peer review comments, and should provide a proposal on how to address the peer review comments. The PRL and/or PM should identify clearly for the DM any key peer review comments, including significant comments that will not be accepted and why, as well as any controversial comments that need resolving. Comments that may lead to allocation of additional resources or a revised schedule for the completion of the work product are particularly important and should be evaluated in consultation with management.

Adequate documentation is needed to show whether comments were accepted or rejected. The documentation may be brief, but it should address all relevant and appropriate comments. The peer review record should contain a document describing the Agency's response to the peer review comments.

When peer review is conducted through a journal, the individual authors of the article evaluate and respond to the peer review comments.

6.3.2. How Does the Agency Address Comments from Peer Review Reports?

Reviewers of work products categorized as ISI and HISAs are asked to produce and submit the peer review report describing the nature of their review, and their findings and conclusions. EPA offices are expected to make these reports publicly available to implement the provisions of the Office of Management and Budget's (OMB) Peer Review Bulletin. The EPA posts or provides a link to the peer review reports, along with all materials related to the peer review, on its publicly accessible EPA Peer Review Agenda website (Science Inventory [SI] website [<http://epa.gov/si/>]).

The credibility of the final influential work product is likely to be enhanced if the public understands how the Agency addressed the specific concerns raised by the peer reviewers. Therefore, for HISAs, EPA offices should prepare a written response to comments in the peer review report explaining (1) the Agency's agreement or disagreement with the views expressed in the report; (2) the actions that have been or will be taken to respond to the report; and (3) the reasons that the EPA office believes those actions satisfy any key concerns or recommendations in the report. Any responses also should be posted in the SI website database. When peer reviews are conducted by FACs, the peer review report and the Agency's response to the committee also are posted on the advisory committee's website.

For products that are not considered "influential" (those categorized as "other"), the Agency may disclose the peer review report and Agency's response to the report (if prepared). Information on the peer review of products not considered influential are not posted on EPA's Peer Review Agenda website.

6.3.3. How Might Peer Review Comments Impact the Work Product?

Peer review comments, when appropriate, enhance the quality of the information EPA disseminates by ensuring that the information that the Agency uses to support and carry out its mission is reliable, accurate and unbiased (i.e., is objective) and that it is appropriate for its intended use (i.e., has utility). A variety of changes to a work product may result from the comments provided during peer review:

- Peer review comments and recommendations may entail significant impacts on the planned project schedule, budget or other resource needs. Management decisions to adjust one or more of these areas may be appropriate.
- The substantive issues or concerns expressed by peer reviewers may suggest that wider scientific and technical consultation is needed to ensure the adequacy of the work product relative to its intended use. If the Agency agrees with the reviewers, additional resources and an extended delivery schedule may be necessary.
- Peer review comments may lead to a better or more thorough analysis, a different interpretation of the results or a different perspective on a topic.
- The peer review comments and recommendations on a draft final product may provide a basis for bringing the associated project to closure.

6.3.4. What Should the Final Work Product Say About the Peer Review Process?

A final peer-reviewed work product *may* include a brief description of the peer review process (e.g., a statement regarding public participation and names/affiliations of the peer reviewers). Frequently, this will be part of a description of the process of developing the product, which can be included in an introduction, preamble or appendix. For ISI and HISAs that support rulemaking, the peer review should be discussed in the preamble of the rule.

When there are significant peer review comments, particularly if they are not accepted, a discussion of the issues and reasons for the Agency's choices should be included in the work product. The level of detail provided is a matter of judgment and should reflect the significance and degree of controversy surrounding the issue.

If ISI or a HISA has not been peer reviewed, this fact should be noted in the document, perhaps in an introduction or description of its scope. This section should briefly indicate the reasons that peer review was not conducted.

6.4. Finalizing the Work Product: When Is the Peer Review of a Work Product Complete?

Performance of the formal peer review is not the final stage in the product's development. Rather, it is an important stage in its development, with the final version (addressing comments) representing the true end of the peer review. The peer review process closes with three major activities:

1. Evaluating peer review comments and recommendations.
2. Utilizing peer review comments for completing the final document or conducting another review, if appropriate.
3. Completing the peer review record (for ISI and HISAs, this includes completing the entry in the SI).

Careful attention to all of these elements, singly and together, ensures a credible and transparent peer review process. Conversely, inattention to detail can nullify the peer review effort. A well-planned peer

review applied to a quality draft work product and followed by responsible employment of peer review suggestions in the final product ensures a credible and defensible product for use in Agency decision making. Sometimes the draft work product may not be finalized after the peer review. In these cases, the Agency may decide not to disseminate the Peer Review Report and/or the EPA Response to the Peer Review Report (if any).

Note: For the purposes of the EPA Annual Peer Review Report to OMB, peer review of an influential work product (ISI or HISA) is considered complete when the Agency receives the peer reviewers' final comments (e.g., the peer review report) and the comments are publicly available through the SI.

6.5. The Peer Review Record

6.5.1. What Is the Peer Review Record?

The peer review record is the PRL's formal record (file) of decision on the conduct of the peer review (either internal or external). It includes sufficient documentation (electronic and/or paper) for an uninvolved individual to understand the review process and the outcome. It is the responsibility of the PRL to create a separate review record that may be kept within the overall file for the development of the work product. Once the peer review is completed, it is the responsibility of the PRL to ensure that the peer review record is maintained in accordance with the organization's document retention procedures.

If ISI or a HISA has not been peer reviewed, a record should be created explaining why the product was not peer reviewed, including documentation signed by the DM during the peer review planning process (see Exhibit 2). Some Agency documents, such as strategic plans or analytic blueprints, are not subject to the EPA's Peer Review Policy and do not require peer review; in these cases, no record explaining why the product was not peer reviewed is necessary (see Section 3.3 to determine which work products do not require peer review).

For ISI and HISAs, some of the information from the PRL's official peer review record (e.g., the charge and the draft work product) is entered into the SI database that serves as the primary public interface for these records (see Sections 7.3.2 and 7.3.4). The resulting SI database entry is publicly accessible on the Agency's Peer Review Agenda website³⁴ through a link to the SI. Since the record in the SI does not contain all the information regarding the peer review, it is not the official peer review record.

6.5.2. What Should Be in the Peer Review Record?

Contents of the peer review record may vary, depending on the type of review undertaken. Documentation should be commensurate with the type of work product and its intended use. Such materials typically include:

- An approved plan specifying the type of peer review;
- Peer review documentation/checklist(s) that contain the rationale for the work product categorization and the signature of the DM approving the categorization (see Exhibit 1);

³⁴ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

- The draft work product submitted for peer review;
- The materials and information (including the charge) given to the peer reviewers;
- Information about the peer reviewers (e.g., names, affiliations, signed COI forms for each reviewer or a statement concerning potential COIs and their resolution, relevant correspondence);
- Logistical information about the conduct of the peer review (such as times and locations of meetings, if applicable);
- The peer review report, which include reviewers' comments and responses to charge questions;
- A memorandum or other written record, approved by the DM or DM designee, responding to the peer review comments and specifying either acceptance or rebuttal and non-acceptance (when prepared);
- The final work product, including any revisions resulting from the peer review;
- Documentation of any opportunities for public comment, including docket information, if applicable; and
- For ISI and HISAs, SI reference information (e.g., record number).

When deciding if particular materials should be included in the record, the PRL should consider whether the materials would help reconstruct the peer review process and outcome at a later time. If the materials might be helpful, they should be part of the peer review record.

The peer review record is considered complete when it contains a copy of the final work product (when there is one) that addresses the peer review comments, as well as a copy of the Agency's response to the comments (when there is one), including any that were not incorporated.

6.5.3. When Should the Peer Review Record-Building Process Begin?

An early start to developing and maintaining a peer review record will help ensure that the record is complete and helpful. Preferably, the record should begin at the start of the planning stage, once the decision to peer review the work product is made and the product categorization (ISI, HISA or other) is determined and documented.

6.5.4. What Types of Documentation Should Be Maintained When Categorizing Work Products and Determining the Peer Review Mechanism?

When making the determination if a work product is influential and what type of peer review mechanism should be used, these decisions should be documented and include the following: work product peer review categorization, the rationale for the categorization, the peer review mechanism selected and approval by the DM. The flowcharts and checklists found in the Roadmap at the front of this Handbook are tools for assisting the PRLs in evaluating what decisions are needed and how they should be documented. Other tools and products to enhance the transparency and reporting of peer

reviews are summarized in Table 1. Individual EPA offices maintain decision documentation for their scientific and technical work products categorized as influential.

6.5.5. How Can the Peer Review Record Improve the Peer Review Process?

A good peer review record supports the planning process and ensures that appropriate peer review is conducted. Also, it permits a retrospective examination of the peer review, and it helps the Agency make appropriate use of peer review comments. In addition, a good record helps ensure that the EPA's Peer Review Policy is implemented. The PRL is responsible for ensuring that the documentation for the peer review record for individual work products is collected and maintained.

6.5.6. What Happens to a Peer Review Record That Pertains to a Rulemaking Action?

The PRL should coordinate with the Federal Docket Management System to ensure that proper docketing procedures are followed for a peer review of a work product supporting a rule. If EPA relies on ISI or a HISA to support a regulatory action, the preamble should include a discussion of how EPA implemented the provisions of the OMB Peer Review Bulletin. See Appendix D, Sound Science and Peer Review in Rulemaking Policy, for a template to use for this purpose.

6.5.7. Are there Differences in Record-Keeping between a Review by Individuals and One by a Panel?

Generally, the content of the two peer review records would be similar. In the case of a review by individuals, such as a letter review, the peer review record typically would contain each individual's comments. For a panel review, the record typically contains a summary or other synthesis of the panel's peer review comments and recommendations (i.e., their peer review report).

6.5.8. Are Internal Peer Review Comments Included in the Peer Review Record?

Comments from formally conducted internal EPA peer reviews should be documented and included in the peer review record. This process does not substitute for Agency clearance. Informal input from EPA colleagues and input from Agency personnel helping to develop the work product need not be included.

Note: An internal EPA peer review may be followed by a separate external peer review. In such a case, the external peer review will stand as the official peer review record, because it is viewed as more independent in nature, may have broader fields of available expertise which can be brought to bear on the issues, and often includes greater depth for specific disciplines.

6.5.9. Where Should the Peer Review Record Be Kept and for How Long?

During the active conduct of the peer review, the PRL is responsible for maintaining the onsite record until the peer review is complete. Once completed, the peer review record should be maintained onsite by the PRL until at least 1 year after the completed peer review is reported in the next annual reporting cycle. The location of the record should be readily identifiable so that interested parties can locate and obtain materials easily and quickly. The peer review record may be kept with other records relating to the overall project as long as it is easily and separately identifiable.

Establishment and maintenance of the archive where the peer review records ultimately reside are an organization's responsibility (i.e., not that of an individual PM or PRL). The PRL should collect the

applicable materials and submit them for archiving in accordance with the applicable records-retention schedule(s).

PRLs should consult with their EPA Records Liaison Officer or the EPA's National Records Management Program (<http://www.epa.gov/records>) to determine the appropriate retention schedule for a peer review record, whether in electronic or paper form. A peer review record may be covered by one or more of the EPA's records-retention schedules. Some peer review records are permanent (e.g., records created by FACs, Integrated Risk Information System [IRIS] peer reviews and Health and Environment Assessment Program Files).

The peer review of products that meet OMB's definitions for ISI or HISAs must be reported and tracked in the EPA's SI (<http://cfpub.epa.gov/si/>). The SI database entry for such work products should be completed and updated in accordance with the appropriate Agency procedures. When peer review is provided by a FAC, such as the SAB, committee records are created and maintained by the EPA DFO and made available to the public on advisory committee Web pages.^{35, 36}

Public dockets serve as the repository for peer review information related to rulemaking (regulatory dockets) or other non-rulemaking actions (general dockets). The appropriate peer review information, however, also should be entered in the SI. There are specific procedures regarding the establishment and use of public dockets for retaining records associated with federal rulemaking and other Agency actions. If a peer review record is included in an EPA docket to support a rulemaking or other Agency action, the Federal Records Act record-retention schedule for dockets must be followed. For details on the EPA's record-retention schedule for dockets, see <http://www.epa.gov/records/policy/schedule/>.

7. Transparency in Peer Review: Public Participation and Reporting

7.1. Overview

The EPA is committed to the independent review of the Agency's scientific products and consistent implementation of its Peer Review Policy across the Agency. Transparency and openness are key objectives of its peer review process (Figure 8). To ensure transparency, the Agency often provides opportunities for participation by the general public, stakeholders and the larger scientific community in the peer review of influential scientific information (ISI). In addition, EPA makes peer review materials (e.g., the peer review plan, the peer review report) for Highly Influential Scientific Assessments (HISAs) and ISI publicly available at the EPA Peer Review Agenda³³ website. Through *Federal Register* notices, website postings and other means, EPA keeps the public informed of its peer review activities. The EPA also submits annual reports on the peer review of influential work products to the Office of Management and Budget (OMB).

Figure 8. The Peer Review Process: Public Participation and Reporting

7.2. Opportunities for Public Participation

7.2.1. What Are the Opportunities for Public Participation in Peer Review?

The Agency provides opportunities for public participation in its peer review whenever feasible and appropriate. Opportunities are communicated by several means, including the EPA Peer Review

Agenda,³⁷ relevant Agency websites and *Federal Register* notices. Public comments may be submitted to the Agency in writing, as oral statements during public meetings when panels are convened, or both.

Peer review plans for work products categorized as ISI and HISAs are publicly available on the EPA Peer Review Agenda, and the public may comment on the adequacy of those plans. The Agency indicates in each plan whether the public will have the opportunity to comment on the work product (and if so, how and when opportunities will be provided) and whether the public will be asked to nominate peer reviewers. Sometimes the charge to the peer reviewers is posted for public comment, and for HISAs, the draft work product is posted whenever feasible and appropriate.

For peer reviews conducted by panels selected and managed by an independent contractor, the public may nominate experts and later provide feedback on potential panel members (see Section 4.6.4). These opportunities are announced in *the Federal Register* and EPA may utilize a public docket (at www.regulations.gov) for submission of the comments.

7.2.2. What Are the Opportunities for Public Participation for Peer Reviews Conducted by Federal Advisory Committees (FACs)?

The Federal Advisory Committee Act (FACA) requires that the public have an opportunity to provide written comments to FACs and, in most cases, FACs also provide opportunities for oral comments.³⁸ Public comments provided to FACs have a different purpose than public comment provided to EPA offices because they inform the deliberations of the FAC as it reviews the draft EPA work product. Members of the public can submit relevant comments pertaining to the group providing advice, the EPA's charge questions, EPA review or background documents, and draft advisory reports prepared by a FAC or its panels.

7.2.3. Is Information Regarding a Peer Review Subject to Release Under the Freedom of Information Act (FOIA)?

Information regarding a peer review is subject to release if EPA receives a FOIA request unless the peer review information meets the criteria for an exemption under the FOIA 5 U.S.C. § 552(b). It should be noted, however, that many documents relating to Agency peer reviews are available to the public on the EPA website.

7.3. Reporting on Peer Reviews

7.3.1. What Are the EPA's Reporting Practices?

As part of the EPA's systematic planning process, EPA publicly posts information on the peer review activities of EPA's forthcoming influential (HISA and ISI) scientific product disseminations on the EPA's Peer Review Agenda (PRA) website.³⁹ Pursuant to the OMB Peer Review Bulletin, for each entry on the PRA, the Agency provides a link to the peer review plan, the charge to the reviewers, the peer review report, the names and affiliations of the peer reviewers (in the peer review report or as a

³⁷ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

³⁸ 5 U.S.C. App. 2 Section 10(a)(3) and § 102–3.140(c) and (d) of the U.S. General Services Administration FAC Management final rule.

³⁹ EPA. 2015. *Peer Review Agenda*. http://cfpub.epa.gov/si/si_public_pr_agenda.cfm.

separate file), any Agency response to comments, and, whenever feasible and appropriate, the draft work product for HISAs.

The PRA is a component of the EPA Science Inventory (SI), a searchable database of scientific and technical work products developed by EPA and accessible at www.epa.gov/si. Product metadata including peer review information and related documents, are entered into the SI and then published to the Agency PRA, which is also linked to the U.S. Government's official web portal FirstGov at <http://www.FirstGov.gov>.

In addition to reporting on peer review through the PRA, the Agency officially submits an annual report on peer review to OMB that summarizes all the external peer reviews of HISA and ISI products that were completed during the fiscal year. For the purposes of reporting to OMB, "completed" is defined as having received the peer review report (see Sections 6.4.1 and 7.4). The Agency response to the peer reviewer comments is also reported to OMB in the annual report, among other information.

EPA offices also communicate their peer review activities through press releases, website postings, dockets and *Federal Register* notices (see Appendix I for example notices).

7.3.2. What Information Should Be Provided in the Science Inventory Peer Review Plan Regarding ISI and HISAs?

Since EPA allows the public to view and comment on the Agency's peer review plans for activities or products categorized as ISI or HISAs, the following information should be provided for each activity or product into the SI:

- A paragraph including the title, subject and purpose of the activity or product.
- An Agency contact to whom inquiries may be directed to learn the specifics of the peer review plan.
- The categorization of the work product (e.g., ISI, HISA).
- The timing of the review (including any deferrals).
- The process by which the review will be conducted (e.g., a panel or individual letter review, an alternative procedure).
- Opportunities for the public to comment on the work product to be peer reviewed, including how and when these opportunities will be provided, if applicable.
- Any significant and relevant public comments that EPA will provide to the peer reviewers before they conduct their review.
- A succinct description of the primary disciplines or expertise needed in the peer review.
- The number of peer reviewers expected.
- The organization that will select the reviewers (e.g., EPA, a designated outside organization).

- Opportunities for the public, including scientific or professional societies, to nominate peer reviewers, if applicable.

After new or updated product and peer review information is entered into the SI, the SI Product Coordinator or his/her designee generates (from within the SI) a public peer review plan and posts the plan to the Peer Review Agenda website. The SI Product Coordinator should also post or link other relevant peer review documents to the PRA from the SI.

EPA offices are expected to keep this information current by updating agenda entries of influential work products at least every 6 months. Real-time updates occasionally may be necessary, for example, when there is an imminent change in the timing for the peer review of a high-visibility work product or a change in the timing of the public availability of a draft of a HISA.

7.3.3. Which Products Generated Under EPA Grants or Cooperative Agreements Should Be Reported in the Science Inventory?

As a matter of practice, EPA organizations are encouraged, but not required, to include in the SI those scientific and technical work products that are produced under grants and cooperative agreements so that EPA staff and the public are aware of the ongoing work. If a grant or cooperative agreement product is likely to be used in Agency decision making (assuming this use is incidental to the principal purpose of the agreement), it generally should be considered a candidate for peer review and noted as such in the SI by the Peer Review Coordinator (PRC).

7.3.4. Does the Agency Report on Peer Review of Scientific and Technical Work Products That Are Not ISI or HISAs?

Each EPA office is responsible for reporting peer-reviewed work products categorized as “other” upon request. For example, a list of these work products may be requested from each EPA office for inclusion in annual reports (e.g., for the Agency’s Annual Report on Scientific Integrity) and for the purposes of monitoring compliance with the EPA’s Peer Review Policy and this Handbook. Offices are encouraged to include information in the SI on the peer review of these other work products not categorized as ISI or HISAs but are not required to do so.

7.4. Annual Report to OMB on EPA Peer Reviews

The EPA submits an annual report to OMB that summarizes the peer reviews of all of the ISI and HISAs that were conducted during the previous fiscal year. Release of any reviewer information retrieved by a personal identifier will be performed in accordance with the Privacy Act of 1974 (5 U.S.C. § 552a, as amended), as interpreted in OMB implementing guidance, 40 *Fed. Reg.* 28,948 (Jul. 9, 1975). The OMB Peer Review Bulletin states that the annual report should include the following:

- The number of peer reviews conducted subject to the OMB Peer Review Bulletin.
- The number of times alternative procedures were invoked (see Section IV of the OMB Peer Review Bulletin).
- The number of times waivers or deferrals were invoked and, in the case of deferrals, the length of time elapsed between the deferral and the peer review.

- Any decision to appoint a peer reviewer pursuant to any exception to the applicable independence or conflict of interest (COI) standards of the OMB Peer Review Bulletin.
- The number of peer review panels that were conducted in public and the number that included public comment.
- The number of public comments provided on the peer review plans.
- The number of peer reviewers used who were recommended by professional societies.

APPENDIX A. EPA PEER REVIEW POLICY

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

JAN 31 2006

THE ADMINISTRATOR

MEMORANDUM

SUBJECT: Peer Review Program

TO: Assistant Administrators
General Counsel
Inspector General
Associate Administrators
Regional Administrators
Staff Office Directors

We have made tremendous strides in improving our peer review program at EPA since the Agency's Peer Review Policy was reaffirmed in 1994. Today I am updating the Peer Review Policy to emphasize the critical role that peer review plays in our efforts to ensure that EPA's decisions rest on sound, credible science and data (see attached policy statement).

Peer review at EPA takes several different forms, ranging from informal consultations with Agency colleagues who were not involved in developing the product to the formal, public processes of the Science Advisory Board (SAB) and the FIFRA Scientific Advisory Panel (SAP). In any form, peer review assists EPA's work by bringing independent expert experience and judgment to bear on issues before the Agency to the benefit of the final product.

In 1994 the Science Policy Council (SPC) and its Steering Committee were asked to undertake an initiative to ensure that EPA has a comprehensive Agency-wide program for implementing its Peer Review Policy. I commend the SPC for its diligence and success in meeting this objective. The SPC has made substantial improvements in the Peer Review Handbook, sponsored training of Agency managers and staff in peer review procedures, identified scientific and technical work products that merit peer review, and developed a publicly available data base of the peer review activities across the Agency. EPA has a strong and well-recognized peer review program as a direct result of these efforts.

In 2004 the Office of Management and Budget (OMB) issued a "Final Information Quality Bulletin for Peer Review" that contains provisions for peer review at all federal agencies. The OMB Bulletin applies to influential scientific information and highly influential scientific assessments. The SPC has updated the Agency's Peer Review Handbook, in part to incorporate the provisions of the OMB Bulletin, and to reflect the experience gained from implementing the program over the last decade.

I ask that you continue to implement fully the provisions of our Peer Review Policy, and I expect the Science Policy Council to continue its role in overseeing and strengthening EPA's peer review program. We must ensure that our decisions are based on the highest quality, peer-reviewed scientific and technical information.

PEER REVIEW AND PEER INVOLVEMENT AT THE U.S. ENVIRONMENTAL PROTECTION AGENCY

This document establishes the policy of the United States Environmental Protection Agency (EPA) for peer review of scientifically and technically based work products, including economic and social science products, that are intended to inform Agency decisions. Peer review, a form of *peer involvement*, is one process through which EPA staff augment their capabilities by inviting independent subject-matter experts to provide objective evaluation of the work product.

PEER REVIEW

EPA strives to ensure that the scientific and technical bases of its decisions meet two important criteria: (1) they are based upon the best current knowledge from science, engineering, and other domains of technical expertise; and (2) they are credible. Peer review, a process based on the principles of obtaining the best technical and scientific expertise with appropriate independence, is central to sound science and helps the Agency meet these important criteria. Peer review occurs when scientifically and technically based work products are evaluated by relevant experts who were not involved in creating the product. Properly applied, peer review not only enriches the quality of work products but also adds a degree of credibility that cannot be achieved in any other way. Furthermore, peer review early in the development of work products in some cases may conserve future resources by steering the development along the most efficacious course.

Peer review generally takes one of two approaches:

- Internal, in which the reviewers are independent experts from inside EPA.
- External, in which the reviewers are independent experts from outside EPA.

POLICY STATEMENT

Peer review of all scientific and technical information that is intended to inform or support Agency decisions is encouraged and expected. Influential scientific information, including highly influential scientific assessments, should be peer reviewed in accordance with the Agency's Peer Review Handbook. All Agency managers are accountable for ensuring that Agency policy and guidance are appropriately applied in determining if their work products are influential or highly influential, and for deciding the nature, scope, and timing of their peer review. For highly influential scientific assessments, external peer review is the expected procedure. For influential scientific information intended to support important decisions, or for work products that have special importance in their own right, external peer review is the approach of choice. Peer review is not restricted to the nearly final version of work products; in fact, peer review at the planning stage can often be extremely beneficial.

LEGAL EFFECT

This policy statement does not establish or affect legal rights or obligations. Rather, it confirms the importance of peer review where appropriate, outlines relevant principles, and identifies factors Agency staff should consider in implementing the policy. On a continuing basis, Agency management is expected to evaluate the policy as well as the results of its application throughout the Agency and undertake revisions as necessary. Therefore, the policy does not stand alone; nor does it establish a binding norm that is finally determinative of the issues addressed.

IMPLEMENTATION

The Science Policy Council is responsible for overseeing Agency-wide implementation of this policy, including: promoting consistent interpretation; assessing Agency-wide progress; developing recommendations for revisions of the policy as necessary; and issuing the *Peer Review Handbook*, which provides additional information and procedures on implementing this policy. Assistant Administrators, Regional Administrators, and other senior managers remain ultimately responsible for ensuring the appropriate application of Agency policy and guidance in identifying work products subject to peer review, determining the type and timing of such review, documenting the process and outcome of each peer review, ensuring that the Science Inventory is kept current, and otherwise implementing the policy within their organizational units.

The policy is effective immediately.

APPROVED:  DATE: JAN 31 2006
STEPHEN L. JOHNSON, ADMINISTRATOR

APPENDIX B. OMB INFORMATION QUALITY BULLETIN FOR PEER REVIEW

This appendix contains the text of the OMB Information Quality Bulletin for Peer Review.

December 15, 2004

OFFICE OF MANAGEMENT AND BUDGET
Final Information Quality Bulletin for Peer Review

INTRODUCTION

This Bulletin establishes that important scientific information shall be peer reviewed by qualified specialists before it is disseminated by the federal government. We published a proposed Bulletin on September 15, 2003. Based on public comments, we published a revised proposal for additional comment on April 28, 2004. We are now finalizing the April version, with minor revisions responsive to the public's comments.

The purpose of the Bulletin is to enhance the quality and credibility of the government's scientific information. We recognize that different types of peer review are appropriate for different types of information. Under this Bulletin, agencies are granted broad discretion to weigh the benefits and costs of using a particular peer review mechanism for a specific information product. The selection of an appropriate peer review mechanism for scientific information is left to the agency's discretion. Various types of information are exempted from the requirements of this Bulletin, including time-sensitive health and safety determinations, in order to ensure that peer review does not unduly delay the release of urgent findings.

This Bulletin also applies stricter minimum requirements for the peer review of highly influential scientific assessments, which are a subset of influential scientific information. A scientific assessment is an evaluation of a body of scientific or technical knowledge that typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. To ensure that the Bulletin is not too costly or rigid, these requirements for more intensive peer review apply only to the more important scientific assessments disseminated by the federal government.

Even for these highly influential scientific assessments, the Bulletin leaves significant discretion to the agency formulating the peer review plan. In general, an agency

conducting a peer review of a highly influential scientific assessment must ensure that the peer review process is transparent by making available to the public the written charge to the peer reviewers, the peer reviewers' names, the peer reviewers' report(s), and the agency's response to the peer reviewers' report(s). The agency selecting peer reviewers must ensure that the reviewers possess the necessary expertise. In addition, the agency must address reviewers' potential conflicts of interest (including those stemming from ties to regulated businesses and other stakeholders) and independence from the agency. This Bulletin requires agencies to adopt or adapt the committee selection policies employed by the National Academy of Sciences (NAS)¹ when selecting peer reviewers who are not government employees. Those that are government employees are subject to federal ethics requirements. The use of a transparent process, coupled with the selection of qualified and independent peer reviewers, should improve the quality of government science while promoting public confidence in the integrity of the government's scientific products.

PEER REVIEW

Peer review is one of the important procedures used to ensure that the quality of published information meets the standards of the scientific and technical community. It is a form of deliberation involving an exchange of judgments about the appropriateness of methods and the strength of the author's inferences.² Peer review involves the review of a draft product for quality by specialists in the field who were not involved in producing the draft.

The peer reviewer's report is an evaluation or critique that is used by the authors of the draft to improve the product. Peer review typically evaluates the clarity of hypotheses, the validity of the research design, the quality of data collection procedures, the robustness of the methods employed, the appropriateness of the methods for the

¹ National Academy of Sciences, "Policy and Procedures on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports," May 2003: Available at: <http://www.nationalacademies.org/doi/index.html>.

² Carnegie Commission on Science, Technology, and Government, Risk and the Environment: Improving Regulatory Decision Making, Carnegie Commission, New York, 1993: 75.

hypotheses being tested, the extent to which the conclusions follow from the analysis, and the strengths and limitations of the overall product.

Peer review has diverse purposes. Editors of scientific journals use reviewer comments to help determine whether a draft scientific article is of sufficient quality, importance, and interest to a field of study to justify publication. Research funding organizations often use peer review to evaluate research proposals. In addition, some federal agencies make use of peer review to obtain evaluations of draft information that contains important scientific determinations.

Peer review should not be confused with public comment and other stakeholder processes. The selection of participants in a peer review is based on expertise, with due consideration of independence and conflict of interest. Furthermore, notice-and-comment procedures for agency rulemaking do not provide an adequate substitute for peer review, as some experts -- especially those most knowledgeable in a field -- may not file public comments with federal agencies.

The critique provided by a peer review often suggests ways to clarify assumptions, findings, and conclusions. For instance, peer reviews can filter out biases and identify oversights, omissions, and inconsistencies.³ Peer review also may encourage authors to more fully acknowledge limitations and uncertainties. In some cases, reviewers might recommend major changes to the draft, such as refinement of hypotheses, reconsideration of research design, modifications of data collection or analysis methods, or alternative conclusions. However, peer review does not always lead to specific modifications in the draft product. In some cases, a draft is in excellent shape prior to being submitted for review. In others, the authors do not concur with changes suggested by one or more reviewers.

³ William W. Lowrance, Modern Science and Human Values, Oxford University Press, New York, NY 1985: 85.

Peer review may take a variety of forms, depending upon the nature and importance of the product. For example, the reviewers may represent one scientific discipline or a variety of disciplines; the number of reviewers may range from a few to more than a dozen; the names of each reviewer may be disclosed publicly or may remain anonymous (e.g., to encourage candor); the reviewers may be blinded to the authors of the report or the names of the authors may be disclosed to the reviewers; the reviewers may prepare individual reports or a panel of reviewers may be constituted to produce a collaborative report; panels may do their work electronically or they may meet together in person to discuss and prepare their evaluations; and reviewers may be compensated for their work or they may donate their time as a contribution to science or public service.

For large, complex reports, different reviewers may be assigned to different chapters or topics. Such reports may be reviewed in stages, sometimes with confidential reviews that precede a public process of panel review. As part of government-sponsored peer review, there may be opportunity for written and/or oral public comments on the draft product.

The results of peer review are often only one of the criteria used to make decisions about journal publication, grant funding, and information dissemination. For instance, the editors of scientific journals (rather than the peer reviewers) make final decisions about a manuscript's appropriateness for publication based on a variety of considerations. In research-funding decisions, the reports of peer reviewers often play an important role, but the final decisions about funding are often made by accountable officials based on a variety of considerations. Similarly, when a government agency sponsors peer review of its own draft documents, the peer review reports are an important factor in information dissemination decisions but rarely are the sole consideration. Agencies are not expected to cede their discretion with regard to dissemination or use of information to peer reviewers; accountable agency officials must make the final decisions.

There are a multiplicity of science advisory procedures used at federal agencies and across the wide variety of scientific products prepared by agencies.⁴ In response to congressional inquiry, the U.S. General Accounting Office (now the Government Accountability Office) documented the variability in both the definition and implementation of peer review across agencies.⁵ The Carnegie Commission on Science, Technology and Government⁶ has highlighted the importance of “internal” scientific advice (within the agency) and “external” advice (through scientific advisory boards and other mechanisms).

A wide variety of authorities have argued that peer review practices at federal agencies need to be strengthened.⁷ Some arguments focus on specific types of scientific products (e.g., assessments of health, safety and environmental hazards).⁸ The Congressional/Presidential Commission on Risk Assessment and Risk Management suggests that “peer review of economic and social science information should have as high a priority as peer review of health, ecological, and engineering information.”⁹

Some agencies have formal peer review policies, while others do not. Even agencies that have such policies do not always follow them prior to the release of important scientific products.

Prior to the development of this Bulletin, there were no government-wide standards concerning when peer review is required and, if required, what type of peer review processes are appropriate. No formal interagency mechanism existed to foster cross-agency sharing of experiences with peer review practices and policies. Despite the importance of peer review for the credibility of agency scientific products, the public lacked a consistent way to determine when an important scientific information product is being developed by an agency, the type of peer review planned for that product, or whether there would be an opportunity to provide comments and data to the reviewers.

This Bulletin establishes minimum standards for when peer review is required for scientific information and the types of peer review that should be considered by agencies in different circumstances. It also establishes a transparent process for public disclosure of peer review planning, including a web-accessible description of the peer review plan that the agency has developed for each of its forthcoming influential scientific disseminations.

LEGAL AUTHORITY FOR THE BULLETIN

This Bulletin is issued under the Information Quality Act and OMB's general authorities to oversee the quality of agency information, analyses, and regulatory actions. In the Information Quality Act, Congress directed OMB to issue guidelines to "provide policy and procedural guidance to Federal agencies for ensuring and maximizing the quality, objectivity, utility and integrity of information" disseminated by Federal agencies. Pub. L. No. 106-554, § 515(a). The Information Quality Act was developed as a supplement to the Paperwork Reduction Act, 44 U.S.C. § 3501 et seq., which requires OMB, among

other things, to “develop and oversee the implementation of policies, principles, standards, and guidelines to apply to Federal agency dissemination of public information.” In addition, Executive Order 12866, 58 Fed. Reg. 51,735 (Oct. 4, 1993), establishes that OIRA is “the repository of expertise concerning regulatory issues,” and it directs OMB to provide guidance to the agencies on regulatory planning. E.O. 12866, § 2(b). The Order also requires that “[e]ach agency shall base its decisions on the best reasonably obtainable scientific, technical, economic, or other information.” E.O. 12866, § 1(b)(7). Finally, OMB has authority in certain circumstances to manage the agencies under the purview of the President’s Constitutional authority to supervise the unitary Executive Branch. All of these authorities support this Bulletin.

THE REQUIREMENTS OF THIS BULLETIN

This Bulletin addresses peer review of scientific information disseminations that contain findings or conclusions that represent the official position of one or more agencies of the federal government.

Section I: Definitions

Section I provides definitions that are central to this Bulletin. Several terms are identical to or based on those used in OMB’s government-wide information quality guidelines, 67 Fed. Reg. 8452 (Feb. 22, 2002), and the Paperwork Reduction Act, 44 U.S.C. § 3501 et seq.

The term “Administrator” means the Administrator of the Office of Information and Regulatory Affairs in the Office of Management and Budget (OIRA).

The term “agency” has the same meaning as in the Paperwork Reduction Act, 44 U.S.C. § 3502(1).

The term “Information Quality Act” means Section 515 of Public Law 106-554 Pub. L. No. 106-554, § 515, 114 Stat. 2763, 2763A-153-154 (2000)).

The term “dissemination” means agency initiated or sponsored distribution of information to the public. Dissemination does not include distribution limited to government employees or agency contractors or grantees; intra- or inter-agency use or sharing of government information; or responses to requests for agency records under the Freedom of Information Act, the Privacy Act, the Federal Advisory Committee Act, the Government Performance and Results Act, or similar laws. This definition also excludes distribution limited to correspondence with individuals or persons, press releases, archival records, public filings, subpoenas and adjudicative processes. In the context of this Bulletin, the definition of “dissemination” modifies the definition in OMB’s government-wide information quality guidelines to address the need for peer review prior to official dissemination of the information product. Accordingly, under this Bulletin, “dissemination” also excludes information distributed for peer review in compliance with this Bulletin or shared confidentially with scientific colleagues, provided that the distributing agency includes an appropriate and clear disclaimer on the information, as explained more fully below. Finally, the Bulletin does not directly cover information supplied to the government by third parties (e.g., studies by private consultants, companies and private, non-profit organizations, or research institutions such as universities). However, if an agency plans to disseminate information supplied by a third party (e.g., using this information as the basis for an agency’s factual determination that a particular behavior causes a disease), the requirements of the Bulletin apply, if the dissemination is “influential”.

In cases where a draft report or other information is released by an agency solely for purposes of peer review, a question may arise as to whether the draft report constitutes an official “dissemination” under information-quality guidelines. Section I instructs agencies to make this clear by presenting the following disclaimer in the report:

“THIS INFORMATION IS DISTRIBUTED SOLELY FOR THE PURPOSE OF
PRE- DISSEMINATION PEER REVIEW UNDER APPLICABLE INFORMATION
QUALITY GUIDELINES. IT HAS NOT BEEN FORMALLY DISSEMINATED BY

[THE AGENCY]. IT DOES NOT REPRESENT AND SHOULD NOT BE
CONSTRUED TO REPRESENT ANY AGENCY DETERMINATION OR POLICY.”

In cases where the information is highly relevant to specific policy or regulatory deliberations, this disclaimer shall appear on each page of a draft report. Agencies also shall discourage state, local, international and private organizations from using information in draft reports that are undergoing peer review. Draft influential scientific information presented at scientific meetings or shared confidentially with colleagues for scientific input prior to peer review shall include the disclaimer: “THE FINDINGS AND CONCLUSIONS IN THIS REPORT (PRESENTATION) HAVE NOT BEEN FORMALLY DISSEMINATED BY [THE AGENCY] AND SHOULD NOT BE CONSTRUED TO REPRESENT ANY AGENCY DETERMINATION OR POLICY.”

An information product is not covered by the Bulletin unless it represents an official view of one or more departments or agencies of the federal government. Accordingly, for the purposes of this Bulletin, “dissemination” excludes research produced by government- funded scientists (e.g., those supported extramurally or intramurally by federal agencies or those working in state or local governments with federal support) if that information is not represented as the views of a department or agency (i.e., they are not official government disseminations). For influential scientific information that does not have the imprimatur of the federal government, scientists employed by the federal government are required to include in their information product a clear disclaimer that “the findings and conclusions in this report are those of the author(s) and do not necessarily represent the views of the funding agency.” A similar disclaimer is advised for non-government employees who publish government-funded research.

