

How hobbling the Environmental Protection Agency would threaten Montana’s health, families, jobs and economy

Support from the U.S. Environmental Protection Agency (EPA) is essential to protecting Montana’s air, water and land. From cleaning up toxic sites to preventing pollution from leaking underground tanks, EPA grants provided the state with more than \$194 million in funding from 2012 to 2016. Unfortunately, the Trump Administration and many members of Congress are working to hollow out the EPA and cut its budget to its lowest level since the 1970s, posing threats to millions of Montanans who depend on the agency to protect their health and the state’s tourism and business climate.

EPA’s budget will be negotiated in a backroom by a President and EPA Administrator who have laid out a roadmap to cripple the EPA, along with many Congressional leaders who have shown little interest in protecting environmental safeguards. The EPA’s budget could be bargained away in the blink of an eye, and Montanans could be the losers.

Eliminating and Slashing EPA Programs that Protect Montana’s Environment

The Trump Administration’s Road Map

EPA Administrator Scott Pruitt and the Trump Administration are championing 30 percent cuts that would hollow out the EPA and cut its budget to its lowest level since the 1970s. If enacted, these cuts would reverse decades of progress cleaning up pollution, including toxic substances, that foul our drinking water, air and soil.

The Trump Administration’s road map

Programs, Grants, and Initiatives	Purpose	Trump Budget	2012-2016 Grants
Nonpoint Source Pollution Management Program (Section 319 grants)	Fights runoff pollution from roads, parking lots and excessive fertilizer	Eliminate	\$10.6 million
Leaking Underground Storage Tanks grants	Protects water and soil from tanks leaking chemicals	Eliminate	\$6.1 million
Performance Partnership Grants	Helps states with their priority environmental health issues	Cut 45%	\$50.7 million
Superfund	Supports toxic and radioactive waste cleanup of most polluted sites	Cut 30%	\$18.3 million
Brownfield	Supports cleanup and redevelopment of polluted sites	Cut 30%	\$11.5 million

The House of Representatives

The House-passed budget includes numerous cuts that would move our nation's public health and environmental quality backwards:

- Big cuts in water quality programs: The budget would slash more than \$300 million from programs to keep water clean
- Soft on polluters: Key efforts to enforce environmental safeguards and hold polluters accountable would be cut between 5-15 percent across multiple programs—including cleanup of Superfund hazardous waste sites—which could mean less support for legal and investigative staff who gather evidence and make companies pay for cleanups.
- Reckless on homeland security: A 15 percent cut in homeland security efforts that help identify vulnerable industrial facilities and water supplies, which can be critical in natural disasters.
- A retreat on science: The House budget would make deep cuts in research and development programs that help identify the most advanced, cost-effective means of preventing, detecting, and cleaning up pollution.

The House of Representatives		
Programs, Grants, and Initiatives	Purpose	House Budget Cuts
Water Programs		\$312.3 million
Research on Safe and Sustainable Water	Develops science & technologies to keep water clean and safe	\$15.9 million
Human Health Protection	Monitor and treat drinking water	\$14.8 million
Water Quality Protection	Provide loans for drinking water and wastewater infrastructure projects.	\$31.6 million
Clean Water SRF	Finance infrastructure projects to improve water quality and public wastewater systems	\$250 million
Enforcement Programs		\$50.4 million
Science and Technology	Provide expert scientific and technical support for environmental enforcement cases	\$2.1 million
Environmental Progs and Mgmt	Enforce civil and criminal environmental laws	\$36.1 million
Hazardous Substance Superfund	Ensure that responsible parties conduct cleanups	\$12 million
Homeland Security		\$8.5 million
Science and Technology	Research to protect water system security and deal with terrorist attacks and other disasters	\$4.9 million
Environmental Progs and Mgmt	Support EPA communications and protection of water infrastructure during a homeland security incident	\$1.5 million
Buildings and Facilities	Protection of EPA personnel and infrastructure	\$500,000
Hazardous Substance Superfund	Prepare for and respond to incident involving possible chemical, biological, radiological, and nuclear agents	\$2 million

More than a million Montanans depend on a safe and healthy environment to live a good life. Its world-class outdoor attractions generate \$1.5 billion in wages and salaries, \$5.8 billion in consumer spending, \$403 million in state and local tax revenue, and support 64,000 jobs, according to surveys conducted by the Outdoor Industry Association.¹ Over the last five years, Montana has received more than \$194 million in grants from the U.S. Environmental Protection Agency to protect the state's environment and economy. Millions more have gone to support state and

local environmental and public health efforts, including assistance in the form of science and technology, legal expertise and enforcement.

