

## Clean Car Roll-back

Estimated costs for American families if U.S. climate pollution and fuel economy standards are relaxed

July 20, 2018

## U.S. Climate Pollution and Fuel Economy Standards Save Families Money

- On May 30, 2018 the EPA and NHTSA forwarded to OMB a draft proposal to dramatically roll back the current U.S. climate pollution and Corporate Average Fuel Economy (CAFE) program. The current standards require gradual climate pollution reductions every year, which will spur increases in fuel efficiency for all new vehicles sold between now and 2025
- The exact details of this proposal are unknown, but it reportedly recommends capping U.S. climate pollution and fuel economy targets at model year 2020 - with no further increases in later years
- This analysis indicates that rolling back the current U.S. climate pollution and fuel economy standards in this way will cost the average American family as much as \$500 per year after 2025
- Families in every state stand to lose money due to higher annual gasoline costs - but those in some of the lowest income states will likely lose the most because they do more driving every year
- More stringent standards also protect families against rising gas prices - keeping the model year 2025 standards will save the average U.S. family an additional $\$ 85 /$ year for every $\$ 0.50$ /gallon increase in gasoline prices
- Compared to vehicles that meet Model Year 2020 CAFE standards, life-time savings from vehicles that meet the current Model Year 2025 standards will be at least $\$ 2,800$ more for cars and at least $\$ 4,500$ more for light trucks

## How do Families Save Money with Clean Cars?

## Monthly fuel cost savings outweigh increased vehicle costs

## Annual Savings for the Average U.S. Family with Clean Cars

The average U.S. family owns two cars and drives 23,030 miles per year.

For this family net savings from MY2025 U.S. climate pollution and fuel economy standards could be over \$500/year and over \$3,000 during the time they own MY2025 vehicles ${ }^{1}$, depending on fuel costs (High Oil Price)
Annual family savings will increase

| Net Savings $^{2}$ |  |  |
| :---: | :---: | :---: |
| AVERAGE U.S. FAMILY (2017\$) |  |  |
|  | Reference | High Oil <br> Price |
| One Year | $\$ 202$ | $\$ 512$ |
| 6 Years |  |  |
| Typical time a <br> family owns a car | $\$ 1,212$ | $\$ 3,072$ | by $\$ 85$ for every $\$ 0.50 /$ gallon increase in gasoline prices

${ }^{1}$ Annual savings could be even higher for the next new vehicles they purchased, if U.S. Climate pollution and fuel economy standards continued to increase each year.
${ }^{2}$ Based on gasoline price projections from U.S. Energy Information Administration. Reference Case price averages $\$ 3.19 / \mathrm{gal}$, High Oil Price Case price averages \$5.02/gallon between 2025 and 2031 (constant 2017 dollars)
${ }^{3} 6$-year savings does not include potential increase in 6-year resale value due to higher fuel economy.
$M J B \& A$

## Life-time Savings for MY2025 Clean Car Vehicles

Over their entire life (typically multiple owners) cars on average travel over 184,000 miles and light trucks travel more than 214,000 miles.
Compared to MY2020 vehicles, over their life-time MY2025 cars could save up to $\$ 5,000$ and MY2025 trucks could save up to $\$ 8,000$, depending on fuel costs.

## Families in Some Lowest Income States Could Save Most

- Family savings will vary based on how many cars they own, how much they drive, and how expensive gasoline is
- Families in some of the states with lowest median income on average own more cars and drive more miles than people in wealthier states - the average family in these states will suffer more from rising gas prices, and will save the most from more stringent climate pollution and fuel economy standards
- Examples of states with lower than average median income and higher than average family savings:
$\checkmark$ Mississippi
$\checkmark$ Alabama
$\checkmark$ New Mexico
$\checkmark$ Oklahoma
$\checkmark$ North Carolina
$\checkmark$ Florida
$\checkmark$ Indiana
$\checkmark$ Georgia
$M J B \& A$