For the purposes of the peer review Bulletin, the term “scientific information” means factual inputs, data, models, analyses, technical information, or scientific assessments related to such disciplines as the behavioral and social sciences, public health and medical sciences, life and earth sciences, engineering, or physical sciences. This includes any communication or representation of knowledge such as facts or data, in any medium

or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual forms. This definition includes information that an agency disseminates from a web page, but does not include the provision of hyperlinks on a web page to information that others disseminate. This definition excludes opinions, where the agency's presentation makes clear that an individual's opinion, rather than a statement of fact or of the agency's findings and conclusions, is being offered.

The term "influential scientific information" means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions. In the term "influential scientific information," the term "influential" should be interpreted consistently with OMB's government-wide information quality guidelines and the information quality guidelines of the agency. Information dissemination can have a significant economic impact even if it is not part of a rulemaking. For instance, the economic viability of a technology can be influenced by the government's characterization of its attributes. Alternatively, the federal government's assessment of risk can directly or indirectly influence the response actions of state and local agencies or international bodies.

One type of scientific information is a scientific assessment. For the purposes of this Bulletin, the term "scientific assessment" means an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. These assessments include, but are not limited to, state-of-science reports; technology assessments; weight-of-evidence analyses; meta-analyses; health, safety, or ecological risk assessments; toxicological characterizations of substances; integrated assessment models; hazard determinations; or exposure assessments. Such assessments often draw upon knowledge from multiple disciplines. Typically, the data and models used in scientific assessments have already been subject to some form of peer review (e.g., refereed journal peer review or peer review under Section II of this Bulletin).

Section II: Peer Review of Influential Scientific Information

Section II requires each agency to subject “influential” scientific information to peer review prior to dissemination. For dissemination of influential scientific information, Section II provides agencies broad discretion in determining what type of peer review is appropriate and what procedures should be employed to select appropriate reviewers. Agencies are directed to choose a peer review mechanism that is adequate, giving due consideration to the novelty and complexity of the science to be reviewed, the relevance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review.

The National Academy of Public Administration suggests that the intensity of peer review should be commensurate with the significance of the information being disseminated and the likely implications for policy decisions.¹⁰ Furthermore, agencies need to consider tradeoffs between depth of peer review and timeliness.¹¹ More rigorous peer review is necessary for information that is based on novel methods or presents complex challenges for interpretation. Furthermore, the need for rigorous peer review is greater when the information contains precedent-setting methods or models, presents conclusions that are likely to change prevailing practices, or is likely to affect policy decisions that have a significant impact.

This tradeoff can be considered in a benefit-cost framework. The costs of peer review include both the direct costs of the peer review activity and those stemming from potential delay in government and private actions that can result from peer review. The benefits of peer review are equally clear: the insights offered by peer reviewers may lead to policy with more benefits and/or fewer costs. In addition to contributing to strong science, peer review, if performed fairly and rigorously, can build consensus among stakeholders and reduce the temptation for courts and legislators to second-guess or

¹⁰ National Academy of Public Administration, Setting Priorities, Getting Results: A New Direction for EPA, National Academy Press, Washington, D.C., 1995:23.

¹¹ Presidential/Congressional Commission on Risk Assessment and Risk Management, Risk Commission Report, 1997.

overturn agency actions.¹² While it will not always be easy for agencies to quantify the benefits and costs of peer review, agencies are encouraged to approach peer review from a benefit-cost perspective.

Regardless of the peer review mechanism chosen, agencies should strive to ensure that their peer review practices are characterized by both scientific integrity and process integrity. “Scientific integrity,” in the context of peer review, refers to such issues as “expertise and balance of the panel members; the identification of the scientific issues and clarity of the charge to the panel; the quality, focus and depth of the discussion of the issues by the panel; the rationale and supportability of the panel’s findings; and the accuracy and clarity of the panel report.” “Process integrity” includes such issues as “transparency and openness, avoidance of real or perceived conflicts of interest, a workable process for public comment and involvement,” and adherence to defined procedures.¹³

When deciding what type of peer review mechanism is appropriate for a specific information product, agencies will need to consider at least the following issues: individual versus panel review; timing; scope of the review; selection of reviewers; disclosure and attribution; public participation; disposition of reviewer comments; and adequacy of prior peer review.

Individual versus Panel Review

Letter reviews by several experts generally will be more expeditious than convening a panel of experts. Individual letter reviews are more appropriate when a draft document covers only one discipline or when premature disclosure of a sensitive report to a public panel could cause harm to government or private interests. When time and resources

¹² Mark R. Powell, *Science at EPA: Information in the Regulatory Process, Resources for the Future*, Washington, D.C., 1999: 148, 176; Sheila Jasanoff, *The Fifth Branch: Science Advisors as Policy Makers*, Harvard University Press, Boston, 1990: 242.

¹³ ILSI Risk Sciences Institute, “Policies and Procedures: Model Peer Review Center of Excellence,” 2002: Available at <http://rsi.ilsi.org/file/Policies&Procedures.pdf>.

warrant, panels are preferable, as they tend to be more deliberative than individual letter reviews and the reviewers can learn from each other. There are also multi-stage processes in which confidential letter reviews are conducted prior to release of a draft document for public notice and comment, followed by a formal panel review. These more rigorous and expensive processes are particularly valuable for highly complex, multidisciplinary, and more important documents, especially those that are novel or precedent-setting.

Timing of Peer Review

As a general rule, it is most useful to consult with peers early in the process of producing information. For example, in the context of risk assessments, it is valuable to have the choice of input data and the specification of the model reviewed by peers before the agency invests time and resources in implementing the model and interpreting the results. “Early” peer review occurs in time to “focus attention on data inadequacies in time for corrections.

When an information product is a critical component of rule-making, it is important to obtain peer review before the agency announces its regulatory options so that any technical corrections can be made before the agency becomes invested in a specific approach or the positions of interest groups have hardened. If review occurs too late, it is unlikely to contribute to the course of a rulemaking. Furthermore, investing in a more rigorous peer review early in the process “may provide net benefit by reducing the prospect of challenges to a regulation that later may trigger time consuming and resource-draining litigation.”¹⁴

¹⁴ Fred Anderson, Mary Ann Chirba Martin, E Donald Elliott, Cynthia Farina, Ernest Gellhorn, John D. Graham, C. Boyden Gray, Jeffrey Holmstead, Ronald M. Levin, Lars Noah, Katherine Rhyne, Jonathan Baert Wiener, “Regulatory Improvement Legislation: Risk Assessment, Cost-Benefit Analysis, and Judicial Review,” Duke Environmental Law and Policy Forum, Fall 2000, vol. XI (1): 132.

Scope of the Review

The “charge” contains the instructions to the peer reviewers regarding the objective of the peer review and the specific advice sought. The importance of the information, which shapes the goal of the peer review, influences the charge. For instance, the goal of the review might be to determine the utility of a body of literature for drawing certain conclusions about the feasibility of a technology or the safety of a product. In this context, an agency might ask reviewers to determine the relevance of conclusions drawn in one context for other contexts (e.g., different exposure conditions or patient populations).

The charge to the reviewers should be determined in advance of the selection of the reviewers. In drafting the charge, it is important to remember the strengths and limitations of peer review. Peer review is most powerful when the charge is specific and steers the reviewers to specific technical questions while also directing reviewers to offer a broad evaluation of the overall product.

Uncertainty is inherent in science, and in many cases individual studies do not produce conclusive evidence. Thus, when an agency generates a scientific assessment, it is presenting its scientific judgment about the accumulated evidence rather than scientific fact.¹⁵ Specialists attempt to reach a consensus by weighing the accumulated evidence. Peer reviewers can make an important contribution by distinguishing scientific facts from professional judgments. Furthermore, where appropriate, reviewers should be asked to provide advice on the reasonableness of judgments made from the scientific evidence.

However, the charge should make clear that the reviewers are not to provide advice on the policy (e.g., the amount of uncertainty that is acceptable or the amount of precaution that should be embedded in an analysis). Such considerations are the purview of the government.¹⁶

¹⁵ Mark R. Powell, *Science at EPA: Information in the Regulatory Process*, Resources for the Future, Washington, D.C., 1999: 139. http://intranet.epa.gov/ocem/faca/guidance/2012_03_epa_faca_handbook.pdf.

¹⁶ . Ibid.

The charge should ask that peer reviewers ensure that scientific uncertainties are clearly identified and characterized. Since not all uncertainties have an equal effect on the conclusions drawn, reviewers should be asked to ensure that the potential implications of the uncertainties for the technical conclusions drawn are clear. In addition, peer reviewers might be asked to consider value-of-information analyses that identify whether more research is likely to decrease key uncertainties.¹⁷ Value-of-information analysis was suggested for this purpose in the report of the Presidential/Congressional Commission on Risk Assessment and Risk Management.¹⁸ A description of additional research that would appreciably influence the conclusions of the assessment can help an agency assess and target subsequent efforts.

Selection of Reviewers

Expertise. The most important factor in selecting reviewers is expertise: ensuring that the selected reviewer has the knowledge, experience, and skills necessary to perform the review. Agencies shall ensure that, in cases where the document being reviewed spans a variety of scientific disciplines or areas of technical expertise, reviewers who represent the necessary spectrum of knowledge are chosen. For instance, expertise in applied mathematics and statistics is essential in the review of models, thereby allowing an audit of calculations and claims of significance and robustness based on the numeric data.¹⁹

For some reviews, evaluation of biological plausibility is as important as statistical modeling. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.

¹⁹ William W. Lowrance, Modern Science and Human Values, Oxford University Press, New York, NY 1985: 86.

Balance. While expertise is the primary consideration, reviewers should also be selected to represent a diversity of scientific perspectives relevant to the subject. On most controversial issues, there exists a range of respected scientific viewpoints regarding interpretation of the available literature. Inviting reviewers with competing views on the science may lead to a sharper, more focused peer review. Indeed, as a final layer of review, some organizations (e.g., the National Academy of Sciences) specifically recruit reviewers with strong opinions to test the scientific strength and balance of their reports. The NAS policy on committee composition and balance²⁰ highlights important considerations associated with perspective, bias, and objectivity.

Independence. In its narrowest sense, independence in a reviewer means that the reviewer was not involved in producing the draft document to be reviewed. However, for peer review of some documents, a broader view of independence is necessary to assure credibility of the process. Reviewers are generally not employed by the agency or office producing the document. As the National Academy of Sciences has stated, “external experts often can be more open, frank, and challenging to the status quo than internal reviewers, who may feel constrained by organizational concerns.”²¹ The Carnegie Commission on Science, Technology, and Government notes that “external science advisory boards serve a critically important function in providing regulatory agencies with expert advice on a range of issues.”²² However, the choice of reviewers requires a case-by-case analysis. Reviewers employed by other federal and state agencies may possess unique or indispensable expertise.

A related issue is whether government-funded scientists in universities and consulting firms have sufficient independence from the federal agencies that support their work to

²⁰ National Academy of Sciences, “Policy and Procedures on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports,” May 2003: Available at: <http://www.nationalacademies.org/coi/index.html>.

²² Carnegie Commission on Science, Technology, and Government, Risk and the Environment: Improving Regulatory Decision Making, Carnegie Commission, New York, 1993: 90.

be appropriate peer reviewers for those agencies.²³ This concern can be mitigated in situations where the scientist initiates the hypothesis to be tested or the method to be developed, which effectively creates a buffer between the scientist and the agency. When an agency awards grants through a competitive process that includes peer review, the agency's potential to influence the scientist's research is limited. As such, when a scientist is awarded a government research grant through an investigator-initiated, peer-reviewed competition, there generally should be no question as to that scientist's ability to offer independent scientific advice to the agency on other projects. This contrasts, for example, to a situation in which a scientist has a consulting or contractual arrangement with the agency or office sponsoring a peer review. Likewise, when the agency and a researcher work together (e.g., through a cooperative agreement) to design or implement a study, there is less independence from the agency. Furthermore, if a scientist has repeatedly served as a reviewer for the same agency, some may question whether that scientist is sufficiently independent from the agency to be employed as a peer reviewer on agency-sponsored projects.

As the foregoing suggests, independence poses a complex set of questions that must be considered by agencies when peer reviewers are selected. In general, agencies shall make an effort to rotate peer review responsibilities across the available pool of qualified reviewers, recognizing that in some cases repeated service by the same reviewer is needed because of essential expertise.

Some agencies have built entire organizations to provide independent scientific advice while other agencies tend to employ ad hoc scientific panels on specific issues.

Respect for the independence of reviewers may be enhanced if an agency collects names of potential reviewers (based on considerations of expertise and reputation for objectivity) from the public, including scientific or professional societies. The Department of Energy's use of the American Society of Mechanical Engineers to identify potential peer reviewers from a variety of different scientific societies provides an example of how

²³ Lars Noah, "Scientific 'Republicanism': Expert Peer Review and the Quest for Regulatory Deliberation, Emory Law Journal, Atlanta, Fall 2000:1066.

professional societies can assist in the development of an independent peer review panel.²⁴

Conflict of Interest. The National Academy of Sciences defines “conflict of interest” as any financial or other interest that conflicts with the service of an individual on the review panel because it could impair the individual’s objectivity or could create an unfair competitive advantage for a person or organization.²⁵ This standard provides a useful benchmark for agencies to consider in selecting peer reviewers. Agencies shall make a special effort to examine prospective reviewers’ potential financial conflicts, including significant investments, consulting arrangements, employer affiliations and grants/contracts. Financial ties of potential reviewers to regulated entities (e.g., businesses), other stakeholders, and regulatory agencies shall be scrutinized when the information being reviewed is likely to be relevant to regulatory policy. The inquiry into potential conflicts goes beyond financial investments and business relationships and includes work as an expert witness, consulting arrangements, honoraria and sources of grants and contracts. To evaluate any real or perceived conflicts of interest with potential reviewers and questions regarding the independence of reviewers, agencies are referred to federal ethics requirements, applicable standards issued by the Office of Government Ethics, and the prevailing practices of the National Academy of Sciences. Specifically, peer reviewers who are federal employees (including special government employees) are subject to federal requirements governing conflicts of interest. See, e.g., 18 U.S.C. § 208; 5 C.F.R. Part 2635 (2004). With respect to reviewers who are not federal employees, agencies shall adopt or adapt the NAS policy for committee selection with respect to evaluating conflicts of interest.²⁶ Both the NAS and the federal government recognize that under certain circumstances some conflict may be unavoidable in order to obtain the necessary expertise. See, e.g., 18 U.S.C. § 208(b)(3); 5 U.S.C. App. § 15 (governing NAS committees). To improve the transparency of the process, when an agency

²⁴ American Society for Mechanical Engineers, Assessment of Technologies Supported by the Office of Science and Technology, Department of Energy: Results of the Peer Review for Fiscal Year 2002, ASME Technical Publishing, Danvers, MA, 2003.

²⁵ National Academy of Sciences, “Policy and Procedures on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports,” May 2003: Available at: <http://www.nationalacademies.org/doi/index.html>.

determines that it is necessary to use a reviewer with a real or perceived conflict of interest, the agency should consider publicly disclosing those conflicts. In such situations, the agency shall inform potential reviewers of such disclosure at the time they are recruited.

Disclosure and Attribution: Anonymous versus Identified

Peer reviewers must have a clear understanding of how their comments will be conveyed to the authors of the document and to the public. When peer review of government reports is considered, the case for transparency is stronger, particularly when the report addresses an issue with significant ramifications for the public and private sectors. The public may not have confidence in the peer review process when the names and affiliations of the peer reviewers are unknown. Without access to the comments of reviewers, the public is incapable of determining whether the government has seriously considered the comments of reviewers and made appropriate revisions. Disclosure of the slate of reviewers and the substance of their comments can strengthen public confidence in the peer review process. It is common at many journals and research funding agencies to disclose annually the slate of reviewers. Moreover, the National Academy of Sciences now discloses the names of its peer reviewers, without disclosing the substance of their comments. The science advisory committees to regulatory agencies typically disclose at least a summary of the comments of reviewers as well as their names and affiliations.

For agency-sponsored peer review conducted under Sections II and III, this Bulletin strikes a compromise by requiring disclosure of the identity of the reviewers, but not public attribution of specific comments to specific reviewers. The agency has considerable discretion in the implementation of this compromise (e.g., summarizing the

²⁶ Ibid.

views of reviewers as a group or disclosing individual reviewer comments without attribution). Whatever approach is employed, the agency must inform reviewers in advance of how it intends to address this issue. Information about a reviewer retrieved from a record filed by the reviewer's name or other identifier may be disclosed only as permitted by the conditions of disclosure enumerated in the Privacy Act, 5 U.S.C. § 552a as amended, and as interpreted in OMB implementing guidance, 40 Fed. Reg. 28,948 (July 9, 1975).

Public Participation

Public comments can be important in shaping expert deliberations. Agencies may decide that peer review should precede an opportunity for public comment to ensure that the public receives the most scientifically strong product (rather than one that may change substantially as a result of peer reviewer suggestions). However, there are situations in which public participation in peer review is an important aspect of obtaining a high- quality product through a credible process. Agencies, however, should avoid open- ended comment periods, which may delay completion of peer reviews and complicate the completion of the final work product.

Public participation can take a variety of forms, including opportunities to provide oral comments before a peer review panel or requests to provide written comments to the peer reviewers. Another option is for agencies to publish a "request for comment" or other notice in which they solicit public comment before a panel of peer reviewers performs its work.

Disposition of Reviewer Comments

A peer review is considered completed once the agency considers and addresses the reviewers' comments. All reviewer comments should be given consideration and be incorporated where relevant and valid. For instance, in the context of risk assessments, the National Academy of Sciences recommends that peer review include a written evaluation made available for public inspection.²⁷ In cases where there is a public panel,

²⁷ National Research Council, Risk Assessment in the Federal Government: Managing the Process, National Academy Press, Washington, D.C., 1983.

the agency should plan publication of the peer review report(s) and the agency's response to peer reviewer comments.

In addition, the credibility of the final scientific report is likely to be enhanced if the public understands how the agency addressed the specific concerns raised by the peer reviewers. Accordingly, agencies should consider preparing a written response to the peer review report explaining: the agency's agreement or disagreement, the actions the agency has undertaken or will undertake in response to the report, and (if applicable) the reasons the agency believes those actions satisfy any key concerns or recommendations in the report.

Adequacy of Prior Peer Review

In light of the broad range of information covered by Section II, agencies are directed to choose a peer review mechanism that is adequate, giving due consideration to the novelty and complexity of the science to be reviewed, the relevance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review.

Publication in a refereed scientific journal may mean that adequate peer review has been performed. However, the intensity of peer review is highly variable across journals. There will be cases in which an agency determines that a more rigorous or transparent review process is necessary. For instance, an agency may determine a particular journal review process did not address questions (e.g., the extent of uncertainty inherent in a finding) that the agency determines should be addressed before disseminating that information. As such, prior peer review and publication is not by itself sufficient grounds for determining that no further review is necessary.

Section III: Peer Review of Highly Influential Scientific Assessments

Whereas Section II leaves most of the considerations regarding the form of the peer review to the agency's discretion, Section III requires a more rigorous form of peer review for highly influential scientific assessments. The requirements of Section II of this Bulletin apply to Section III, but Section III has some additional requirements, which are discussed below. In planning a peer review under Section III, agencies typically will have to devote greater resources and attention to the issues discussed in Section II, i.e., individual versus panel review; timing; scope of the review; selection of reviewers; disclosure and attribution; public participation; and disposition of reviewer comments.

A scientific assessment is considered "highly influential" if the agency or the OIRA Administrator determines that the dissemination could have a potential impact of more than \$500 million in any one year on either the public or private sector or that the dissemination is novel, controversial, or precedent-setting, or has significant interagency interest. One of the ways information can exert economic impact is through the costs or benefits of a regulation based on the disseminated information. The qualitative aspect of this definition may be most useful in cases where it is difficult for an agency to predict the potential economic effect of dissemination. In the context of this Bulletin, it may be either the approach used in the assessment or the interpretation of the information itself that is novel or precedent-setting. Peer review can be valuable in establishing the bounds of the scientific debate when methods or interpretations are a source of controversy among interested parties. If information is covered by Section III, an agency is required to adhere to the peer review procedures specified in Section III.

Section III (2) clarifies that the principal findings, conclusions and recommendations in official reports of the National Academy of Sciences that fall under this Section are generally presumed not to require additional peer review. All other highly influential scientific assessments require a review that meets the requirements of Section III of this Bulletin.

With regard to the selection of reviewers, Section III(3)(a) emphasizes consideration of expertise and balance. As discussed in Section II, expertise refers to the required knowledge, experience and skills required to perform the review whereas balance refers to the need for diversity in scientific perspective and disciplines. We emphasize that the term “balance” here refers not to balancing of stakeholder or political interests but rather to a broad and diverse representation of respected perspectives and intellectual traditions within the scientific community, as discussed in the NAS policy on committee composition and balance.²⁸

Section III (3)(b) instructs agencies to consider barring participation by scientists with a conflict of interest. The conflict of interest standards for Sections II and III of the Bulletin are identical. As discussed under Section II, those peer reviewers who are federal employees, including Special Government Employees, are subject to applicable statutory and regulatory standards for federal employees. For non-government employees, agencies shall adopt or adapt the NAS policy for committee member selection with respect to evaluating conflicts of interest.

Section III (3)(c) instructs agencies to ensure that reviewers are independent of the agency sponsoring the review. Scientists employed by the sponsoring agency are not permitted to serve as reviewers for highly influential scientific assessments. This does not preclude Special Government Employees, such as academics appointed to advisory committees, from serving as peer reviewers. The only exception to this ban would be the rare situation in which a scientist from a different agency of a Cabinet-level department than the agency that is disseminating the scientific assessment has expertise, experience and skills that are essential but cannot be obtained elsewhere. In evaluating the need for this exception, agencies shall use the NAS criteria for assessing the appropriateness of using employees of sponsors (e.g., the government scientist must not have had any part in the development or prior review of the scientific information and must not hold a position of managerial or policy responsibility).

²⁸ National Academy of Sciences, “Policy and Procedures on Committee Composition and Balance and Conflicts of Interest for Committees Used in the Development of Reports,” May 2003: Available at: <http://www.nationalacademies.org/coi/index.html>.

We also considered whether a reviewer can be independent of the agency if that reviewer receives a substantial amount of research funding from the agency sponsoring the review. Research grants that were awarded to the scientist based on investigator-initiated, competitive, peer-reviewed proposals do not generally raise issues of independence. However, significant consulting and contractual relationships with the agency may raise issues of independence or conflict, depending upon the situation.

Section III (3)(d) addresses concerns regarding repeated use of the same reviewer in multiple assessments. Such repeated use should be avoided unless a particular reviewer's expertise is essential. Agencies should rotate membership across the available pool of qualified reviewers. Similarly, when using standing panels of scientific advisors, it is suggested that the agency rotate membership among qualified scientists in order to obtain fresh perspectives and reinforce the reality and perception of independence from the agency.

Section III (4) requires agencies to provide reviewers with sufficient background information, including access to key studies, data and models, to perform their role as peer reviewers. In this respect, the peer review envisioned in Section III is more rigorous than some forms of journal peer review, where the reviewer is often not provided access to underlying data or models. Reviewers shall be informed of applicable access, objectivity, reproducibility and other quality standards under federal information quality laws.

Section III (5) addresses opportunity for public participation in peer review, and provides that the agency shall, wherever possible, provide for public participation. In some cases, an assessment may be so sensitive that it is critical that the agency's assessment achieve a high level of quality before it is publicized. In those situations, a rigorous yet confidential peer review process may be appropriate, prior to public release of the assessment. If an agency decides to make a draft assessment publicly available at the

onset of a peer review process, the agency shall, whenever possible, provide a vehicle for the public to provide written comments, make an oral presentation before the peer reviewers, or both. When written public comments are received, the agency shall ensure that peer reviewers receive copies of comments that address significant scientific issues with ample time to consider them in their review. To avoid undue delay of agency activities, the agency shall specify time limits for public participation throughout the peer review process.

Section III (6) requires that agencies instruct reviewers to prepare a peer review report that describes the nature and scope of their review and their findings and conclusions. The report shall disclose the name of each peer reviewer and a brief description of his or her organizational affiliation, credentials and relevant experiences. The peer review report should either summarize the views of the group as a whole (including any dissenting views) or include a verbatim copy of the comments of the individual reviewers (with or without attribution of specific views to specific names). The agency shall also prepare a written response to the peer review report, indicating whether the agency agrees with the reviewers and what actions the agency has taken or plans to take to address the points made by reviewers. The agency is required to disseminate the peer review report and the agency's response to the report on the agency's website, including all the materials related to the peer review such as the charge statement, peer review report, and agency response to the review. If the scientific information is used to support a final rule then, where practicable, the peer review report shall be made available to the public with enough time for the public to consider the implications of the peer review report for the rule being considered.

Section III (7) authorizes but does not require an agency to commission an entity independent of the agency to select peer reviewers and/or manage the peer review process in accordance with this Bulletin. The entity may be a scientific or professional society, a firm specializing in peer review, or a non-profit organization with experience in peer review.

Section IV: Alternative Procedures

Peer review as described in this Bulletin is only one of many procedures that agencies can employ to ensure an appropriate degree of pre-dissemination quality of influential scientific information. For example, Congress has assigned the NAS a special role in advising the federal government on scientific and technical issues. The procedures of the NAS are generally quite rigorous, and thus agencies should presume that major findings, conclusions, and recommendations of NAS reports meet the performance standards of this Bulletin.

As an alternative to complying with Sections II and III of this Bulletin, an agency may instead (1) rely on scientific information produced by the National Academy of Sciences, (2) commission the National Academy of Sciences to peer review an agency draft scientific information product, or (3) employ an alternative procedure or set of procedures, specifically approved by the OIRA Administrator in consultation with the Office of Science and Technology Policy (OSTP), that ensures that the scientific information product meets applicable information-quality standards.

An example of an alternative procedure is to commission a respected third party other than the NAS (e.g., the Health Effects Institute or the National Commission on Radiation Protection and Measurement) to conduct an assessment or series of related assessments. Another example of an alternative set of procedures is the three-part process used by the National Institutes of Health (NIH) to generate scientific guidance. Under that process, a scientific proposal or white paper is generated by a working group composed of external, independent scientific experts; that paper is then forwarded to a separate external scientific council, which then makes recommendations to the agency. The agency, in turn, decides whether to adopt and/or modify the proposal. For large science agencies that have diverse research portfolios and do not have significant regulatory responsibilities, such as NIH, an acceptable alternative would be to allow scientists from one part of the agency (for example, an NIH institute) to participate in the review of documents prepared by another part of the agency, as long as the head of the agency

confirms in writing that each of the reviewers meets the NAS criteria relating to the appropriateness of using employees of sponsors (e.g., the government scientist must not have had any part in the development or prior review of the scientific information and must not hold a position of managerial or policy responsibility). The purpose of Section IV is to encourage these types of innovation in the methods used to ensure pre- dissemination quality control of influential scientific information.

The mere existence of a public comment process (e.g., notice-and-comment procedures under the Administrative Procedure Act) does not constitute adequate peer review or an “alternative process,” because it does not assure that qualified, impartial specialists in relevant fields have performed a critical evaluation of the agency’s draft product.²⁹

Section V: Peer Review Planning

Section V requires agencies to begin a systematic process of peer review planning for influential scientific information (including highly influential scientific assessments) that the agency plans to disseminate in the foreseeable future. A key feature of this planning process is a web-accessible listing of forthcoming influential scientific disseminations (i.e., an agenda) that is regularly updated by the agency. By making these plans publicly available, agencies will be able to gauge the extent of public interest in the peer review process for influential scientific information, including highly influential scientific assessments. These web-accessible agendas can also be used by the public to monitor agency compliance with this Bulletin.

Each entry on the agenda shall include a preliminary title of the planned report, a short paragraph describing the subject and purpose of the planned report, and an agency contact person. The agency shall provide its prediction regarding whether the dissemination will be “influential scientific information” or a “highly influential scientific assessment,” as the designation can influence the type of peer review to be undertaken.

²⁹ William W. Lowrance, *Modern Science and Human Values*, Oxford University Press, New York, NY 1985: 86.

The agency shall discuss the timing of the peer review, as well as the use of any deferrals. Agencies shall include entries in the agenda for influential scientific information, including highly influential scientific assessments, for which the Bulletin's requirements have been deferred or waived. If the agency, in consultation with the OIRA Administrator, has determined that it is appropriate to use a Section IV "alternative procedure" for a specific dissemination, a description of that alternative procedure shall be included in the agenda.

Furthermore, for each entry on the agenda, the agency shall describe the peer review plan. Each peer review plan shall include: (i) a paragraph including the title, subject and purpose of the planned report, as well as an agency contact to whom inquiries may be directed to learn the specifics of the plan; (ii) whether the dissemination is likely to be influential scientific information or a highly influential scientific assessment; (iii) the timing of the review (including deferrals); (iv) whether the review will be conducted through a panel or individual letters (or whether an alternative procedure will be exercised); (v) whether there will be opportunities for the public to comment on the work product to be peer reviewed, and if so, how and when these opportunities will be provided; (vi) whether the agency will provide significant and relevant public comments to the peer reviewers before they conduct their review; (vii) the anticipated number of reviewers (3 or fewer; 4-10; or more than 10); (viii) a succinct description of the primary disciplines or expertise needed in the review; (ix) whether reviewers will be selected by the agency or by a designated outside organization; and (x) whether the public, including scientific or professional societies, will be asked to nominate potential peer reviewers.

The agency shall provide a link from the agenda to each document made public pursuant to this Bulletin. Agencies shall link their peer review agendas to the U.S. Government's official web portal: firstgov at <http://www.FirstGov.gov>

Agencies should update their peer review agendas at least every six months. However, in some cases -- particularly for highly influential scientific assessments and other particularly important information -- more frequent updates of existing entries on the agenda, or the addition of new entries to the agenda, may be warranted. When new

entries are added to the agenda of forthcoming reports and other information, the public should be provided with sufficient time to comment on the agency's peer review plan for that report or product. Agencies shall consider public comments on the peer review plan. Agencies are encouraged to offer a listserve or similar mechanism for members of the public who would like to be notified by email each time an agency's peer review agenda has been updated.

The peer review planning requirements of this Bulletin are designed to be implemented in phases. Specifically, the planning requirements of the Bulletin will go into effect for documents subject to Section III of the Bulletin (highly influential scientific assessments) six months after publication. However, the planning requirements for documents subject to Section II of the Bulletin do not go into effect until one year after publication. It is expected that agency experience with the planning requirements of the Bulletin for the smaller scope of documents encompassed in Section III will be used to inform implementation of these planning requirements for the larger scope of documents covered under Section II.

Section VI: Annual Report

Each agency shall prepare an annual report that summarizes key decisions made pursuant to this Bulletin. In particular, each agency should provide to OIRA the following: 1) the number of peer reviews conducted subject to the Bulletin (i.e., for influential scientific information and highly influential scientific assessments); 2) the number of times alternative procedures were invoked; 3) the number of times waivers or deferrals were invoked (and in the case of deferrals, the length of time elapsed between the deferral and the peer review); 4) any decision to appoint a reviewer pursuant to any exception to the applicable independence or conflict of interest standards of the Bulletin, including determinations by the Secretary or Deputy Secretary pursuant to Section III (3) (c); 5) the number of peer review panels that were conducted in public and the number that allowed public comment; 6) the number of public comments provided on the agency's peer

review plans; and 7) the number of peer reviewers that the agency used that were recommended by professional societies.

Section VII: Certification in the Administrative Record

If an agency relies on influential scientific information or a highly influential scientific assessment subject to the requirements of this Bulletin in support of a regulatory action, the agency shall include in the administrative record for that action a certification that explains how the agency has complied with the requirements of this Bulletin and the Information Quality Act. Relevant materials are to be placed in the administrative record.

Section VIII: Safeguards, Deferrals, and Waivers

Section VIII recognizes that individuals serving as peer reviewers have a privacy interest in information about themselves that the government maintains and retrieves by name or identifier from a system of records. To the extent information about a reviewer (name, credential, affiliation) will be disclosed along with his/her comments or analysis, the agency must comply with the requirements of the Privacy Act, 5 U.S.C. 552a, as amended, and OMB Circular A-130, Appendix I, 61 Fed. Reg. 6428 (February 20, 1996) to establish appropriate routine uses in a published System of Records Notice. Furthermore, the peer review must be conducted in a manner that respects confidential business information as well as intellectual property.

Section VIII also allows for a deferral or waiver of the requirements of the Bulletin where necessary. Specifically, the agency head may waive or defer some or all of the peer review requirements of Sections II or III of this Bulletin if there is a compelling rationale for waiver or deferral. Waivers will seldom be warranted under this provision because the Bulletin already provides significant safety valves, such as: the exemptions provided in Section IX, including the exemption for time-sensitive health and safety information;

the authorization for alternative procedures in Section IV; and the overall flexibility provided for peer reviews of influential scientific information under Section II. Nonetheless, we have included this waiver and deferral provision to ensure needed flexibility in unusual and compelling situations not otherwise covered by the exemptions to the Bulletin, such as situations where unavoidable legal deadlines prevent full compliance with the Bulletin before information is disseminated. Deadlines found in consent decrees agreed to by agencies after the Bulletin is issued will not ordinarily warrant waiver of the Bulletin's requirements because those deadlines should be negotiated to permit time for all required procedures, including peer review. In addition, when an agency is unavoidably up against a deadline, deferral of some or all requirements of the Bulletin (as opposed to outright waiver of all of them) is the most appropriate accommodation between the need to satisfy immovable deadlines and the need to undertake proper peer review. If the agency head defers any of the peer review requirements prior to dissemination, peer review should be conducted as soon as practicable thereafter.

Section IX: Exemptions

There are a variety of situations where agencies need not conduct peer review under this Bulletin. These include, for example, disseminations of sensitive information related to certain national security, foreign affairs, or negotiations involving international treaties and trade where compliance with this Bulletin would interfere with the need for secrecy or promptness.

This Bulletin does not cover official disseminations that arise in adjudications and permit proceedings, unless the agency determines that peer review is practical and appropriate and that the influential dissemination is scientifically or technically novel (i.e., a major change in accepted practice) or likely to have precedent-setting influence on future adjudications or permit proceedings. This exclusion is intended to cover, among other things, licensing, approval and registration processes for specific product development activities as well as site-specific activities. The determination as to whether peer review

is practical and appropriate is left to the discretion of the agency. While this Bulletin is not broadly applicable to adjudications, agencies are encouraged to hold peer reviews of scientific assessments supporting adjudications to the same technical standards as peer reviews covered by the Bulletin, including transparency and disclosure of the data and models underlying the assessments. Protections apply to confidential business information.

The Bulletin does not cover time-sensitive health and safety disseminations, for example, a dissemination based primarily on data from a recent clinical trial that was adequately peer reviewed before the trial began. For this purpose, “health” includes public health, or plant or animal infectious diseases.

This Bulletin covers original data and formal analytic models used by agencies in Regulatory Impact Analyses (RIAs). However, the RIA documents themselves are already reviewed through an interagency review process under E.O. 12866 that involves application of the principles and methods defined in OMB Circular A-4. In that respect, RIAs are excluded from coverage by this Bulletin, although agencies are encouraged to have RIAs reviewed by peers within the government for adequacy and completeness.

The Bulletin does not cover accounting, budget, actuarial, and financial information including that which is generated or used by agencies that focus on interest rates, banking, currency, securities, commodities, futures, or taxes.

Routine statistical information released by federal statistical agencies (e.g., periodic demographic and economic statistics) and analyses of these data to compute standard indicators and trends (e.g., unemployment and poverty rates) is excluded from this Bulletin.

The Bulletin does not cover information disseminated in connection with routine rules that materially alter entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof.

If information is disseminated pursuant to an exemption to this Bulletin, subsequent disseminations are not automatically exempted. For example, if influential scientific information is first disseminated in the course of an exempt agency adjudication, but is later disseminated in the context of a non-exempt rulemaking, the subsequent dissemination will be subject to the requirements of this Bulletin even though the first dissemination was not.

Section X: OIRA and OSTP Responsibilities

OIRA, in consultation with OSTP, is responsible for overseeing agency implementation of this Bulletin. In order to foster learning about peer review practices across agencies, OIRA and OSTP shall form an interagency workgroup on peer review that meets regularly, discusses progress and challenges, and recommends improvements to peer review practices.

Section XI: Effective Date and Existing Law

The requirements of this Bulletin, with the exception of Section V, apply to information disseminated on or after six months after publication of this Bulletin. However, the Bulletin does not apply to information that is already being addressed by an agency- initiated peer review process (e.g., a draft is already being reviewed by a formal scientific advisory committee established by the agency). An existing peer review mechanism mandated by law should be implemented by the agency in a manner as consistent as possible with the practices and procedures outlined in this Bulletin. The requirements of Section V apply to “highly influential scientific assessments,” as designated in Section III of the Bulletin, within six months of publication of the final Bulletin. The requirements in Section V apply to documents subject to Section II of the Bulletin one year after publication of the final Bulletin.

Section XII: Judicial Review

This Bulletin is intended to improve the internal management of the Executive Branch and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, against the United States, its agencies or other entities, its officers or employees, or any other person.

Bulletin for Peer Review

I. Definitions.

For purposes of this Bulletin --

1. the term “Administrator” means the Administrator of the Office of Information and Regulatory Affairs in the Office of Management and Budget (OIRA);
2. the term “agency” has the same meaning as in the Paperwork Reduction Act, 44 U.S.C. § 3502(1);
3. the term “dissemination” means agency initiated or sponsored distribution of information to the public (see 5 C.F.R. 1320.3(d) (definition of “Conduct or Sponsor”)).

Dissemination does not include distribution limited to government employees or agency contractors or grantees; intra- or inter-agency use or sharing of government information; or responses to requests for agency records under the Freedom of Information Act, the Privacy Act, the Federal Advisory Committee Act, the Government Performance and Results Act or similar law. This definition also excludes distribution limited to correspondence with individuals or persons, press releases, archival records, public filings, subpoenas and adjudicative processes. The term “dissemination” also excludes information distributed for peer review in compliance with this Bulletin, provided that the distributing agency includes a clear disclaimer on the information as follows: “THIS INFORMATION IS DISTRIBUTED SOLELY FOR THE PURPOSE OF PRE-DISSEMINATION PEER REVIEW UNDER APPLICABLE INFORMATION

QUALITY GUIDELINES. IT HAS NOT BEEN FORMALLY DISSEMINATED BY [THE AGENCY]. IT DOES NOT REPRESENT AND SHOULD NOT BE CONSTRUED TO REPRESENT ANY AGENCY DETERMINATION OR POLICY.”

