

## The Cross-State Air Pollution Rule

### *Health and Economic Benefits for Maryland*

To protect states afflicted by air pollution from outside their borders, EPA finalized the Cross-State Air Pollution Rule to reduce harmful emissions of sulfur dioxide (SO<sub>2</sub>) and nitrogen oxides (NO<sub>x</sub>) from power plants in the eastern half of the U.S. These clean air protections are called for under the “Good Neighbor” provision of the Clean Air Act – a provision ensuring that air pollution discharged by power plants in an upwind state do not contribute to unhealthy pollution levels in downwind states. These protections will help downwind states suffering from this harmful pollution restore healthy air for their citizens and maintain compliance with the health-based national ambient air quality standards.

Under this rule, harmful pollution will be significantly reduced: SO<sub>2</sub> emissions from power plants in the eastern half of the U.S. would be reduced 73% and NO<sub>x</sub> emissions would be reduced 54%. Nationally, this rule will save up to 34,000 lives, prevent 400,000 asthma attacks, and avoid 1.8 million lost work or sick days each year once in place. The economic value of these benefits is estimated at \$120–280 billion each year. These benefits don’t even account for the value of increased agricultural crop and commercial forest yields, improvements to visibility, and reduced nitrogen and acid deposition.

#### ***Marylanders will reap vital health benefits from this rule.***

Outside pollution from 13<sup>1</sup> states is currently impairing Maryland’s air quality. Reducing pollution from both out of state and in-state sources will save up to 1,003 lives<sup>2</sup> and will prevent 375 heart attacks, 255 hospitalizations, and 441 ER visits in Maryland every year. Air quality improvement from this rule could benefit the over 1.35 million children at risk for asthma in Maryland.<sup>3</sup> These reductions will also prevent 57,122 lost work days due to these illnesses and provide about \$8 billion<sup>4</sup> in benefits to Maryland each year. These benefits are just those related to avoided mortality, but there are other important health and environmental benefits not quantified here. Under these clean air protections, the quantified health benefits for Maryland are significantly more than the 5.7 billion that the state will spend on its public schools in 2012<sup>5</sup>—in other words, these billions of dollars in health benefits are very good news for Marylanders.