## Annual Savings for Average Mississippi Family

The average Mississippi family owns 1.8 cars and drives 32,209 miles per year.
For this family net savings from MY2025 U.S. climate pollution and fuel economy standards could be as high as \$800/year and almost \$4,800 during the time they own MY2025 vehicles, depending on fuel costs (High Oil Price)
Annual family savings will increase by $\$ 118$ for every $\$ 0.50 /$ gallon increase in gasoline prices

| Net Savings |  |  |

## Clean Car Roll-back

Estimated costs for American families if U.S. climate pollution and fuel economy standards are relaxed

APPENDIX - STATE LEVEL ANALYSIS

July 12, 2018

## U.S. Climate Pollution and Fuel Economy Standards Save Families Money

- On May 30, 2018 the EPA and NHTSA forwarded to OMB a draft proposal to dramatically roll back the current U.S. climate pollution and Corporate Average Fuel Economy (CAFE) program. The current standards require gradual climate pollution reductions every year, which will spur increases in fuel efficiency for all new vehicles sold between now and 2025
- The exact details of this proposal are unknown, but it reportedly recommends capping U.S. climate pollution and fuel economy targets at model year 2020 - with no further increases in later years
- This analysis indicates that rolling back the current U.S. climate pollution and fuel economy standards in this way will cost the average American family as much as $\$ 500$ per year after 2025
- Families in every state stand to lose money due to higher annual gasoline costs - but those in some of the lowest income states will likely lose the most because they do more driving every year
- More stringent standards also protect families against rising gas prices - keeping the model year 2025 standards will save the average US family an additional \$85/year for every $\$ 0.50 /$ gallon increase in gasoline prices
- Compared to vehicles that meet Model Year 2020 CAFE standards, life-time savings from vehicles that meet the current Model Year 2025 standards will be at least $\$ 2,800$ more for cars and at least $\$ 4,500$ more for light trucks

## Annual Savings for Average Washington Family

The average Washington family owns 2.2 cars and drives 19,291 miles per year
For this family net savings from MY2025 U.S. climate pollution and fuel economy standards could be almost \$500/year and almost $\$ 3,000$ during the time they own MY2025 vehicles, depending on fuel costs (High Oil Price)
Annual family savings will increase by

## REFERENCES

| Metric | Data Sources \& Methodology |
| :--- | :--- |
| Incremental Vehicle <br> Purchase Costs | - EPA's OMEGA model was used to calculate fleet average incremental costs, for vehicles <br> meeting MY2020 and MY2025 CAFE standards, compared to MY2015 vehicles <br> - OMEGA technology cost input assumptions were taken from the ICCT report: "Efficiency <br> Technology and Cost Assessment for U.S. 2020-2025 Light-Duty Vehicles", March 2017 |
| Incremental Vehicle <br> Ownership Costs | - Incremental vehicle purchase costs were increased by $5.46 \%$ (sales tax) and the incremental <br> monthly loan payment was calculated assuming a 72 month new car loan at 4.25\% annual <br> interest rate. Incremental annual insurance costs of $1.8 \%$ of incremental purchase price were <br> added to the incremental loan payment. |
| Vehicle Fuel Economy | - OMEGA results for fleet average $\mathrm{CO}_{2}$ emissions (g/mi) were converted to gallons/mi and <br> miles/gallon (MPG) assuming 8,788 g/gallon of CO2 <br> CAFE compliance levels, were multiplied by $80 \%$, to estimate "real world" fuel economy of <br> compliant vehicles, consistent with EPA/NHTSA test data. |
| Fuel Costs | - Energy Information Administration, Annual Energy Outlook 2018, Table 3, Energy Costs by <br> Sector and Source, Transportation - Motor Gasoline; Reference Case and High Oil Cost <br> Case |
| - For state-level analyses, regional fuel costs from Tables 3.1 - 3.9 were used to calculate state |  |
| fuel costs (\$/gal) relative to US average fuel costs, for both the reference case and high oil |  |
| price cases |  |

## Projected Fleet Average Fuel Economy (MPG) Current CAFE standards

## Fleet Average MPG

$M J B \& A$

## Gasoline Price Projections

## Projected Gasoline Price US average 2017 \$/gallon

This chart shows projected prices in constant 2017 dollars, without inflation. Nominal gasoline prices (including inflation) are projected to reach \$4.90/gallon in 2034 under the Reference case, and \$8.71/gallon under the High Oil Price case