For the purposes of this Bulletin, “dissemination” excludes research produced by government-funded scientists (e.g., those supported extramurally or intramurally by federal agencies or those working in state or local governments with federal support) if that information does not represent the views of an agency. To qualify for this exemption, the information should display a clear disclaimer that “the findings and conclusions in this report are those of the author(s) and do not necessarily represent the views of the funding agency”;

4. the term “Information Quality Act” means Section 515 of Public Law 106-554 (Pub. L. No. 106-554, § 515, 114 Stat. 2763, 2763A-153-154 (2000));
5. the term “scientific information” means factual inputs, data, models, analyses, technical information, or scientific assessments based on the behavioral and social sciences, public health and medical sciences, life and earth sciences, engineering, or physical sciences. This includes any communication or representation of knowledge such as facts or data, in any medium or form, including textual, numerical, graphic, cartographic, narrative, or audiovisual forms. This definition includes information that an agency disseminates from a web page, but does not include the provision of hyperlinks to information that others disseminate. This definition does not include opinions, where the agency’s presentation makes clear that what is being offered is someone’s opinion rather than fact or the agency’s views;
6. the term “influential scientific information” means scientific information the agency reasonably can determine will have or does have a clear and substantial impact on important public policies or private sector decisions; and
7. the term “scientific assessment” means an evaluation of a body of scientific or technical knowledge, which typically synthesizes multiple factual inputs, data, models, assumptions, and/or applies best professional judgment to bridge uncertainties in the available information. These assessments include, but are not limited to, state-of-science reports; technology assessments; weight-of-evidence analyses; meta-analyses; health,

safety, or ecological risk assessments; toxicological characterizations of substances; integrated assessment models; hazard determinations; or exposure assessments.

II. Peer Review of Influential Scientific Information.

1. In General: To the extent permitted by law, each agency shall conduct a peer review on all influential scientific information that the agency intends to disseminate. Peer reviewers shall be charged with reviewing scientific and technical matters, leaving policy determinations for the agency. Reviewers shall be informed of applicable access, objectivity, reproducibility and other quality standards under the federal laws governing information access and quality.
2. Adequacy of Prior Peer Review: For information subject to this section of the Bulletin, agencies need not have further peer review conducted on information that has already been subjected to adequate peer review. In determining whether prior peer review is adequate, agencies shall give due consideration to the novelty and complexity of the science to be reviewed, the importance of the information to decision making, the extent of prior peer reviews, and the expected benefits and costs of additional review. Principal findings, conclusions and recommendations in official reports of the National Academy of Sciences are generally presumed to have been adequately peer reviewed.
3. Selection of Reviewers:
 - (a) Expertise and Balance: Peer reviewers shall be selected based on expertise, experience and skills, including specialists from multiple disciplines, as necessary. The group of reviewers shall be sufficiently broad and diverse to fairly represent the relevant scientific and technical perspectives and fields of knowledge. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.
 - (b) Conflicts: The agency – or the entity selecting the peer reviewers – shall (i) ensure that those reviewers serving as federal employees (including special government employees) comply with applicable federal ethics requirements; (ii) in selecting peer reviewers who are not government employees, adopt or adapt the National Academy of Sciences policy for committee selection with respect to evaluating the potential for

conflicts (e.g., those arising from investments; agency, employer, and business affiliations; grants, contracts and consulting income). For scientific information relevant to specific regulations, the agency shall examine a reviewer's financial ties to regulated entities (e.g., businesses), other stakeholders, and the agency.

(c) Independence: Peer reviewers shall not have participated in development of the work product. Agencies are encouraged to rotate membership on standing panels across the pool of qualified reviewers. Research grants that were awarded to scientists based on investigator-initiated, competitive, peer-reviewed proposals generally do not raise issues as to independence or conflicts.

4. Choice of Peer Review Mechanism: The choice of a peer review mechanism (for example, letter reviews or ad hoc panels) for influential scientific information shall be based on the novelty and complexity of the information to be reviewed, the importance of the information to decision making, the extent of prior peer review, and the expected benefits and costs of review, as well as the factors regarding transparency described in II(5).
5. Transparency: The agency -- or entity managing the peer review -- shall instruct peer reviewers to prepare a report that describes the nature of their review and their findings and conclusions. The peer review report shall either (a) include a verbatim copy of each reviewer's comments (either with or without specific attributions) or (b) represent the views of the group as a whole, including any disparate and dissenting views. The agency shall disclose the names of the reviewers and their organizational affiliations in the report. Reviewers shall be notified in advance regarding the extent of disclosure and attribution planned by the agency. The agency shall disseminate the final peer review report on the agency's website along with all materials related to the peer review (any charge statement, the peer review report, and any agency response). The peer review report shall be discussed in the preamble to any related rulemaking and included in the administrative record for any related agency action.
6. Management of Peer Review Process and Reviewer Selection: The agency may commission independent entities to manage the peer review process, including the selection of peer reviewers, in accordance with this Bulletin.

III. Additional Peer Review Requirements for Highly Influential Scientific Assessments.

1. Applicability: This section applies to influential scientific information that the agency or the Administrator determines to be a scientific assessment that:
 - (i) could have a potential impact of more than \$500 million in any year, or
 - (ii) is novel, controversial, or precedent-setting or has significant interagency interest.
2. In General: To the extent permitted by law, each agency shall conduct peer reviews on all information subject to this section. The peer reviews shall satisfy the requirements of Section II of this Bulletin, as well as the additional requirements found in this section. Principal findings, conclusions and recommendations in official reports of the National Academy of Sciences that fall under this section are generally presumed not to require additional peer review.
3. Selection of Reviewers:
 - (a) Expertise and Balance: Peer reviewers shall be selected based on expertise, experience and skills, including specialists from multiple disciplines, as necessary. The group of reviewers shall be sufficiently broad and diverse to fairly represent the relevant scientific and technical perspectives and fields of knowledge. Agencies shall consider requesting that the public, including scientific and professional societies, nominate potential reviewers.
 - (b) Conflicts: The agency – or the entity selecting the peer reviewers – shall (i) ensure that those reviewers serving as federal employees (including special government employees) comply with applicable federal ethics requirements; (ii) in selecting peer reviewers who are not government employees, adopt or adapt the National Academy of Sciences’ policy for committee selection with respect to evaluating the potential for conflicts (e.g., those arising from investments; agency, employer, and business affiliations; grants, contracts and consulting income). For scientific assessments relevant

to specific regulations, a reviewer's financial ties to regulated entities (e.g., businesses), other stakeholders, and the agency shall be examined.

(c) Independence: In addition to the requirements of Section II (3)(c), which shall apply to all reviews conducted under Section III, the agency -- or entity selecting the reviewers -- shall bar participation of scientists employed by the sponsoring agency unless the reviewer is employed only for the purpose of conducting the peer review (i.e., special government employees). The only exception to this bar would be the rare case where the agency determines, using the criteria developed by NAS for evaluating use of "employees of sponsors," that a premier government scientist is (a) not in a position of management or policy responsibility and (b) possesses essential expertise that cannot be obtained elsewhere. Furthermore, to be eligible for this exception, the scientist must be employed by a different agency of the Cabinet-level department than the agency that is disseminating the scientific information. The agency's determination shall be documented in writing and approved, on a non-delegable basis, by the Secretary or Deputy Secretary of the department prior to the scientist's appointment.

(d) Rotation: Agencies shall avoid repeated use of the same reviewer on multiple assessments unless his or her participation is essential and cannot be obtained elsewhere.

4. Information Access: The agency -- or entity managing the peer review -- shall provide the reviewers with sufficient information -- including background information about key studies or models -- to enable them to understand the data, analytic procedures, and assumptions used to support the key findings or conclusions of the draft assessment.
5. Opportunity for Public Participation: Whenever feasible and appropriate, the agency shall make the draft scientific assessment available to the public for comment at the same time it is submitted for peer review (or during the peer review process) and sponsor a public meeting where oral presentations on scientific issues can be made to the peer reviewers by interested members of the public. When employing a public comment process as part of the peer review, the agency shall, whenever practical, provide peer reviewers with access to public comments that address significant scientific or technical issues. To ensure that public participation does not unduly delay agency activities, the agency shall clearly specify time limits for public participation throughout the peer review process.

6. Transparency: In addition to the requirements specified in II(5), which shall apply to all reviews conducted under Section III, the peer review report shall include the charge to the reviewers and a short paragraph on both the credentials and relevant experiences of each peer reviewer. The agency shall prepare a written response to the peer review report explaining (a) the agency's agreement or disagreement with the views expressed in the report, (b) the actions the agency has undertaken or will undertake in response to the report, and (c) the reasons the agency believes those actions satisfy the key concerns stated in the report (if applicable). The agency shall disseminate its response to the peer review report on the agency's website with the related material specified in Section II(5).
7. Management of Peer Review Process and Reviewer Selection: The agency may commission independent entities to manage the peer review process, including the selection of peer reviewers, in accordance with this Bulletin.

IV. Alternative Procedures.

As an alternative to complying with Sections II and III of this Bulletin, an agency may instead: (i) rely on the principal findings, conclusions and recommendations of a report produced by the National Academy of Sciences; (ii) commission the National Academy of Sciences to peer review an agency's draft scientific information; or (iii) employ an alternative scientific procedure or process, specifically approved by the Administrator in consultation with the Office of Science and Technology Policy (OSTP), that ensures the agency's scientific information satisfies applicable information quality standards. The alternative procedure(s) may be applied to a designated report or group of reports.

V. Peer Review Planning.

1. Peer Review Agenda: Each agency shall post on its website, and update at least every six months, an agenda of peer review plans. The agenda shall describe all planned and ongoing influential scientific information subject to this Bulletin. The agency shall provide a link from the agenda to each document that has been made public pursuant to

this Bulletin. Agencies are encouraged to offer a listserve or similar mechanism to alert interested members of the public when entries are added or updated.

2. Peer Review Plans: For each entry on the agenda the agency shall describe the peer review plan. Each peer review plan shall include: (i) a paragraph including the title, subject and purpose of the planned report, as well as an agency contact to whom inquiries may be directed to learn the specifics of the plan; (ii) whether the dissemination is likely to be influential scientific information or a highly influential scientific assessment; (iii) the timing of the review (including deferrals); (iv) whether the review will be conducted through a panel or individual letters (or whether an alternative procedure will be employed); (v) whether there will be opportunities for the public to comment on the work product to be peer reviewed, and if so, how and when these opportunities will be provided; (vi) whether the agency will provide significant and relevant public comments to the peer reviewers before they conduct their review; (vii) the anticipated number of reviewers (3 or fewer; 4-10; or more than 10); (viii) a succinct description of the primary disciplines or expertise needed in the review; (ix) whether reviewers will be selected by the agency or by a designated outside organization; and (x) whether the public, including scientific or professional societies, will be asked to nominate potential peer reviewers.
3. Public Comment: Agencies shall establish a mechanism for allowing the public to comment on the adequacy of the peer review plans. Agencies shall consider public comments on peer review plans.

VI. Annual Reports.

Each agency shall provide to OIRA, by December 15 of each year, a summary of the peer reviews conducted by the agency during the fiscal year. The report should include the following: 1) the number of peer reviews conducted subject to the Bulletin (i.e., for influential scientific information and highly influential scientific assessments); 2) the number of times alternative procedures were invoked; 3) the number of times waivers or deferrals were invoked (and in the case of deferrals, the length of time elapsed between the deferral and the peer review); 4) any decision to appoint a reviewer pursuant to any exception to the applicable independence or conflict of interest standards of the Bulletin,

including determinations by the Secretary pursuant to Section III(3)(c); 5) the number of peer review panels that were conducted in public and the number that allowed public comment; 6) the number of public comments provided on the agency's peer review plans; and 7) the number of peer reviewers that the agency used that were recommended by professional societies.

VII. Certification in the Administrative Record.

If an agency relies on influential scientific information or a highly influential scientific assessment subject to this Bulletin to support a regulatory action, it shall include in the administrative record for that action a certification explaining how the agency has complied with the requirements of this Bulletin and the applicable information quality guidelines. Relevant materials shall be placed in the administrative record.

XIII. Safeguards, Deferrals, and Waivers.

1. Privacy: To the extent information about a reviewer (name, credentials, affiliation) will be disclosed along with his/her comments or analysis, the agency shall comply with the requirements of the Privacy Act, 5 U.S.C. § 522a as amended, and OMB Circular A-130, Appendix I, 61 Fed. Reg. 6428 (February 20, 1996) to establish appropriate routine uses in a published System of Records Notice.
2. Confidentiality: Peer review shall be conducted in a manner that respects (i) confidential business information and (ii) intellectual property.
3. Deferral and Waiver: The agency head may waive or defer some or all of the peer review requirements of Sections II and III of this Bulletin where warranted by a compelling rationale. If the agency head defers the peer review requirements prior to dissemination, peer review shall be conducted as soon as practicable.

IX. Exemptions.

Agencies need not have peer review conducted on information that is:

1. related to certain national security, foreign affairs, or negotiations involving international trade or treaties where compliance with this Bulletin would interfere with the need for secrecy or promptness;
2. disseminated in the course of an individual agency adjudication or permit proceeding (including a registration, approval, licensing, site-specific determination), unless the agency determines that peer review is practical and appropriate and that the influential dissemination is scientifically or technically novel or likely to have precedent-setting influence on future adjudications and/or permit proceedings;
3. a health or safety dissemination where the agency determines that the dissemination is time-sensitive (e.g., findings based primarily on data from a recent clinical trial that was adequately peer reviewed before the trial began);
4. an agency regulatory impact analysis or regulatory flexibility analysis subject to interagency review under Executive Order 12866, except for underlying data and analytical models used;
5. routine statistical information released by federal statistical agencies (e.g., periodic demographic and economic statistics) and analyses of these data to compute standard indicators and trends (e.g., unemployment and poverty rates);
6. accounting, budget, actuarial, and financial information, including that which is generated or used by agencies that focus on interest rates, banking, currency, securities, commodities, futures, or taxes; or
7. information disseminated in connection with routine rules that materially alter entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof.

X. Responsibilities of OIRA and OSTP.

OIRA, in consultation with OSTP, shall be responsible for overseeing implementation of this Bulletin. An interagency group, chaired by OSTP and OIRA, shall meet periodically to foster better understanding about peer review practices and to assess progress in implementing this Bulletin.

XI. Effective Date and Existing Law.

The requirements of this Bulletin, with the exception of those in Section V (Peer Review Planning), apply to information disseminated on or after six months following publication of this Bulletin, except that they do not apply to information for which an agency has already provided a draft report and an associated charge to peer reviewers. Any existing peer review mechanisms mandated by law shall be employed in a manner as consistent as possible with the practices and procedures laid out herein. The requirements in Section V apply to “highly influential scientific assessments,” as designated in Section III of this Bulletin, within six months of publication of this Bulletin. The requirements in Section V apply to documents subject to Section II of this Bulletin one year after publication of this Bulletin.

XII. Judicial Review.

This Bulletin is intended to improve the internal management of the executive branch, and is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity, against the United States, its agencies or other entities, its officers or employees, or any other person.

APPENDIX C. OVERVIEW OF THE AGENCY'S GENERAL ASSESSMENT FACTORS

In 2003, the Agency published, *A Summary of General Assessment Factors for Evaluating the Quality of Scientific and Technical Information*, in an effort to enhance the transparency about EPA's quality expectations for information that is voluntarily submitted to, or gathered, or generated, by the Agency for various purposes. The *Assessment Factors* document is intended to inform information-generating scientists about quality issues that should appropriately be taken into consideration at the time information is generated. It is also an additional resource for Agency staff as they evaluate the quality and relevance of information, regardless of source. The general assessment factors are drawn from the Agency's existing information quality systems, practices and guidelines that describe the types of considerations EPA takes into account when evaluating the quality and relevance of scientific and technical information used in support of Agency actions. The document is intended to raise the awareness of the information-generating public about EPA's ongoing interest in ensuring and enhancing the quality of information available for Agency use.

When evaluating the quality and relevance of scientific and technical information, the considerations that the Agency typically takes into account can be characterized by five general assessment factors:

- **Soundness** -The extent to which the scientific and technical procedures, measures, methods or models employed to generate the information are reasonable for, and consistent with, the intended application.
- **Applicability and Utility** -The extent to which the information is relevant for the Agency's intended use.
- **Clarity and Completeness** -The degree of clarity and completeness with which the data, assumptions, methods, quality assurance, sponsoring organizations and analyses employed to generate the information are documented.
- **Uncertainty and Variability** -The extent to which the variability and uncertainty (quantitative and qualitative) in the information or in the procedures, measures, methods or models are evaluated and characterized.
- **Evaluation and Review** -The extent of independent verification, validation and peer review of the information or of the procedures, measures, methods or models.

These assessment factors reflect the most salient features of EPA's existing information quality policies and guidelines.

For further information, please visit <http://www2.epa.gov/osa/summary-general-assessment-factors-evaluating-quality-scientific-and-technical-information>.

APPENDIX D. SOUND SCIENCE AND PEER REVIEW IN RULEMAKING POLICY

In response to several provisions of the December 2004, OMB Bulletin Final Information Quality Bulletin for Peer Review, the Office of Policy (formerly known as the Office of Policy, Economics, and Innovation [OPEI]) created conditional peer review template language for the preambles to proposed and final rules (Attachment A). This language should be used by rulewriters in the preamble of regulations that rely on influential scientific information or a highly influential scientific assessment, which are two categories of information defined in Section 3.2 of this Handbook.

For proposed and final regulations that rely on influential scientific information or a highly influential scientific assessment, rulewriters should use the template as a model to discuss peer review in the preamble where appropriate. In addition, peer review leaders should communicate with rulewriters and workgroup chairs to ensure that all appropriate peer review material is included in the docket, and that template language is included in the preamble.

The Office of Policy also revised the Action Memorandum Framework to include a discussion of peer review for influential scientific information or a highly influential scientific assessment (Attachment B).

Peer Review (Conditional Template)

Read this first (but **DO NOT** insert it in your preamble):

The OMB Final Information Quality Bulletin for Peer Review directs EPA to include a discussion of the peer review report and how the Agency complied with the provisions of the Bulletin in the preamble of rulemakings that are supported by influential scientific information or highly influential scientific assessments. Peer review reports should either (a) include a verbatim copy of each reviewer's comments (either with or without specific attributions) or (b) represent the views of the group as a whole, including any disparate and dissenting views. The Agency should disclose the names of the reviewers and their organizational affiliations in the report and should notify the reviewers in advance regarding the extent of the disclosure and attribution planned by the Agency. You should ensure that the peer review report is placed in the docket to comply with the OMB Bulletin.

Use this template if your proposed or final rule is based on a work product containing influential scientific information or a highly influential scientific assessment. This language should appear in the Supplementary Information section of regulatory preambles under General Information. You may want to include the language under the heading:

Did EPA conduct a peer review before issuing this notice?

II PROPOSED & FINAL ACTIONS: If you used a highly influential scientific assessment or influential scientific information to support this rulemaking, insert this into the preamble of your proposed or final rule, advanced notice of proposed rulemaking, or other substantive action:

This regulatory action was supported by **[influential scientific information or a highly influential scientific assessment]**. Therefore, EPA conducted a peer review in accordance with OMB's Final Information Quality Bulletin for Peer Review. **[Insert a brief description of the peer review process along with any other relevant information.]** The peer review report is located in the docket for this action. According to the report, **[insert a brief discussion of the peer review report. For more information about the peer review report, see the Peer Review Handbook.]**

ATTACHMENT B

Guidelines and Template for Action Memoranda Accompanying Regulatory Packages

(Updated 10/05/2011)

Background

This guidance and template focuses only on those action memoranda prepared for the Administrator. You may or may not be asked by your program office to produce similar memos for actions signed by a delegated official other than the Administrator, but this guidance and template do not cover such instances. Speak with your program or regional office's Regulatory Steering Committee (RSC) member to learn what office-specific procedures may exist.

An action memorandum should be included with all regulatory packages brought to the Administrator for signature. Also, a copy of the draft memorandum should be included as part of 1) the Final Agency Review (FAR) package that is circulated to participating offices for final review and 2) the package that is submitted to the Office of Policy (OP) to initiate review by the Office of Management and Budget (OMB). The action memorandum provides a formal communication between the recommending official and the Administrator. It also offers a succinct rationale for the action, and provides a plain English explanation of the action in order to inform the Administrator's decision and help in future communications of the rule to the public and Congress. The memo should be signed by the recommending official [usually the Assistant Administrator (AA)] and should receive the personal attention of the recommending official.

Guidelines for Using This Template

Instructions for each section of an action memorandum are provided within the template below. The template is already formatted according to the *Correspondence Manual's* guidance, and you should be able to copy and paste the entire template into a new Microsoft Word document to begin creating your action memorandum. Please be aware that formatting may or may not be altered when you copy the template into another document. Carefully read the tips below to understand how your memo should be formatted.

As with other Action Development Process (ADP) guidance and templates, template text provided herein that appears in regular font and black ink should be inserted into your document without significant changes. Instructions on additional text to insert appear as bolded blue text in square brackets [like this]. Text that appears within blue curly brackets {like this} is optional to include and may be omitted without further consultation. Once you insert the appropriate text, please remove the brackets, instructions, color and unnecessary formatting from your document.

As indicated by the use of non-mandatory language such as "should," "recommend" and "may," this document provides recommendations and does not impose any legally binding requirements. Programs may include information on additional topics if they are relevant to a given action (e.g., information quality issues).

While preparing your action memorandum, you should follow these tips:

- Keep your memo to 4 pages; use attachments if you need to include longer descriptions.

- Use plain English. Provide a clear understanding of the action being taken and its impact; you should refrain from copying technical language from your action’s preamble or regulatory text.
- In the header or footer of each page, insert this reminder: Internal, Deliberative Document – Do Not Cite, Quote or Distribute.
- Follow EPA’s *Correspondence Manual* (<http://intranet.epa.gov/agcyintr/manual/>) guidance on:
 - Usage of “agency” and “EPA”: Use “U.S. Environmental Protection Agency” as the first reference and “EPA” as the second reference. Use a lowercase “agency” in such references when it is not used as part of the full formal name of the agency.
 - Contractions: Do not use them.
 - Printing: Double-sided.
 - Ink: Print in black ink when printing. Signing officials may sign in blue or black ink. No other colors for official correspondence, aside from whatever colors may be on your letterhead.
 - Typeface:
 - Font: 12 point, Times New Roman.
 - Spacing:
 - Lines should be single spaced, but leave one blank line between each paragraph. For headings, one blank line should be above the heading and zero blank lines should be below the heading.
 - One space between each sentence and all punctuation marks.
 - Indentation: Do not indent the first line of a paragraph.
 - Margins:
 - 0.75-inch on all four sides.
 - Align left for normal text. Do not center, justify or right-align. You may deviate from left justification when formatting bulleted or numbered lists, quotes or other special passages.
 - Seven or eight hard returns should align the first line of text on the first page of the document, so that the first line is just below the office name that appears on the right-hand side of standard letterhead.
 - Page numbers:
 - Use them only for memos consisting of four or more pages, and then begin numbering with page 3. For example, most action memos are likely to be four pages long. You would place page numbers on pages 3 and 4.
 - Note: You will need to use a “section break” rather than a “page break” in Microsoft Word to accomplish this formatting. Also, you must remove the “Link to Previous Section” feature for the section in which you are inserting page 3, *et seq.* The way this guidance/template is formatted should achieve this formatting for you, as long as you copy and paste the template portion (the portion starting on pg. 4 of this document) into a new Word document.

- Use the format “Page # of ##” (e.g., Page 3 of 4).
- Center the page number in the footer.
- Do not enclose in quotes, dashes or parentheses.
- Acronyms: Spell out acronyms or abbreviations in the Subject line, and wherever they are first-used.
- Attachments:
 - Each document that accompanies your memo (e.g., a document that will be published in the *Federal Register*, a regulatory impact analysis, an economic analysis) is considered an attachment.
 - If attachments are referenced in the body of the text of your memo, type the word “Attachment” or “Attachments (#)” three lines below the body of the memo. For more than one attachment, indicate the number in parentheses.
 - If attachments are not identified in the text, type *Attachment* or *Attachments* three lines below the last line of the memorandum body, flush with the left margin. Number and list each attachment on a separate line. If more than one line is needed for any listed attachment, continue the information on a succeeding line aligned with the first character of the name of the attachment.

MEMORANDUM

SUBJECT: [Stage (e.g., Advance Notice of Proposed Rulemaking, Proposed Rule, or Final Rule): Title of Action] (Tier [insert number]; SAN [insert number]; RIN [insert number]) – **ACTION MEMORANDUM**

[Here is an example:

Proposed Rule: CERCLA/EPCRA Administrative Reporting Exemption for Air Releases of Hazardous Substances from Animal Waste (Tier 2; SAN 5117; RIN 2050-AG37) – **ACTION MEMORANDUM**]

FROM: [Insert the name of your Assistant or Regional Administrator]
[Insert “Assistant” or “Regional”] Administrator

THRU: Office of Policy (1806A)
Office of Executive Secretariat (1105A)

TO: [Insert the name of the Administrator]
EPA Administrator (1101A)

[This action memorandum should not exceed four pages, but you may use attachments to provide longer descriptions if necessary. Use plain language throughout. Write this memo so that the Administrator’s Office, as well as any future officials who refer to this action’s record, can clearly understand the action being taken and its impact. Refrain from copying technical language from your action’s preamble or regulatory text.]

PURPOSE

Attached for your signature is a [insert stage (e.g., Advance Notice of Proposed Rulemaking (ANPRM), proposed rule, final rule)]. [In three to five sentences, explain the action and why it was needed. This section should provide some context (i.e., how the rule fits into an overall strategy, agency priority/initiative, or suite of related actions).]

DEADLINE

[Indicate whether any signature or publication deadlines apply. Include this section even if your action does not have a deadline. If there is a deadline, indicate what it is and the type of deadline. It may be a legal deadline (e.g., imposed by a court or by law), an Administration deadline (e.g., identified as a priority action or fulfilling an external commitment), or an internal management deadline (e.g., timed with an event or speech). If no deadline exists, simply state: “No deadlines apply to this action.”]

OVERVIEW

[Briefly describe the action, the relevant statute that provides authority for the action and, as appropriate, cover the following points:

- Describe the specific environmental issue(s), public health problem(s) and/or statutory requirements being addressed, and the goal of this action;

- Describe how the regulated community is affected (e.g., performance standards, specific requirements);
- Describe implementation flexibilities, particularly for states and regulated entities;
- Describe key issues, such as any environmental justice concerns or Limited English Proficiency (LEP) concerns related to this action, and how they were addressed;
- Identify other actions underway that will affect this particular program or sector;
- Identify whether the action amends the *Code of Federal Regulations* and, if so, explain what kind of amendment (e.g., procedural); and
- Briefly summarize the history of the action.]

{Many programs elect to use subheadings in this section (e.g., *Authority, Background, Actions Proposed, Key Issues*).}

ANTICIPATED PUBLIC AND STAKEHOLDER RESPONSE

[Describe the type of response anticipated from the various audiences interested or impacted by the action. Identify both the involved stakeholders and the nature of their expected response. Characterize the likely reaction to the action by all interested parties including industry; environmental groups; Congress; state, local and tribal governments; and OMB. Explain what the agency has done to mitigate anticipated adverse reactions.]

INTERNAL DEVELOPMENT AND REVIEW PROCESS

[Identify whether the action was developed under Tier 1, 2 or 3. If the action was Tier 1 or 2, present, in an attachment if preferred, a brief chronology of the development and review process, noting specifically when the workgroup was formed. Note at what stages and for what specific objectives at each stage the workgroup was substantially engaged, including prior to seeking Early Guidance. (The Office of Policy will attach the summary memo from Final Agency Review (FAR).) Describe any noteworthy or innovative collaborative development and review process(es) used internally, and identify those that would be appropriate “best practices” to advance One EPA.]

[Identify program offices or Regions that participated in the development of the action, along with any outstanding issues from the development process and why they cannot be resolved or accommodated. Also, provide the basis for any decision made to not address an identified cross-media impact.]

OMB TRANSACTION

[Identify the determination by the Office of Management and Budget (OMB) (e.g., significant, non-significant, waived) and whether the action went to OMB for review under Executive Order (EO) 12866. If the action went to OMB for review, highlight significant issues resulting from EO 12866 review, including any significant issues raised by other agencies participating in the review. Explain any substantive changes made to the action as a result of recommendations from OMB or the other agencies.]

[If the action is subject to EO 12866 review but OMB waived review (e.g., OMB determined the action was significant but decided not to review it), please indicate whether OMB was otherwise involved with the action (e.g., was briefed) and describe the results of this interaction.]

[If the action is not subject to EO 12866 review, please indicate if OMB was briefed or otherwise involved. Describe the results of this interaction.]

[Note that you will not be able to complete this section until after OMB completes its review of the action; therefore, this section generally will not be complete when you circulate the draft Action Memorandum with the FAR package and the EO 12866 review package to OMB. Do your best to provide what detail you can when circulating the draft memo, however (e.g., it is likely that you can list the OMB determination in this section, even at the draft stage.)]

IMPACTS

[Summarize the costs and benefits of the action – including a discussion of any non-monetized benefits and/or non-quantified benefits – and the results of any economic analyses. As appropriate under individual statutes, explain how cost-benefit analyses helped to shape the approach chosen.]

{Use an attachment to provide any additional economic impact detail and to summarize, as applicable, the regulatory flexibility analysis and Small Business Advocacy Review (SBAR) Panel recommendations. Also, this attachment may describe impacts on affected entities, such as other federal agencies, states, local governments, tribes, paperwork burdens, children’s health, environmental justice populations, climate change, etc., that you are likely to discuss in the “Statutory and Executive Order” section of your rule’s preamble or in other contexts. Consider using a table to display estimates (i.e., use the Circular A-4 table for economically significant rules.) Reference the attachment in the Impacts section and list the impacts described in the attachment.}

{This attachment should be succinct and focused on salient issues that senior decision-makers in the Office of the Administrator need to know. You may wish to use subheadings in this attachment (e.g., *Environmental Justice*, *Limited English Proficiency*, *Small Business Impacts*, *Federalism Impacts*). Guidance for describing the impacts related to applicable statutes and executive orders can be found in the ADP Library (<http://intranet.epa.gov/adplibrary/>).}

STAKEHOLDER INVOLVEMENT

[Briefly discuss the role of state, local and tribal government entities and private sector stakeholders (e.g., regulated entities, NGOs, academia) in the development of the action. Summarize the concerns they have raised and what the agency has done to address them, or explain why the agency cannot address them. If applicable, refer to the discussion above or in the attachment on impacts related to EJ concerns, children’s health concerns, or other issues described in the Impacts section.]

PEER REVIEW

[If you did not use influential scientific information or a highly influential scientific assessment as defined by the EPA's *Peer Review Handbook* (<http://www.epa.gov/peerreview/pdfs/prhandbk.pdf>) to support the action, include the following statement in the Action Memorandum: There were no influential or highly influential products supporting this action as defined by the agency's *Peer Review Handbook*.]

[If you did use influential scientific information or a highly influential scientific assessment to support the action, include the following statement: [Insert Name of AAship] has followed the agency's Peer Review Policy with respect to the underlying [influential scientific information or highly influential scientific assessment] supporting this action.]

[You may add any details you think are important, but you generally should not modify this compliance statement. If you used influential scientific information or a highly influential scientific assessment, but were not fully able to meet the Peer Review Policy, explain why.]

RECOMMENDATION

[Recommend an action the Administrator should take (i.e., sign the rule or other document). Here is an example: I recommend that you sign the attached rulemaking.]

[Three lines below the body of the memo, indicate that you have attached a rule for signature, and other documents as appropriate. If your attachment(s) are referenced in the body of the memo, insert either the word "Attachment" or "Attachments (#)," indicating the number of attachments in parentheses. If you have referenced the attachments in the body of your memo, you need not list the names of them here. On the other hand, if attachments are not identified in the body, type "Attachment" or "Attachments" three lines below the last line of the memorandum body, flush with the left margin. Number and list each attachment on a separate line. If more than one line is needed for any listed attachment, continue the information on a succeeding line aligned with the first character of the name of the attachment.]

[NOTE: Where an Action Memorandum accompanies another document (e.g., a rule or *Federal Register* document) to be signed by the Administrator, you should not include a concurrence line at the bottom of the Action Memorandum or anything else that might cause the Action Memorandum to be misinterpreted to be a Decision Memo, which it is not. After signature, the *Federal Register* notice (or other document such as an order) will contain the agency's decision or action (if any). The Action Memorandum is only a pre-decisional briefing document.]

{You may wish to add a "cc" line if you are sending a copy of the action memorandum to others. Do not include a courtesy title such as Mr. or Mrs. The "cc" line should be flush left and two lines below your text or the "Attachment/Attachments" line. Two spaces follow the colon after "cc." If a courtesy copy list is too long to fit in a single column at the bottom of the memorandum, a separate distribution list is permitted and should be referenced in the Attachments.}

APPENDIX E. EXAMPLES OF PEER REVIEW STATEMENTS OF WORK

Note: The examples are provided for reference purposes only. Development of new Statements of Work should reflect current agency policies and procedures, including the “Conflict of Interest Review Process for Contractor-Managed Peer Reviews of EPA HISA and ISI Documents.”

Statement of Work: Letter Review

**External Peer Review of the EPA's
Markov Chain Nest Productivity Model (MCnest)**

STATEMENT OF WORK AND CHARGE TO REVIEWERS

Background

A challenge in the regulation of pesticides is to improve methods for quantifying ecological risk projections in higher-tier risk assessments that can address the “so what” questions about potential changes to wildlife populations. The United States Environmental Protection Agency’s (USEPA) Office of Pesticide Programs (OPP) has developed a Terrestrial Investigation Model (TIM) for quantifying the magnitude of acute mortality in birds exposed to a pesticide, but has not adopted a method for quantifying effects to reproductive success. In the current pesticide risk assessment process, results from a pair of laboratory avian reproduction tests are used in calculating risk quotients (RQ) by comparing the reported no-observed-adverse-effect concentration (NOAEC) for the most sensitive measured endpoint(s) with estimates of the maximum dietary exposure expected for a given application rate. As a screening tool, RQs are compared to an established regulatory level-of-concern to categorize the potential for unacceptable risk. Because of the high degree of uncertainty in these simple tools for characterizing risk, RQs typically incorporate conservative or worse-case assumptions about exposure and toxicity to reduce the chances of concluding a chemical has an acceptable level of risk when in fact it does not (i.e., false negative conclusion). Consequently, risk quotients can be used to identify the environmental concentration above which adverse effects to avian reproduction may occur, but they cannot determine the probability or magnitude of potential reproductive effects.

An alternative conceptual framework for interpreting the results of avian reproduction tests was proposed by Bennett et al. (2005). Briefly, it involves linking the types of effects that may occur during each phase of a bird’s reproductive cycle (e.g., pair formation, egg laying, incubation, nestling rearing) to selected surrogate endpoints from all three standard avian toxicity tests and relates those effects to the estimated exposure during each phase under a given pesticide-use scenario. Because the great majority of avian reproduction tests do not provide quantitative dose-response information for surrogate endpoints, by necessity the alternative approach is based on a series of phase-specific deterministic decision points – essentially RQs for specific surrogate endpoints at each breeding phase – for determining whether the nest attempt fails or continues. If the estimated exposure during the critical exposure period is less than the established toxicity threshold (e.g., the no-observed-adverse-effect level or NOAEL) for surrogate endpoints at each phase, the nest continues without disruption. However, if exposure exceeds the toxicity threshold for a surrogate endpoint, the nest attempt is assumed to have failed and the female may be able to renest if conditions permit and sufficient time remains in the breeding season. Also, for those species that can produce multiple broods in a single breeding season, females may renest after successful nesting attempts if conditions permit. The simulated performance of a population of females in relation to the timing of pesticide applications is modeled over the course of a full breeding season. Consequently, using this framework, the effects of a pesticide on annual reproductive success are not only a function of the results of avian toxicity tests, but also are quite sensitive to the timing of pesticide applications relative to a species’ breeding season and to differences in life history characteristics among species.

A flexible mathematical model, known as the Markov chain nest productivity model or MCnest, has been developed for implementing the conceptual framework of Bennett et al. (2005). It projects estimates of pesticide effects on reproductive success for a broad range of species and can be modified to incorporate either sparse or abundant life-history data. MCnest builds on over 40 years of avian nest-survival modeling in the ornithological literature. This Markov chain model is equivalent to the well-known Mayfield nest-survival model when similar assumptions are. Although the basic version of MCnest was developed to use data from the standardized avian toxicity tests required by OPP, it could

be applied to contaminant effects questions in other USEPA Program Offices, though at present the model is not designed to adequately estimate the effects of bioaccumulative chemicals where effects on hatchability and hatchling survival may result from chemical residues accumulated prior to the egg formation period.

Most of the data used in MCnest are in the form of input parameters provided by the model user and represent three categories of input parameters: toxicity threshold values for surrogate endpoints, pesticide application scenarios, and species life history parameters. MCnest uses information for parameterizing toxicity threshold values and application scenarios that is currently available in the risk assessment process. The model user may use default life history parameters from a library of avian species available to MCnest or create new or modified species parameter profiles.

The primary output of MCnest is an estimate of the potential magnitude of pesticide effects to annual reproductive success by calculating the relative difference between scenarios with and without pesticide exposure. It also provides information on which species are at greatest risk under a specific pesticide-use scenario or which application dates have the greatest impact throughout a breeding season. This quantitative estimate of pesticide effects on annual reproductive success is needed for use in population modeling or probabilistic risk assessments.

Scope of Review/Objective Statement

The focus of this review is the MCnest model and its accompanying user's and technical manuals with the objective of providing a written, independent review of the MCnest model and commenting on its ease of use and utility in estimating risk.