But the Trump Administration and many Members of Congress are working to cut the EPA’s budget by 30 percent. These historic cuts would reverse decades of progress in cleaning up the toxic substances that foul drinking water, air and soil, posing grave threats to health and safety. They would strip the EPA of decades of scientific and technical expertise that Montana has turned to time and again to support state and local cleanups of dangerous pollution, as well as the legal support to go after polluters. The states, its communities and its tribes would have a harder time cleaning up hazardous waste sites without such help.

Deep budget cuts could threaten the state’s public health and attractiveness to tourists. For every family, especially their vulnerable children and seniors, these cuts will move Montana’s environment backward to a dirtier and more dangerous era: More poisons in the soil and toxic substances in the water, and more of the cancers that follow. More mercury, arsenic, lead and other toxic substances that have no place in anyone’s lungs or drinking water. More corroding underground storage tanks and more mine waste and hazardous Superfund sites awaiting cleanup. More pesticides in food, water, and the environment. More unaddressed waste sites that threaten community health and sap economic development. And fewer investigations to make polluters pay for the costs of cleaning up their waste.

As the Congress moves towards adopting a new budget this fall, cuts have already been proposed by both the Administration and by Appropriations Committee members in Congress. Many vital spending decisions will be made behind closed doors as members horse-trade and make deals with an administration that is eager to jettison pollution prevention and cleanup programs. Why is it so important to understand which anti-pollution programs are being targeted for deep cuts or outright elimination? So that Montanans can weigh in with their Members of Congress to ensure that EPA funding is fully preserved.

The Threat to Montana’s Land

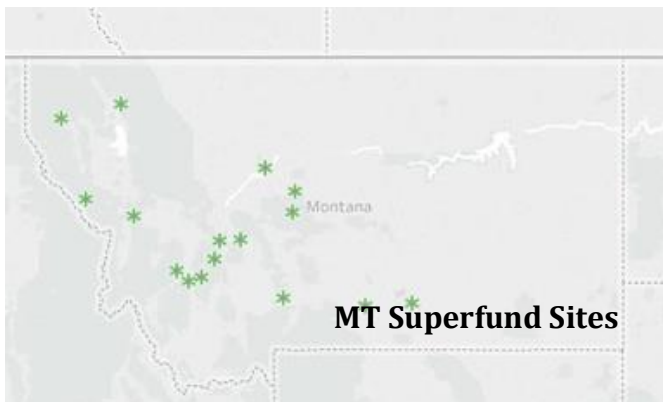

The Trump Administration would drastically reduce EPA funding for programs that protect Montanans from the health and safety risks of contaminated soil and that help clean up pollution so that properties can be returned to productive economic use. The positive effects of clean soil multiply through the environment, since contaminated soil can also pollute groundwater.

Fewer cleanups of toxic chemicals, less accountability for polluters

Program at Risk: Superfund program, including emergency response and enforcement funds

EPA provides grants to states, tribes and local communities to deal with Superfund sites. Montana had 17 hazardous waste sites on the EPA Superfund National Priorities List in mid-2017, and the state received \$18.3 million in Superfund grants from 2012 to 2016. These grants helped pay for cleanup efforts at the Upper Ten Mile Superfund site southwest of Helena and at the Flat Creek Iron Mountain Mine and Mill site in the Lolo National Forest, among other

EPA Funding to Montana FY12-FY16	
Superfund Grants	\$18.3 Million

Superfund sites in the state. EPA’s expertise is vital in assessing the chemical contents of waste sites and the risks they present, designing and putting measures in place to protect health and safety, and holding polluters accountable.

The Trump Administration’s budget would slash funding designed to deal with these hazardous sites. Hazardous substance cleanup spending through Superfund would be cut by 30 percent, include an 18 percent cut to emergency response funds, which help clean up the most urgent threats. And the Administration’s cuts would shift more cleanup costs from polluters to taxpayers, by instituting 37 percent

cuts in enforcement funds that help efforts to track down polluters and make them pay to clean up sites for which they are responsible.

By cleaning up vast amounts of toxic waste, the EPA’s Superfund program has reduced severe threats to Montanans’ health and returned contaminated properties to job-creating productivity (or restored them as vital natural habitats). Without Superfund cleanups, toxic chemicals like lead, mercury, arsenic, and dioxin are left to render entire locations dangerous or uninhabitable, and to leak into water and soil.