The enclosed CD contains a copy of:

- the MCnest model
- an Excel file named 'SpeciesLibrary'
- the MCR Installer
- a User's Manual
- a Technical Manual
- a Species Life History Profiles Manual
- the Bennett et al. (2005) Ecotoxicology publication

The basic version of MCnest focuses on the pesticide risk assessment process of USEPA's Office of Pesticide Programs, though the model could be modified in future versions for application in other USEPA program offices or other regulatory bodies. The document on avian life history profiles is included for background purposes, but is not the focus of this review; once the MCnest model is finalized, the species profiles will be expanded and peer-reviewed separately for use in MCnest. Also, since the purpose of MCnest is to implement the conceptual approach first described by Bennett et al. (2005), that paper is included for background.

Contacts

If you have questions regarding installation or operation of the model, please feel free to contact [Name] at [Phone] or [Email].

If you have questions regarding the review or providing answers to the charge questions, please contact [Name of Peer Review Coordinator] at [Phone] or [Email].

Task Description

1. The contractor shall install the draft MCnest model (including the MCR Installer and the “SpeciesLibrary” excel file) on their computer.
2. The contractor shall perform an independent review of MCnest model and the user’s and technical manuals.
3. The contractor shall provide a written evaluation addressing the charge questions, with recommendations, in a report submitted to [the Peer Review Coordinator] no later than [Date].

Government Responsibilities

1. Provide a Statement of Work outlining expectations.
2. Request a conflict of interest statement.
3. Provide a professional services fee (honorarium) if appropriate.
4. Provide a CD including all necessary files.

Milestones/Deliverables and Schedule

The reviewer shall review the MCnest model and the accompanying user’s and technical manuals and provide written comments addressing the charge questions to [the Peer Review Coordinator] no later than [Date].

Acceptance Criteria

An independent and unbiased professional review is provided in written form.

Charge Questions

In your written review, please address the following questions. Additional comments and recommendations for improving the model and associated methodology are welcome.

1. The user’s manual is intended to introduce all of the currently available features of the MCnest model and allow the model user to start running model simulations. Did you have problems or questions during the installation or operation of the MCnest model? Did you encounter issues that were not explained sufficiently in the user’s manual? Do you have any suggestions for improving the user’s manual?
2. The technical manual provides background material on the details for how the model operates and how calculations are performed; however, it does not provide guidance on policy-related issues that will need to be addressed for use in a regulatory context. Does the technical manual provide sufficient technical background information for how the model operates and how decisions are made? Are there additional technical issues that should be discussed in the technical manual?
3. The intent of the basic version of MCnest is to implement a breeding phase-specific approach for quantifying pesticide effects on avian reproductive success that is general enough to be applied to a broad range of species life history strategies. Does the technical manual adequately explain the selection and use of surrogate endpoints? Do the manuals

adequately explain how choices made for input parameters might affect the model results?

4. Despite the limitations of both toxicity test data and life history information, does the model provide a basis for quantifying the magnitude of change to reproductive success from pesticide exposure that adds value beyond the current use of risk quotients? Does the model adequately implement the breeding phase-specific approach for quantifying pesticide effects on reproductive success?
5. Beyond the basic model outputs provided, are there additional outputs (e.g., graphs, data summaries) that would be useful for understanding the simulation results or interpreting differences among simulations?
6. Work is underway to include more detailed exposure estimation and improved methods for defining the length of a breeding season in future versions of MCnest. Are there additional features or issues that you believe should be addressed in MCnest?

Reporting Requirements

Please provide your written comments to [the Peer Review Coordinator] by [Date], answering the questions specified above. The review may be sent by regular mail to the address below, by email to [Email] or by FAX to [Number].

We sincerely thank you for your input to our peer review process.

Statement of Work: Contractor-Managed Peer Review

STATEMENT OF WORK

U.S. EPA Environmental Economics Peer Review

BACKGROUND INFORMATION:

The National Center for Environmental Economics (NCEE) is located in the Office of Policy, Economics and Innovation and serves as a center of expertise for cutting-edge research and analysis in environmental economics. NCEE's primary function is to assist the Environmental Protection Agency's (EPA's) program and staff offices in applying sound economic science in the development of analyses that support the Agency's actions. NCEE conducts and supervises a wide array of research and development on economic analytic methods, and provides guidance and support for performing economic analyses throughout the Agency. NCEE serves as an information resource for EPA, other government departments and agencies, and the public on benefit-cost analyses, economic impact models and measurement, and economic incentive measures.

Peer review is an important component of the scientific process. It provides a focused, objective evaluation of work products, and the criticism, suggestions and new ideas provided by the peer reviewers stimulate creative thought, strengthens the reviewed document and confer credibility on the product. Comprehensive, objective peer reviews leads to good science and product acceptance within the scientific community.

PURPOSE:

NCEE (and economists throughout the Agency) routinely create work products that require peer review. The purpose of this contract is to procure peer review services from a contractor that is able to perform peer review of a variety of environmental economic work products. The economic work products for peer review required under this contract, as described in EPA's *Peer Review Handbook*, 3rd Edition (http://www.epa.gov/peerreview/pdfs/peer_review_handbook_2006.pdf) are as follows:

1. Economic and financial methodologies that will serve as a principal method or protocol used to conduct economic analyses within a program;
2. Unique or novel applications of existing economic and financial methodologies , particularly those that are recognized to be outside of mainstream economic practices;
3. Stated preference (e.g., contingent valuation) and revealed preference surveys (e.g., recreational travel cost surveys) developed to assist in the economic analysis of a regulation or program ;
4. National surveys of costs and expenditures for environmental protection (e.g., financial needs surveys, pollution abatement expenditures surveys);
5. Meta-analyses (i.e., re-analyses of existing published literature and supporting data on the measurement of economic benefits, costs and impacts);
6. Data and analytical models underlying economic analyses, particularly those

supporting economically significant rules, if the models and corresponding use of the data have not been previously subject to adequate peer review; and

7. Applications for research grants.

Note that the above list omits two (2) kinds of economic work products described in the Peer Review Handbook that are typically peer reviewed: internal Agency guidance for conducting economic and financial analysis; and broad-scale economic assessments of regulatory programs, such as those required by Congressional mandates (e.g., the Clean Air Act reports to Congress on benefits and costs). These major work products would usually be reviewed by EPA's Science Advisory Board Environmental Economics Advisory Committee or an equivalent body, and are not in the scope of this Statement of Work (SOW).

Examples of current and/or previous work products produced by NCEE in need of peer review are as follows:

1. NCEE recently published the Handbook on the Benefits, Costs, and Impacts of Land Cleanup and Reuse (<http://yosemite.epa.gov/ee/epa/eed.nsf/pages/LandHandbook.html>), which is 126 pages and which was peer reviewed by a panel of seven (7) environmental economists.
2. NCEE is also leading a large effort to value the benefits of the Chesapeake Bay Total Maximum Daily Load, including a stated preference survey, a hedonic analysis, commercial and recreational fishing benefits, protecting drinking water in groundwater wells, other ancillary benefits, and a benefit transfer exercise. NCEE expects that each component of this analysis will result in a report of approximately 50 pages that would need to be peer reviewed by three (3) outside economists.
3. NCEE routinely issues proposals for research grant applications; these proposals are usually 10-15 pages in length with some supporting information. All research grant proposals must be externally peer-reviewed and NCEE prefers three (3) external reviewers per proposal.

The purpose of this contract is to provide peer review for the whole variety of environmental economics work products from NCEE and EPA. Several offices within EPA will utilize this contract, for in-scope work, based upon NCEE projections and future requirements.

TECHNICAL SUPPORT REQUIREMENTS:

The contractor shall perform the following tasks in support of this contract:

A. Peer Review Services

The contractor shall perform scientific/technical peer reviews of documents and materials related to the full breadth of Agency work products and grant/cooperative agreement proposals pertaining to environmental economics. The peer reviews may occur by mail or email; via telephone or video conferences; or during in-person meetings.

When conducting peer reviews, the contractor shall follow EPA's *Peer Review Handbook*, 3rd edition (EPA 100/B-06/002, January 2006, which is provided at the following website:

http://www.epa.gov/peerreview/pdfs/peer_review_handbook_2006.pdf, and *Addendum* (2009) at the following link: http://www.epa.gov/peerreview/pdfs/spc_peer_rvw_handbook_addendum.pdf or the most recent rendition of that Handbook, to the extent that the subject of the review is covered by EPA's *Peer Review Handbook*, 3rd Edition and the *Addendum*.

1. Identify and Recruit Qualified Reviewers

The number of reviewers required and their qualifications will be determined during contract performance and will be provided by the Contracting Officer's Representative (COR); the reviewer(s) qualifications may vary depending upon the technical nature of the work product. The minimum qualifications for a peer reviewer of the products encompassed in this contract are a Ph.D. in economics, environmental economics, agricultural economics, or a related field. Interdisciplinary projects may, in some cases, require expertise (as demonstrated by a Ph.D.) in a different field; any such cases will be indicated by the COR.

The appropriate expertise, knowledge, and experience necessary for individual peer reviewers will be indicated by the COR according to the following:

Level 1 reviewers will have engaged in relevant research as evidenced by at least one peer-reviewed journal publication in the subject of the review.

Level 2 reviewers will have engaged in relevant research as evidenced by at least three peer-reviewed journal publications in the subject of the review; or by at least one peer-reviewed journal publication in the subject of the review and by serving as the principal investigator for a research project comparable to the product being reviewed.

Level 3 reviewers will have engaged in relevant research and achieved standing in the field as evidenced by at least four peer-reviewed journal publications in the subject of the review; by serving as the principal investigator for at least one research project comparable to the product being reviewed; and by achieving recognition in the field as reflected by awards, and other honors received from scientific and professional organizations (e.g., an AERE or AAAS Fellow), distinguished or named professorships, journal editorships, or appointment to high-level review committees (such as the National Research Council or Science Advisory Board).

Prior to the performance of a peer review, the contractor shall submit to the COR and the CO a Statement of Conflict of Interest for each reviewer in addition to a complete list of all prospective reviewers within two (2) weeks of the contractors receipt of the number of reviewers and their qualifications from the COR. For each prospective reviewer, the submission shall include: (1) a short academic and professional biography, and a brief paragraph concerning the reviewer's technical expertise in support of the reviewer's selection; and (2) information concerning the reviewer's availability and willingness to provide the review within the specified time frame. The CO will verify that the list of reviewers conforms to the number and qualifications of reviewers provided to the contractor and required for the review. The contractor will be notified by the CO with a determination of consent with regard to the list of proposed reviewers. NCEE will not be involved in the selection of individual peer reviewers.

Within three (3) working days of receiving the CO's consent that the contractor's proposed list of reviewers conforms to the peer review's specifications and Statement of Conflict of Interest, the contractor shall select and enlist the services of reviewers.

It is the responsibility of the contractor to ensure that all peer reviews are conducted in a manner to avoid all actual or potential, substantial conflicts of interest, or the appearance of substantial conflicts to the maximum extent possible. Prior to conducting a peer review, the contractor shall ensure that each reviewer is free of any actual or potential conflict of interest (COI), or the appearance of any substantial conflict that are direct and substantial enough as to rule out a particular reviewer. Any particular COI, or appearance of loss of impartiality (see Chapter 5), must be disclosed by the contractor with a description of the actions the contractor has taken, or proposes to take, to avoid, mitigate, or neutralize the COI or appearance of loss of impartiality. Assurance of impartiality of each reviewer must be provided by the contractor to EPA.

2. Submission of Written Comments

Each review will be directed by a charge (including general and specific questions, evaluation criteria, or similar instructions to peer reviewers) that will be provided by the COR. (See Section 3.2 of the Peer Review Handbook for a description of charges.)

After completing the review, the contractor shall submit the peer review panel's written comments in final form, along with all supporting materials, such as additional references or suggested approaches, to the appropriate EPA personnel. Review packages submitted by the contractor to EPA shall include: (1) written general comments; (2) specific changes or revisions required to improve clarity; (3) scientific changes or revisions required to improve the clarity and/or the scientific accuracy of the documents or products; (4) any new data that might contribute to the derivation of improved processes and procedures; (5) other scientific and technical materials that may be pertinent; and (6) any other materials necessary to complete the peer review record. The contractor shall also be readily available to clarify any peer review comments and recommendations the EPA poses within a week of submission of the review package.

The contractor shall submit these documents to the COR in final form. All final peer reviews submitted shall include copies of the literature cited or make reference to the citations in the document for the COR to verify and approve.

3. Submission of Panel Recommendations

For reports that include peer review panel recommendations, the contractor shall: (1) explain and rank the policy or action alternatives; (2) describe the procedures used to arrive at the recommendations; (3) summarize the substance of the peer review panel's deliberations; (4) summarize any peer review panel dissenting views; (5) list the sources relied upon; and (6) provide any other information necessary clarify the methods and considerations upon which the recommendations are based.

The contractor shall submit these documents to the COR in final form. All final peer reviews submitted shall include copies of the literature cited or make reference to the citations in the document for the COR to verify and approve.

B. Workshop and Meeting Support Requirements

The contractor shall perform the following activities relative to peer review meetings, meetings that are not explicitly peer review, as well as for scientific workshop/workshop support, in support of this contract:

1. Pre-Workshop/Meeting Support

The contractor shall:

- a) Identify attendees. Organize and provide support in arranging workshops, meetings, and presentations by individuals to address issues and concerns raised by the peer review and/or as requested;
- b) Arrange for workshops and meetings to be held at EPA office locations or other geographical sites, as specified during contract performance;
- c) Arrange for facilities necessary to support required equipment, agenda development, and other logistical support, including: tape recording, audiovisual, computer, photo-copying, and operation of audiovisual equipment, microphones, and lighted pointers (all photocopying shall adhere to the clause Printing, (EPAAR 1552.208-70) (DEC 2005));
- d) Select hotel and arrange for rooms for workshop participants, as necessary;
- e) Develop the registration process and the materials needed for pre- workshop/meeting and onsite activities, e.g., registration and distribution of workshop/meeting materials, agendas, literature, information pamphlets, etc. to participants;
- f) Inspect meeting and workshop site with site personnel, checking all facilities, furniture, equipment, and signs to ensure facilities are appropriate and sufficient to handle meeting/workshop and attendees' requirements; and
- g) Provide identification badges for workshop and meeting attendees.
- h) The contractor shall clearly identify itself as an EPA contractor. When in attendance at meetings, contractor personnel shall wear identification that is different than the badges used by seminar attendees or Agency personnel attending or speaking at the meeting. Contractor personnel shall identify themselves as such when placing calls in conjunction with the SOW.
- i) Arrange teleconferences for planning purposes, peer review panels, or similar purposes.

2. Post-Workshop/Meeting Support

The contractor shall:

- a) Obtain all post-meeting/workshop comments, collect and compile all comments and suggested document revisions, transcribe meeting proceedings where required, and obtain all new hard copy references with distribution of copies as specified during contract performance; and
- b) Distribute draft proceedings summaries to the peer reviewers and/or participants for comment. Distribute revised proceedings summaries to the COR for review to ensure completeness and clarity before development of final document(s).

DELIVERABLES AND SERVICES

1. The contractor shall deliver complete comments, as specified during contract

performance, to assure rapid assimilation and timely action by EPA. Deliverables will be used to improve the quality of planned and current research projects and to assess the scientific and technical accuracy of completed and current work before dissemination outside EPA. Specific deliverables will be specified during contract performance. In providing deliverables, the contractor shall: provide high quality peer reviews and workshops in the research areas specified during contract performance;

2. Maintain the capability to provide such peer reviews and workshops as needed, document qualifications of personnel, and ensure performance of the work in accordance with EPA guidance;
3. Disseminate existing EPA supplied and specified documents, as referenced during contract performance;
4. Arrive at firm conclusions and/or recommendations, and provide supporting documentation and/or analyses to EPA;
5. Coordinate peer review findings with EPA and other selected individuals through teleconferences, workshops, and/or meetings involving the COR and any other specified EPA personnel, to clarify specific scientific points made by a peer review panel, and to document views and scientific judgments made by peer reviewers;
6. Provide a full and accurate accounting of all work ordered, as required;
7. Document the procedures used to ensure that all specifications required for a given review are met;
8. Maintain a record of ongoing and completed peer reviews, and devise a system for documenting all peer reviews conducted; an electronic copy of a progress report shall be sent to the COR and the CO.
9. Provide follow-up information to peer reviewers, to the COR and the CO;
10. Certify that, to the best of the contractor's knowledge and belief, no actual or potential conflicts of interest, or appearance of substantial conflicts exist, in accordance with contract requirements; and
11. Provide pre-meeting, meeting, and post-meeting workshop support, including planning, arranging, administering, and conducting required workshops and/or meetings.

Copies of all deliverables shall be sent to the COR in an electronic format (i.e., MS Word or MS Excel, MS Office 97 or a later version), along with a portable document file (.pdf) copy. The deliverable must include, but not be limited to, the peer review or workshop title. In all matters, the contractor shall perform in a manner that will ensure consistency of procedure and practice in support of the requirements of this SOW, and shall ensure consistent completion of all deliverables in accordance with the contract.

APPENDIX F. GUIDANCE ON REQUESTING A REVIEW BY THE SCIENCE ADVISORY BOARD

Introduction

Each year, the Deputy Administrator invites the EPA's senior leadership to identify requests for advice and peer review from the agency's independent Science Advisory Board (SAB), Clean Air Scientific Advisory Committee (CASAC), and other advisory committees. Significant scientific and technical issues related to the Administrator's priorities are topics most appropriate for consideration by these science advisory committees, which are supported by the SAB Staff Office in the Office of the Administrator. This appendix provides guidance for identifying and nominating requests for SAB and CASAC review. More detailed information about the functions and advisory process for the committees is available at <http://www.epa.gov/sab>.

Background

The SAB and CASAC provide mechanisms for the EPA to receive external peer review and other advice designed to make a positive difference in producing and using science at the agency.

The SAB has a broad congressional mandate to provide independent advice and peer review to the EPA Administrator on the scientific and technical aspects of environmental issues. Section (c)(1) of the Environmental Research, Development, and Demonstration Authorization Act ([ERDDAA], 42 U.S.C. § 4365] states that "at the time any proposed criteria document, standard, limitation, or regulation ... under any ... authority of the Administrator, is provided to any other Federal agency for formal review and comment, shall make available to the Board such proposed criteria document, standard, limitation, or regulation, together with relevant scientific and technical information in the possession of the Environmental Protection Agency on which the proposed action is based."

The CASAC provides independent advice to the EPA Administrator on the technical bases for the EPA's national ambient air quality standards program, including peer review of Integrated Science Assessments, Risk and Exposure Assessments, and Policy Assessments for criteria air pollutants.

These advisory committees generally provide advice on high-priority scientific and technical issues in written form, either as peer reviews of final draft technical reports (e.g., guidelines, assessments, research strategies) or work products (e.g., analytical methods, models, databases) or advisories (written advice on works in progress). In some cases, where the EPA is committed to interact with the SAB iteratively in developing a scientific product or activity, advisory members may provide an initial consultation to provide advice at an early stage in a science activity. Such a consultation will be followed at a later stage by an advisory or peer review report. The SAB also may provide oral rapid consultative advice in the event of an emergency, such as a natural disaster, and may conduct *de novo* studies on emerging science issues or overarching topics of importance to the EPA.

Because resources are always limiting, the SAB Staff Office uses several criteria for selecting project proposals proposed by the agency. Advisory project proposals best suited for consideration by the SAB and CASAC are those that meet several of the following criteria:

- General Criterion:
 - Provides an opportunity to make a difference in the science that supports the agency's mission.
- Client-Related Criteria:
 - Supports major regulatory or risk management initiatives.
 - Serves leadership interests (e.g., the Administrator, Congress).
 - Supports EPA strategic priorities.
- Science-Driven Criteria:
 - Involves scientific approaches that are new to the EPA.
 - Addresses areas of substantial uncertainties.
- Problem-Driven Criteria:
 - Involves major environmental risks.
 - Relates to emerging environmental issues.
 - Exhibits a long-term outlook.
- Organizational Criteria:
 - Serves as a model for future agency methods.
 - Requires the commitment of substantial resources to scientific or technological development.
 - Transcends organizational boundaries, within or outside the EPA (includes international boundaries).
 - Strengthens the agency's basic capabilities.

In addition, the SAB Staff Office considers the overall mix of the nominated project proposals for a specific fiscal year, as well as the time and available resources needed to take on the projects.

Process for Submitting Nominations

Any office desiring to take a product, activity or issue to the SAB for a peer review, advisory project nomination or consultation is requested to complete the two-step process described below.

Step 1 – Project Identification and Nomination. Each year, the Assistant Administrators and Regional Administrators are asked to send the SAB Staff Office Director a memorandum that lists all advisory project nominations, with the highest priority nominations for the next fiscal year identified

Step 2 – Electronic Project Sheet. Nominators are asked to submit an electronic project sheet for each individual project to be considered for SAB or CASAC attention. The project sheets are created after establishing or updating the related Peer Review Project or Science Activity in the agency’s Science Inventory. The Science Inventory entries must be approved by their Peer Review Coordinator or Science Activity Coordinator for the specific program or regional office. Project sheets should be filled out for all desired projects, including previously submitted projects for which no project planning meeting has occurred between the program or regional office and the SAB Staff Office Director. The electronic Project sheet may be accessed and completed through the SAB Product Database; contact the SAB Staff Office for information about how to access the database to create a project sheet. The information fields required for the electronic project sheet are provided in Table E-1.

Process for Keeping Informed About the Decisions Made

After receiving project nominations, the SAB Staff Office will discuss project priorities with each EPA program and regional office. The Staff Office also discusses project priorities with the chartered SAB, which includes the chair of the CASAC. The SAB Staff Office will consult with the EPA Administrator, Deputy Administrator and Science Advisor to the Administrator to develop an annual operating plan that includes the highest priority projects. Additionally, projects may be added or deleted at any time during the fiscal year, as requested by EPA senior management, Congress and the SAB.

The SAB Staff Office will identify a point of contact for each advisory request and keep requesting offices informed about the status of advisory activities. The SAB website (www.epa.gov/sab) provides current information about advisory activities once they are announced to the public. This information includes the *Federal Register* notice announcing the advisory activity, information about panel formation, public meetings, draft reports, quality review by the chartered SAB (which reviews and approves all advisory reports), final reports to the Administrator, and the Administrator’s responses to final reports.

The SAB and CASAC are federal advisory committees subject to the Federal Advisory Committee Act. For more information about how these advisory committees operate and the roles of the public and the agency in that process, please see *Advisory Committee Meetings and Report Development: Process for Public Involvement* (EPA-SABSO-04-001).

EPA Staff with questions about the SAB Product Database or the process for submitting nominations to the EPA SAB may contact the SAB Staff Office.

APPENDIX G. EPA FEDERAL ADVISORY COMMITTEES THAT PERFORM SCIENTIFIC PEER REVIEW

The Federal Advisory Committee Act (FACA; 5 U.S.C., App. 2) is a statute designed to ensure that the Congress and the public are kept informed of the activities of advisory committees that report to the executive branch of the federal government. Key provisions of the law are that committees must have balanced membership in terms of points of view for the tasks to be performed, meetings are to be announced ahead of time and open to interested members of the public, detailed meeting minutes are to be kept, and all materials presented to or prepared by or for the committees are to be made available to the public. In addition, all federal advisory committees must have a formal charter filed with the head of the agency and the Congress. For more information on Federal Advisory Committees at the EPA, see <http://www.epa.gov/ocem/faca/>.

The following scientific advisory committees have been established at the EPA to provide scientific advice and peer review:

- **EPA Science Advisory Board (SAB):** a statutory committee established under the Environmental Research, Development, and Demonstration Authorization Act (ERDDAA, codified at 42 U.S.C. § 4365) to provide independent advice and peer review to the EPA's Administrator on the scientific and technical aspects of environmental issues, including the adequacy and scientific basis of any EPA proposed criteria document, standard, limitation or regulation. The SAB reports directly to the EPA Administrator. For more information on the SAB, see <http://www.epa.gov/sab>.
- **EPA Clean Air Scientific Advisory Committee (CASAC):** a statutory committee established under the Clean Air Act (42 U.S.C. § 7409(c)(2)) to provide independent advice on the scientific and technical aspects of air quality criteria and standards, research related to air quality, sources of air pollution, and strategies to attain and maintain air quality standards and prevent significant deterioration of air quality. The CASAC reports directly to the EPA Administrator. For more information on the CASAC, see <http://www.epa.gov/casac>.
- **FIFRA Scientific Advisory Panel (SAP):** a statutory committee established under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA, 7 U.S.C. § 136w) that provides advice, evaluations and recommendations on pesticides and pesticide-related issues relating to the impact on health and the environment of the EPA's pesticide-related regulatory actions. The FIFRA SAP reports to the EPA Administrator through EPA's Assistant Administrator for the Office of Chemical Safety and Pollution Prevention (OCSPP). For more information on the FIFRA SAP, see <http://www.epa.gov/scipoly/sap>.
- **EPA Board of Scientific Counselors (BOSC):** a discretionary committee established by the EPA to provide advice and recommendations on technical and management issues relating to the Office of Research and Development's (ORD) research program. As appropriate, the BOSC coordinates its work with the SAB. The BOSC reports to the EPA Administrator through the Assistant Administrator for the Office of Research and Development, in consultation with the Administrator's Science Advisor. For more information on the BOSC, see <http://www.epa.gov/OSP/bosc>.

- **Human Studies Review Board (HSRB):** a statutory committee that provides scientific or policy advice to the EPA on the scientific and ethical aspects of human subjects research. The HSRB reports to the EPA Administrator through the EPA's Science Advisor. For more information about the HSRB, see <http://www.epa.gov/osa/hsrb>.

APPENDIX H. EXAMPLES OF PEER REVIEW CHARGES

It should be noted that certain questions posed in charges can be responded to with a yes or no answer. Clearly, this is not the type of response the agency generally wants; therefore, it is important to phrase charge questions carefully to ensure a fully satisfactory and thoughtful response. Where a yes or no answer might be expected, charge questions should ask for a full explanation supporting the yes or no answer.

Charges can run the gamut from rather simplistic to highly complex, depending on the nature of the review. The examples shown here cover a variety of types. Examples 1 through 3 have less complex questions and are looking for the overall quality of the efforts. Examples 4 and 5 have numerous technical questions that need to be addressed and are, therefore, more complex in their nature.

Other charges that have been used can be found on the Science Advisory Board (SAB) website at <http://www.epa.gov/sab> and the Scientific Advisory Panel (SAP) website at <http://www.epa.gov/scipoly/sap/index.htm>.

Charge Example 1: HISA Example

**US ENVIRONMENTAL PROTECTION AGENCY
OFFICE OF RESEARCH AND DEVELOPMENT
*National Coastal Condition Report IV***

Charge to the Peer Reviewers

This document represents a collaborative effort among EPA's Office of Water and Office of Research and Development, NOAA, and US Fish and Wildlife Service. Our objective is to provide regional and national assessments of the condition of coastal waters of the U.S.

Background:

The National Coastal Condition Reports represent collaboration among EPA (OW and ORD), NOAA, USFWS, and coastal state agencies. The first National Coastal Condition Report (NCCR I), published in 2001, reported that the nation's coastal resources were in fair condition. The NCCR I used available data from 1990 to 1996 to characterize approximately 70% of the nation's coastal resources. The second National Coastal Condition Report (NCCR II) was based on data from 1997 to 2000 representative of 100% of coastal area in the contiguous 48 states and Puerto Rico, and showed that the nation's coastal waters continued to be in fair condition. The 3rd National Coastal Condition Report (NCCR III) assessed condition of the nation's coastal waters, including Alaska and Hawaii, based primarily on NCA data collected in 2001 and 2002, and indicated that the condition remained fair. For the first time, NCCR III also included comparison of changes in condition from 1990 to 2002, presented for the nation's coastal waters and by region.

The National Coastal Condition Report IV (NCCR IV) is the fourth in a series of environmental assessments of U.S. coastal waters and the Great Lakes. The report includes assessments of all the nation's coastal waters in the contiguous 48 states and Puerto Rico, south-eastern Alaska, Hawaii, the U.S. Virgin Islands, Guam, and American Samoa. The NCCR IV presents four main types of data: (1) coastal monitoring data, (2) coastal ocean/offshore monitoring data, (3) offshore fisheries data, and (4) beach assessment and fish advisory data. The NCCR IV relies heavily on coastal monitoring data from EPA's National Coastal Assessment (NCA) to assess coastal condition by evaluating five indices of condition—water quality, sediment quality, benthic community condition, coastal habitat loss, and fish tissue contaminants. Coastal waters are valuable from both an environmental and economic perspective. These waters are vulnerable to pollution from diverse sources. EPA expects that this report on the condition of coastal waters will support more informed decisions concerning protection of this resource and will increase public awareness about the extent and seriousness of pollution in these waters.

The overall condition of the nation's coastal waters is fair, using five key indices of ecological health [water quality index (including dissolved oxygen, chlorophyll a, nitrogen, phosphorus, and water clarity), sediment quality index (including sediment toxicity, sediment contaminants, and sediment total organic carbon), benthic index, coastal habitat index, and a fish tissue contaminants index]. For each of these five key indices, a score of good, fair, or poor was assigned to each coastal region of the U.S. These ratings were then averaged to create overall regional and national scores illustrated using "traffic light" color scoring.

Purpose:

The purpose of this review is to obtain expert feedback and comments on the draft "*National Coastal Condition Report IV*." In your review, please provide written responses to the questions below. Additional comments and recommendations for improving the report and associated methodology are also welcome.

Charge Questions:

- 1) Are the methods used to assess coastal condition supported by sound scientific principles?

- 2) Selection and use of coastal monitoring indicators are described in Chapter 1 (the Introduction). Do the coastal monitoring indicators used to assess coastal condition nationally and regionally and do the criteria for ranking condition as good, fair, or poor reflect the primary environmental concerns of state, regional, and national resource managers?
- 3) Are the report's conclusions supported by the analyses and results?
- 4) Are the conclusions regarding changes in coastal condition over time supported by the data and analyses presented?
- 5) Does this report represent an important contribution to the state of the science for assessment of coastal waters?
- 6) Do the four approaches to assessing coastal condition (i.e., coastal monitoring data, coastal ocean/offshore monitoring data, offshore fisheries, and assessment and advisory data) clearly represent aspects of coastal condition that are informative and not redundant?
- 7) Are the shortcomings of available data and assessment approaches clearly articulated?
- 8) This report is quite lengthy. For those reviewing the entire document or individual chapters, do you have any recommendations for omitting parts of this report to shorten the length?
- 9) Please discuss any controversies that may be raised by the conclusions presented in this report.

Please provide written comments to EPA's Peer Review Coordinator, [name], by [date]. Your review may be sent by regular mail to the address below, by e-mail to [email] or by fax to [fax number].

If you have any questions concerning the draft report or the charge, please contact me at [phone number] or [email]. We sincerely thank you for your input to this important peer review.

Charge Example 2: Charge for a Letter Review for an Economic Analysis

Letter Reviews of Chapter 10 of the EPA Economic Analysis Guidelines

Document: Chapter 10 entitled “Environmental Justice, Children’s Environmental Health, and Other Distributional Considerations” -- approximately 37 pages total

Task: A letter peer review of this report by three (3) external economists with Level 3 expertise.

- At least one (1) economist will have specific expertise with environmental justice analysis.
- At least one (1) economist will have specific expertise with public health and distributional analysis.
- At least one (1) economist will have familiarity with environmental regulatory impact analysis and how risk assessment information is used to inform regulatory impact analysis.

Deliverable: Written review comments from each reviewer

Deadline: 4 weeks from receipt of document for review

Charge Questions for External Peer Review of Chapter 10: Environmental Justice, Children’s Environmental Health, and Other Distributional Considerations

1. Please provide your overall impressions of the clarity and technical accuracy of the discussion in the chapter for analyzing and presenting quantitative information about the distributional effects of environmental regulations with regard to race and income.
2. A brief overview of the environmental justice literature from the economics field is provided. Are there any pertinent citations that should be added to the discussion?
3. The chapter presents a suite of methods to describe the distributional effects of environmental regulations. Please comment on the technical accuracy and clarity with which each method is described. Are there any methods or relevant literature that should be added to the discussion or deleted?
4. The chapter primarily describes the use of Census data for conducting analyses. Are there additional data sources that should be included?
5. Does the text box on Social Welfare Functions and Inequality Indices provide a reasonable discussion of the available literature and challenges in using these indices in the context of measuring changes in the distribution of environmental quality? Are the conclusions regarding the use of SWFs and inequality indices in this context technically accurate and scientifically grounded?
6. The chapter recommends that all economically significant rules include summary statistics on EJ, with supplemental methods for measuring and estimating EJ impacts as appropriate for the action. Please comment on whether this is a reasonable approach for presenting the analytic

results, and if there are other recommended ways to present the analytic results to inform decision-making?

7. Please provide your overall impressions of the clarity and technical accuracy of the discussion of elderly, children and intergenerational equity. Should other methods or considerations be added to this discussion?
8. Are there additional equity dimensions that should be considered in this chapter?

Charge Example 3: ISI (Panel Review)

Charge to External Reviewers for the IRIS Toxicological Review of Biphenyl

September 2011

Introduction

The U.S. Environmental Protection Agency (EPA) is seeking an external peer review of the draft Toxicological Review of Biphenyl that will appear on the Agency's online database, the Integrated Risk Information System (IRIS). IRIS is prepared and maintained by the EPA's National Center for Environmental Assessment (NCEA) within the Office of Research and Development (ORD). The existing IRIS assessment for biphenyl includes a chronic reference dose (RfD) posted in 1989 and a cancer weight-of-evidence descriptor posted in 1991. The external review draft Toxicological Review of Biphenyl includes an RfD and a cancer assessment.

Charge Questions

Below is a set of charge questions that address scientific issues in the draft Toxicological Review of Biphenyl. Please provide detailed explanations for responses to the charge questions. EPA will also consider reviewer comments on other major scientific issues specific to the hazard identification and dose-response assessment of biphenyl. Please identify and provide the rationale for approaches to resolve the issues where possible. Please consider the accuracy, objectivity, and transparency of EPA's analyses and conclusions in your review.

General Charge Questions:

1. Is the Toxicological Review logical, clear and concise? Has EPA clearly presented and synthesized the scientific evidence for noncancer and cancer health effects of biphenyl?
2. Please identify any additional peer-reviewed studies from the primary literature that should be considered in the assessment of noncancer and cancer health effects of biphenyl.

Chemical-Specific Charge Questions:

(A) Oral reference dose (RfD) for biphenyl

1. A developmental toxicity study of biphenyl in Wistar rats (Khera et al., 1979) was selected as the basis for the derivation of the RfD. Please comment on whether the selection of this study is scientifically supported and clearly described. If a different study is recommended as the basis for the RfD, please identify this study and provide scientific support for this choice.
2. A developmental effect in Wistar rats (i.e., fetal skeletal anomalies) was concluded by EPA to be an adverse effect and was selected as the critical effect for the derivation of the RfD. Please comment on whether the selection of this critical effect and its characterization is scientifically supported and clearly described. If a different endpoint is recommended as the critical effect for deriving the RfD, please identify this effect and provide scientific support for this choice.
3. Benchmark dose (BMD) modeling was conducted using the incidence of litters with fetal skeletal anomalies to estimate the point of departure (POD) for derivation of the RfD. Has the modeling been appropriately conducted and clearly described based on EPA's draft *Benchmark Dose Technical Guidance Document* (U.S. EPA, 2000)? Is the choice of the benchmark response (BMR) for use in

deriving the POD (i.e., a BMR of 10% extra risk of the incidence of litters with any fetal skeletal anomalies) supported and clearly described?

4. Please comment on the rationale for the selection of the uncertainty factors (UFs) applied to the POD for the derivation of the RfD. Are the UFs appropriate based on the recommendations described in *A Review of the Reference Dose and Reference Concentration Processes* (U.S. EPA, 2002; Section 4.4.5) and clearly described? If changes to the selected UFs are proposed, please identify and provide scientific support for the proposed changes.

(B) Inhalation reference concentration (RfC) for biphenyl

1. The draft Toxicological Review of Biphenyl did not derive an RfC. Has the justification for not deriving an RfC been clearly described in the document? Are there available data to support the derivation of an RfC for biphenyl? If so, please identify these data.

(C) Carcinogenicity of biphenyl

1. Under EPA's *Guidelines for Carcinogen Risk Assessment* (U.S. EPA, 2005; www.epa.gov/iris/backgrd.html), the draft Toxicological Review of Biphenyl concludes that the database for biphenyl provides "suggestive evidence of carcinogenic potential" by all routes of exposure. Please comment on whether this characterization of the human cancer potential of biphenyl is scientifically supported and clearly described.
2. EPA has concluded that biphenyl-induced urinary bladder tumors in male rats is a high-dose phenomenon involving sustained occurrence of calculi in the urinary bladder leading to transitional cell damage, sustained regenerative cell proliferation, and eventual promotion of spontaneously initiated tumor cells in the urinary bladder epithelium. Please comment on whether this determination is scientifically supported and clearly described. Please comment on data available that may support an alternative mode of action for biphenyl-induced urinary bladder tumors.
3. EPA has concluded that there is insufficient information to identify the mode(s) of carcinogenic action for biphenyl-induced liver tumors in mice. Please comment on whether this determination is appropriate and clearly described. If it is judged that a mode of action can be established for biphenyl-induced mouse liver tumors, please identify the mode of action and its scientific support (i.e., studies that support the key events, and specific data available to inform the shape of the exposure-response curve at low doses). *Oral Slope Factor (OSF)*
4. A two-year cancer bioassay of biphenyl in B6F1 mice (Umeda et al., 2005) was selected as the basis for the derivation of the OSF. Please comment on whether the selection of this study is scientifically supported and clearly described. If a different study is recommended as the basis for the OSF, please identify this study and provide scientific support for this choice.
5. The incidence of liver tumors (i.e., adenomas or carcinomas) in female mice was selected to serve as the basis for the derivation of the OSF. Please comment on whether this selection is scientifically supported and clearly described. If a different cancer endpoint is recommended for deriving the OSF, please identify this endpoint and provide scientific support for this choice.
6. Benchmark dose (BMD) modeling was conducted using the incidence of liver tumors in female mice in conjunction with dosimetric adjustments for calculating the human equivalent dose (HED) to estimate the point of departure (POD). A linear low-dose extrapolation from this POD was

performed to derive the OSF. Has the modeling been appropriately conducted and clearly described based on EPA's draft *Benchmark Dose Technical Guidance Document* (U.S. EPA, 2000)? Has the choice of the benchmark response (BMR) for use in deriving the POD (i.e., a BMR of 10% extra risk of the incidence of liver tumors in female mice) been supported and clearly described?

7. EPA has concluded that a nonlinear approach is appropriate for extrapolating cancer risk from male rats to humans because the mode of action analysis suggests that rat bladder tumors occur only after a series of events that begin with calculi formation. At exposure levels below the RfD (i.e., below exposure levels needed to form calculi), no increased risk of cancer is expected. Please comment on whether this approach is scientifically supported and clearly described. Please identify and provide the rationale for any other extrapolation approaches that should be selected.

Inhalation Unit Risk (IUR)

8. The draft Toxicological Review of Biphenyl did not derive an IUR due to the lack of available studies. Are there available data to support the derivation of an IUR for biphenyl? If so, please identify these data.

Charge Example 4: Integrated Science Assessment for a National Ambient Air Quality Standards HISA

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
NATIONAL CENTER FOR ENVIRONMENTAL ASSESSMENT
WASHINGTON, DC 20460

December 6, 2013

MEMORANDUM

OFFICE OF
RESEARCH AND DEVELOPMENT

SUBJECT: CASAC Review of First External Review Draft Integrated Science Assessment for Oxides of Nitrogen - Health Criteria

FROM: John Vandenberg, Ph.D.
Director
National Center for Environmental Assessment
Research Triangle Park Division (B243-01)

TO: Aaron Yeow, M.P.H.
Designated Federal Officer
Clean Air Scientific Advisory Committee
EPA Science Advisory Board Staff Office (1400R)

The First *External Review Draft Integrated Science Assessment (ISA)* for *Oxides of Nitrogen – Health Criteria* prepared by the Environmental Protection Agency's (EPA) National Center for Environmental Assessment - Research Triangle Park Division (NCEA-RTP) as part of EPA's ongoing review of the primary (health-based) national ambient air quality standards (NAAQS) for nitrogen dioxide (NO₂) was released on November 22, 2013. Electronic copies are available for download at <http://www.epa.gov/ncea>. The draft ISA will be reviewed by the Clean Air Scientific Advisory Committee (CASAC) 02 Primary NAAQS Review Panel at a public meeting to be held March 12-13, 2014. We are in the process of distributing the draft ISA for Oxides of Nitrogen to the CASAC Oxides of Nitrogen Panel. I am requesting that you forward our charge to the CASAC Oxides of Nitrogen Panel.

The purpose of the draft ISA is to identify, evaluate, and summarize scientific information on the health effects associated with gaseous oxides of nitrogen. The ISA is intended to "accurately reflect the latest scientific knowledge useful in indicating the kind and extent of identifiable effects on public health which may be expected from the presence of [a] pollutant in ambient air" (Clean Air Act, Section 108; 42 U.S.C. 7408). This first external review draft ISA integrates the scientific evidence for review of the primary (health-based) NAAQS for NO₂ and provides draft findings, conclusions, and judgments on the strength, coherence, and plausibility of the evidence. The Preamble presents the process for ISA development, including aspects considered in judging the overall weight of evidence and framework for causal determination. Criteria used to identify relevant studies for inclusion in the ISA are also described in the Preamble. Chapter I provides an integrative summary and conclusions of this assessment. This chapter is supported by detailed information on the relevant evidence available from the multiple disciplines and approaches related to the causal framework (Preamble to the ISA); atmospheric chemistry, ambient concentrations, and exposure to oxides of nitrogen (Chapter 2); dosimetry and modes of action (Chapter 3); health effects of short-term exposure to oxides of nitrogen (Chapter 4); health effects of long-term exposure to oxides of nitrogen (Chapter 5); and lifestages and populations potentially at increased risk for health effects related to oxides of nitrogen (Chapter 6). The final ISA for Oxides of Nitrogen, in conjunction with additional technical assessments, will provide the scientific basis for EPA's decision regarding the adequacy of the primary NAAQS for NO₂ to protect human health.

The purpose of this memo is to provide charge questions related to a number of important topics addressed in the ISA. Following the CASAC and public review of the draft ISA, NCEA-RTP will produce a second draft ISA, which will be released the summer of 2014.

Charge to the CASAC Oxides of Nitrogen Panel

EPA has aimed to succinctly present and integrate the policy-relevant scientific evidence for the review of the NO₂ NAAQS while also sufficiently describing how scientific information was evaluated in forming the conclusions presented. Previous panels have emphasized the importance of older studies and concluded that if older studies are open to reinterpretation in light of newer data and/or they remain the definitive works available in the literature, they should be discussed in detail to reinforce key concepts and conclusions. In considering subsequent charge questions and recognizing an overall goal of producing a clear and concise document, are there topics that should be added or receive additional discussion? Similarly, are there topics for which discussion should be shortened or removed? Does the Panel have opinions on how the document can be shortened without eliminating important and necessary content?

In addition, we ask the Panel to focus on the following specific questions in their review:

1. The Executive Summary is intended to provide a concise synopsis of the key findings and conclusions of the ISA for a broad range of audiences. Please comment on the clarity with which the Executive Summary communicates the key information from the ISA. Please provide recommendation on information that should be added or information that should be left for discussion in the subsequent chapters of the ISA.
2. Chapter 1 summarizes key information from the Preamble about the process for developing an ISA. Chapter 1 also presents the integrative summary and conclusions from the subsequent detailed chapters of the ISA for Oxides of Nitrogen and characterizes available scientific information on policy-relevant issues.
 - a. Please comment on the usefulness and effectiveness of the summary presentation. Please provide recommendations on approaches that may improve the communication of key ISA findings to varied audiences and the synthesis of available information across subject areas.
 - b. What are the Panel's thoughts on the application of the Health and Environmental Research Online (HERO) system to support a more transparent assessment process?
 - c. To what extent does Chapter 1 communicate the key scientific information on sources, atmospheric chemistry, ambient concentrations, exposure, and health effects of oxides of nitrogen as well as at-risk lifestyles and populations? What information should be added or is more appropriate to leave for discussion in the subsequent detailed chapters?
 - d. What are the Panel's thoughts on the rationale presented for forming causal determinations for NO₂ exposure only and considering epidemiologic results for associations between NO_x and health effects in causal determinations for NO₂ (Sections 1.4.1 and 1.4.3)?

- e. Based on individual Panel member recommendations from June 2013¹ on the *Draft Plan for the Development of the Integrated Science Assessment for Nitrogen Oxides – Health Criteria* (May 2013)², Chapter 1 presents an integrated evaluation of various epidemiologic lines of evidence that inform the independent effects of NO₂ exposure (Section 1.5). This section discusses available information that is not necessarily included in the health effect chapters on potential confounding by copollutants and other factors as well as the potential for NO₂ to serve primarily as an indicator of traffic-related pollutants and traffic proximity. This discussion is in Chapter 1 because it integrates information across Chapters 2, 4, and 5. Please comment on the extent to which this discussion is informative in describing how the evidence of independent effects of NO₂ is evaluated in this ISA. Does the discussion accurately reflect the available evidence? If this discussion is informative, what information could be added or removed to improve the discussion. Should the discussion remain in Chapter 1 or should it be moved to another part of the ISA?
 - f. Please comment on the extent to which the discussion of various policy-relevant considerations is clearly described and integrates relevant information (Section 1.6). Please identify any other relevant information that would be useful to include.
3. Chapter 2 describes scientific information on sources, atmospheric chemistry, air quality characterization, and human exposure of oxides of nitrogen.
 - a. To what extent is the information presented regarding characteristics of sources, chemistry, monitoring concentrations, and human exposure accurate, complete, and relevant to the review of the NO₂ NAAQS?
 - b. To what extent are the analyses of air quality presented clearly conveyed, appropriately characterized, and relevant to the review of the NO₂ NAAQS?
 - c. How effective are the source category groupings and the discussion of source emissions in understanding the importance and impacts of oxides of nitrogen from different sources on both national and local scales?
 - d. Please comment on the extent to which available information on the spatial and temporal trends of ambient oxides of nitrogen at various scales has been adequately and accurately described.
 - e. Please comment on the accuracy, level of detail, and completeness of the discussion regarding exposure assessment and the influence of exposure error on effect estimates in epidemiologic studies of the health effects of NO₂.
 4. Chapter 3 characterizes scientific evidence on the dosimetry and modes of action for NO₂ and nitric oxide (NO). Dosimetry and modes of action are bridged by reactions of NO₂ with components of the extracellular lining fluid and by reactions of NO with heme proteins, processes that play roles in both uptake and biological responses.
 - a. Given the ubiquity of reactive substrates and reaction rate of NO₂ with these substrates, it appears unlikely NO₂ itself will penetrate through the lung lining fluid to the epithelium (see Table 3-1). Please comment of the adequacy of the discussion of NO₂ uptake and reactivity in the respiratory tract.

¹ The individual panel member comments are available at [http://yosemite.epa.gov/sab/sabproduct.nsf/08EF0A3789CDB13A85257B8E006A496E/\\$File/EPA-CASAC-13-006+unsigned.pdf](http://yosemite.epa.gov/sab/sabproduct.nsf/08EF0A3789CDB13A85257B8E006A496E/$File/EPA-CASAC-13-006+unsigned.pdf)

²The draft plan for development of the ISA is available at <http://yosemite.epa.gov/sab/sabproduct.nsf/4620a620d0120f93852572410080d786/bc264e65792e015f85257b4a007128c6!OpenDocument>

- b. Since existing dosimetric models for NO₂ do not consider the probability of oxidants/cytotoxic products reaching target sites, it was concluded that these models are inadequate for within or cross species comparisons. Please comment on the validity of this conclusion and identify and comment on the validity of any alternative conclusions.
 - c. Please comment on the adequacy of the discussion of endogenously occurring NO₂ and NO and their reaction products in comparison to that derived from ambient inhalation.
 - d. To what extent are the discussion and integration of the potential modes of action underlying the health effects of exposure to oxides of nitrogen presented accurately and in sufficient detail? Are there additional modes of action that should be included in order to characterize fully the underlying mechanisms of oxides of nitrogen?
5. Chapters 4 and 5 present assessments of the health effects associated with short-term and long-term exposure to oxides of nitrogen, respectively. The discussion is organized by health effect category, outcome, and scientific discipline.
- a. To what extent do the discussions in this chapter accurately reflect the body of evidence from epidemiologic, controlled human exposure and toxicological studies?
 - b. Please comment on the balance of discussion of evidence from previous and recent studies in informing the causal determinations.
 - c. Please comment on the adequacy of the discussion of the strengths and limitations of the evidence in the text and tables within Chapters 4 and 5 and in the evaluation of the evidence in the causal determinations.
 - d. What are the views of the panel on the integration of epidemiologic, controlled human exposure, and toxicological evidence, in particular, on the balance of emphasis placed on each source of evidence? Please comment on the adequacy with which issues related to exposure assessment and mode of action are integrated in the health effects discussion. Please provide recommendations on information in other chapters of the ISA that would be useful to integrate with the health effects discussions in these chapters.
 - e. Please comment on the appropriateness of using experimental and epidemiologic evidence for morbidity effects to inform the biological plausibility of total mortality associated with short-term (Section 4.4) and long-term (Section 5.5) NO₂ exposure and in turn, to inform causal determinations.
 - f. Section 4.2.2 discusses the effect of short-term NO₂ exposure on airways responsiveness. This section focuses primarily on an EPA meta-analysis developed for this ISA of airway responsiveness data for individuals with asthma and secondarily on the potential of various factors to affect airways hyperresponsiveness independently or in conjunction with NO₂ exposure in controlled human exposure studies. This material presently is unpublished and we ask the Panel to provide the peer review for the analysis, in particular, to comment on the appropriateness of the methodology utilized for the meta-analysis, the conclusions reached based this analysis, and its use in the draft ISA. With regard to factors potentially affecting airways responsiveness, please comment on the adequacy of this discussion. Are there other modifying factors that should be considered?

- g. The 2008 ISA for Oxides of Nitrogen stated that one of the largest uncertainties was the potential for health effects observed in association with NO₂ exposure to be confounded by correlated copollutants. To what extent has evidence that informs independent effects of NO₂ been adequately discussed in Chapters 4 and 5 and appropriately interpreted as reducing uncertainty (for example, evaluation of copollutant model results)? Has the current draft ISA appropriately considered recent epidemiologic findings regarding potential copollutant confounding in causal determinations? Please provide comments specifically for respiratory effects, cardiovascular effects, and total mortality of short-term NO₂ exposure.
 - h. To what extent is the causal framework transparently applied to evidence for each of the health effect categories evaluated to form causal determinations? How consistently was the causal framework applied across the health effect categories? Do the text and tables in the summaries and causal determinations clearly communicate how the evidence was considered to form causal determinations?
 - i. What are the views of the panel regarding the clarity and effectiveness of figures and tables in conveying information about the consistency of evidence for a given health endpoint? In particular, was the use of the tables and figures in both the text and online in the HERO database effective in providing additional information on the studies evaluated? Are there tables and figures in the ISA that would be more appropriate to include as a resource in the HERO database?
6. Chapter 6 evaluates scientific information and presents conclusions on factors that may modify exposure to NO₂, physiological responses to NO₂ exposure, or risk of health effects associated with NO₂ exposure. Consistent with the ISAs for ozone and lead, conclusions on these at-risk factors inform at-risk lifestages and populations.
 - a. How effective are the categories of at-risk factors in providing information on potential at-risk lifestages and populations? Is there information available on other key at-risk factors that is not included in the first draft ISA and should be added?
 - b. To what extent do the discussions in this chapter accurately reflect the body of available evidence from epidemiologic, controlled human exposure, and toxicological studies, including the extent to which evidence indicates that the effects of NO₂ exposure are independent of other traffic-related copollutants?
 - c. Please comment on the consistency and transparency with which the framework for drawing conclusions about at-risk factors has been applied in this ISA.
 - d. To what extent is available scientific evidence on factors that modify exposure to NO₂ discussed in the chapter and adequately considered in conclusions for at-risk lifestages or populations?

We look forward to discussing these issues with the CASAC Oxides of Nitrogen Panel at our upcoming meeting. Should you have any questions regarding the draft ISA for Oxides of Nitrogen, please feel free to contact Dr. Steven Dutton (919-541-5035, dutton.steven@epa.gov) or Dr. Molini Patel (919-541-1492, patel.molini@epa.gov).

Charge Example 5: Science Advisory Board Example

**Animal Feeding Operations Air Emissions Estimating Methodologies
From the National Air Emissions Monitoring Study**

MEMORANDUM

This memorandum requests that the Science Advisory Board (SAB) review and comment on the draft emissions estimating methodologies (EEMs) for animal feeding operations (AFOs). In preparation for this review, the SAB has formed the *Animal Feeding Operations Emission Review Panel*. We envision conducting multiple meetings of this panel to cover the material we are requesting to be reviewed. This memorandum contains background material and charge questions for review by the expert SAB Panel at the initial meeting. We request that these materials be forwarded to the SAB Panel for their review.

As the attachment and associated documents illustrate, the EPA staff has carefully considered the data collected as part of the National Air Emissions Monitoring Study (NAEMS) and now ask the Panel to refine and comment upon our work thus far to create EEMs. To bound and define the discussion, the attachment offers charge questions for the Panel to consider.

By way of background, in 2005, the EPA entered a voluntary consent agreement with the AFO industry in which AFOs that chose to sign the Air Compliance Agreement (Agreement) shared responsibility for funding a nationwide emissions monitoring study. The NAEMS monitoring protocol was developed through a collaborative effort of AFO industry experts, university scientists, U.S. Department of Agriculture and EPA scientists and other stakeholders. The monitoring study was designed to gather data for developing methodologies for estimating emissions from AFOs and to help AFOs determine and comply with their regulatory responsibilities under the Clean Air Act (CAA), the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), and the Emergency Planning and Community Right-To-Know Act (EPCRA). Once the EPA publishes the applicable EEMs, the Agreement requires each participating AFO to certify that it is in compliance with all relevant requirements of the CAA, CERCLA and EPCRA.

We appreciate your efforts and those of the Panel to prepare for the upcoming meeting and look forward to discussing this project in detail. Questions regarding the attached materials should be directed to [name], EPA-OAQPS ([telephone]; [email]).

Attachment

ATTACHMENT

Regulatory Background

In 2005, the EPA entered a voluntary consent agreement with the animal feeding operations (AFO) industry in which AFOs that chose to sign the Air Compliance Agreement (Agreement) shared responsibility for funding the National Air Emissions Monitoring Study (NAEMS). Approximately 2,600 AFOs, representing nearly 14,000 facilities that include broiler, dairy, egg layer and swine operations, received the EPA's approval to participate in the Agreement.

To provide a framework for the NAEMS, AFO industry experts, university and government scientists and other stakeholders collaborated to develop a comprehensive monitoring plan. The study was designed to generate scientifically credible data to characterize emissions from the participating animal sectors.

Consistent with the Agreement, the Agriculture Air Research Council (AARC), a nonprofit entity comprised of participating AFO industry representatives, administered the monitoring study. The AARC was responsible for selecting the Independent Monitoring Contractor (IMC) and the study's Science Advisor with EPA approval. The Agreement outlined the roles and responsibilities of the AARC, the IMC and the Science Advisor.

The monitoring plan specified the general geographic location of the farms to be monitored, animal production phase, ventilation type, manure management/handling system and other pertinent information for each animal sector.

- For broilers, two sites were to be monitored - one on the West Coast and the other in the Southeast. Both were to be mechanically ventilated and have litter on the floor.
- For the swine industry, the sites were to be located in the Southeast (sow and finisher), Midwest (sow and finisher), and West (sow). Mechanically-ventilated buildings, a deep pit building, lagoons and basin manure storage types were to be monitored.
- For dairy, both naturally- and mechanically-ventilated buildings, lagoons and basins were monitored. Five dairies were monitored, one dairy in each of the following geographical areas: Northeast, Midwest, Northwest, West and South.

For confinement sources, the IMC monitored for ammonia (NH₃), particulate matter (PM₁₀, PM_{2.5}, TSP), volatile organic compounds (VOCs) and hydrogen sulfide (H₂S). For lagoons and basins, H₂S, NH₃ and VOC were to be monitored. Accordingly, the EPA is then responsible for developing EEMs for each of these pollutants.

Charge to the Science Advisory Board (SAB) AFO Air Emissions Review Panel

In preparation for the first and second meeting, the EPA has analyzed the NAEMS data for two broiler sites and nine swine and dairy lagoons/basins. For the purpose of this study, the EPA used the description of a lagoon and basin as provided in the MidWest Plan Service "Manure Storages" (MWPS-18 Section 2) document. According to MWPS, "A lagoon is a biological treatment system designed and operated for biodegradation of organic matter in animal manure to a more stable end product. A basin, while similar to but smaller than a lagoon, is designed to store manure only and is not a treatment system."

For a broiler confinement house, the EPA has developed draft EEMs for NH₃, PM₁₀, PM_{2.5}, TSP, VOC and H₂S. For swine and dairy lagoons/basins, the EPA has only developed a draft EEM for NH₃. The documents provided to the SAB describe the sites monitored; the data submitted to the EPA; and a detailed discussion of the statistical methodology used to develop the draft EEMs. This material is provided to inform the SAB panel of the EEM development process used by the agency. In subsequent meetings, the EPA will address draft EEMs for egg-layers, swine and dairy confinement houses and other pollutants for swine and dairy lagoons/basins.

Issue 1: Statistical Methodology used to develop draft EEMs

The EPA seeks the SAB's input on the statistical methodology used by the EPA to develop the draft EEMs. Section 7.0 and 8.0 of the broiler document and Section 5.0 of the swine and dairy lagoon/basin document provide an overview of the statistical methodology used to develop the draft EEMs. A flow diagram of the statistical methodology is provided in Figure 7-1 in the broiler document and Figure 5-1 in the swine and dairy lagoon/basin document. The EPA considers this statistical methodology to be the best approach for analyzing the data and intends to use this same approach to develop draft EEMs for the egg-layers, swine and dairy confinement houses.

Using the process described in the sections listed above, we developed a mean trend function that provides a point prediction of emissions under a given set of conditions. We chose an appropriate mean trend function to quantify the relationship between predictor variables and pollutant emissions by analyzing the emissions data and incorporating knowledge of the emissions generating processes. The EEM development process also involves choosing a probability distribution and covariance function to appropriately quantify other contributions to variability in emissions, and thereby to accurately quantify methods at all stages. If necessary, we will adjust the statistical methodology based on our review of the SAB's input.

Question 1: Please comment on the statistical approach used by the EPA for developing the draft EEMs for broiler confinement houses and swine and dairy lagoons/basins. In addition, please comment on using this approach for developing draft EEMs for egg-layers, swine and dairy confinement houses.

Issue 2: Statistical Methodology used to develop swine and dairy lagoon/basin draft EEMs

After conducting an initial analysis of the NAEMS data submitted for swine and dairy lagoons/basins, the EPA decided to focus on developing a draft EEM for NH₃. The EPA's review of current literature indicates that lagoon/basin emissions are influenced by several factors, one of these being lagoon/basin temperature. To ensure that the dataset used to develop the draft EEM represented all seasonal meteorological conditions for the entire two year monitoring period, the EPA decided to combine the swine and dairy data. Combining the swine and dairy lagoon/basin dataset also resulted in combining lagoon and basin emissions data.

To maximize the number of NH₃ emissions measurements used to develop the draft EEM, the EPA used static predictor variables (SPVs) as surrogates for data on lagoon/basin conditions (i.e., nitrogen content of lagoon liquid, lagoon pH, oxidation reduction potential and temperature). The static variables of animal type, total live mass of animal capacity on the farm and the surface area of the lagoon were used to represent NH₃ precursor loading and the potential for release to the air. Consistent with operating parameters associated with statistical degrees-of-freedom, we concluded that two degrees of freedom was the maximum that the data would credibly allow for inclusion in the developing the draft EEM. As a result, the EPA developed three sets of draft EEMs, using the paired combinations of these static variables (i.e., animal type, surface area, farm size) and the continuous variables representing

meteorological conditions (i.e., temperature, atmospheric pressure, humidity, wind speed, solar radiation).

Question 2: Please comment on the agency's decision to combine the swine and dairy dataset to ensure that all seasonal meteorological conditions are represented. In addition, the agency also seeks the SAB's comments on whether the agency should combine lagoon and basin data.

Question 3: Please comment on the agency's decision to use SPVs as surrogates for data on lagoon/basin conditions. Given the uncertainties in that approach, does the SAB recommend that the EPA consider specific alternative approaches for statistically analyzing the data that would allow for the site-specific lagoon liquid characteristics to be used as predictor variables?

Question 4: Does the SAB recommend that EPA consider alternative approaches for developing the draft NH₃ EEM that balances the competing needs for a large dataset (to reflect seasonal meteorological conditions) versus incorporating additional site-specific factors that directly affect lagoon emissions. If so, what specific alternative approaches would be appropriate to consider?

Issue 3: Negative and Zero Data

Some emissions measurements were reported to the EPA as either negative or zero emissions values. When developing the draft EEMs, the EPA used the following general approach regarding inclusion of negative and zero emissions values in the data.

- The EPA evaluated whether the negative or zero values represent the variability in emissions measurements due to the means of obtaining the measurements. For example, negative values for a pollutant concentration might result when the concentration of the pollutant falls below the minimum detection limit of a monitor. For all EEM datasets, the EPA included zero values because these values potentially represent instances where the emissions from the source were zero (e.g., a frozen lagoon), or the background and pollutant concentrations from the source were the same. Regarding negative values, in cases where the dataset available to develop draft EEMs was relatively large and the emissions were significantly greater than zero, the EPA excluded negative emissions values from the EEM datasets. The EPA used this approach to develop the entire broiler confinement house draft EEMs and swine and dairy lagoon/basin NH₃ draft EEMs.
- The EPA reviewed the data to see if the data quality measures were properly performed according to the Quality Assurance Project Plan.
- If the EPA identified data where the quality assurance measures were not followed, we contacted the science advisor to determine if the corrected data could be submitted to the EPA.

The EPA has conducted a preliminary analysis of the swine and dairy lagoon/basin H₂S emissions data. Our analysis indicates that we may need to modify our approach for handling negative and zero data in order to develop a draft H₂S EEM for swine and dairy lagoons/basins. A modification may be needed due to the limited number of H₂S emissions values, the presence of a greater percentage of negative emissions values and emissions values that are closer to zero than the NH₃ emissions for swine and dairy lagoons/basins. The EPA's concern is that failure to include the negative measurements in the dataset, or setting them equal to zero, would result in an EEM that fails to fully quantify uncertainty around the point prediction of emissions attributable to measurement error.

Question 5: Please comment on the EPA's approach for handling negative or zero emission measurements.

Question 6: In the interest of maximizing the number of available data values for development of the draft H2S EEMs for swine and dairy lagoons/basins, does SAB recommend any alternative approaches for handling negative and zero data other than the approach used by the agency.

Issue 4: Volatile Organic Compounds (VOC) Data

The EPA reviewed the VOC data submitted for the California and Kentucky broiler sites. The two sites used different VOC measurement techniques. Based on our analysis of the measurement and analytical techniques and the VOC data, the EPA decided to use only the VOC data from the Kentucky sites when developing the draft VOC EEM.

Question 7: Please comment on the approach EPA used to develop the draft broiler VOC EEM.

APPENDIX I. EXAMPLES OF *FEDERAL REGISTER* NOTICES REQUESTING PUBLIC COMMENT

***Federal Register* Notice: Announcement of Public Comment Period for Draft Document**

Federal Register, Volume 77 Issue 102 (Friday, May 25, 2012)

ENVIRONMENTAL PROTECTION AGENCY

[FRL-9678-3; Docket ID No. EPA-HQ-ORD-2012-0276]

An Assessment of Potential Mining Impacts on Salmon Ecosystems of
Bristol Bay, AK

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of public comment period.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing a public comment period for the draft document titled, “An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska” (EPA-910-R-12-004a-d). The document was prepared by the EPA’s Region 10 (Pacific Northwest and Alaska), EPA’s Office of Water, and EPA’s Office of Research and Development. The EPA conducted this assessment to determine the significance of Bristol Bay’s ecological resources and evaluate the potential impacts of large-scale mining on these resources. EPA will use the results of this assessment to inform the consideration of options consistent with its role under the Clean Water Act. The assessment is intended to provide a scientific and technical foundation for future decision making; EPA will not address use of its regulatory authority until the assessment becomes final and has made no judgment about whether and how to use that authority at this time.

DATES: The public comment period began Friday, May 18, 2012, and ends Monday, July 23, 2012. Technical comments should be in writing and must be received by EPA by Monday, July 23, 2012.

ADDRESSES: The draft “An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska” is available primarily via the Internet on the EPA Region 10 Bristol Bay Web site at www.epa.gov/bristolbay as well as on the National Center for Environmental Assessment’s Web site under the Recent Additions and the Data and Publications menus at www.epa.gov/ncea. A printed copy of the assessment will be placed at public locations in Bristol Bay and in Anchorage, AK. These locations are listed on the Region 10 Web site. A limited number of paper copies are available from the Information Management Team, NCEA; telephone: 703-347-8561; facsimile: 703-347-8691. If you are requesting a paper copy, please provide your name, your mailing address, and the document title, “An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska.” Please also indicate if a paper copy of the full set of appendices is needed.

Comments on the report may be submitted electronically via <http://www.regulations.gov/>, by email, by mail, by facsimile, or by hand delivery/courier. Please follow the detailed instructions provided in the SUPPLEMENTARY INFORMATION section of this notice.

FOR FURTHER INFORMATION CONTACT: For information on the public comment period, contact the Office of Environmental Information Docket; telephone: 202-566-1752; facsimile: 202-566-1753; or email: ORD.Docket@epa.gov.

For technical information concerning the report, contact Judy Smith; telephone: 503-326-6994; facsimile: 503-326-3399; or email: r10bristolbay@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Information About the Project/Document

The U.S. Environmental Protection Agency (EPA) conducted this assessment to determine the significance of Bristol Bay’s ecological resources and evaluate the potential impacts of large-scale mining on these resources. The EPA will use the results of this assessment to inform the consideration of options consistent with its role under the Clean Water Act. The assessment is intended to provide a scientific and technical foundation for future decision making. The Web site that describes the project is www.epa.gov/bristolbay. This draft document addresses potential impacts to water quality and the salmon fishery that may result from large-scale mining in the Nushagak and Kvichak watersheds of southwest Alaska.

EPA is releasing this draft assessment for the purposes of public comment and peer review. This draft assessment is not final as described in EPA’s information quality guidelines, and it does not represent and should not be construed to represent Agency policy or

views. EPA utilizes public comments as one means to ensure that science products are complete and accurate. EPA is seeking comments from the public on all aspects of the report, including the scientific and technical information presented in the report, the hypothetical mining scenario used, the data and information used to inform assumptions about mining activities and the evaluations of risk to the fishery, and the potential mitigation measures considered (and effectiveness of those measures). EPA is also specifically seeking any additional data or scientific or technical information about Bristol Bay resources or large-scale mining that should be considered in our evaluation.

EPA will consider any public comments submitted in accordance with this notice when revising the document. After public review and comment, EPA's independent contractor, Versar, Inc., will convene an expert panel for independent external peer review of this draft assessment. The public comment period and external peer review meeting are separate processes that provide opportunities for all interested parties to comment on the assessment. The preferred method to submit comments is through the docket, which is described below. Public meetings will be held in Anchorage, Dillingham, Newhalen, Naknek, Nondalton, and New Stuyahok, AK during the week of June 4-8, 2012. Spoken comments will be accepted at these meetings. The external peer review panel meeting is scheduled to be held in Anchorage, AK on August 7, 8, and 9, 2012. The public will be invited to attend on August 7 and 8, 2012. Further information regarding the external peer review panel meeting will be announced at a later date in the Federal Register.

II. How To Submit Technical Comments to the Docket at

<http://www.regulations.gov/>

Submit your comments, identified by Docket ID No. EPA-HQ-ORD-2012-0276, by one of the following methods:

<http://www.regulations.gov/>: Follow the on-line instructions for submitting comments.

Email: ORD.Docket@epa.gov. Include the docket number EPA-HQ-ORD-2012-0276 in the subject line of the message.

Fax: 202-566-1753.

Mail: Office of Environmental Information (OEI) Docket (Mail Code: 2822T), Docket EPA-HQ-ORD-2012-0276, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460. The phone number is 202-566-1752. If you provide comments by mail, please submit one unbound original with pages numbered consecutively, and three copies of the comments. For attachments, provide an index, number pages consecutively with the comments, and submit an unbound original and three copies.

Hand Delivery: The OEI Docket is located in the EPA Headquarters Docket Center, Room 3334, EPA West Building, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public

Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is 202-566-1744. Deliveries are only accepted during the docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information. If you provide comments by hand delivery, please submit one unbound original with pages numbered consecutively, and three copies of the comments. For attachments, provide an index, number pages consecutively with the comments, and submit an unbound original and three copies.

Comment at a public meeting: Spoken comments will be taken at public meetings during June 4-8, 2012. A court reporter will provide a transcription of comments received at the Anchorage and Dillingham meetings for the docket. Audio recording and written notes will be taken for the docket for comments spoken at Naknek, Newhalen, New Stuyahok, and Nondalton.

Instructions: Direct your comments to Docket ID No. EPA-HQ-ORD-2012-0276. Please ensure that your comments are submitted within the specified comment period. Comments received after the closing date will be marked "late," and may only be considered if time permits. It is EPA's policy to include all comments it receives in the public docket without change and to make the comments available on-line at <http://www.regulations.gov/>, including any personal information provided, unless a comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through <http://www.regulations.gov/> or email. The <http://www.regulations.gov/> Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through <http://www.regulations.gov/>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comments due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comments. Electronic files should avoid the use of special characters and any form of encryption and be free of any defects or viruses. For additional information about EPA's public docket, visit the EPA Docket Center homepage at www.epa.gov/epahome/dockets.htm.

Docket: Documents in the docket are listed in the <http://www.regulations.gov/--index>. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy.

Publicly available docket materials are available either electronically at <http://www.regulations.gov/> or in hard copy at the OEI Docket in the EPA Headquarters Docket Center.

Dated: May 21, 2012.

Darrell Winner,

Acting Director, National Center for Environmental Assessment.

An Assessment of Potential Mining Impacts on Salmon Ecosystems of
Bristol Bay, Alaska--Peer Review Panel Members and Charge Questions

AGENCY: Environmental Protection Agency (EPA).

[[Page 33214]]

ACTION: Notice of availability and public comment period.

SUMMARY: EPA is announcing the peer review panel members assembled by an independent contractor to evaluate the draft document titled, "An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska" (EPA-910-R-12-004a-c). EPA is also announcing a three week public comment period for the draft charge questions to be provided to the peer review panel. The assessment was prepared by the U.S. EPA's Region 10 Office (Pacific Northwest and Alaska), EPA's Office of Water, and EPA's Office of Research and Development. The U.S. EPA conducted this assessment to determine the significance of Bristol Bay's ecological resources and evaluate the potential impacts of large-scale mining on these resources.

DATES: The public comment period begins June 5, 2012, and ends June 26, 2012. Comments should be in writing and must be received by EPA by June 26, 2012.

Availability: Draft charge questions are provided below. Copies of the draft charge questions are also available via the Internet on the EPA Region 10 Bristol Bay Web site at www.epa.gov/bristolbay. The draft document “An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska” is also available on the Internet on the EPA Region 10 Bristol Bay Web site at www.epa.gov/bristolbay. A limited number of paper copies of the draft charge questions are available from the Information Management Team, NCEA; telephone: 703-347-8561; facsimile: 703-347-8691. If you are requesting a paper copy, please provide your name, your mailing address, and title, “Peer Review Charge Questions on An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska.”

Comments on the draft charge questions may be submitted electronically via <http://www.regulations.gov/>, by email, by mail, by facsimile, or by hand delivery/courier. Please follow the detailed instructions provided in the SUPPLEMENTARY INFORMATION section of this notice.

FOR FURTHER INFORMATION CONTACT: For information on the public comment period, contact the Office of Environmental Information Docket; telephone: 202-566-1752; facsimile: 202-566-9744; or email: ORD.Docket@epa.gov.

For technical information concerning the report, contact Judy Smith; telephone: 503-326-6994; facsimile: 503-326-3399; or email: r10bristolbay@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Information About the Project

The U.S. EPA conducted this assessment to determine the significance of Bristol Bay’s ecological resources and evaluate the potential impacts of large-scale mining on these resources. The U.S. EPA will use the results of this assessment to inform the consideration of options consistent with its role under the Clean Water Act. The assessment is intended to provide a scientific and technical foundation for future decision making. The Web site that describes the project is www.epa.gov/bristolbay.

EPA released the draft assessment for the purposes of public comment and peer review on May 18, 2012. Consistent with guidelines for the peer review of highly influential scientific assessments, EPA asked a contractor (Versar, Inc.) to assemble a panel of experts to evaluate the draft report. Versar evaluated the 86 candidates nominated during a previous public comment period (February 24, 2012 to March 16, 2012) and sought other experts to complete this peer review panel. The twelve peer review panel members are as follows:

Mr. David Atkins, Watershed Environmental, LLC.--Expertise in mining and hydrology.
Mr. Steve Buckley, WHPacific/NANA Alaska--Expertise in mining and seismology.
Dr. Courtney Carothers--Expertise in indigenous Alaskan cultures.
Dr. Dennis Dauble, Washington State University--Expertise in fisheries biology and wildlife ecology.
Dr. Gordon Reeves, USDA Pacific NW Research Station--Expertise in fisheries biology and aquatic biology.
Dr. Charles Slaughter, University of Idaho--Expertise in hydrology.
Dr. John Stednick, Colorado State University--Expertise in hydrology and biogeochemistry.
Dr. Roy Stein, Ohio State University--Expertise in fisheries and aquatic biology.
Dr. William Stubblefield, Oregon State University--Expertise in aquatic biology and ecotoxicology.
Dr. Dirk van Zyl, University of British Columbia--Expertise in mining and biogeochemistry.
Dr. Phyllis Weber Scannel--Expertise in aquatic ecology and ecotoxicology.
Dr. Paul Whitney--Expertise in wildlife ecology and ecotoxicology.

The peer review panel will be provided with draft charge questions to guide their evaluation of the draft assessment. These draft charge questions are designed to focus reviewers on specific aspects of the report. EPA is seeking comments from the public on the draft charge questions and welcome input on additional charge questions consistent with the objectives of the assessment. The draft charge questions are as follows:

(1) The assessment brought together information to characterize the ecological, geological, and cultural resources of the Nushagak and Kvichak watersheds. Was this characterization accurate? Was any significant literature missed that would be useful to complete this characterization?

(2) A formal mine plan or application is not available for the porphyry copper deposits in the Bristol Bay watershed. EPA developed a hypothetical mine scenario for its risk assessment. Given the type and location of copper deposits in the watershed, was this hypothetical mine scenario realistic? Has EPA appropriately bounded the magnitude of potential mine activities with the minimum and maximum mine sizes used in the scenario? Is there significant literature not referenced that would be useful to refine the mine scenario?

(3) EPA assumed two potential modes for mining operations: A no-failure mode of operation and a mode outlining one or more types of failures. The no-failure operation mode assumes best practical engineering and mitigation practices are in place and in optimal operating condition. Is the no-failure mode of operation adequately described? Is the choice of engineering and mitigation practices reasonable and consistent with current practices?

(4) Are the potential risks to salmonid fish due to habitat loss and modification and water quantity/quality changes appropriately characterized and described for the no-failure mode of operation? Does the assessment appropriately describe the risks to salmonid fish due to

operation of a transportation corridor under the no-failure mode of operation?

(5) Do the failures outlined in the assessment reasonably represent potential system failures that could occur at a mine of the type and size outlined in the mine scenario? Is there a significant type of failure that is not described? Are the assumed risks of failures appropriate?

(6) Does the assessment appropriately characterize risks to salmonid fish due to a potential failure of water and leachate collection and treatment from the mine site? If not, what suggestions do you have for improving this part of the assessment?

(7) Does the assessment appropriately characterize risks to salmonid fish due to culvert failures along the transportation corridor? If not, what suggestions do you have for improving this part of the assessment?