The Enemy Underground: leaking underground storage tank grants

Program at Risk: Leaking underground storage tank grants and trust fund

Across the country, thousands of underground storage tanks and accompanying pipes—many of them made from older corroded steel—hold and carry a variety of fuels and chemicals.² When tanks are at risk of leaking harmful chemicals such as oil, gas, benzene and toluene into soil and ground water, drinking water is fouled, backyards and businesses become dangerous, community health is jeopardized, and economic development is crippled.

EPA Funding to Montana FY12-FY16	
Leaking Underground Storage Tanks	\$6.1 Million

Montana has a backlog of more than 790 leaking underground storage tanks (or LUSTs).³ EPA has supported essential programs in Montana to monitor these tanks, detect leaks of petroleum products, address the causes of leaks, repair damage to soil or groundwater, hold polluters responsible for cleanup costs, and contribute funds for cleanup if the responsible party can’t be found or is no longer in business. Leaking underground storage tanks cleanups received \$6.1 million in EPA grant funding in Montana from 2012 to 2016.

The Trump Administration’s proposed budget would curtail leaking tank assistance to states. Montana’s receives federal LUST grants from two sources. The first—prevention and detection grants, would be eliminated entirely. The second—a trust fund paid for by a one-cent federal fuel tax, would be cut in half.

Fewer clean-ups and economic development at polluted properties

Program at Risk: Brownfield grants

Brownfield sites are properties where contamination prevents economic development and threatens public health and safety. Research has shown that residential property values near restored brownfield sites increased between 5 and 15 percent and can increase property values in a 1.24-mile radius of that site. A study analyzing data near 48 brownfield sites shows an estimated \$29 million to \$97 million in additional tax revenue was generated for local governments in a single year after cleanup. This is two to seven times more than the \$12.4 million EPA contributed to those brownfields.⁴

Before cleanup and redevelopment can happen safely and be permitted to go forward, brownfield sites must be assessed and tested for soil contamination. The risk of hazardous substances, petroleum or asbestos being released when disturbing soil at the site or dismantling properties. To carry out this assessment work, EPA funds pay for expert tests of soil, ground water, sediment, surface water and vapors. EPA grants also help pay for the actual cleanup.

EPA Funding to Montana FY12-FY16	
Brownfield Grants	\$11.5 Million

The Trump Administration’s proposed budget would cut brownfield restoration programs by 30 percent.

These cuts could hamper cleanups at more than 250 Brownfield sites in Montana.⁵ From 2012-16, Montana received \$11.5 million in EPA grants that have helped local counties and communities clean up polluted properties to protect people’s lives and spark job-creating economic redevelopment.

The Threat to Montana’s water

With almost 170,000 miles of rivers,⁶ water recreation and private and commercial fishing are critical to the state’s economy. But proposed Trump Administration budgets cuts would decimate funding for programs that protect rivers, lakes, streams and groundwater across the state.

More dangerous runoff in the water

Program at Risk: Nonpoint source implementation grants

Polluted runoff, sometimes called “nonpoint source pollution,” is the number one source of water pollution in the United States today.⁷ In contrast to “point-source” pollution, which can be traced to a single location such as a factory waste pipe, “nonpoint source” pollution seeps off broad areas such as parking lots and roads, construction sites, agricultural lands, etc. Stormwater can threaten water supplies with animal waste laden with harmful pathogens, sewage, industrial waste, pesticides, mine waste, and oil and gas from roadways.

EPA Funding to Montana FY12-FY16	
Nonpoint Source Implementation Grants	\$10.6 Million

The Trump Administration’s proposed budget would eliminate an EPA program that has provided \$10.6 million to Montana from 2012 to 2016 to control pollutants carried by rainfall runoff into its drinking water, rivers and lakes.

Other Challenges

Less flexibility to pursue emerging problems

Program at Risk: Performance partnership grants

The Trump Administration has proposed a massive 44 percent reduction in EPA Performance Partnership Grants, which allow Montana to apply EPA grant money toward its most pressing air, water and land issues.’ These grants allow states to use EPA awards with greater flexibility for addressing priority environmental problems or program needs, streamline paperwork and accounting procedures to reduce administrative costs, and try cross-program initiatives and approaches that were difficult to fund under traditional category grants. Montana received \$50.7 million in Performance Partnership Grants from 2012 to 2016.