(8) Does the assessment appropriately characterize risks to salmonid fish due to pipeline failures? If not, what suggestions do you have for improving this part of the assessment?

(9) Does the assessment appropriately characterize risks to salmonid fish due to a potential tailings dam failure? If not, what suggestions do you have for improving this part of the assessment?

(10) Does the assessment appropriately characterize risks to wildlife and human cultures due to risks to fish? If not, what suggestions do you have for improving this part of the assessment?

(11) Does the assessment appropriately describe the potential for cumulative risk from multiple mines?

(12) Does the assessment identify the uncertainties and limitations associated with the mine scenario and the identified risks?

The preferred method to submit comments on the draft peer review charge is through the docket, which is described below. This docket is separate from the docket collecting public comments on the draft assessment itself. The EPA will evaluate comments received on these draft charge questions. Charge questions will be finalized and provided to EPA's independent contractor, Versar, Inc., who will convene the expert panel for independent external peer review.

The external peer review panel meeting is scheduled to be held in Anchorage, AK on August 7, 8, and 9, 2012. The public will be invited to attend on August 7 and 8, 2012. Further information regarding the external peer review panel meeting will be announced at a later date in the Federal Register.

II. How to Submit Technical Comments to the Docket at <http://www.regulations.gov/>

Submit your comments, identified by Docket ID No. EPA-HQ-ORD-2012-0358, by one of the following methods:

<http://www.regulations.gov/>: Follow the on-line instructions for

submitting comments.

Email: ORDDocket@epa.gov. Include the docket number EPA-HQ-ORD-2012-0358 in the subject line of the message.

Fax: 202-566-9744.

Mail: Office of Environmental Information (OEI) Docket (Mail Code: 28221T), Docket EPA-HQ-ORD-2012-0358, U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue NW., Washington, DC 20460. The phone number is 202-566-1752. If you provide comments by mail, please submit one unbound original with pages numbered consecutively, and three copies of the comments. For attachments, provide an index, number pages consecutively with the comments, and submit an unbound original and three copies.

Hand Delivery: The OEI Docket is located in the EPA Headquarters Docket Center, Room 3334, EPA West Building, 1301 Constitution Avenue NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is 202-566-1744. Deliveries are only accepted during the docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information. If you provide comments by hand delivery, please submit one unbound original with pages numbered consecutively, and three copies of the comments. For attachments, provide an index, number pages consecutively with the comments, and submit an unbound original and three copies.

Instructions: Direct your comments to Docket ID No. EPA-HQ-ORD-2012-0358. Please ensure that your comments are submitted within the specified comment period. Comments received after the closing date will be marked "late," and may only be considered if time permits. It is EPA's policy to include all comments it receives in the public docket without change and to make the comments available online at <http://www.regulations.gov/>, including any personal information provided, unless a comment includes information claimed to be Confidential

Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through <http://www.regulations.gov/> or email. The <http://www.regulations.gov/> Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through <http://www.regulations.gov/>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comments due to technical difficulties and cannot contact you for

clarification, EPA may not be able to consider your comments. Electronic files should avoid the use of special characters and any form of encryption and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at www.epa.gov/epahome/dockets.htm.

Docket: Documents in the docket are listed in the <http://www.regulations.gov>. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy at the OEI Docket in the EPA Headquarters Docket Center.

Dated: May 30, 2012.
Darrel A. Winner,
Acting Director, National Center for Environmental Assessment.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-9697-3]

Notice of the Peer Review Meeting for EPA's Draft Report Entitled
An Assessment of Potential Mining Impacts on Salmon Ecosystems of
Bristol Bay, AK

AGENCY: U.S. Environmental Protection Agency (EPA).

ACTION: Notice of external peer review meeting.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing that Versar, Inc., an EPA contractor for external peer review, has convened a panel of experts and will organize and conduct an independent expert external peer review meeting on August 7-9, 2012, to review the draft report entitled An Assessment of Potential Mining Impacts on Salmon Ecosystems of Bristol Bay, Alaska. Versar, Inc. invites the public to register to attend the first two days of this meeting as observers. In addition, Versar, Inc. invites the public to register to provide oral testimony during Day 1 (August 7, 2012) of the external peer review meeting. The panel will meet privately on Day 3 (August 9, 2012) of the meeting. The expert panel is charged with reviewing the scientific and technical merit of the draft assessment. The panel will not be making recommendations to the EPA concerning any potential future actions or policies. Therefore, the peer review meeting will focus on issues of science relevant to the assessment, rather than its policy implications. The panel will have access to public comments received in

the official public docket (docket ID number EPA-HQ-ORD-2012-0276) during the assessment's public comment period, as well as oral comments made on Day 1 of the peer review meeting. The draft assessment is available through <http://www.regulations.gov/> and at www.epa.gov/bristolbay. In preparing the final assessment, EPA will consider Versar, Inc.'s report of the comments and recommendations from the external peer review meeting, as well as written public comments received through the official public docket. The final peer review report prepared by Versar, Inc. will be made available to the public. EPA has released this draft assessment for the purposes of public comment and peer review. This draft assessment is not final as described in EPA's information quality guidelines, and it does not represent and should not be construed to represent Agency policy or views.

DATES: The public peer review panel meeting will be held on August 7-8, 2012, beginning and ending at approximately 8:30 a.m. and 5:00 p.m. (AKDT) on both days.

ADDRESSES: The independent expert external peer review meeting will be held at the Dena'ina Civic & Convention Center, located at 600 West Seventh Avenue, Anchorage, Alaska.

Meeting Background: As part of the peer review process for the EPA's draft assessment report, the public portion of the peer review meeting will be held on August 7-8, 2012 at the Dena'ina Civic & Convention Center in Anchorage, Alaska. On both days, the meeting will begin at 8:30 a.m. (AKDT) and will end at approximately 5:00 p.m. (AKDT). Members of the public and any other interested parties may register to attend both days of the meeting as observers, and to offer oral testimony on the first day of the meeting.

The focus of this peer review meeting is the scientific content and merit of the EPA's draft assessment. Public speakers are encouraged to focus on issues directly relevant to science-based aspects of the assessment, and to address specific scientific points in their oral testimony. The peer review process is separate from the EPA public comment meetings held in early June that enabled members of the public to provide comments and voice opinions concerning the EPA's draft assessment report and its potential policy implications for the public docket.

Day 1 of the meeting (August 7, 2012) will be dedicated to hearing oral comments on the draft assessment. Members of the public who have registered in advance to provide oral comments will have the opportunity to speak during the observer comment session. Each speaker will be allowed between 3-5 minutes, depending on number of speakers registered. Given time constraints, a maximum of 100 speakers will be allowed to offer testimony. If more than 100 speakers register to provide oral comments, speakers will be selected by Versar in a manner designed to optimize representation from all organizations,

affiliations, and present a balance of science issues relevant to the Agency's science assessment. Additional information on selection of speakers and speaking times will be sent out by August 3, to all individuals who register to speak.

To accommodate as many speakers as possible, registered speakers will present oral comments only, without visual aids or written material. All members of the public, including registered observers and speakers, are encouraged to submit written comments and materials to the official public docket for the draft assessment (docket ID number EPA-HQ-ORD- 2012-0276) by the close of the public comment period on July 23, 2012. Panel members will have access to any written comments and materials submitted to the official public docket by this deadline. Registered observers and speakers will not be allowed to distribute any written materials directly to the peer review panel. To submit written comments, please follow one of the methods outlined in the previous Federal Register notice, issued on May 25, 2012, initiating the assessment's public comment period: Federal Register Volume 77, Number 102 (<http://www.gpo.gov/fdsys/pkg/FR-2012-05-25/html/2012-12808.htm>).

Day 2 of the meeting (August 8, 2012) will be devoted to deliberations of the EPA's draft assessment by the peer review panel, guided by the charge questions provided to the public for public comment. Registered observers may attend and observe the peer review panel deliberations on Day 2, but will not be allowed to address the panel or provide oral or written comments.

Registration: To attend the August 7-8 public portion of the peer review meeting, you must register for the meeting by 11:59 p.m. (EDT) on July 23, 2012. You can register for the meeting by visiting , completing the online registration form, and submitting the required information. You can also register through U.S. Postal Service or overnight/priority mail by sending the necessary registration information (see Required Registration Information) to the Versar Meeting Coordinator, Ms. Brittany Ekstrom, Versar, Inc., 6850 Versar Center, Springfield, VA 22151; Telephone: (703) 642-6767. Registrations sent via U.S. Postal Service or overnight/priority mail must be received by 11:59 p.m. (EDT) on July 23, 2012. There will be no on-site registration, so members of the public who do not register by July 23, 2012 via one of the methods detailed above will not be able to attend the peer review meeting.

Required Registration Information: To register for the meeting online or via post, you must provide your full name, organization or affiliation, and contact information. You must also indicate which days you plan to attend the meeting and if you are interested in making an oral statement during the public comment session on Day 1 of the meeting. If you register to speak, you must also indicate if you have any special requirements related to your oral comments (e.g., translation).

If you indicate that you wish to make oral comments, you will be

asked to select one category most closely reflecting the content of your comments. These comment categories are: (i) Mine scenario and operational modes; (ii) potential failures and probabilities; (iii) hydrology; (iv) toxicity; (v) potential effects on Alaska Native culture; (vi) potential effects on fish; (vii) potential effects on wildlife; and (viii) other issues. Should more than 100 speakers register, these categories will be used to ensure that a balance of substantive science issues relevant to the assessment are heard.

FOR FURTHER INFORMATION CONTACT: Questions regarding logistics or registration for the external peer review meeting should be directed to Ms. Brittany Ekstrom, Versar, Inc., 6850 Versar Center, Springfield, VA, 22151; telephone: (703) 642-6767; or via email at BEkstrom@versar.com.

SUPPLEMENTARY INFORMATION:

I. Information About the Project

The EPA conducted this assessment to determine the significance of Bristol Bay's ecological resources and evaluate the potential impacts of large-scale mining on these resources. The EPA will use the results of this assessment to inform the consideration of options consistent with its role under the Clean Water Act. The assessment is intended to provide a sound scientific and technical foundation for future decision making. The Web site that describes the project is www.epa.gov/bristolbay.

II. Information About the Peer Review Panel

The EPA released the draft assessment for the purposes of public comment and peer review on May 18, 2012. Consistent with guidelines for the peer review of highly influential scientific assessments, EPA asked a contractor (Versar, Inc.) to assemble a panel of experts to evaluate the draft report. Versar, Inc. evaluated the 68 candidates nominated during a previous public comment period (February 24, 2012 to March 16, 2012) and sought other experts to complete this peer review panel. The twelve peer review panel members were made public in EPA's previous FRN, issued on June 5, 2012. The panelist's names are included below, with corrections made to account for errors present in the June 5, 2012 FRN:

Mr. David Atkins, Watershed Environmental, LLC.--Expertise in mining and hydrology.

Mr. Steve Buckley, WHPacific--Expertise in mining and seismology.

Dr. Courtney Carothers, University of Alaska Fairbanks--Expertise in indigenous Alaskan cultures.

Dr. Dennis Dauble, Washington State University--Expertise in fisheries

biology and wildlife ecology.

Dr. Gordon Reeves, USDA Pacific NW Research Station--Expertise in fisheries biology and aquatic biology.

Dr. Charles Slaughter, University of Idaho--Expertise in hydrology.

Dr. John Stednick, Colorado State University--Expertise in hydrology and biogeochemistry.

Dr. Roy Stein, Ohio State University--Expertise in fisheries and aquatic biology.

Dr. William Stubblefield, Oregon State University--Expertise in aquatic biology and ecotoxicology.

Dr. Dirk van Zyl, University of British Columbia--Expertise in mining.

Dr. Phyllis Weber Scannell--Expertise in aquatic ecology and ecotoxicology.

Dr. Paul Whitney--Expertise in wildlife ecology and ecotoxicology.

Dated: June 29, 2012.

Darrell Winner,

Acting Director, National Center for Environmental Assessment.

BILLING CODE 6560-50-P

APPENDIX J. CONFLICT OF INTEREST MEMORANDA FOR ISI

Conflict of Interest Memorandum: Task Orders

U.S. Environmental Protection Agency Conflict of Interest Statement for Task Orders

The contractor shall include a conflict of interest certification in all task orders in accordance with EPAAR 1552.209-71 and the Section B Clause “Ordering Procedures.”

Prior to selecting expert panelists/peer reviewers, the contractor shall perform an evaluation to determine the existence of an actual or potential COI for each potential reviewer. The financial and professional information obtained by the Contractor as part of the evaluation to determine the existence of an actual or potential conflict of interest is considered private and nondisclosable to outside entities except as required by law and/or regulation.

The contractor shall ensure that potential peer reviewers will not have an actual or potential conflict of interest if they are selected to participate in a peer review. When determining if a proposed peer reviewer may have an actual or potential conflict of interest, the contractor shall incorporate the following yes/no questions (a – i) for **all** individuals, and requests for supporting information (j – r) for **task orders involving public peer review meetings** into its established process to evaluate and determine the presence of an actual or potential COI:

Conflict of Interest Analysis		YES	NO
a.	To the best of your knowledge and belief, is there any connection between the subject topic and any of your and/or your spouse’s compensated or uncompensated employment, including government service, during the past 24 months?		
b.	To the best of your knowledge and belief, is there any connection between the subject topic and any of your and/or your spouse’s research support and project funding, including from any government source, during the past 24 months?		
c.	To the best of your knowledge and belief, is there any connection between the subject topic and any consulting by you and/or your spouse, during the past 24 months?		
d.	To the best of your knowledge and belief, is there any connection between the subject topic and any expert witness activity by you and/or your spouse, during the past 24 months?		
e.	To the best of your knowledge and belief, have you, your spouse, or dependent child, held in the past 24 months, any financial holdings (excluding well-diversified mutual funds and holdings, with a value less than \$15,000) with any connection to the subject topic?		
f.	Have you made any public statements or taken positions on or closely related to the subject topic under review?		
g.	Have you had previous involvement with the development of the document (or review materials) you have been asked to review?		
h.	To the best of your knowledge and belief, is there any other information that might reasonably raise a question about an actual or potential personal conflict of interest or bias?		

Conflict of Interest Analysis		
	YES	NO
i. To the best of your knowledge and belief, is there any financial benefit that might be gained by you or your spouse as a result of the outcome of this review?		

Information to be collected from panel members:

j. <u>Compensated and noncompensated employment</u> —for panel member and spouse—sources of compensated and uncompensated employment, including government service, for the preceding 2 years, including a brief description of work.
k. <u>Research funding</u> —for panel member—sources of research support and project funding, including from any government source, for the preceding 2 years for which the panel member served as the Principal Investigator, Significant Collaborator, or Project Manager or Director. For panel member's spouse, a general description of research and project activities in the preceding 2 years.
l. <u>Consulting</u> —for panel member—compensated consulting activities during the preceding 2 years, including names of clients if compensation provided 15% or more of annual compensation. For panel member's spouse, a general description of consulting activities for the preceding 2 years.
m. <u>Expert witness activities</u> —for panel member—sources of compensated expert witness activities and a brief description of issue and testimony. For panel member's spouse, a general description of expert testimony provided in the preceding 2 years.
n. <u>Assets: Stocks, Bonds, Real Estate, Business, Patents, Trademarks and Royalties</u> —for panel member, spouse and dependent children—specific financial holdings that collectively had a fair market value greater than \$15,000 at any time during the preceding 24-month period (excluding well-diversified mutual funds, money market funds, treasury bonds and personal residence).
o. <u>Liabilities</u> —for panel member, spouse and dependent children—liabilities over \$10,000 owed at any time in the preceding 12 months (excluding a mortgage on personal residence, home equity loans, automobile and consumer loans).
p. <u>Public statements</u> —a brief description of public statements and/or positions on, or closely related to, the matter under review by the panel member.
q. <u>Involvement with document under review</u> —a brief description of any previous involvement of the panel member with the development of the document (or review materials) the individual has been asked to review.
r. <u>Other potentially relevant information</u> —a brief description of any other information that might reasonably raise a question about actual or potential personal conflict of interest or bias.

Further, the contractor shall require that panel members sign a statement that says the panel member is not currently arranging new professional relationships with, or obtaining new financial holdings in, an entity, which is not yet reported and which could be viewed as related to the topic under discussion or stakeholders associated with the topic.

Conflict of Interest Memorandum: Certification

**U.S. Environmental Protection Agency
Conflict of Interest Inquiry**

You have been requested by EPA to serve as a Peer Reviewer for _____, and your involvement in certain activities could pose a conflict of interest or create the appearance of a loss of impartiality in your review. Although your involvement in these activities is not necessarily grounds for exclusion from the peer review, affiliations or activities that could potentially lead to conflicts of interest are included in the table.

Please complete the table and sign the certification below. If you have any questions, contact [point of contact at EPA Office] at your earliest convenience to discuss any potential conflict of interest issues.

Conflict of Interest Analysis		
	YES	NO
a. To the best of your knowledge and belief, is there any connection between the subject topic and any of your and/or your spouse's compensated or uncompensated employment, including government service, during the past 24 months?		
b. To the best of your knowledge and belief, is there any connection between the subject topic and any of your and/or your spouse's research support and project funding, including from any government source, during the past 24 months?		
c. To the best of your knowledge and belief, is there any connection between the subject topic and any consulting by you and/or your spouse, during the past 24 months?		
d. To the best of your knowledge and belief, is there any connection between the subject topic and any expert witness activity by you and/or your spouse, during the past 24 months?		
e. To the best of your knowledge and belief, have you, your spouse, or dependent child, held in the past 24 months, any financial holdings (excluding well-diversified mutual funds and holdings, with a value less than \$15,000) with any connection to the subject topic?		
f. Have you made any public statements or taken positions on or closely related to the subject topic under review?		
g. Have you had previous involvement with the development of the document (or review materials) you have been asked to review?		
h. To the best of your knowledge and belief, is there any other information that might reasonably raise a question about an actual or potential personal conflict of interest or bias?		
i. To the best of your knowledge and belief, is there any financial benefit that might be gained by you or your spouse as a result of the outcome of this review?		

CERTIFICATION

I hereby certify that I have read the above statements and, to the best of my knowledge and belief, no conflict of interest exists that may diminish my capacity to provide an impartial, technically sound, objective review of the subject matter or otherwise result in a biased opinion.

OPINION | COMMENTARY

A Step Toward Scientific Integrity at the EPA

Scott Pruitt sweeps out Obama-era science advisers. The agency needs truly independent ones.

PHOTO: GETTY IMAGES/ISTOCKPHOTO

By Steve Milloy

July 17, 2017 5:14 p.m. ET

The Trump administration in May began the process of replacing the small army of outside science advisers at the Environmental Protection Agency. In June, 38 additional EPA advisers were notified that their appointments would not be renewed in August. To Mr. Trump's critics, this is another manifestation of his administration's "war on science." Histrionics aside, the administration's actions are long overdue.

00575

<https://www.wsj.com/articles/a-step-toward-scientific-integrity-at-the-epa-1500326062>

5/3/2018

ED_002389_00011925-00575

The most prominent of the EPA's myriad boards of outside advisers are the Science Advisory Board and the Clean Air Scientific Advisory Committee, or CASAC. Mostly made up of university professors, these boards also frequently draw members from consulting firms and activist groups. Only rarely do members have backgrounds in industry. All EPA boards are governed by the Federal Advisory Committee Act, which requires that they be balanced and unbiased. While the EPA is required by law to convene the SAB and CASAC, the agency is not bound by law to heed their advice.

The EPA's Obama-era "war on coal" rules and its standards for ground-level ozone—possibly the most expensive EPA rule ever issued—depend on the same scientifically unsupported notion that the fine particles of soot emitted by smokestacks and tailpipes are lethal. The EPA claims that such particles kill hundreds of thousands of Americans annually.

The EPA first considered regulating fine particles in the mid-1990s. But when the agency ran its claims past CASAC in 1996, the board concluded that the scientific evidence did not support the agency's regulatory conclusion. Ignoring the panel's advice, the EPA's leadership chose to regulate fine particles anyway, and resolved to figure out a way to avoid future troublesome opposition from CASAC.

In 1996 two-thirds of the CASAC panel had no financial connection to the EPA. By the mid-2000s, the agency had entirely flipped the composition of the advisory board so two-thirds of its members were agency grantees. Lo and behold, CASAC suddenly agreed with the EPA's leadership that fine particulates in outdoor air kill. During the Obama years, the EPA packed the CASAC panel. Twenty-four of its 26 members are now agency grantees, with some listed as principal investigators on EPA research grants worth more than \$220 million.

Although the scientific case against particulate matter hasn't improved since the 1990s, the EPA has tightened its grip on CASAC. In effect, EPA-funded researchers are empowered to review and approve their own work in order to rubber-stamp the EPA's regulatory agenda. This is all done under the guise of "independence."

Another "independent" CASAC committee conducted the most recent review of the Obama EPA's ground-level ozone standards. Of that panel's 20 members, 70% were EPA grantees who'd hauled in more than \$192 million from the agency over the years. These EPA panels make decisions by consensus, which has lately been easy enough to achieve considering they are usually chaired by an EPA grantee.

Would-be reformers have so far had no luck changing the culture at these EPA advisory committees. In 2016 the Energy and Environment Legal Institute, where I am a senior fellow, sued the agency. We alleged that the CASAC fine-particulate subcommittee was biased—a clear violation of the Federal Advisory Committee Act. We found a plaintiff who had been refused CASAC membership because of his beliefs about fine particles. Unfortunately, that individual was not willing to take a hostile public stand against the EPA for fear of professional retribution. We ultimately withdrew the suit.

The EPA's opaque selection process for membership on its advisory boards has opened the agency to charges of bias. In 2016 Michael Honeycutt, chief toxicologist of the Texas Commission on Environmental Quality, was recommended in 60 of the 83 nominations to the EPA for CASAC membership. The EPA instead selected Donna Kenski of the Lake Michigan Air Directors Consortium. Ms. Kenski received only one of the 83 recommendations. While no one objected to Mr. Honeycutt's nomination, Sen. James Inhofe (R., Okla.) lodged an objection to Ms. Kenski's nomination, claiming she had exhibited partisanship during an earlier term on the committee.

Congress has also tried to reform the EPA's science advisory process. During the three most recent Congresses, the House has passed bills to provide explicit conflict-of-interest rules for EPA science advisers, including bans on receiving EPA grants for three years before and after service on an advisory panel. The bills went nowhere in the Senate, where the threat of a Democrat-led filibuster loomed. Had they passed, President Obama surely would have vetoed them.

President Trump and his EPA administrator have ample statutory authority to rectify the problem. As Oklahoma's attorney general, Scott Pruitt spent years familiarizing himself with the EPA's unlawful ways. He is in the process of reaffirming the independence of the agency's science advisory committees. This won't mean that committee members can't have a point of view. But a committee as a whole must be balanced and unbiased. Mr. Pruitt's goal is the one intended by Congress—peer review, not pal review.

Mr. Milloy served on the Trump EPA transition team and is the author of "Scare Pollution: Why and How to Fix the EPA."

Administrator Scott Pruitt
U.S. Environmental Protection Agency
William Jefferson Clinton Building
1200 Pennsylvania Avenue, N. W.
Washington, DC 20460

Subject: Invitation for Public Comment on the List of Candidates for the U.S. Environmental Protection Agency's (EPA) Clean Air Scientific Advisory Committee (CASAC)

Administrator Pruitt:

The Association of Air Pollution Control Agencies (AAPCA)¹ appreciates U.S. EPA's request for public comments on the list of candidates for service on EPA's chartered CASAC.² You stated in EPA's call for nominations that you "... encourage scientific viewpoints from a full range of stakeholders in order to achieve balanced scientific advice."³ Recently, AAPCA, in conjunction with The Council of State Governments (CSG), created a new resource – located at www.cooperativefederalism.org – entitled *STATES AT THE TABLE: Engaging Energy and Environmental Opportunities with Federal Advisory Committees* to provide information on federal advisory committee opportunities for state officials.⁴

U.S. EPA's list of qualified candidates includes four experts from state environmental agencies: Dr. James Boylan, Georgia Environmental Protection Division (and co-chair of AAPCA's Modeling Committee); Dr. Sabine Lange, Texas Commission on Environmental Quality; Dr. Steve Packham, Utah Department of Environmental Quality; and, Dr. Larry Wolk, Colorado Department of Public Health and Environment. These individuals have demonstrated high levels of competence, knowledge, and expertise in fields relevant to air pollution and air quality issues, and possess significant experience in the technical aspects of National Ambient Air Quality Standards (NAAQS), including cost-benefit analysis, modeling, monitoring, and emissions inventory assessment. Their on-the-ground experience in implementing the NAAQS would be indispensable to CASAC and EPA, and would provide key perspectives in the scientific review process. Each candidate also holds an advanced degree, with impressive academic credentials in fields that include chemical engineering, modeling, risk assessment, toxicology, and public health.

¹ AAPCA is a national, non-profit, consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the federal Clean Air Act. AAPCA represents more than 40 state and local air agencies, and senior officials from 20 state environmental agencies currently sit on the AAPCA Board of Directors. AAPCA is housed in Lexington, Kentucky as an affiliate of The Council of State Governments. You can find more information about AAPCA at: <http://www.cleanairact.org>. In addition, more information on AAPCA agencies can be found in the recently released report, *The Greatest Story Seldom Told: Profiles and Success Stories in Air Pollution Control*.

² U.S. EPA Science Advisory Board Staff Office, Invitation for Public Comment on the List of Candidates For the Environmental Protection Agency's Clean Air Scientific Advisory Committee, August 28, 2017.

³ U.S. EPA, "EPA to Accept Nominations for Science Boards," June 27, 2017.

⁴ This resource includes information on federal advisory committees at U.S. EPA, the U.S. Departments of Energy and Interior, and the National Oceanic and Atmospheric Administration, as well as an introduction to the Federal Advisory Committee Act.

AAPCA strongly recommends that EPA consider these state experts in the current chartered CASAC selection process. State, local, and tribal agency personnel possess direct knowledge and experience critical to providing informed, comprehensive, and authoritative understanding of the NAAQS.

EPA should ensure the chartered CASAC and individual NAAQS review panels include significant state, local, or tribal participation and diverse geographic backgrounds of advisors. At present, this is not the case. To illustrate:

- According to a May 2015 letter from CSG West: “For EPA’s Clean Air Scientific Advisory Committee Ozone Review Panel, which provided the critical advice for Administrator Gina McCarthy’s proposed ozone regulations, only one of the 22 panelists came from a state/local perspective.”⁵
- Historically, representation on CASAC committees and panels has been limited to specific regions and a handful of states.⁶
- A survey of twenty state air directors, including both AAPCA members and non-members, provides context for these concerns.⁷ The survey found:
 - A majority of respondents said state and local agencies are not adequately represented on CASAC and its subpanels, and that these panels are not sufficiently geographically diverse.
 - A majority of respondents agreed that the CASAC process for nominating and recommending expert candidates was transparent and clearly understood, but the top three barriers selected by respondents to state personnel serving on CASAC or its subpanels were lack of time to serve, low likelihood of being selected, and a perceived lack of expertise.
- Other EPA federal advisory committees have found avenues to expand membership for intergovernmental partners and co-regulators. For example, the Assumable Waters Subcommittee of the National Advisory Council on Environmental Policy and Technology (NACEPT) included ten state and two tribal members, representing members from seven different EPA regions.⁸
- The *Consolidated Appropriations Act of 2016*, signed into law on December 17, 2015, was accompanied by a report directing the EPA Administrator to develop a policy statement on science quality and integrity for the Science Advisory Board. The report also indicated that “EPA’s policy statement should include goals on increasing membership from States and tribes who are often underrepresented....”⁹
- The Government Accountability Office (GAO) reviewed this policy statement and reported in June 2017 that EPA did “not include specific or numeric goals on increasing membership from states and tribes,” and recommended that the Agency specifically address the Congressional directives.¹⁰
- The U.S. House Appropriations Committee report for H.R. 3354, *the Department of the Interior, Environment, and Related Agencies Appropriations Act of 2018*, again directed EPA “to develop updated policy statements in order to fulfill previous Congressional directives.”¹¹

⁵ The Council of State Governments West, *Letter to Senators Mike Rounds and Edward Markey*, May 19, 2015.

⁶ Data collected from *CASAC entry* in the FACA database, which contains information on panelists back to FY1997.

⁷ Survey results and related presentation are available on AAPCA’s 2016 Spring Meeting website.

⁸ U.S. EPA, *Assumable Waters Sub-Committee*, June 2016. The *Assumable Waters Subcommittee Report* was transmitted via NACEPT on June 2, 2017.

⁹ *Explanatory Statement Submitted for Consolidated Appropriations Act, 2016*, pg. H10220, December 17, 2015.

¹⁰ *GAO Assessment of Updated EPA Policy Statement*, June 8, 2017

¹¹ *Report from the Committee on Appropriations to accompany H.R. 3354*, pg. 62, July 21, 2017.

The Federal Advisory Committee Act requires committees to be “fairly balanced in terms of the points of view represented and the functions to be performed.” CASAC’s charter and the Clean Air Act (CAA) direct EPA to appoint at least one member of the National Academy of Sciences, one physician, and one person representing state air pollution control agencies. The most recent Membership Balance Plan for CASAC, last updated in June 2017, states that “Geographic location may be considered” as the only other balance factor that “EPA identifies as important in achieving a balanced [Federal Advisory Committee].”¹² U.S. EPA’s Peer Review Handbook states that the Agency should “include a broad enough spectrum of other related experts to consider wider dimensions of the issue(s)” and “keep a balance by considering new individuals who bring fresh perspectives to the review of a work product.”¹³

Geographically diverse state, local, and tribal contributors have unique, direct experience with the NAAQS, including expertise that could help CASAC carrying out the full responsibilities in its charter and Section 109(d) of the CAA. This includes advice on: “any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such” NAAQS; “the relative contribution to air pollution concentrations of natural as well as anthropogenic activity”; “areas in which additional knowledge is required to appraise the adequacy and basis of” NAAQS; and, “the research efforts necessary to provide the required information.”

In 2015, the GAO reported that CASAC has not carried out its role in providing some of this advice related to the NAAQS “... because EPA has never asked CASAC to do so.”¹⁴ EPA’s press release calling for nominations also recognized that EPA and CASAC have failed to carry out statutory duties required in the CAA. AAPCA has detailed the historical record confirming GAO’s finding, and identified five avenues for EPA and CASAC to facilitate this advice (including the critical role of experts from state, local, and tribal environmental agencies in reforming the current CASAC review process).¹⁵ Communications from AAPCA members also suggest that state air pollution control agencies would benefit from the full suite of statutorily required advice.¹⁶

EPA should select state air agency experts for the chartered CASAC from this list of qualified candidates. If EPA is unable to select a seven-member chartered CASAC that satisfies CAA requirements for membership and scope of advice, including advice on adverse social, economic or energy effects related to NAAQS, and with geographically and scientifically diverse viewpoints, the EPA Administrator, as the appointing authority, should reconstitute the panel in accordance with 41 CFR 102-3.130.¹⁷ EPA should

¹³ U.S. EPA, Peer Review Handbook, 4th Edition, October 2015.

¹⁴ U.S. GAO, EPA’S SCIENCE ADVISORY BOARD: Improved Procedures Needed to Process Congressional Requests for Scientific Advice, June 2015.

¹⁵ AAPCA, “Advice and Context: The Role of CASAC in Contextualizing Background Pollution and Adverse NAAQS Effects,” June 2016.

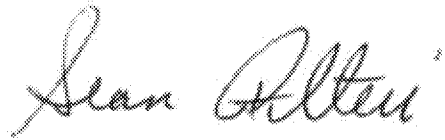

¹⁶ In response to a May 2014 letter from members of the U.S. Senate Committee on Environment and Public Works, the Louisiana Department of Environmental Quality, Mississippi Department of Environmental Quality, North Carolina Department of Environment and Natural Resources (now Department of Environmental Quality), and Texas Commission on Environmental Quality provided feedback on the CASAC process. Multi-state comments on the proposed ozone NAAQS provide perspectives on the role of CASAC. The previously cited survey of state air directors found that more than 80 percent of respondents thought CASAC advice on the full suite of topics in the charter and Section 109(d) of the Clean Air Act, as part of the NAAQS review process, would be helpful.

¹⁷ 41 CFR 102-3.130 states “Unless otherwise provided by statute, Presidential directive, or other establishment authority, advisory committee members serve at the pleasure of the appointing or inviting authority. Membership terms are at the sole discretion of the appointing or inviting authority.”

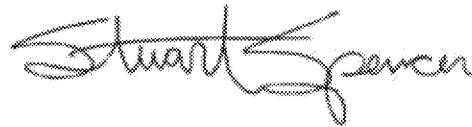

also strongly encourage nominations of qualified state, local, and tribal environmental agency experts for future openings on individual CASAC NAAQS review panels.

Thank you for the opportunity to provide feedback on EPA's excellent list of candidates for CASAC. If you have any questions regarding our comments, please contact Mr. Clint Woods, Executive Director, at cwoods@csg.org or (859) 244-8040.

Sincerely,

Sean Alteri
Director, Kentucky Division for Air Quality
2017 President, AAPCA

Associate Director, Office of Air Quality
Arkansas Department of Environmental Quality
2018 President, AAPCA

September 28, 2017

Mr. Thomas Carpenter
Designated Federal Officer, Science Advisory Board
U.S. Environmental Protection Agency
William Jefferson Clinton Building
1200 Pennsylvania Avenue, N. W.
Washington, DC 20460

Subject: Invitation for Public Comment on the List of Candidates for the U.S. Environmental Protection Agency's (EPA) Chartered Science Advisory Board (SAB)

Mr. Carpenter:

The Association of Air Pollution Control Agencies (AAPCA)¹ appreciates U.S. EPA's request for public comments on the list of candidates under consideration for EPA's chartered SAB.² EPA's call for nominations quoted EPA Administrator Scott Pruitt highlighting that "[t]hese boards play an important role at EPA by providing independent advice based on sound science in support of the agency's mission," and that he strongly encouraged "scientific viewpoints from a full range of stakeholders in order to achieve balanced scientific advice."³ Recently, AAPCA, in conjunction with The Council of State Governments (CSG), created a new resource – located at www.cooperativefederalism.org – entitled *STATES AT THE TABLE: Engaging Energy and Environmental Opportunities with Federal Advisory Committees* to provide information on federal advisory committee opportunities for state officials.⁴

U.S. EPA's list of qualified candidates includes several experts from state environmental agencies with experience and expertise that would enable them to provide independent advice and unique, indispensable perspectives on the suite of scientific issues facing EPA and SAB. The Administrator should look to appoint these officials in leadership roles on the chartered SAB and its subcommittees. These officials possess on-the-ground experience in implementing regulations under the Clean Air Act and other statutes, as well as expertise in disciplines including air quality, public health, chemistry, risk assessment, engineering, modeling, toxicology, and uncertainty and benefit-cost analysis. In addition to the value of this advice from state experts, selecting these nominees for leadership roles could help the Agency in following Congressional directives to increase SAB "membership from States and tribes who are often underrepresented" and the SAB Staff Office's commitment to "expanding the diversity of scientific perspectives on the SAB, including the perspectives from state and local governments..."

¹ AAPCA is a national, non-profit, consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the federal Clean Air Act. AAPCA represents more than 40 state and local air agencies, and senior officials from 20 state environmental agencies currently sit on the AAPCA Board of Directors. AAPCA is housed in Lexington, Kentucky as an affiliate of The Council of State Governments. You can find more information about AAPCA at: <http://www.cleanairact.org>.

² U.S. EPA Science Advisory Board Staff Office, Invitation for Public Comment on the List of Candidates For the Environmental Protection Agency's Chartered Science Advisory Board, September 7, 2017.

³ U.S. EPA, "EPA to Accept Nominations for Science Boards," June 27, 2017.

⁴ This resource includes information on federal advisory committees at U.S. EPA, the U.S. Departments of Energy and Interior, and the National Oceanic and Atmospheric Administration, as well as an introduction to the Federal Advisory Committee Act.

The SAB is one of the few currently operating EPA advisory committees established by Congress, rather than Agency authority.⁵ The *Environmental Research, Development, and Demonstration Authorization Act of 1978*⁶ (ERDDAA) requires that the Administrator establish the SAB to “provide such scientific advice as may be requested by the Administrator” as well as Congressional committees of jurisdiction. The Board is to be composed of at least nine members (although the Agency’s most recent membership balance plan indicates composition of “about 45 members”)⁷ and each member is to be “qualified by education, training, and experience.” ERDDAA further requires the Administrator, at the time any proposed criteria document, standard, limitation, or regulation under the Clean Air Act or other environmental statute is provided for interagency review, to provide such Agency action with relevant technical and scientific information in possession of EPA to the SAB for review. Administrator Pruitt has stated that he intends to “follow applicable legal authorities” as it related to SAB and other advisory committees.⁸ Nominated state officials are uniquely qualified to help EPA and SAB carry out these statutory duties.

EPA should ensure the chartered SAB and its subcommittees and ad hoc panels include significant state, local, or tribal participation and diverse geographic backgrounds of advisors. At present, this is not the case. To illustrate:

- The *Consolidated Appropriations Act of 2016*, signed into law on December 17, 2015, was accompanied by a report directing the EPA Administrator to develop a policy statement on science quality and integrity for the Science Advisory Board. The report also indicated that “EPA’s policy statement should include goals on increasing membership from States and tribes who are often underrepresented...”⁹
- The Government Accountability Office (GAO) reviewed EPA’s draft policy statement and reported in June 2017 that “the draft document does not include specific or numeric goals on increasing membership from states and tribes. However, it states that the SAB Staff Office is committed to expanding the diversity of scientific perspectives on the SAB, including the perspectives from state and local governments, tribes, industry, and nongovernmental organizations.” GAO also stated they “continue to encourage the agency to specifically address the directives provided in the explanatory statement.”¹⁰
- The U.S. House Appropriations Committee report for H.R. 3354, *the Department of the Interior, Environment, and Related Agencies Appropriations Act of 2018*, again directed EPA “to develop updated policy statements in order to fulfill previous Congressional directives.”¹¹
- A May 2015 letter from CSG West noted that “states are largely underrepresented in EPA advisory panels” and pointed to the dearth of state/local/tribal experts during recent SAB and CASAC reviews of science related to air quality, hydraulic fracturing, and water connectivity.¹²

⁵ More information on establishment authority can be found at the General Services Administration’s [FACA Database](#).

¹² The Council of State Governments West, *Letter to Senators Mike Rounds and Edward Markey*, May 19, 2015.

- In May 15, 2017 comments on regulatory reform, the Western Governors Association argued that U.S. EPA should “enhance state representation on the [SAB], as well as on its standing and *ad hoc* committees.”¹³
- Historically, representation on the chartered SAB has been limited to certain geographic areas, and state experts have constituted no more than three advisors on the roughly 50-member panel at any time over the last decade.¹⁴
- Other EPA federal advisory committees have found avenues to expand membership for intergovernmental partners and co-regulators. For example, the Assumable Waters Subcommittee of the National Advisory Council on Environmental Policy and Technology (NACEPT) included ten state and two tribal members, representing members from seven different EPA regions.¹⁵

The *Federal Advisory Committee Act* (FACA) requires committees to be “fairly balanced in terms of the points of view represented and the functions to be performed.” U.S. EPA’s Peer Review Handbook states that the Agency should “include a broad enough spectrum of other related experts to consider wider dimensions of the issue(s)” and “keep a balance by considering new individuals who bring fresh perspectives to the review of a work product.”¹⁶ 41 CFR 102-3.130 provides the Administrator, as the appointing authority, with the ability to determine membership terms for all SAB members under FACA.¹⁷

EPA should select state environmental agency experts for the chartered SAB from this list of qualified candidates. EPA should also strongly encourage nominations of qualified state, local, and tribal environmental agency experts for future openings on SAB subcommittees and ad hoc panels.

Thank you for the opportunity to provide feedback on EPA’s list of candidates for SAB. If you have any questions regarding our comments, please contact cwoods@csg.org or (859) 244-8040.

Sincerely,

Clinton J. Woods
Executive Director, AAPCA

¹⁷ 41 CFR 102-3.130 states “Unless otherwise provided by statute, Presidential directive, or other establishment authority, advisory committee members serve at the pleasure of the appointing or inviting authority. Membership terms are at the sole discretion of the appointing or inviting authority.”

November 28, 2016

Dr. Bryan J. Bloomer
Designated Federal Officer
Science Advisory Board
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20460

Subject: Invitation for Public Comment on the List of Candidates for the EPA Science Advisory Board Ad Hoc Committee for Review of the *Screening Methodologies to Support Risk and Technology Reviews (RTR): A Case Study Analysis*

Dr. Bloomer:

The Association of Air Pollution Control Agencies (AAPCA)¹ appreciates the opportunity to comment on the list of candidates for U.S. Environmental Protection Agency's (EPA) Science Advisory Board (SAB) Ad Hoc Committee for reviewing the EPA's Office of Air and Radiation's draft report *Screening Methodologies to Support Risk and Technology Reviews (RTR): A Case Study Analysis* ("SAB RTR Methods Review Panel").²

In the invitation to comment, EPA notes that "a balanced panel is characterized by inclusion of candidates who possess the necessary domains of knowledge, the relevant scientific perspectives (which, among other factors, can be influenced by work history and affiliation), and the collective breadth of experience to adequately address the general charge." Importantly, the list includes experts from state environmental agencies, giving EPA a key opportunity to select individuals that could provide geographically diverse, on-the-ground perspectives, and years of experience addressing emissions of hazardous air pollutants from stationary sources. In particular, the candidates bring expertise in toxicology, health and exposure risk assessment, and air toxics.

AAPCA strongly recommends that EPA's SAB Staff Office consider these state personnel for the SAB RTR Methods Review Panel because of their demonstrated scientific and technical knowledge, as well as their ability to convey diverse expertise and viewpoints.

As the EPA SAB Staff Office reviews these candidates based on the chosen criteria,³ the Agency should ensure state, local and tribal participation in order to obtain input from experts that work with and implement federal Clean Air Act regulations. The need for a wider, more diverse range of advisors on EPA panels is well-noted:

¹ AAPCA is a national, non-profit, consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the federal Clean Air Act. Twenty state environmental agencies currently sit on AAPCA's Board of Directors. AAPCA is housed in Lexington, Kentucky as an affiliate of The Council of State Governments. You can find more information about AAPCA at: <http://www.cleanairact.org>.

² U.S. EPA Science Advisory Board Staff Office, [Invitation for Public Comment on the List of Candidates for the EPA Science Advisory Board Ad Hoc Committee for Review of the Screening Methodologies to Support Risk and Technology Reviews \(RTR\): A Case Study Analysis](#), November 3, 2016.

³ 81 FR 52683.

- The Consolidated Appropriations Act of 2016, signed into law on December 17, 2015, was accompanied by a report directing the EPA Administrator to develop a policy statement on science quality and integrity for the Science Advisory Board. The report further directed that “EPA’s policy statement should include goals on increasing membership from States and tribes who are often underrepresented....”⁴
- U.S. EPA’s Peer Review Handbook (Fourth Edition) directs that the Agency “include a broad enough spectrum of other related experts to consider wider dimensions of the issue(s)” and “keep a balance by considering new individuals who bring fresh perspectives to the review of a work product.”⁵
- Of the 48 members currently on EPA’s chartered SAB, only two are from state agencies. Additionally, as noted in a May 2015 letter from the Council of State Governments West, EPA’s SAB Staff Office has failed to select intergovernmental experts for other SAB ad hoc panels.⁶

Considering for this panel the candidates that have state-level experience and perspectives would be a step in the appropriate direction. As all of the candidates for the SAB RTR Methods Review Panel were identified by the SAB Staff Office “based on their relevant expertise and willingness to serve,” selecting panelists that meet fundamental criteria, such as a “diversity of scientific expertise and viewpoints,” becomes more vital to the process of creating a balanced panel to review this important document.

In addition to fulfilling the need for proper balance on the SAB RTR Methods Review Panel, AAPCA encourages EPA to solicit advice from, and select for advisory committees and panels, experts from state, local and tribal environmental agencies. These agencies can provide critical guidance as EPA looks to future regulatory actions.

Thank you for the invitation to provide comments on this highly qualified list of candidates. If you have any questions, please contact cwoods@csgr.org or (859) 244-8040.

Sincerely,

Clinton J. Woods, Executive Director
AAPCA

⁴ Explanatory Statement Submitted for Consolidated Appropriations Act, 2016, pg. H10220, December 17, 2015

⁵ U.S. EPA, Peer Review Handbook, 4th Edition, October 2015.

⁶ The Council of State Governments West, Letter to Senators Mike Rounds and Edward Markey, May 19, 2015.

July 19, 2016

Mr. Aaron Yeow
Designated Federal Official
U.S. Environmental Protection Agency
Science Advisory Board & Clean Air Scientific Advisory Committee
1200 Pennsylvania Avenue, NW
Washington, DC 20460

Subject: Invitation for Public Comment on the List of Candidates for the U.S. Environmental Protection Agency's (EPA) Clean Air Scientific Advisory Committee (CASAC)

Mr. Yeow:

The Association of Air Pollution Control Agencies (AAPCA)¹ appreciates U.S. EPA's request for public comments on the list of candidates who represent state air pollution control agencies for service on EPA's chartered CASAC.²

EPA's list of qualified candidates includes several officials from AAPCA member agencies³ as well as from two partner multi-jurisdictional organizations which share state agency members with AAPCA. These individuals possess decades of experience in the technical aspects of National Ambient Air Quality Standards (NAAQS) and have demonstrated high levels of competence, knowledge, and expertise in fields relevant to air pollution and air quality issues. This on-the-ground experience would be indispensable to CASAC and EPA. The candidates also have impressive academic credentials in fields including toxicology, environmental science, zoology, geography, and engineering.

We strongly recommend that EPA's Science Advisory Board (SAB) Staff Office consider these experts in the current chartered CASAC selection process.

EPA should ensure the chartered CASAC and individual NAAQS review panels include significant state, local, or tribal participation and diverse geographic backgrounds of advisors. At present, this is not the case. To illustrate:

- According to a May 2015 letter from the Council of State Governments West: "For EPA's Clean Air Scientific Advisory Committee Ozone Review Panel, which provided the critical advice for Administrator Gina McCarthy's proposed ozone regulations, only one of the 22 panelists came from a state/local perspective."⁴

¹ AAPCA is a national, non-profit, consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the federal Clean Air Act. Eighteen state environmental agencies currently sit on AAPCA's Board of Directors. AAPCA is housed in Lexington, Kentucky as an affiliate of The Council of State Governments. You can find more information about AAPCA at <http://www.cleanairect.org>.

² U.S. EPA Science Advisory Board Staff Office, *Invitation for Public Comment on the List of Candidates For the Environmental Protection Agency's Clean Air Scientific Advisory Committee*, June 20, 2016

³ These include the Arkansas Department of Environmental Quality, Georgia Department of Natural Resources, Ohio Environmental Protection Agency, and the Texas Commission on Environmental Quality.

⁴ The Council of State Governments West, *Letter to Senators Mike Rounds and Edward Markey*, May 19, 2015.

- Historically, representation on CASAC committees and panels has been limited to specific regions and a handful of states.⁵
- A recent survey of twenty state air directors, including both AAPCA members and non-members, provides context for these concerns.⁶ The survey found:
 - A majority of respondents said state and local agencies are not adequately represented on CASAC and its subpanels, and that these panels are not sufficiently geographically diverse.
 - A majority of respondents agreed that the CASAC process for nominating and recommending expert candidates was transparent and clearly understood, but the top three barriers selected by respondents to state personnel serving on CASAC or its subpanels were lack of time to serve, low likelihood of being selected, and a perceived lack of expertise.
- Other EPA federal advisory committees have found avenues to expand membership for intergovernmental partners and co-regulators. For example, the recently constituted Assumable Waters Subcommittee of the National Advisory Council on Environmental Policy and Technology includes ten state and two tribal members, representing members from seven different EPA regions.⁷
- The Consolidated Appropriations Act of 2016, signed into law on December 17, 2015, was accompanied by a report directing the EPA Administrator to develop a policy statement on science quality and integrity for the Science Advisory Board. The report further directed that “EPA’s policy statement should include goals on increasing membership from States and tribes who are often underrepresented....”⁸

Statutory requirements and federal committee composition directives also suggest a robust role for geographically diverse state, local, and tribal experts in the scientific advisory process. CASAC’s charter and the Clean Air Act direct EPA to appoint *at least* one member of the National Academy of Sciences, one physician, and one person representing state air pollution control agencies. The most recent Membership Balance Plan for CASAC, last updated in 2015, states that “Geographic location may be considered” as the only other balance factor that “EPA identifies as important in achieving a balanced [Federal Advisory Committee].”⁹ The Federal Advisory Committee Act requires committees to be “fairly balanced in terms of the points of view represented and the functions to be performed.” The most recent edition of U.S. EPA’s Peer Review Handbook directs that the Agency “include a broad enough spectrum of other related experts to consider wider dimensions of the issue(s)” and “keep a balance by considering new individuals who bring fresh perspectives to the review of a work product.”¹⁰ Related policy from the National Academies argues that it may be critical to have a particular perspective on a panel, even though an individual is not a representative of their interests, “because such individuals, through their particular knowledge and experience, are often vital to achieving an informed, comprehensive, and authoritative understanding and analysis of the specific problems and potential solutions to be considered by the committee.”¹¹

⁵ Data collected from CASAC entry in the FACA database, which contains information on panelists back to FY1997.

⁶ Survey results and related presentation are available on AAPCA’s 2016 Spring Meeting website.

⁷ U.S. EPA, Assumable Waters Sub-Committee, June 2016.

⁸ Explanatory Statement Submitted for Consolidated Appropriations Act, 2016, pg. H10220, December 17, 2015.

⁹ CASAC 2015 Membership Balance Plan.

¹⁰ U.S. EPA, Peer Review Handbook, 4th Edition, October 2015.

¹¹ The National Academies, Policy on Committee Composition and Balance and Conflicts of Interest for Committees used in the Development of Reports, May 12, 2003.

AAPCA recognizes the distinction between technical advisory committees like CASAC, in which panelists serve as “Special Government Employees,” and representative advisory committees, but we believe that state, local, and tribal agency personnel possess particular knowledge and experience critical to providing informed, comprehensive, and authoritative understanding of the NAAQS.

Geographically diverse state, local, and tribal contributors provide unique, on-the-ground experience with the NAAQS, including expertise that could help CASAC carrying out the full responsibilities in its charter and Section 109(d) of the Clean Air Act. This includes advice on: “any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such” NAAQS; “the relative contribution to air pollution concentrations of natural as well as anthropogenic activity”; “areas in which additional knowledge is required to appraise the adequacy and basis of” NAAQS; and “the research efforts necessary to provide the required information.” The Government Accountability Office (GAO) has determined that CASAC has not carried out its role in providing some of this advice related to the NAAQS “because EPA has never asked CASAC to do so.”¹² Communications from AAPCA Members suggest that state air pollution control agencies would benefit from the full suite of statutorily required advice.¹³

In light of this evidence on the potential benefits of expanding geographically diverse state, local, and tribal participation on CASAC and other advisory activities, AAPCA also suggests that EPA should encourage nominations of, and seriously consider, qualified state, local, and tribal environmental agency experts for future openings on the chartered CASAC (including for those openings not statutorily required to be filled by a representative of state air pollution control agencies) as well as individual CASAC NAAQS review panels.

Thank you for the opportunity to provide feedback on EPA’s excellent list of candidates for CASAC. If you have any questions regarding our comments, please contact cwoods@csg.org or (859) 244-8040.

Sincerely,

Clinton J. Woods, Executive Director
AAPCA

¹² U.S. GAO, EPA’S SCIENCE ADVISORY BOARD: Improved Procedures Needed to Process Congressional Requests for Scientific Advice, June 2015.

¹³ In response to a May 2014 letter from members of the U.S. Senate Committee on Environment and Public Works, the Louisiana Department of Environmental Quality, Mississippi Department of Environmental Quality, North Carolina Department of Environment and Natural Resources (now Department of Environmental Quality), and Texas Commission on Environmental Quality provided feedback on the CASAC process. Multi-state comments on the proposed ozone NAAQS provide perspectives on the role of CASAC. The previously cited survey of state air directors found that more than 80 percent of respondents thought CASAC advice on the full suite of topics in the charter and Section 109(d) of the Clean Air Act, as part of the NAAQS review process, would be helpful.

Q2 Have you or anyone in your agency ever served on the chartered CASAC or on its subpanels since 2000?

Answered: 19 Skipped: 1

Answer Choices	Responses	
I have served on CASAC	10.53%	2
Someone at my agency has served on CASAC	5.26%	1
No one at my agency has served on CASAC	89.47%	17
Total Respondents: 19		

Q3 Have you or anyone in your agency been nominated for the chartered CASAC or individual NAAQS subpanels since 2000?

Answered: 19 Skipped: 1

Answer Choices	Responses	
Yes	21.05%	4
No	78.95%	15
Total		19

Q4 Have you or anyone in your agency participated in the CASAC review process through attending in-person meetings, providing written or oral comments to CASAC, or joining teleconferences?

Answered: 19 Skipped: 1

Answer Choices	Responses	
Yes, often	31.58%	6
Rarely	36.84%	7
Never	31.58%	6

Introduction to AAPCA

The Association of Air Pollution Control Agencies (AAPCA) is a consensus-driven organization focused on assisting state and local air quality agencies and personnel with implementation and technical issues associated with the federal Clean Air Act. AAPCA's members work collaboratively on behalf of states and the communities they protect to act as a conduit for and provide feedback to federal regulators on air quality rules that have significant impacts across the entire nation. AAPCA represents more than 40 state and local air agencies, and senior officials from 20 state environmental agencies currently sit on AAPCA's Board of Directors. AAPCA is housed in Lexington, Kentucky as an affiliated association of the Council of State Governments (CSG).

Association of Air Pollution Control Agencies | 1776 Avenue of the States | Lexington, Kentucky 40511
www.cleanairact.org | [@AAPCA_States](https://twitter.com/AAPCA_States)

State Environmental Agencies Currently Represented on AAPCA's Board of Directors

Alabama | Arizona | Arkansas | Florida
Georgia | Indiana | Kentucky | Louisiana
Maine | Mississippi | Nevada
North Carolina | North Dakota | Ohio
South Carolina | Tennessee | Texas
Virginia | West Virginia | Wyoming

Footprint of AAPCA State Members

State members of AAPCA's Board of Directors have primary responsibility for air quality for a segment of the country that represents:

- Over 140 million Americans, nearly half of the U.S. population;
- More than 45 percent of U.S. Total Manufacturing Output; and,
- 60 percent of total energy production in the United States.

2017 AAPCA Officers and Technical Committees

President | [Sean Alteri](#), Kentucky Division for Air Quality, (502) 564-3999

Vice President | [Stuart Spencer](#), Arkansas Department of Environmental Quality, (501) 683-0873

Secretary/Treasurer | [Vivian Aucoin](#), Louisiana Department of Environmental Quality, (225) 219-3417

Past President | [Sheila Holman](#), North Carolina Department of Environmental Quality, (919) 707-8430

AAPCA's members participate on eleven technical committees that provide information-sharing forums for agency personnel on the following topics: Training; Best Practices; NAAQS/SIP; Modeling; Emission Inventory; Local Government; Ambient Monitoring; Compliance, Enforcement, and Testing; Permitting and New Source Review (NSR); Energy; and Public Outreach & Information.

Recent and Forthcoming AAPCA Activities

Meetings

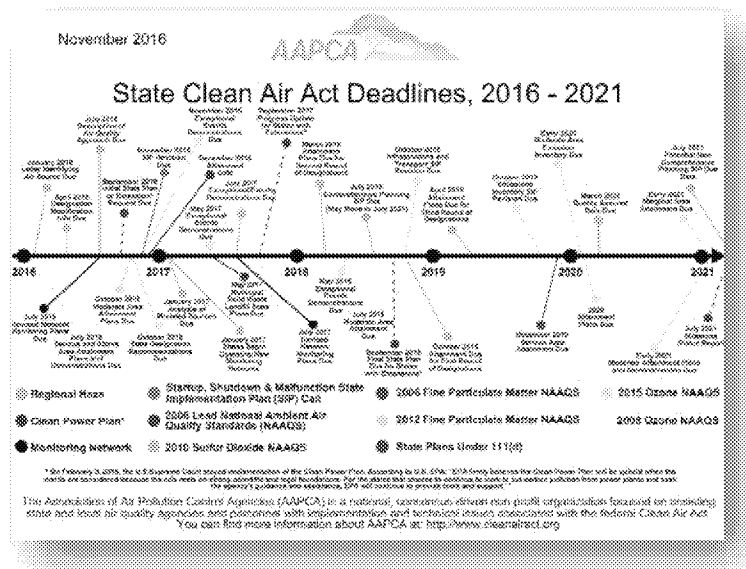

AAPCA's [membership meetings](#) offer a premier venue to engage with senior air quality officials from state and local agencies, and U.S. EPA. In 2017, AAPCA will host two in-person meetings:

- Spring Meeting, March 27 – 29, Tucson, Arizona [presentations available [here](#)]
- Annual Business Meeting, September 20 – 22, Raleigh, North Carolina

Timelines and Factsheets

AAPCA has recently released several timelines and factsheets:

- [State Clean Air Act Deadlines, 2016 - 2021](#) (updated November 2016):

- In December 2016, AAPCA released an updated timeline, [Forthcoming & Initiated Clean Air Act Regulatory Actions, 2016 - 2020](#).
- [Timing of U.S. EPA Nominations & Appointments in Past Presidential Transitions](#) (January 2017)
- In October 2016, AAPCA released a fact sheet, [Preparing for Personal Air Sensors: Definition, Opportunities, and Data Limitations](#).

Consensus Comments

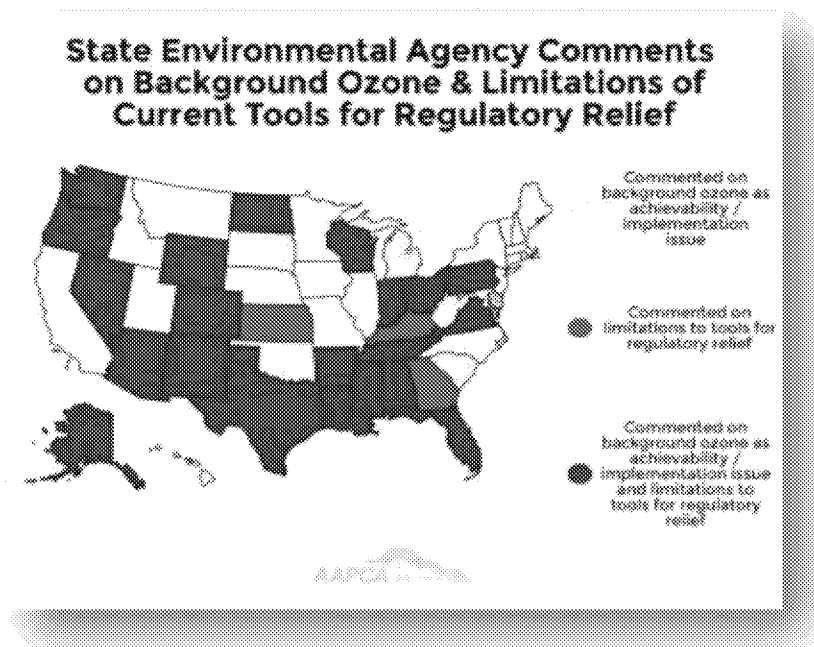

AAPCA has recently provided feedback to U.S. EPA on several topics: U.S. EPA's Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone National Ambient Air Quality Standard; data display issues on U.S. EPA's Enforcement and Compliance History Online (September 2016); the list of candidates for U.S. EPA's Science Advisory Board Ad Hoc Committee for Review of the *Screening Methodologies to Support Risk and Technology Reviews (RTR): A Case Study Analysis* (November 2016); the proposed Regional Haze Rule Amendments (August 2016); the list of candidates for U.S. EPA's Clean Air Scientific Advisory Committee (July 2016); the proposed Revision to the Near-Road NO₂ Minimum Monitoring Requirements (June 2016); and Treatment of Data Influenced by Exceptional Events and draft Guidance on the Preparation of Exceptional Events Demonstrations for Wildfire Events that May Influence Ozone (February 2016).

AAPCA has also requested extension of the public comment periods for U.S. EPA's: draft Guidance on Modeled Emission Rates for Precursors and PM_{2.5} Precursor Demonstration (January 2017); Implementation of the 2015 National Ambient Air Quality Standards for Ozone: Nonattainment Area Classifications and State Implementation Plan Requirements, (December 2016); Draft Guidance on Significant Impact Levels for Ozone and Fine Particles in the Prevention of Significant Deterioration Permitting Program (September 2016); and Protection of Visibility: Amendments to Requirements for State Plans (June 2016).

Surveys of State Perspectives

AAPCA also conducts surveys of state agency perspectives:

- Perspectives on EPA's Clean Air Scientific Advisory Committee (April 2016)
- State Environmental Agency Perspectives on Timely NAAQS Implementation (September 2015)
- State Environmental Agency Perspectives on Background Ozone & Regulatory Relief (June 2015)

Resource Pages

AAPCA has compiled state and local agency comments on recent Clean Air Act issues, including: [Response to December 9, 2013 CAA Section 176A Petition From Connecticut, Delaware, Maryland, Massachusetts, New Hampshire, New York, Pennsylvania, Rhode Island and Vermont \(comment deadline: April 13, 2017\)](#); [Preliminary Interstate Ozone Transport Modeling Data for the 2015 Ozone National Ambient Air Quality Standard \(NAAQS\) \(comment deadline: April 6, 2017\)](#); [Implementation of the 2015 NAAQS for Ozone: Nonattainment Area Classifications and State Implementation Plan Requirements \(comment period closed 2/13/2017\)](#); [Protection of Visibility: Amendments to Requirements for State Plans \(final rule published 1/10/2017\)](#); [Cross-State Air Pollution Rule Update for the 2008 Ozone National Ambient Air Quality Standards \("CSAPR Update"; final rule published 10/26/2016\)](#); [Proposed Exceptional Events Rule Revisions & Draft Wildfire Guidance \(final rule published 10/3/16\)](#); [Startup, Shutdown and Malfunction State Implementation Plan Call \("SSM SIP Call"; final action published 5/22/2015\)](#); the proposed [2015 Ozone NAAQS \(final rule published 10/26/2015\)](#); the [Volkswagen litigation and mitigation](#); [permitting updates](#); and [personal air sensors](#).

Forthcoming Projects

In 2017, AAPCA and the Council of State Governments are developing a joint project, entitled [States at the Tables: Engaging Energy and Environmental Federal Advisory Committees](#). This portal will serve as a comprehensive resource for state leaders from all three branches of government regarding opportunities to interact with federal energy and environmental agencies through Federal Advisory Committees. More information will be available at: www.cooperativefederalism.org.

In April 2017, AAPCA anticipates releasing a report entitled *The Greatest Story Seldom Told: Profiles and Success Stories in Air Pollution Control*, which compiles indicators and metrics to illustrate the progress of air pollution control in the United States.

Justin Clark
Director of Intergovernmental Affairs
The White House
1600 Pennsylvania Avenue N.W.
Washington, D.C. 20500

Dear Mr. Clark:

President Trump's Executive Order 13777 (E.O.), Enforcing the Regulatory Reform Agenda, requires that federal agencies seek input and assistance from states. Western Governors appreciate this requirement and commend to your attention WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship, as a good starting point for reform of federal regulatory processes.

Western Governors believe that one of the most important and durable reforms the President could undertake is to work with them to realign the relationship of the federal government and states so that it operates as a true partnership. Such realignment could be significantly advanced by a serious effort to redefine state-federal consultation coupled with agency accountability for engagement in that process.

Pursuant to Western Governors' definition of true consultation:

Each Executive department and agency should be required to have a clear and accountable process to provide each state – through its Governor as the top elected official of the state and other representatives of state and local governments as he or she may designate – with *early, meaningful and substantive* input in the development of regulatory policies that have federalism implications. This includes the development, prioritization and implementation of federal environmental statutes, policies, rules, programs, reviews, budgets and strategic planning.

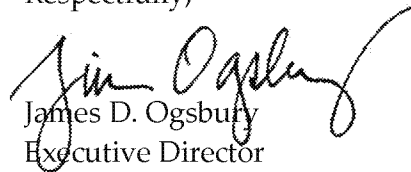

WGA has prepared the attached agency-by-agency menu of reforms for consideration by the White House and various departmental Regulatory Reform Task Forces. These options are informed by Governors' past interactions with federal agencies. We believe they can be useful in initiating realignment of the state-federal relationship, an objective that is consistent with the purposes of the President's E.O.

Justin Clark
May 15, 2017
Page 2

Western Governors are excited to work in authentic partnership with the federal government. Governors are optimistic that the new Administration will be eager to unleash the power and creativity of states for the common advantage of our country. By working cooperatively with the states, the Administration can create a legacy of renewed federalism, resulting in a nation that is stronger, more resilient and more united.

We hope this menu of reforms will be a useful resource to the various Regulatory Reform Task Forces. The Western Governors' Association is prepared to help coordinate the participation of Western Governors in this very important effort.

Respectfully,

James D. Ogsbury
Executive Director

WESTERN GOVERNORS' ASSOCIATION

Realigning the State-Federal Relationship

Agency-by-Agency Menu of Possible Reforms

This document contains a variety of process improvement recommendations informed by Western Governors' policy resolutions and previous interactions with the Administration and Congress. The Governors' primary priorities for regulatory reform are articulated in [WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship](#).

The document begins with a presentation of cross-cutting recommendations (those impacting more than one agency), followed by agency-specific recommendations. It was developed to as a practical tool for the Executive Branch and Congress as they consider regulatory process improvements.

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
CROSS-CUTTING		
White House Congress	Establish a federalism office in the executive branch - potential models include the U.S. Advisory Commission on Intergovernmental Relations (ACIR) and Council on Environmental Quality (CEQ).	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u>
White House	Revise Executive Order 13123, <i>Federalism</i> .	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
Congress	Establish a permanent Joint Select Committee on Intergovernmental Relations.	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u>
White House Agencies Congress	Governors have specifically defined "consultation." Seek opportunities for more meaningful consultation through: agency-specific processes; Executive Branch cross-cutting regulatory efforts (such as those outlined in recent E.O.s); administrative reorganization, and Congressional regulatory reform initiatives.	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u> Letter to Agencies: Executive Order, "Enforcing the Regulatory Reform Agenda": <u>DOI</u> , <u>USDA</u> , <u>USCOE</u>
Congress	Clarify definitions in key enabling statutes to better define state-federal consultation.	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u>
White House Agencies Congress	Clarify which federal actions trigger the state consultation requirements under E.O. 13132, <i>Federalism</i> . Federal agencies have recently contemplated excluding certain regulatory activities (such as agency procedures, directives development, and handbook or manual updates) from the APA process (see 80 FR 74740, November 30, 2015, RFI Regarding Involving the Public in the Formulation of Forest Service Directives). This would preclude the application of notice and comment requirements to a great deal of regulatory activity and could operate to diminish the role of states in the development of these significant regulatory tools.	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u> <u>Comments: USFS Groundwater Directive</u>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
White House/ CEQ Congress	Better define “cooperating agency” under NEPA processes.	
White House Agencies Congress	Infrastructure planning and permitting guidelines, rules, and regulations should be coordinated, streamlined, and sufficiently flexible to: (i) allow for timely decision-making in the design, financing, and construction of needed infrastructure; (ii) account for regional differences; (iii) balance economic and environmental considerations; and (iv) minimize the costs of compliance.	<u>WGA Policy Resolution 2015-08: Water Resource Management in the West</u>
White House Congress	Develop an E.O. or legislation that: ensures a more focused and streamlined federal approach to invasive species issues and that promotes greater coordination, collaboration, and communication with states and Pacific islands; and provides for greater transparency of invasive species data and management decisions.	<u>WGA Policy Resolution 2016-05, Combating Invasive Species</u> <u>Letter: Concern regarding invasive species management</u> <u>Testimony: Oversight Hearing on Invasive Species</u> <u>Letter: Recommendations for state experts for Invasive Species Advisory Council</u>
White House Congress	<p>Require agencies to develop step-by-step internal guidelines on compliance with the preemption provisions of the Federalism E.O.; and</p> <p>Require internal oversight procedure by which agency scrutinizes potential preemptions of state authority.</p>	<u>WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship</u>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
White House Congress	Require OMB/OIRA to update directions to agencies "federalism official" designations and "consultation plans." These directions should describe how agencies identify policies with federalism implications and the procedures agencies will use to ensure meaningful and timely consultation with states. Make consultations plans and contact information for designated federalism officials publicly available.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
White House	Improve preemption and federalism review requirements in OIRA's "A-4 Circular" checklist.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
Congress	Strengthen existing statutory savings clauses and incorporate savings clauses in new legislation as opportunities arise.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
Congress	Request a GAO analysis of how often federalism reviews occur in key agencies and what they include.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
Congress	Seek mandatory use of state data and expertise, subject to existing state requirements for data protection and transparency.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship WGA Policy Resolution 2016-08, Species Conservation and the Endangered Species Act WGA Policy Resolution 2014-14, State Wildlife Science, Data and Analysis Appropriations Requests Testimony, FY 2015, 2016, 2017

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
Congress	Require agencies to assure state participation in relevant federal science boards by requiring the selection of state scientists to serve on science-based groups informing federal regulation (e.g. EPA Science Advisory Board panels).	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship Appropriations Requests Testimony, FY 2015
White House Agencies Congress	Seek mandatory use of a refined model for federal land management agencies' economic impact and cost/benefit analyses designed in conjunction with affected states and counties.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
White House Agencies Congress	Require agencies to share assumptions supporting federalism assessment impact analyses. (n.b. In a previous CERCLA 108(b) federalism assessment process, EPA refused to share assumptions or modeling information with states. See details here .)	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
DEPARTMENT OF AGRICULTURE		
United States Forest Service (USFS)		
Congress	Clarify definitions in key enabling statutes such as NFMA, MUSYA, and FRRRPA to better define state-federal consultation.	WGA Policy Resolution 2017-01, Building a Stronger State-Federal Relationship
White House Agencies	Consult with states in a meaningful way prior to proposing directives or rules affecting states' management and allocation of water resources.	WGA Policy Resolution 2015-08: Water Resource Management in the West

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
	(n.b. USFS previously contemplated excluding certain regulatory activities (such as agency procedures, directives development, and handbook or manual updates) from the APA process [see 80 FR 74740, November 30, 2015, RFI Regarding Involving the Public in the Formulation of Forest Service Directives]. This would preclude the application of notice and comment requirements to a great deal of regulatory activity and could diminish the role of states in the development of these significant regulatory tools.)	WGA Policy Resolution 2017-01: Building a Stronger State-Federal Relationship Appropriations Requests Testimony, FY 2016, 2017 Testimony: State Authority over Water Management Comments: USFS Groundwater Directive Letter: Concern on USFS Proposed Groundwater Management Directive Comments: Ski Area Water Rights on Forest Service Lands Comments: Proposed USFS Directive for National Best Management Practices for Water Quality
White House/CEQ Agencies	<p>Increase state-federal coordination to complete the siting and permitting of electricity transmission across federal lands within three years of submission of a completed application.</p> <p>Include meaningful state consultation as a required component of the west-wide energy corridor designation process under section 368 of the Energy Policy Act of 2005.</p>	WGA Policy Resolution 2016-09: Energy and Transmission Comments: The first iteration of DOE's Quadrennial Energy Review Comments: DOE Integrated, Interagency Pre-Application Process proposal Comments: DOE Integrated, Interagency Pre-application Process proposal Letter: Western states' need for substantial state role in Section 368 energy corridor designation process WGA Policy Resolution 2016-09: Energy and Transmission

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
		<p><u>Letter: Request for substantive partnership in Section 368 energy corridor designation process</u></p> <p><u>Letter: Offer to work with federal agencies on western energy Section 368 corridors</u></p>
White House Agencies	<p>Consult with states in development of a consistent, cross-agency process for identifying and selecting highest priority hazardous fuels projects.</p> <p>Involve states in development and implementation of risk assessment tools for identifying and prioritizing hazardous fuels reductions projects on western NFS lands.</p> <p>Implement tracking measurements to quantify and report acres treated for hazardous fuels reduction as an accomplishment only after an entire project has been completed and the desired condition is achieved.</p>	<p><u>USFS Inspector General's Report "Forest Service Wildland Fire Activities – Hazardous Fuels Reduction." (July, 2016)</u></p>
White House Agencies	<p>Federal statutes require federal land management agencies to establish a balance between multiple uses of public lands. Take steps to account for local needs and state priorities when evaluating the viability of various uses.</p>	<p><u>WGA Policy Resolution 2016-01 National Forest and Rangeland Management</u></p> <p><u>WGA National Forest and Rangeland Management Initiative</u></p>
Agencies	<p>Expand use of authorities included in the 2014 Farm Bill to increase the pace and scale of forest management and restoration on western National Forests and adjacent non-federal lands; Expand opportunities for state and local collaborative involvement in decision-making processes.</p>	<p><u>2016-01 National Forest and Rangeland Management</u></p> <p><u>Appropriations Requests Testimony, FY 2016, 2017</u></p> <p><u>Letter: Support for accelerated implementation of forest management projects</u></p>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
	<p>Target funding from USFS, BLM, NRCS and state sources to address cross-boundary management goals in priority areas consistent with state forest action plans. Increase training of state, tribal, and other partners in USFS analysis, administration, and business practices to facilitate interagency implementation of cross-boundary projects.</p> <p>Enable State leadership to reinforce and reward collaboration on USFS and DOI planning and projects.</p>	
Agencies	Identify fuels management priorities in consultation with states to focus resources on greatest wildfire threats.	<p><u>2014-10 Regional Wildfire Fighting Resources</u></p> <p><u>Letter: State collaboration in addressing rangeland fire risk</u></p>
DEPARTMENT OF COMMERCE		
National Marine Fisheries Service (NMFS)		
	Provide regulatory and statutory avenues to implement forthcoming recommendations produced by the Western Governors' Species Conservation and ESA Initiative.	<u>WGA Policy Resolution 2016-08, Species Conservation and the Endangered Species Act</u>
	Require petitioners to provide a copy of petitions to affected state(s) so states may provide any existing state data regarding the petitioned species.	<p><u>WGA Policy Resolution 2016-08, Species Conservation and the Endangered Species Act</u></p> <p><u>Comments: Endangered & Threatened Wildlife and Plants: Revisions to the Regulations for Petitions</u></p>
	Limit critical habitat designations for broadly distributed species to only the area deemed necessary by the best available science. Critical habitat designations should be based on analysis that	<u>WGA Policy Resolution 2016-08, Species Conservation and the Endangered Species Act</u>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
	includes data and scientific information from states included in proposed critical habitat. Engage states as full partners in critical habitat designations, especially when federal agencies intend to rely on the precautionary principle, coupled with the use of long-term modeling and forecasting.	<u>Comments: Implementing Changes to the Regulations for Designating Critical Habitat</u>
	Utilize data and expertise provided by states in conducting status reviews and 12-month findings on petitions for listing species under the ESA.	<u>WGA Policy Resolution 2016-08, Species Conservation and the Endangered Species Act</u> <u>Comments: Use of State Data & Expertise in ESA Listing Methodology</u>
National Oceanic and Atmospheric Administration (NOAA)		
	Work with states and resource managers to improve predictive and adaptive capabilities for extreme weather variability and related impacts, with a priority on improving sub-seasonal and seasonal precipitation forecasting capabilities to support water management decision-making.	<u>WGA Policy Resolution 2015-08, Water Resource Management in the West</u> <u>Letter: Support for federal drought relief legislation</u>
DEPARTMENT OF DEFENSE		
United States Army Corps of Engineers (USACE)		
	Promote early, meaningful consultation with states in the promulgation or development of any rules, regulations, directives, or agency action that affects or influences states' management or allocation of water resources, including "surplus" water supplies in USACE reservoirs or water storage projects.	<u>WGA Policy Resolution 2015-08, Water Resource Management in the West</u> <u>Letter: Concern regarding U.S. Army Corps of Engineers water surplus rule</u>

Entity	Description of Reform	Nexus to Governors' Policy Resolutions
	Any attempts to define the jurisdictional scope of "Waters of the United States" in the Clean Water Act must respect limits set by Congress and the U.S. Supreme Court, recognizing the authority of states to manage water within their boundaries.	WGA Policy Resolution 2015-08, Water Resource Management in the West Appropriations Requests Testimony, FY 2015, 2016, 2017 Comments: Final Waters of the United States (WOTUS) Rule Request for Extended Comment Period - Waters of the United States (WOTUS) Rule Letter: Concern regarding Clean Water Act jurisdiction rulemaking
DEPARTMENT OF ENERGY		
	Work cooperatively with states in implementing a policy to ensure the safe transportation, storage, and disposal of spent fuel and high-level waste.	WGA Policy Resolution 2016-03: Transportation of Radioactive Waste, Radioactive Materials and Spent Nuclear Fuel 2017-05 Storage and Disposal of Radioactive Waste and Spent Nuclear Fuel
	Require consent of an affected state's Governor before allowing construction of a centralized interim storage facility. Honorable Edward Markey
United States Senator
Ranking Member, Superfund, Waste Management, and Regulatory
Oversight Subcommittee
456 Dirksen Senate Office Building
Washington, DC 20510-6175

Dear Senator Rounds and Senator Markey,

On behalf of the Council of State Governments West (CSG West), thank you for the opportunity to contribute to the Superfund, Waste Management, and Regulatory Oversight Subcommittee's hearing on oversight of scientific advisory panels and processes at the Environmental Protection Agency (EPA). We appreciate your leadership and the subcommittee's interest in hearing from Western state legislators.

As a nonpartisan, nonprofit organization serving Western state legislatures, CSG West is dedicated to preserving the role of states as "laboratories of democracy" and fostering effective cooperation with relevant federal agencies in areas of shared jurisdiction while limiting unnecessary federal intrusion in areas of state responsibility. In no other region in our country is effective federal and state cooperation more important than in the West where federal agencies work with relevant state and local agencies on a number of critical issues affecting the sustainability of our region, including the management of our natural resources and the protection of wildlife.

Over the past several years CSG West, through resolutions and correspondence, has urged Congress and federal agencies to communicate and consult with Western states in a substantive and timely manner when considering amendments to the Water Pollution Control Act as well as other federal laws. Moreover, CSG West has urged federal agencies to adhere to Presidential Executive Order 13132, issued August 4, 1999, requiring federal agencies to "have an accountable process to ensure meaningful and timely input by state and local officials in the development of regulatory policies that have federalism implications."

Enclosed for your reference are copies of CSG West resolutions related to proposed amendments to the Federal Water Pollution Control Act and water-related federal rules, regulations, directives, orders and policies.

Despite our organization's call for greater consultation with Western states, communication challenges remain. In many instances state consultation by federal agencies, including U.S. EPA, has taken place in the latter part of the policy development process, placing states and regional organizations such as CSG West in a reactionary position to a proposed regulation or interpretation as opposed to engaging states on the front-end of the process to ensure that state perspectives are taken into account.

In addition to the state consultation challenges limited state representation exists in EPA advisory panels. U.S. EPA advisory panels play an important role in providing independent advice to the EPA Administrator and other high level administration officials on a number of technical issues, including the development of rules related to the jurisdiction and application of the Clean Water Act, Clean Air Act and other regulations that impact state authority. Because they provide an independent voice to complex, technical matters, it is imperative that such advisory boards be comprised by a wide array of stakeholders, including state level representatives. However, states are largely underrepresented in EPA advisory panels.

Below are some examples related to the lack of state/local participation on EPA advisory panels:

- Of the 47 members of EPA's Chartered Science Advisory Board, only three are from state and local governments.
- EPA's Hydraulic Fracturing Research Advisory Panel, a subpanel of the Science Advisory Board designed to review EPA science on hydraulic fracturing and water, has no state/local/tribal experts on the panel. Thirteen state/local/tribal experts were nominated including from Western states and local governments, but none were selected by EPA.
- For the Science Advisory Board "Connectivity" Panel, which was reviewing a highly influential scientific assessment designed to inform EPA's authority over "waters of the U.S." under the Clean Water Act, EPA did not pick any of the nine qualified state/local experts the 27-member panel. As the Western Governors' Association recently testified: "It is worth noting that the SAB panel for the review of the EPA water body connectivity report included no state representatives. The report was therefore developed without the regulatory expertise, scientific resources and on-the-ground knowledge possessed by state professionals."
- For EPA's Clean Air Scientific Advisory Committee Ozone Review Panel, which provided the critical advice for Administrator Gina McCarthy's proposed ozone regulations, only one of the 22 panelists came from a state/local perspective.

- For EPA's seven-member chartered Clean Air Scientific Advisory Committee, whose recommendations establish the range to be considered by EPA in setting national air pollution standards, not a single member has come from EPA Region 6 (AR, LA, NM, OK, TX), Region 7 (IA, KS, MO, NE), Region 8 (CO, MT, ND, SD, UT, WY), or Region 10 (AK, ID, OR, WA) since at least 2010.

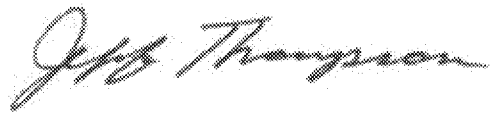

CSG West recognizes that the federal government has a vital role to play in advancing national priorities. However, it is imperative that federal agencies substantially engage states when developing or enacting regulations which affect state jurisdictions, and ensure that advisory panels designed to provide an independent voice include greater state representation. We encourage you and the members of the subcommittee to address these challenges with the hope that our state and federal engagement can be strengthened for the benefit our states and communities.

Once again, thank you for your consideration of these important issues. If you or your staff has any questions, please feel free to contact CSG West Executive Director, Edgar Ruiz, at (916) 553-4423.

Sincerely,

Senator Nancy Todd

CRS Joins Congressional Calls for Transparency at EPA: Submits FOIA Request for Records on CASAC's Member Selection Process

04/13/2018

CRS stresses need for balanced panel that includes western representation

Washington D.C. — Joining congressional calls for transparency at EPA, the Center for Regulatory Solutions (CRS), a project of the Small Business and Entrepreneurship Council, today filed a Freedom of Information Act (FOIA) request for public records and communications regarding the process for selecting new members to the Clean Air Science Advisory Committee (CASAC) and its Ozone Review Panel. The Administrator of the Environmental Protection Agency (EPA) annually reviews CASAC membership, appointing new members on a rotating basis. In turn, CASAC advises EPA on their National Ambient Air Quality Standards (NAAQS) for ozone and other pollutants.

On April 4, 2018, the EPA initiated the 2018 CASAC nominating process, quietly posting a notice in the Federal Register soliciting nominations for new members. However, little is known about how EPA makes its ultimate decisions for membership, and the time allotted for public comment is only 30 days. Even so, Congressional leaders, the EPA Inspector General and the Governmental Accountability Office (GAO), have all raised concerns about conflicts of interest and the lack of transparency in previous nomination and selection processes. For example, in 2015, public comments on the "short-list" of candidates were never made publically available and the EPA Administrator's final decision was not publically noticed.

"CASAC has immense influence and input on EPA's decisions regarding air quality standards, like Ozone NAAQS. As such, EPA has an obligation to ensure that the process of selecting new members is open and transparent and that the panel is balanced and unbiased. Unfortunately, the EPA historically fails in this regard, causing many to question the integrity of the panel," said Karen Kerrigan, President of the Small Business and Entrepreneurship Council. "We're filing this FOIA request to shine a light on the process, as EPA begins to consider a new candidate for the Committee. Moreover, I am urging EPA to consider naming a Western air regulator to the panel, since EPA has so far proved incapable of grappling with the complications associated with background ozone, which disproportionately impacts Western states."

It is important to pull back the curtain and allow the public to understand EPA's selection process, especially in light of the CASAC status as a Federal Advisory Committee, which is governed by Federal Advisory Committee Acts (FACA) requirements of balance and transparency. According to its charter, CASAC's membership must include a physician, a member of the National Academy of Sciences (NAS), and a representative from a state pollution control agencies. These individuals should be free of conflict-of-interest and not hold preconceived views on the science. Yet the current panel does not include a member of NAS and the state representative is from the Northeast States for Coordinated Air Use Management (NESCAUM), which actively lobbies for stricter ozone standards. There is sparse representation from Western states on the Committee, even though they face higher implementation burdens due to the role of background ozone.

In February 2016, Senator James Inhofe (R-OK), Chairman of the Senate Environment and Public Works Committee, sent a letter to the EPA charging that the Administration is "cherry-picking the same allies" to serve on the Committee and its subcommittees "at the expense of having an open and robust process for selecting external advisors." The letter notes that six of the seven current members have previously served on CASAC, or CASAC subcommittees. Inhofe also called on the EPA to address potential conflicts-of-interest of CASAC members, revealing that CASAC members have received millions of dollars in EPA grant funding. The House Science Committee, led by Chairman Lamar Smith (R-TX) has found that the vast majority of appointees to CASAC's Ozone Review Panel were essentially reviewing their own work. In a letter sent this week to the EPA, leaders of the House Oversight and Government Committee asked the agency to produce financial disclosure forms of CASAC members in order to "understand the reliability of EPA's conflicts assessment."

While the public knows very little about CASAC and its membership, it is the main driver for pushing the ozone NAAQS steadily downward, consistently advocating for EPA to lower the standard to 60 parts per billion (ppb) — a level that would be the most expensive regulation in history.

00633

and force the majority of the country into non-attainment. Many areas in the U.S. have background ozone levels higher than 60 ppb, and as such CASAC's preferred standard would not be achievable for much of the country. Such an outcome would be devastating for America's small business owners, their workforce and communities, all would be unfairly penalized by the decision. While the EPA thus far has declined to follow the Committee's extreme advice, the members selected to serve on CASAC will start the process again and define the terms of the debate for the next review of the ozone standard.

CRS' FOIA seeks the following records from EPA:

1. All documents referring or relating to the 2015 CASAC selection process, which includes, but is not limited to the following categories of documents:
 1. All comments submitted to EPA pursuant to its April 2, 2015 request for nominations to CASAC.
 2. All communications referring or relating to the CASAC selection process between EPA's SAB and the Office of the Administrator, the Office of Air and Radiation EPA, and the Office of General Counsel.
 3. All communications between each candidate for CASAC membership and the Office of the Administrator, the Office of Air and Radiation EPA, and the EPA's SAB staff.
 4. All communications referring or relating to Administrator McCarthy's final CASAC selection between and among any of the following offices: EPA's Office of the Administrator, Office of the Air and Radiation, and/ or the Office of General Counsel.
 5. All press releases or public announcements and notifications related to the CASAC selection process.
2. All documents referring or relating to the upcoming Ozone Review Panel selection, which includes, but is not limited to the following categories of documents:
 1. Correspondence between any candidate for the ORP and the SAB.
 2. Discussion between an EPA employee and an outside party relating to ORP panel membership.
 3. All communications referring or relating to the ORP between EPA's SAB and the Office of the Administrator, the Office of Air and Radiation EPA, and the Office of General Counsel.
 4. All communications between each candidate for the ORP and the Office of the Administrator, the Office of Air and Radiation EPA, and the EPA's SAB staff.

About CRS

The Center for Regulatory Solutions is a project of the Small Business and Entrepreneurship Council, a 501(c)(4) advocacy, research, education and networking organization dedicated to protecting small business and promoting entrepreneurship. For twenty-three years, SBE Council has worked to educate elected officials, policymakers, business leaders and the public about policies that enable business start-up and growth.

Congressional Oversight Committee Chairs and Air Regulators Call for Balance on CASAC

07/23/2016

By Karen Kerrigan

Congressional leaders and air quality regulators are calling on the Environmental Protection Agency (EPA) to bring regional diversity to the Clean Air Scientific Advisory Committee (CASAC) in a trio of letters to the agency. The letters, from the chair of the U.S. Senate Committee on Environment and Public Works (EPW), the chair of the House Committee on Oversight and Government Reform (OGR) and another from an influential state air regulators group, the Association of Air Pollution Control Agencies (AAPCA) raise issues with the current makeup of CASAC in their calls for increasing balance on the committee.

The letters come as EPA seeks input to make a new appointment to the committee that is tasked with providing advice, information, and recommendations on the scientific and technical aspects of air quality for ozone and other pollutants.

The nomination is particularly significant with EPA preparing to implement its new National Ambient Air Quality Standards (NAAQS) for Ozone, adopted last October. The rule has drawn widespread bipartisan opposition from federal, state, and local elected officials, editorial boards, business groups, and others who warn that the costs of the rule far outweigh any apparent benefits of dropping permissible ozone concentrations in ambient air from 75 parts per billion (ppb) to 70 ppb.

Congressional Leaders Want Balance on CASAC

In a letter to EPA, Sen. James Inhofe, (R-OK), chairman of Senate EPW, is calling for the agency to select a candidate from the current list of nominees that would bring "much needed balance and integrity to CASAC." Raising his "concerns with two of the nominees under consideration," Inhofe writes that "there is no reason for EPA to overlook well-qualified candidates" from areas "that would clearly balance the panel." From the letter:

This seeming geographic bias on the chartered CASAC cannot be ignored. It is also important to note that with respect to this specific state-based position on CASAC, there has been no meaningful geographic diversity at all.

This is not the first time the chairman has raised issues with CASAC. In February 2016, he admonished EPA for "cherry picking the same allies" to serve on its committees "at the expense of having an open and robust process for selecting external advisors."

Meanwhile, similar concerns are being raised in a letter to EPA from Congressman Bruce Westerman (R-AR), Jason Chaffetz (R-UT) and others, who are calling for EPA to nominate a candidate from a region not currently represented on CASAC. Also from the letter:

When considering nominees, it is vitally important that different EPA Regions are represented to ensure a fair balance of experts and experience. EPA specifically acknowledges in the notice that geographic diversity is an important selection criteria. Currently, no CASAC members come from Region 8 (MT, WY, ND, SD, UT, CO), Region 6 (NM, TX, OK, AR, LA), Region 7 (NE, KS, IA, MO), or Region 4 (KY, TN, MS, AL, FL, GA, SC, NC). Additionally, not a single CASAC member has come from Region's 6, 7, or 8 since 2010. Accordingly, in order for balance, fairness and geographic diversity on CASAC, we request that EPA fill the open position with someone from an area not represented on the Committee.

The pair of Congressional letters is the latest development in what is becoming a growing list of CASAC critics. Congressional leaders, the EPA Inspector General and the Governmental Accountability Office (GAO), have all raised concerns about conflicts of interest and the lack of

00635

transparency in previous nomination and selection processes for the committee. For example, in 2015, public comments on the "short-list" of candidates were never made public.

But members of Congress are not the only ones calling for more balance on CASAC. The Association of Air Pollution Control Agencies (AAPCA) has also recently called on EPA to expand diversity on the committee. In a letter to EPA, the group writes:

"AAPCA also suggests that EPA should encourage nominations of, and seriously consider, qualified state, local, and tribal environmental agency experts for future openings on the chartered CASAC (including for those openings not statutorily required to be filled by a representative of state air pollution control agencies) as well as individual CASAC NAAQS review panels."

The regulatory burden of EPA's new ozone standard has come under intense scrutiny from business groups, editorial boards, and elected officials on both sides of the aisle who are calling on the agency to put the brakes on the new ozone rule. This blanket approach to ozone is exactly why the members of CASAC should represent the greatest geographic diversity available. Communities struggling with the new ozone standard deserve a voice that can speak to the specific and unique issues communities across the country will face in implementing this new standard.

Karen Kerrigan is president & CEO of the Small Business & Entrepreneurship Council (SBE Council). The Center for Regulatory Solutions is a project of the Council.

Dear Ms. Rees:

The American Fuel & Petrochemical Manufacturers (AFPM) respectfully submits these comments in response to the Environmental Protection Agency's (EPA or Agency) Request for Comment, titled "Evaluation of Existing Regulations."¹ AFPM recognizes this information will assist EPA's Regulatory Reform Task Force (Task Force) in evaluating existing regulations to alleviate unnecessary regulatory burdens, as directed by Executive Order 13777, "Enforcing the Regulatory Reform Agenda" (EO 13777).²

AFPM is a national trade association representing nearly 400 companies that encompass virtually all U.S. refining and petrochemical manufacturing capacity. Millions of Americans use products produced by AFPM members every day. Our members serve the American people responsibly and effectively by manufacturing virtually all U.S. petroleum fuels and petrochemicals, strengthening economic and national security, and providing jobs directly and indirectly for over four million people.

While domestic fuel and petrochemical manufacturers have invested and will continue to invest substantial capital in environmental protection, AFPM member companies face regulatory obstacles that can undermine the ability of petrochemical manufacturers and refiners to create jobs and compete in the global economy. It is a truism that our modern lifestyle is inextricably linked to the fuels and petrochemicals AFPM members produce. AFPM supports clear and reasonable regulations that are science and data driven, create a level playing field upon which to compete, and have benefits that exceed the regulation's costs. That said, the U.S. regulatory burden, if left

¹ "Evaluation of Existing Regulations, 82 *Fed. Reg.* 17,793 (April 13, 2017).

² "Presidential Executive Order on Enforcing the Regulatory Reform Agenda," February 24, 2017, <https://www.whitehouse.gov/the-press-office/2017/02/24/presidential-executive-order-enforcing-regulatory-reform-agenda>.

unchecked, creates an economic incentive to produce these essential products outside the country, threatening well-paying jobs, tax revenues, and the security of the nation.

The market policy and infrastructure factors affecting the American fuel supply have created a high-cost environment that hampers our nation's economy and threatens our critical refining infrastructure. Unfortunately, government regulation has the ability to make matters even worse. Proposed new regulations and unnecessary tightening of existing standards threaten to raise energy costs for every American consumer, with little or no environmental benefit.

AFPM supports sensible regulations as important tools to protect our well-being by providing rules for all businesses to live by. Too often, however, the U.S. regulatory regime is opaque, duplicative, or outright conflicting—creating uncertainty for businesses, shuttering good projects, and ultimately harming consumers. There are common sense regulatory reform measures that will promote transparency, good government, and sound science without compromising the environment, health, or safety. Far from undermining sensible regulation, such reforms would allow regulated entities to deliver better results for less cost.

These comments highlight EPA regulations AFPM believes are most burdensome for our members and their business operations. We have included recommendations to either eliminate some of these requirements or modify them as appropriate. To facilitate EPA's review, we have divided these comments into three broad categories: 1) Stationary Sources; 2) Fuels; and 3) Toxic Substance Control Act (TSCA) and Lautenberg Chemical Safety Act (LCSA) Implementation.

A. Stationary Sources

The following are the five stationary source regulations of greatest concern to AFPM members:

1. Risk Management Plan (RMP) – 40 CFR Part 68

In August 2013, following the explosion of the fertilizer plant in West, Texas, President Obama issued Executive Order (EO) 13650, entitled "Improving Chemical Facility Safety and Security." The EO directs the federal government to improve operational coordination with state and local partners, improve federal agency coordination and information sharing, modernize policies, regulations and standards, and work with stakeholders to identify best practices in chemical facility safety and security. The Department of Homeland Security (DHS), Occupational Safety and Health Administration (OSHA) and EPA were to work in conjunction to achieve these objectives. Using this EO as justification, EPA proposed significant modifications to the existing RMP regulations. On May 11, 2016, the Bureau of Alcohol, Tobacco, Firearms and Explosives said that the West, Texas facility fire had been deliberately set. Because the incident was caused intentionally, the recently-promulgated RMP revisions would not have prevented the incident.

AFPM members have significant concerns surrounding the new requirements to compel disclosure of potentially security-sensitive information to emergency responders and the public, perform inherently safer technology assessments and third-party audits, and eliminate the use of representative sampling when performing a compliance audit. Particularly, sharing security-sensitive information is adverse to DHS's mission to protect our nation's security.

EPA's RMP revisions relied on an erroneous cost-benefit analysis. Some of the revisions compromise safety by limiting the ability of companies to hire qualified auditors and diverting resources to inherently safer technology analysis that provides little safety benefit when conducted after a facility is already built. Furthermore, EPA did not respect the jurisdictional lines between itself and OSHA on these issues, as OSHA has primary jurisdiction over the "inside the fence line" requirements that EPA relied on to justify its cost-benefit calculations.

As such, AFPM and five other industry associations filed a petition for reconsideration with EPA and a petition for review with the U.S. Court of Appeals for the District of Columbia Circuit. The coalition is challenging aspects of the rule that compromise security and fail to enhance safety. The petition urges EPA to seek further public comment on various issues surrounding the rule, such as investigators' finding that arson caused the fire that served as the foundation of EO 13650 and the subsequent RMP revisions. In addition, the petition asks EPA to seek feedback on changes in the final rule that expanded provisions for disclosure of facility data and the scope of auditing requirements, as well as whether the rule's independent audit and safer technologies analysis provisions are justified. In response to the petition, EPA agreed to delay the rule's effective date from March 21 to June 19 in order to reconsider the regulation, and has proposed to further delay the effective date until February 19, 2019.

Moreover, the RMP rules significantly overlap with and are redundant to the OSHA Process Safety Management Rules in 29 C.F.R. §1910.119. This overlap/redundancy can lead to duplicative and inconsistent regulations. It can also lead to differing interpretations between OSHA and EPA. AFPM members believe this is an area that is especially ripe for reform and revision.

Recommendation

EPA should withdraw the revisions to the RMP rules and allow OSHA to take the lead on process safety management.

2. Ozone NAAQS – 40 CFR Part 50; 40 CFR Part 58

Under the Clean Air Act, EPA must review national ambient air quality standards (NAAQS) for criteria pollutants at least every five years and revise them "as may be appropriate." Primary NAAQS must be set at a level "requisite to protect the public health" with "an adequate margin of safety." Secondary NAAQS must specify a level of air quality "requisite to protect the public welfare from any known or anticipated adverse effects." In a final rule published in the Federal Register on October 26, 2015, EPA lowered the primary and secondary ozone NAAQS from 75 parts per billion (ppb) to 70 ppb.³

On December 23, 2015, AFPM and numerous other entities filed petitions for review in the U.S. Court of Appeals for the D.C. Circuit. EPA petitioned the court to postpone oral argument and the Court placed the case in abeyance. EPA is to file status reports and a motion to govern further proceedings after EPA takes action on the 2015 standard. AFPM's primary concern with EPA's rule is the attainability of the standard. AFPM continues to advocate for a legislative solution on

³ "National Ambient Air Quality Standards for Ozone," 80 *Fed. Reg.* 65,292 (Oct. 26, 2015).

ozone that would provide meaningful relief for companies faced with more stringent permitting requirements and regulations as a result of the new standard, but the Administration should also consider what avenues may exist for regulatory relief, including with respect to associated implementation rules, such as the Exceptional Events Rule.⁴

EPA's decision to lower the ozone standard from 75 parts ppb to 70 ppb will force many counties across the United States into non-attainment with the ozone NAAQS, increasing the burden on state and local governments and industry. Nonattainment areas are subject to numerous Clean Air Act requirements, including the submittal of state plans to bring an area into attainment, application of reasonably available control technology ("RACT") requirements, permit requirements for the construction and operation of new or modified major sources and other measures that a state or EPA may determine are necessary or appropriate in order to bring an area into attainment. *See* 42 U.S.C. § 7502. These requirements can both inhibit the ability of industry already located in a nonattainment area to expand as well as raise costs and act as a disincentive for new industry to locate in a nonattainment area.

During the 2015 ozone NAAQS rulemaking, EPA identified 241 counties that would not meet the 70 ppb ozone standard based on 2012-2014 data.⁵ But under EPA's current ozone designation process, nonattainment areas are not limited to counties that have measured air quality above a NAAQS; instead, EPA stated that "it is important to examine ozone-contributing emissions across a relatively broad geographic area associated with a monitored violation . . . EPA intends to consider information relevant to designations associated with the counties in the Combined Statistical Area (CSA), or where appropriate, the Core Based Statistical Area (CBSA) in which the violating monitor is located."⁶ If this process is followed, new nonattainment areas will need to be established for the 70 ppb standard and existing nonattainment areas must be reevaluated to determine whether they should be expanded under a "weight of the evidence analysis" based on the evaluation of air quality data, emissions and emissions-related data, meteorology, geography/topography, and jurisdictional boundaries.⁷

Conversely, however, EPA has also projected that a combination of on-the-books federal regulations and implementation of the existing 75 ppb ozone standard would achieve air quality meeting or exceeding a 70 ppb standard across virtually the entire country outside of California by 2025. Thus, EPA has been proceeding apace with the designation process for the 2015 ozone NAAQS – planned for 2017 – while it also has information indicating that further burdening state and local governments with new ozone designations and re-designations of existing nonattainment areas will occur when air quality in most of the country is moving towards attainment of the 2015 NAAQS.

AFPM recognizes that the five-year cycle is part of the statutory design of the Clean Air Act and that other implementation measures are based in statute. But the Administration can ease the burden on states and businesses by further considering how improving air quality can be accounted for considered during the implementation process for the 2015 ozone NAAQS.

⁴ "Treatment of Data Influenced by Exceptional Events," 81 *Fed. Reg.* 68,216 (Oct. 3, 2016).

⁵ "2015 Ozone Standards," https://ozoneairqualitystandards.epa.gov/OAR_OAQPS/OzoneSliderApp/index.html#.

⁶ "Area Designations for the 2015 Ozone National Ambient Air Quality Standards," Memorandum from Janet McCabe to EPA Regional Administrators, February 25, 2016 at 5.

⁷ *Id.* at 6.

For example, EPA has previously implemented policies like Early Action Compacts designed to both achieve air quality standards and avoid imposing the burdens that flow from nonattainment designations. This process used a “nonattainment deferred” status for areas, dependent upon the achievement of certain milestones. Thus, EPA should fully explore whatever additional flexibility it may possess to implement NAAQS in a reasonable manner which recognizes the cumulative impact of finalizing more stringent NAAQS in 1997, 2008 and 2015, the overall downward trend in ozone concentrations,⁸ and improvements in air quality that can be projected in future years. Such an approach will allow state resources to be allocated more effectively and reduce resulting economic hardship, while still achieving intended air quality improvements.

EPA should also review rules and guidance that the previous Administration relied on when it promulgated the 2015 ozone NAAQS. Specifically, EPA should review rules and guidance for “exceptional events” which rely on authority within Clean Air Act §319(b), the Agency’s interpretation of international transport provision contained in Clean Air Act §179B, and the available classification of an area as a “rural transport area” pursuant to Clean Air Act §182. AFPM previously filed detailed comments regarding all three provisions as part of the comments it filed on the proposed 2015 ozone NAAQS.⁹ Among other recommendations, AFPM urged EPA to allow for greater state flexibility in “flagging” and excluding exceptional event data, clarify that relief under the international transport provisions is available to non-border states and that such relief is intended to be widely available on a consistent basis, and that EPA should take additional steps to issue workable regulations or guidance for use of the rural transport area designation.

Regarding EPA’s recent rulemaking and guidance for Exceptional Events, the information lacks objective, science-based criteria for approving a demonstration. For example, the guidance document discusses “Q/D” (fire emissions divided by the distance from the fire) for wildfire-related ozone events. However, Q/D appears inconsistent with peer reviewed scientific analyses that clearly demonstrate that for most wildfire plumes, ozone concentrations increase with distance from the fire (Jaffe and Wigder 2012). Another inconsistency with EPA’s exceptional event guidance lies in the discussion of the possible use of statistical analyses to quantify the ozone increment related to exceptional events. In the guidance, EPA requires an overly conservative methodology that is inconsistent with EPA’s prior approval of an ozone exceptional event that used a similar statistical analysis but not by the overly conservative methodology described by EPA in the guidance. This guidance states “*The difference between the predicted values and the measured values are analyzed, and the 95th percentile of those positive differences (observed [ozone (“O3”)] is greater than predicted) is recorded. This 95 percent error bound is added to the O3 value predicted by the regression equation for the flagged days, and any difference between this sum and the observed O3 for the flagged day may be considered an estimate of the O3 contribution from the fire...*” [Emphasis added] The 95th percentile of positive values is equivalent to the 97.5th percentile of all values. The California Air Resources Board applied this statistical method in a successful exceptional events case demonstration for 2008 California wildfires (CARB 2011), and EPA cited this element in its approval documentation (April 13,

⁸ National ozone levels (as measured over 8 hours) have decreased 22% since 1990. See <https://gispub.epa.gov/air/trendsreport/2016>.

⁹ American Fuel & Petrochemical Manufacturers’ Comments on the Environmental Protection Agency’s Proposed Rulemaking: National Ambient Air Quality Standards for Ozone (Docket No. EPA-HQ-OAR-2008-0699-2114.), March 17, 2015 at 25-34.

2011). However, the CARB analysis did not apply the stringent error bound requirements of considering only the positive differences, but was accepted in any case.

AFPM calls upon EPA to take immediate steps to increase the transparency of data EPA relies on for NAAQS rulemakings. EPA should ensure that all scientific and technical information that the Agency relies on to determine the level of a NAAQS is publicly available to ensure opportunities for independent analysis of the data. In addition, EPA should reform the Clean Air Scientific Advisory Committee (CASAC) and increase the diversity of CASAC membership to include qualified professionals in regulated industries.

Recommendations

EPA should:

- Support a more flexible implementation of non-attainment designations for the 2015 ozone NAAQS to allow for full implementation of the 2008 ozone NAAQS as well as for implementation of other federal and state rules that will reduce ozone formation.
- Empanel CASAC with diverse membership to include qualified professionals within industry, consulting, and state environmental agency backgrounds.
- Revise and reissue the exceptional events rule and guidance, taking into account comments related to science-based information about fire-related events and objective approval criteria that clarify what constitutes an adequate demonstration.

3. Refinery Sector Rule (RSR) – 40 CFR Part 60, Subparts J and Ja; 40 CFR Part 63, Subparts CC and UUU

Under the Clean Air Act, EPA is required to regulate hazardous air pollutants (HAPs) from “major” sources (i.e., those that emit 10 tons per year (tpy) or more of a listed HAP, or 25 tpy or more of a combination of HAPs). EPA must develop standards for HAPs based on the maximum achievable control technology (MACT) used at the best-controlled facilities within an industry. The petroleum refining and petrochemical industries are subject to a number of MACT standards. EPA also must develop and implement a program for assessing risks remaining after facilities implement MACT standards (i.e., residual risk), and may issue regulations to reduce residual risks to protect the public health with an “ample margin of safety.” The residual risk provisions require EPA to consider costs, energy, safety and other relevant factors as it regulates to prevent “adverse environmental effects.” If necessary, EPA must issue risk-based regulations within eight years after the promulgation of the MACT standard.

Beginning in 2006, EPA conducted a thorough residual risk review that concluded that the existing 40 CFR 63 Subpart CC and UUU standards for petroleum refineries did not have residual risks requiring further rules. This was finalized in a rule signed by EPA on January 16, 2009. However, the final rule was withheld from publication at the request of the Obama Administration and withdrawn in 2009.”

After withdrawing the completed refinery residual risk rule in 2009, EPA began a second residual risk analysis and finalized the Refinery Sector Rule on December 1, 2015,¹⁰ and subsequently clarified the compliance dates in a second final rule published on July 13, 2016.¹¹ AFPM supported EPA's process to evaluate the residual risk remaining after full implementation of the refinery MACT rules. As demonstrated by EPA's analysis for this rule, refinery emissions do not pose a significant residual risk to the public. But despite this fact, EPA included significant new compliance requirements in the December 2015 rule. AFPM does not believe that the additional regulation of these sources is authorized under the Clean Air Act because EPA concluded that the risks were acceptable. Further, much of the rulemaking eliminated various allowances for emissions during startups, shutdowns, and malfunctions as a result of EPA's overly broad interpretation of *Sierra Club v. EPA*, 551 F.3d 1019 (D.C. Cir. 2008).

Furthermore, in setting new standards for controlling flare emissions, EPA erroneously went far beyond the MACT "floor" of the best 12 percent controlled flares, in requiring flare compliance for several parameters based on a 15-minute block average compliance period, an example of EPA over-reaching its Congressional mandate to set the MACT floor based on the best performing 12 percent. The 15-minute block average compliance period does not represent the best 12 percent of flares. We are unaware of any flares controlled to a 15-minute block average compliance period prior to this rulemaking. Even the flares subject to Consent Decrees were required to comply on a rolling 3-hour basis prior to this rulemaking. We provided comments to EPA in support of a rolling 3-hour compliance period and against the 15-minute block average compliance period, but EPA finalized the rule with the 15-minute block average compliance period.

In response, AFPM and the American Petroleum Institute (API) filed a joint petition for review in the D.C. Circuit and administrative petitions for reconsideration of EPA's refinery sector residual risk rule as a number of issues need to be clarified. A collection of environmental groups also filed petitions for review and reconsideration, seeking to tighten EPA's emissions standards for flares and pressure relief devices. The lawsuit has been placed in abeyance while EPA considers the pending petitions for reconsideration.

On June 16, 2016, EPA granted the environmental groups' petitions for reconsideration and requested comment on the following aspects of the final rule: 1) work practice standards for pressure relief devices and emergency flaring events, including the assessment of risk from the implementation of these standards; 2) alternative work practice standards for delayed coking units employing a water overflow design; and 3) the provision allowing refineries to reduce the frequency of fence-line monitoring at sampling stations that consistently record benzene concentrations below 0.9 micrograms per cubic meter. While these issues go beyond those raised by AFPM and API in their petitions for reconsideration, the letter granting reconsideration stated that EPA may grant reconsideration of additional issues in the future. AFPM and API submitted comments opposing the environmental groups' petition and are awaiting a decision. EPA has also not yet made a determination on the AFPM/API petition for reconsideration.

¹⁰ "Petroleum Refinery Sector Risk and Technology Review and New Source Performance Standards," 80 *Fed. Reg.* 75,178 (Dec. 1, 2015).

¹¹ "National Emission Standards for Hazardous Air Pollutant Emissions: Petroleum Refinery Sector Amendments," 81 *Fed. Reg.* 45,232 (July 13, 2016).

Recommendations

EPA should:

- Reject the environmental groups' petitions for reconsideration and retain the challenged provisions. In addition, since compliance deadlines are approaching in 2018, EPA needs to take action on the AFPM/API petition in order to ensure regulatory certainty;
- Revise the flare compliance requirements to replace all 15-minute block average compliance periods with a rolling 3-hour compliance period. EPA should make this change quickly to alleviate the need for compliance planning and expenditures related to the shorter compliance period currently in the rule; and
- Eliminate the fence line monitoring provisions as EPA has found insufficient risk to justify their inclusion.

4. Recommendations for Revising New Source Review (NSR) and Prevention of Significant Deterioration (PSD)

In 2002, EPA promulgated a package of NSR reform regulations. These regulations contained provisions that changed the test for measuring whether a significant net emissions increase occurred (allowing use of “projected actual emissions”) and allowing for a longer baseline period in order to determine past emissions and therefore whether an emissions increase triggering NSR had occurred. The 2002 NSR reform package also contained other provisions providing for plantwide applicability limits (PALs) which included a simplified “facility-wide actuals” emission test under which PSD/nonattainment new source review (NNSR) permitting would not be triggered if the facility-wide actual emissions for a given pollutant did not increase above the PAL.

In the years since this effort, EPA has offered small “fixes” for grandfathering facilities when NAAQS are lowered and other implementation rules and guidance have been proposed or finalized designed to reduce NSR analysis and permitting burdens. But the time has come for a more comprehensive review of the NSR program and exploration of legislative and regulatory changes to the program.

Recommendation

The Administration should consider the following modifications to the permitting process, including revisions to the PSD/NNSR program:

- Eliminate the need to consider emissions increases from non-modified affected emission units;
- Allow project netting so that emissions reductions associated with a project can be considered in Step 1 of the PSD/NNSR applicability analysis;
- Use a “potential to potential” comparison of emissions to determine whether PSD/NNSR is triggered; and/or
- Provide a definition of “project” to address uncertainty around project aggregation.

5. Refinery Effluent Limit Guidelines

With respect to the Clean Water Act (CWA) and national pollutant discharge elimination system (NPDES) permitting, EPA is currently undertaking a study to determine whether to revise the petroleum refining effluent limit guidelines (ELGs) for NPDES permits. As a first step, AFPM urges EPA and the Administration to consider whether new regulations are necessary or beneficial before burdening industry with an extensive information collection request (ICR). EPA has stated that it is investigating two theories: (1) whether there has been an increase in loadings to refinery wastewater treatment plants resulting from increases in heavy Canadian crude feedstock; and (2) whether there are increase loadings to refinery wastewater treatment plants as a result of the installation of air pollution control equipment (e.g. fluid catalytic cracking unit (FCCU) scrubbers).

Over the past several decades, AFPM members have invested billions of dollars in technologies to modernize their wastewater treatment facilities to meet the Total Maximum Daily Load (TMDL) developments, NPDES permit revisions (every 5 years at a minimum), and water quality-based effluent limits (WQBEL). Therefore, AFPM requests that EPA further study existing data (eliminating the overly conservative estimations commonly found in the Toxics Release Inventory) and identify the gaps that are not covered by TMDL and WQBEL before embarking on another data collection effort through the ICR that EPA is preparing to issue. This would better utilize scarce agency resources as well as reduce unnecessary burdens on industry. Further, AFPM believes that reviewing available data, as recommended above, will support a conclusion that further rulemaking is unnecessary.

Recommendation

AFPM does not support EPA pursuing a refinery ELG rulemaking based on unclear drivers and objectives from EPA. AFPM recommends that EPA positively state that there is no need to revise the refinery ELG.

Other key regulations of concern to AFPM members:

6. Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Financial Assurance

CERCLA 108(b) addresses the promulgation of regulations that require certain classes of facilities to establish and maintain evidence of financial responsibility consistent with the degree and duration of risk associated with the production, transportation, treatment, storage, or disposal of hazardous substances. EPA published an Advanced Notice of Proposed Rulemaking (ANPRM) in the Federal Register on January 6, 2010, and a Notice of Intent to proceed with Rulemaking in the Federal Register on January 11, 2017.

The ANPRM identified additional classes of facilities within three industry sectors that may warrant the development of financial responsibility requirements under section 108(b)—the Chemical Manufacturing industry (NAICS 325), the Petroleum and Coal Products Manufacturing industry (NAICS 324), and the Electric Power Generation, Transmission, and Distribution industry

(NAICS 2211). A court order¹² established a schedule for EPA's regulatory response, with the hard rock mining industry chosen as the first industry sector with other industries to follow.
